(4248) Mr. Lincoln, the superintendent of transportation, who is here, picked out certain days in 1900, 1901, 1902, and 1903, as to the movement of these fast freight trains, and showed that they moved late. Witness suggested to him that he pick out, regardless of what it would produce, three days in each of those months. Witness did not tell him not to take the same three days in the various months; because there were some days there for which he told the witness he could not get the dispatcher's sheets to trace through; therefore he took the next nearest day. Witness does not know how it happens that in picking out these days Mr. Lincoln has taken, in practically every instance, not the same day or not the same days of the month in the different years, but different days; that is, instead of taking, for instance, June 1st in each year, or June 2nd, or June 10th, or June 20th, he has skipped around in almost every instance. Witness does not know how the trains ran on any of the other days in these months except the isolated days Mr. Lincoln has picked out here in some way or other. The figures on that can be furnished. "I have no knowledge of that, but from my knowledge of the manner in which the traffic moves I have not any doubt but what that represents an average, and it represents a (4249) very much better average than it will if you will let me take the winter months.

Dates selected to show actual movement of freight trains.

"MR. SEVERANCE. I would ask you, then, to be kind enough to have prepared a statement which will show the same information

Statement showing movement of freight trains.

about the movement for the entire month of June in each of the years named and the entire month of October in each of the years named, so we will see what kind of results we get from a complete expose, instead of these isolated days—not some days in each month of each year. MR. LOOMIS. How long will that take? WITNESS. Mr. Lincoln can say better than I. MR. LINCOLN. It will take from 30 to 45 days to work that up. MR. SEVERANCE. That will do very well. MR. LOOMIS. We will permit you to examine the records and work it up yourself. MR. SEVERANCE. I don't know but I will be willing to do that. MR. DUNNE. I think the record ought to show that those days were taken as representative and typical, and that the enumeration of a multitude of days would involve extreme labor and expense. Now let us be fair about this. MR. LOOMIS. I think the record shows that already, Mr. Dunne. MR. SEVERANCE. Mr. Dunne, I don't think I have been unfair about anything in this case, and you know I have not, or would know I have not if you had been in the case from the time it began. MR. DUNNE. You talk about isolated days. Your manner is somewhat disparaging. MR. SEVERANCE. I do not think much of these days, I will admit that. MR. DUNNE. I will argue that with you later. MR. SEVERANCE. All right. We won't quarrel about it. I will make the request and let it stand just as I have made it. MR. DUNNE. Mr. Loomis, haven't you answered Mr. Severance's request? MR. LOOMIS. Yes, I have answered it by saying we will submit to him the records if he will furnish clerks to make the compilation. I do not think we are under obligation to furnish clerks to work three or four months or a long period of time to get up the data he wishes. The records are open for his inspection, and he can make such extracts from them as he sees fit at any time."

Records tendered for use of counsel.

As a rule the U. P. is now and (4250) has been for five or six months substantially making its time under this present schedule of 100 hours and 45 minutes. (4251) Mr. Kruttschnitt was not a party to any of the conferences of operating officials prior to the lengthening out of the time of train No. 53 in October, 1907. He was not advised of those conferences. "Q. He knew nothing about them? Is that the fact? A. Why, he would know about it when the time table was published. He was conversant with the fact that the train was not making the time and was continually urging on us to make that time, and we were continually urging the men to make it, and I think they realized in the Chicago office after a while that there were some things that were impossible."

Now making schedule time.

(4252) The time of that train was lengthened out as a matter of necessity, in order to move the traffic. "Q. And the matter of economy (as testified to by Mr. Kruttschnitt) did not figure in it? A. No sir, not with us." In order to operate a freight train between Council Bluffs and Ogden in 54 hours at the present time (4253), "we would sidetrack a great many of those trains (passenger trains, mail trains, livestock, fruit and manifest trains), but not all of them."

Slowing of train a necessity and not for economy.

Some of the passenger trains would have to be sidetracked. He would try not to sidetrack mail trains. "We have done it." The average speed of the Overland Limited between Omaha and Ogden is 29.9 miles per hour. It frequently runs from 70 to 80 miles an hour to make up time from its connections. There would be times, if near a terminal, when the dispatcher, if he desired to get No. 53 into the Ogden terminal on time, and the passenger train was on time from the west, would probably sidetrack the passenger train to let the freight train by. It has been done a great many times, it was not unusual.

"Overland" frequently makes 70 to 80 miles per hour.

(4254) "You know this train-service business is one that I am up with every day and every hour, and the volume of traffic cannot be governed by any set paper rules; it has got to be governed by the conditions, and those conditions are always changed by weather, by broken wheels, by drawbars pulled out, by late connections, and by so many things that you would not let me say to you that we would not or would sidetrack a passenger train, because we would be governed entirely by the conditions surrounding that particular train service at that time." (4255) Witness spoke of the fact that during 1906 and 1907 there was no special reason for the U. P. to try to make fast time to Ogden with California freight on account of the delays experienced from its connections—there was no special incentive to make the time because the delays on the Central Pacific the U. P. couldn't get rid of. There was no congestion on the Central Pacific a year ago now, in the winter and spring of 1909. A year ago when the U. P. was making such poor time, that was because of the increase in its own traffic which began to embarrass it then. Its own business has been growing constantly. And its facilities had not been increasing in ratio to the increase of the business. The U. P. tried to keep pace with its growth in business; but could not. It hasn't caught up yet. "We are getting more double track and will be in very superior position after we get in service what is now under construction, and it will enable us to accelerate time, and we do so."

Movement of traffic governed by conditions.

Facilities not increased in ratio to traffic.

Struggling to keep pace with business.

(4256) Witness' attention is called to his direct testimony to the effect that by making this lower schedule for train No. 53, he was able to get the maximum of efficiency from his power. The more you can load into a train, up to the maximum of efficiency of your locomotive, the more tonnage you can carry, the cheaper you can handle it. That is a basic principle, but it was not the principle in the operation of this main line from Council Bluffs to Ogden. As a general proposition that is true—that it is economical to load all you can into one train so long as you do not exceed the power of the engine. Adding to the tonnage in the train and the lengthening of the time of the train, did not make it cheaper per ton to transport the traffic from Omaha to Ogden—not by actual practice on that main line because the U. P. had not really been doing much better than on the schedule is now making. "Q. * * * You gave a selected lot of days on which the trains moved, and out of the

A basic principle in the loading of tonnage.

whole number that you gave there were only four days where the time consumed was longer than the present scale of 100 hours and 45 minutes, and there was one selected day, June 11, 1900, when there were only 58 hours and 10 minutes, and it ran from that up through the sixties and seventies and eighty, all of them (except those four days) faster than the schedule that you now publish. A. Yes. Q. In view of that wouldn't you want to modify that last answer? A. That is, before 1904. (4257) Q. Yes. A. And since 1904—I gave the dates of the various changes in the schedule, and in 1906 and 1907 and portions of 1908 our schedule as actually made was considerably longer than 100 hours, in quite a number of cases."

Effect of panic on volume of traffic.

The traffic on the main line between Ogden and Council Bluffs did not fall off a great deal after the panic of October, 1907. In 1908 the tons of the U. P. one mile were 7,718,508,000; in 1909, it was 8,064,882,000. For the year ending June 30th, 1907, it was 8,111,666,457. The falling off between the year ending June 30, 1907, and June 30, 1908, was less than 400 million tons out of a total of about 8 billions. (4258) No. 53 was lengthened out early in October, 1907, making it coincident with the panic. Notwithstanding the falling off of tonnage to the extent of 5 per cent. about 400 million tons, witness did not deem it prudent to restore former faster schedules. "Q. And you have since maintained it although you were all the time increasing your facilities? A. We are not increasing our facilities during the winter months. Q. Not this winter, perhaps. A. No. Q. But you were during last summer? A. Yes. We will give you ample service this summer."

Ample service will be given.

Live stock train movement.

On livestock the company aims to make 20 miles an hour from Granger to Omaha, including stops. An effort is now made to move livestock faster than green fruit, because of the 28-hour law. (4259) Witness does not know what the total time would be from Granger through to Chicago. The packing house trains, which run three times a week from Omaha to Ogden, make it in 93 hours. They run through solid. Packing house products are not carried in other trains.

Highest grade between Co. Bluffs and Julesburg, 66 feet.

The highest grade between Council Bluffs and Julesburg is 66 feet. (4260) It is located between Omaha and Lane. The highest grade between Lane and North Platte is 31.7 feet. The maximum grade between Grand Island and North Platte is 22 feet; between North Platte and Sidney 34 feet; between Sidney and Cheyenne 37 feet. It is 516 miles from Council Bluffs to Cheyenne. The maximum grade west of Cheyenne going over Sherman Hill is 82 feet.

Maximum grade 82 feet.

Witness thinks the minimum grade there is 43 feet. (4261) Along the valley of the Platte, which the U. P. follows through Nebraska, the grade is almost a water grade. The maximum grade, in order to get over the Continental Divide west of Laramie, is 43 feet. The minimum grade is about the same thing. That climb runs from Rawlins—it is nearly that. "We have some little drop-downs at

Maximum grade, Continental Divide, west of Laramie, 43 feet.

Solon and Riner, and the 1 we make the final climb to Creston." The Continental Divide is at Creston. The climb from Rawlins to Creston is from 6,741 to 7,102 feet, in a distance of 29 miles. "Q. That is a distance of 361 feet that you have to raise the train—6,741 to 7,102—in 29 miles, which would be only an average of 13 feet to the mile. Aren't you mistaken about that being a steady climb of 43 feet to the mile. A. I just stated the drop-down at Solon and Riner. Q. Then you do not have a regular pull of 43 feet; that is your maximum? A. Three pulls, that is."

Time of through freight trains.

The next hill is between Green River and Aspen. Green River is 90 miles from Aspen Tunnel. The station at Aspen Tunnel is Altamont. (4262) The maximum grade between Green River and Altamont is 43 feet. The schedule time of train No. 55 between Council Bluffs and Granger is 78 hours and 20 minutes. (4263) Witness is unable to state the time consumed by that train in getting to Portland. Witness thinks that the time of the Portland train No. 55, was lengthened out in October, 1907. Train No. 53 carries the Los Angeles traffic from Omaha in connection with the San Pedro. It it the same train that carries the San Francisco business. The time of freight trains to Denver from Council Bluffs is 37 hours and 45 minutes. (4264) Witness does not recall any change made in the time of that train in October, 1907. Several changes have been made since that time by increasing its speed. The business into Colorado common points is highly competitive, as between the U. P. and the Burlington and the Rock Island, "although we have never tried to take some business from Colorado that other lines take." The fact that that business is competitive may have been partially, but was not entirely, responsible for the reduction of the U. P.'s time, making better speed. It was to get an earlier delivery in its freight terminals in Denver, so as to overcome any delays that it might experience in transit.

Speed of Denver train increased to get earlier delivery.

Bad order cars included in car miles per day.

(4265) The length of the Rock Island Route from Chicago to Colorado common points is longer than the Northwestern-Union Pacific Route. The average movement of 41½ miles per car per day includes all cars that are in bad order, (4266) in the shops. It included everything. The stock trains are moved at 20 miles an hour considerably for the reason that 70 per cent. of our ascents are westbound, and any train moving eastbound can make its time very much easier than it can westbound, it runs so much faster; and witness has no objection to running a train, as he does right along, at 18 and 20 miles an hour. That is not reckless running, eastbound, not with the conditions the U. P. has. He would not consider it reckless running westbound if he could make it, but 20 miles are made so much easier eastbound, downhill, than 20 miles westbound, uphill. "Q. I understood you to say that you regarded the speed made by the 54-hour train as a reckless rate of speed, and unsafe. A. That train ran 45 and 50 miles an hour. Q. You would regard a westbound freight train now, scheduled at 20 miles an hour, as being a reckless rate of speed? A. No, sir, I would not

care to run a freight train at that speed any more than the New York Central or the Pennsylvania would. Q. You would regard it as reckless railroading. A. I would not regard it as reckless; I would regard it as unwise. Q. And you would regard it as reckless to run at 17 or 18 miles an hour, scheduled that way? A. No, I would not regard it as reckless to run at that rate of speed under proper conditions."

Unwise speed.

Referring to the chart from which witness has testified, the information under the heading "Average miles per car per day, all classes of freight service, January, 1907, to February, 1909," was furnished by the American Railway Association. That includes the information as to all of the railroads named on the left of the chart. In order to show the comparative merits of the various speeds used by the different railroads, witness placed upon the one side, the speeds of the general merchandise freight trains between main points upon those railroads, and upon the other side, the average miles each car traveled per day. (4267) Witness believes that better results can be obtained on the U. P., in view of traffic conditions, by running its general merchandise freight trains at an average speed of 10 miles per hour between Council Bluffs and Ogden, than by running them at a higher rate of speed. The chart in question was prepared in order to show whether or not witness' theory on this proposition was effective. It shows upon the one side the speed made by the merchandise trains of these various roads, and upon the other side the actual average movement per car per day for the entire lines.

Better results obtained at average speed of 10 miles.

In getting the information from the American Railway Association it was necessary to take it for the entire railroad. It was not possible to get the movement per car per day on the main line of the U. P. between Council Bluffs and Ogden, but the U. P. had to be taken as a whole. The same is true of the other lines shown on the chart. Witness could obtain, however, in order to make as close comparisons as possible, the actual scheduled speed of the trains upon these different lines between different points; for instance, he could get the speed of the merchandise trains of the U. P. between Council Bluffs and Ogden, and put that down. He could get the average speed in miles per hour of the merchandise trains on the U. P. between Council Bluffs and Denver and between Ogden and Council Bluffs on eastbound traffic, and that was all put down, and then he could get the average speed in miles per hour of the main line trains of the Santa Fe and the other roads named on the chart. "Q. And you placed the one opposite the other for the purpose of making a showing as to the effectiveness, the efficiency, of these various rates of speed in the transportation of general merchandise? A. Yes."

Information necessary to ascertain effectiveness of various rates of speed.

By doing that, witness shows on the chart that although the U. P. runs its freight trains at an average speed of 10 miles per hour between Council Bluffs and Ogden, that the average miles per car per day of all cars in service is 41½ miles, (4268) on the whole

Speed of U. P. trains more efficient than that of other lines.

road and that on the Santa Fe, although they run their freight trains faster, they do not get the car movement per day that the U. P. gets. The car movement upon the Santa Fe, the whole road, is 26.7 as against 41.5 on the U. P.; on the G. N. 21.5 as against 41.5 on the U. P.; on the N. P. 21.4 as against 41.5 on the U. P.; on the Rock Island 23.3 as against 41.5 on the U. P.; on the C., B. & Q. 29.6 as against 41.5 on the U. P.; on the C. M. & St. P. 24.7 as against 41.5 on the U. P.; on the Pennsylvania Lines 23.9 as against 41.5 on the U. P.; on the New York Central Lines 25.2 as against 41.5 on the U. P.

Expenditures necessary.

Improvements the best.

The chart about which witness has been testifying is introduced in evidence and marked Defendants' Exhibit 153 and faces page 4,268 of the record. (4269) No money was spent on betterments that did not serve some useful purpose in connection with the operation of the railroad. Witness considered all the expenditures made as absolutely necessary. Witness believes the standards of the U. P. to be as good as could be adopted, and "I think they average high—very high—with any western line. * * * Mr. Harriman's instruction to me when alive, was that he did not object to furnishing money, but he wanted the improvements so well made that nobody could follow and change them." Witness believes he carried out those instructions absolutely. A good many of the improvements, such as block signals and the like, could have been eliminated if a different policy had been followed. The object in following the policy which he did was "to provide the very best of facilities for the safe operation of the property and the accommodation of the public."

Improvements on contiguous lines.

(4270) The railroads located in the immediate territory of the U. P. are the Chicago-Rock Island, the C., B. & Q., the C. & N.-W., and the Missouri Pacific—the D. & R. G. Witness does not know of any pronounced improvements of those lines in U. P. territory, except the Burlington's Milford cut-off at Lincoln, Nebraska. Witness does not know of any attempt to improve any of those lines to any extent whatever as compared with the U. P. (4271) Referring to the days which were selected to show the actual running time of train 53. "I asked Mr. Lincoln to select three days in the month of June and three days in the month of October, spread through the month the best he could, to indicate to me just what those trains actually did, and that was the basis upon which the information was obtained." In order to get a typical showing of the manner in which those trains were performing; and for that purpose only.

Desired to ascertain actual running time.

Trains were running late.

Witness had personal knowledge as to the time trains were making just prior to the lengthening out of the schedules in 1907, and knows that they were not making their schedule. They were all running from one hour to ten, fifteen, and twenty hours late, as the case might be, and it was an absolute operating necessity to lengthen out the schedules, in order to efficiently operate the road. In running trains between Council Bluffs and Ogden at an average speed of 10 miles per hour, including stops, the running

time between stations would fluctuate from 16, 17, 18, up to 25 or 30 miles an hour, depending entirely on how much time they had been delayed at the last station in trying to recover time, or going down grade. (4272) Its maximum speed will go up to 20 or 25, and may go up to 30 miles per hour. A train operating from Council Bluffs to Ogden at a speed of 20 miles per hour, including stops, would probably in some places have a maximum speed of 40 miles per hour. There are no steep grades between Julesburg and Denver. The only substantial grade between Council Bluffs and Julesburg is the one out of Omaha.

Maximum speed of 40 miles.

There are some slight grades around Elkhorn and Waterloo. "Q. You spoke about trying to get trains in to Denver so as to make an earlier delivery. I wish you would explain that. A. There is a great deal of freight distributed upon other industry tracks in Denver, and our idea is to get the train in earlier in the evening, so that we can deliver the cars to the distributing roads and have them ready for unloading at the morning hour." Deliveries were not being made as early in the morning as he wished. In order to run a train from Council Bluffs to Ogden in 54 hours, the average speed would be 18½ miles per hour; that would make the maximum speed at times from 35 to 40 miles an hour. "I have been told by several of our train men who handled that train that it has run as high as 60." (4273) Witness omitted to state that he is authorized to construct a new general office building in the city of Omaha at a cost of $1,339,000.00, independent of the cost of the land. Tie-treating plants have also been constructed at Topeka, Kansas, and Laramie, Wyoming. There are about 20,000 employes on the payrolls of the U. P. All the roads entering Kansas City expect to use the new Union Station there.

Object of early delivery at Denver.

Speed required by 54-hour schedule.

New general office bldg—20,000 employes.

(4274) The purpose of treating ties is to make the life of the tie longer. The life of a pine tie, not treated, is about four years; treated, from eight to ten years. The treating of ties is not so much a matter of economy as of scarcity of timber. Witness pays from 80 cents to as high as $1.00, at Kansas City, for untreated ties. It costs from 10 to 12 cents more to treat them. (4275) Witness agrees with the testimony of Mr. Harriman to the effect that the improvements which have been made, and which cost millions of dollars, have reduced the percentage of the cost of operation. The average movement per mile per day of freight cars is affected by the number of large industries and terminals along the line of railroad. Witness knows that the Pennsylvania Railroad, starting at New York, passes through a large number of very large towns between New York and Pittsburgh, as well as through other large towns in Ohio and Indiana.

Cost and treatment of ties.

(4276) Terminals reduce the time. The effect of the terminals of the U. P. cannot be compared with those on the Pennsylvania road, or on the New York Central, because the business on the different roads is so different. The largest towns on the U. P. are Denver, Kansas City, and Omaha. (4277) Witness thinks that the

Good car movement on U. P.

comparison of the movement of freight equipment per car per day on the U. P. with a similar movement on the Pennsylvania, is a fair one, and that it is a good illustration of the good movement of equipment on U. P. (4278) Witness is not conversant with improvements made on the Santa Fe, except the loop which they have put in out in the Albuquerque territory. In referring to the improvements made by other railroads, witness referred to the roads in the immediate territory of the U. P. only. He had in mind the Rock Island and the Burlington principally, and the Northwestern. These roads were originally in a better condition than the U. P. (4279) "Q. That being the case, in order to bring you up to a parity, it would not be essential for them to spend as much money, would it? A. We did not intend to bring ourselves up to a parity, but to surpass them." At the time the improvements upon the U. P. began, it would be necessary, in order to bring the U. P. up to the same condition as the Burlington, for the former to spend more money than it would be necessary for the Burlington to spend. In witness' judgment the U. P. has surpassed the Burlington in the improvements made.

U. P. has surpassed other roads in improvements.

The Pennsylvania Railroad has four tracks east of Pittsburgh, and two west of Pittsburgh. The possession of this large number of tracks gives the Pennsylvania a considerable advantage over the U. P. in the movement of its traffic. (4280) Witness believes that the U. P. could manage to get along without the new office building if it had to.

Park.

(4280) WILLIAM L. PARK.

Omaha. General Supt. U. P.

Resides in Omaha: General Superintendent of U. P. Railroad. Has been connected with the U. P. since April, 1875, as brakeman, conductor on freight trains, passenger conductor, assistant superintendent, division superintendent and general superintendent.

Physical condition of U. P. from 1875 to 1898.

As to the physical condition of the U. P. from 1875, down to the time of the reorganization, in 1898: "The line was constructed on the contour of the country, pretty generally; that is, it was built around the hills instead of cutting through. It was laid close to the surface of the ground, through the depressions and over the hogbacks, as they were called, making a great many vertical curves. The depots were roughly constructed of boards nailed upright on the framing, the cracks battened, and without foundations other than posts or wooden foundations. The telegraph line consisted of two wires on small poles of irregular size. The batteries were of the gravity style, placed about 200 miles apart, at which there were also located repeating offices, to which the messages were sent and then repeated further along. The bridges were pile bents or wooden trusses placed on abutments. The stone work consisted of native stone, which very rapidly disintegrated. In the smaller openings wooden boxes were used. And some of the culverts were of the native stone. Q. Was steel used in bridges at that time? A. Very little steel. Up to the time of the reorganization there was only

Depots.

Telegraph line.

Very little steel bridging.

about 12,000 feet of steel in the bridges. There was also another form of drainage used, called the French drain; a primitive arrangement of rocks under the track, through which the water drained. It was not a bridge, but it permitted the water to pass through. It was something that was very cheaply constructed, and (4281) under certain conditions, answered its purpose, although it contained an element of danger. * * * Shops and round-houses were frame structures. Some of them were of the native stone, and some brick. The tools and appliances were crude. * * *

Crude drainage arrangements.

"The roadway water tanks consisted of a tub holding about 25,000 gallons, placed on frame bents; with a barn structure around it and a stove underneath to keep the water from freezing. The discharge pipes were very small—about 4 inches. These water stations, east of the mountains, were supplied mostly with windmills; and there were also located at the water stations, hand pumps. * * * The wind quite often failed, and it was necessary to call in the section men, and sometimes the train employees, to operate the hand pumps. There were no signals or railroad crossing protection, very little fencing. There was no ballast, except perhaps a few miles over the summit of the Rocky Mountains, or the Black Hills, rather, where the Sherman gravel that we now use on all of our lines was the natural soil under the track. The rail in the prairie territories was 45 pound iron, some 50 pound steel; in the mountain territories, 52 pound and 56 pound steel. The iron rail was connected with chairs. The steel was connected with fish plates. The chairs are now entirely obsolete, and the fish plates are found about the yards on minor tracks. * * *

Antiquated water tanks.

No signals and no railroad crossing protection.

"The coal chutes in use in 1875 and 1880 were very primitive; simply platforms at the intermediate coaling stations, from which the coal was either shoveled on to the engines by hand or carried on in boxes by the brakemen. At the district terminals the coal was shoveled from the platform by hand. A little later, after 1880, there were some coal chutes put up at the district terminals, on which cars were run up an incline by an engine and the coal was shoveled into pockets and from there dumped on to the engine by the firemen or hostlers. * * * The passing tracks were from six to twenty miles apart. They held from 15 to 25 cars. A good many of them were stub-ended; connected at one end only. * * * The ties were small and of irregular size. A good many of them were taken from along the road; native cedar and mountain pine. None of them were treated at that time; they were in their native condition."

Primitive coaling facilities.

Passing tracks.

Ties.

As to the present condition of the property: "The line has been straightened throughout from Omaha to Ogden. A great deal of the curvature has been eliminated and (4282) considerably reduced. The grades have been rectified, the sags taken out, and a great many of the hog-backs cut down. The maximum adverse grade going west, except in the Omaha yard, to the summit, is 43 feet to the mile, with the exception of 26 miles from Cheyenne to Buford, where there is a maximum grade of 82 feet. Eastbound the same ruling grade

Improvements made since reorganization.

New telegraph and telephone systems.

obtains, except between Ogden and Wahsatch, where the old grade of 96 feet to the mile still exists. * * * The telegraph line has been entirely reconstructed. It now consists of heavy poles carrying heavy copper wires; there are approximately 30,000 miles of wire on the entire line. The circuits are from 500 to 1,000 miles. Dynamos are used instead of gravity batteries. We have 350 miles of copper wire, used exclusively in handling trains, and have now under construction and nearly completed some 2,000 miles of telephone train dispatching lines. * * *

Modern machine shops.

"The machine shops have been modernized; machinery put in for the quick handling and turning of locomotives, such as traveling cranes, air hoists; and for the turning of tires; expediting the work.

New water tanks and water softeners.

The standard water tanks are of 60,000 gallons capacity, of steel, on iron columns. The standard of the discharge pipe is a 12-inch opening. The windmills have all been abandoned and the water stations equipped with gasoline engines and steam engines for pumping water. * * * In the bad water districts we have erected 36 water softeners the purpose of which was to take out the hard or encrusting substances contained in the water, which render the operation of the engines more effective and extended the life of the flues and bettering the ability to turn them at the terminals, quicker.

New pipe lines.

* * * A pipe line was constructed from Fort Steele, Wyoming, to Rawlins, Wyoming, a district terminal, about 16 miles in length. The pipe laid was ten inches part of the distance and 12 the balance of the distance, carrying the good waters of the North Platte River, which is a mountain stream, to the district terminal. This construction amounted to about $300,000. A pipe line was built from Elk, Montana, to Hanna, 16 miles, with a branch to Dana, Wyoming, supplying two water stations between Rawlins and Laramie. The pipe line at Laramie, Wyoming, was reconstructed. And pipe lines are now under construction in the vicinity of Spring Valley, between Green River and Evanston, not yet completed. There were smaller pipe lines and reservoirs built in a number of localities. * * *

Interlocking plants.

"Quite a number of interlocking plants have been constructed, mostly along the main line. Several of them are exclusively Union Pacific plants, notably the one at Borie, Wyoming, put in as a safety (4283) precaution. Trains operating on the east side of Sherman hill or trains going on to this junction, are safe-guarded against trains that might be coming down the hill at too high a rate of speed or not within the control of the engineer; in fact an accident of that character induced us to put in that particular interlocking plant. Some of these plants are electrically operated, and some of them mechanically operated. * * *The standard type of coal chute is of the conveyor type; a double-track structure in which coal can be taken from three tracks—two underneath and one at the side. The coal is dumped from the cars into a bin, and elevated to the top of the chute, where it passes through crushers which prepare it of proper size for use on the locomotive. These

Coal chutes of conveyor type.

chutes have also been equipped with sand bins or pneumatic sanders, which enable the engine to take sand at the same time it is taking coal; also with water cranes; so that second stops may be avoided in obtaining the supplies. There are other types, with a cable hoist, in which the coal is hoisted up an incline, with a gasoline engine, and the pockets and dumping arrangements, sanding arrangements, are practically the same as the conveyor type. * * *

New standard rail, 90 lbs.

"The standard rail is 90 pounds; 33 foot lengths, each rail weighing 990 pounds. The main line from Omaha to Ogden contains over 50 per cent. of the 90 pound rail and over 90 per cent. of rail weighing more than 80 pounds. * * * There is no rail in any of the main tracks lighter than 70 pounds to the yard. * * * The rail connections are what are known as continuous joints; a combination angle-bar and bridge joint supporting the bottom of the rail as well as the head. This joint is only recently in use. They weigh 86 pounds to the pair, and cost $1.77 each as compared with the old chair which weighed about 12 pounds and cost 15 cents, I think, and the fish plates that weighed 38 pounds. A tie plate weighing 6½ pounds is used on every soft-wood tie on the main line. This is a recent addition to safety; to prevent the rails from spreading laterally under the traffic. The entire line from Council Bluffs to Ogden has been ballasted, 15 or 20 miles with slag; the balance, to Creston, on the Continental Divide, with Sherman gravel—disintegrated gravel. Creston is about 725 miles from Omaha. From Creston to Ogden the Granger gravel was used. Nearly all of the sidetracks on the main line have also been ballasted. In order to do this, the embankments were strengthened over the (4284) entire distance, leaving them at the base of the gravel with an 18 foot face, and on some parts of the road a 20 foot face. * * * The old section house was constructed somewhat similar to the depots—of rough boards. They were all scrapped, and new section houses constructed. Bunkhouses were provided for the laborers, maintenance houses for the signal maintainers, and in a good many localities houses were provided for the agents. These were comfortable buildings, on stone foundations, plastered. At some of the district terminals we also have erected cottages for the train dispatchers and some of the officials. These houses have modern conveniences, bath, hot and cold water. * * *

Continuous joints and tie plates.

Entire main line and much of side tracks ballasted.

Houses provided for employes.

"An effort has been made in the last few years to park the right-of-way. Some 30 linear miles have been planted to alfalfa. At other portions great care has been exercised to keep down the weeds, to encourage the growth of blue grass—a matter that prior to that time had been neglected. A great many parks have been put in at the principal stations, notably at Omaha, Fremont, Grand Island, Kearney, Cheyenne, and particular effort has been made in that direction out in Wyoming, at Rock Springs, Green River, and Rawlins, where, previous to the advent of these parks, I understand no grass was to be seen in the towns. This was done for the benefit of our patrons and as an example of neatness to the employees.

Parking right of way.

Depot parks.

New stock yards.

The stock yards at intermediate stations were nearly all reconstructed; scales put in for the weighing of individual animals; branding chutes; dipping vats; and other conveniences for the shipper. At the larger terminals very elaborate stockyards were built, embracing modern conveniences, the principal feature of which was two tracks into the yards, which enabled stock to be unloaded from a train and a train to be loaded at the same time. A great inconvenience had existed, prior to that, in that one shipper was obliged to hold his stock in the pens longer than he might have desired. Trains coming in and unloading, perhaps under the requirements of the 28-hour law, and for that reason taking precedence, he would necessarily wait in the yard until all of that class of stock was unloaded. The second tracks enabled us to load a train out and load one in at the same time. Hotels were put up at some of them, for the accommodation of the drovers, containing baths, hot and cold water in the rooms, electric lights about the yards to expedite the unloading of sheep—principally sheep—but stock, at night. A great deal of discomfort to the shipper, and delay, had occurred in not being able to get the shipments out of the cars. Electric lights, and the use of goats to lead the sheep out, solved that problem. * * *

Load and unload stock at same time.

Hotels built for accommodation of drovers.

Trained goats.

"Trained goats were employed at the yards at Green River, Rawlins, Laramie and Cheyenne, to lead the sheep out of the cars and into the cars. * * * In the night it was a very difficult matter to get the sheep out of the cars; and we finally hit on this scheme, which I think is peculiar to the Union Pacific. A goat was taken up into the car, and was so trained that he walked around through the sheep, and as he walked out they seemed impelled to follow him."

Early train service.

Witness gives a general description of operating conditions as they existed when he first became connected with the road. (4286) In 1875 one through passenger train was run each way. There was a mixed freight and passenger, and occasionally extras carrying stock and Asiatic goods. In 1881 the line from Julesburg to Denver was completed and a train was put on between Omaha and Denver at that time making a second train on the main line between Omaha and Julesburg. That was a passenger train. In 1883 another passenger train was put on between Julesburg and Denver operating in connection with the main line train. In 1887 another through train was put on the main line which in 1889 was merged into the fast mail. The freight train movement grew in about the same proportion. In 1897 there were, both ways, about 15 freight trains and 4 passenger trains on the main line.

Improvement in train service.

Since that time passenger trains have increased about 70 per cent. and freight trains about 25 per cent. "We are now operating 24 passenger trains out of Omaha as far as Grand Island; 20 passenger trains as far as North Platte; 18 from Omaha to Julesburg and 12 between Julesburg and Granger. 8 passenger trains are being operated through to Ogden." There is only one west-bound scheduled through freight train between Council Bluffs and Ogden

at the present time. It is Number 53. It is run in sections to accommodate the traffic. There is also a train called the Packing House Special that is run three times a week. (4287) It has no number. It is run either as a section of the through California train or as an extra. There is a through train between Council Bluffs and Granger, which goes on to Portland. Its number is 55. That train is run in sections as the traffic demands.

Eastbound through freight trains.

The eastbound through freight trains at the present time are No. 54 and No. 56. These are simply the printed schedules. The regularity of eastbound trains on these schedules is not maintained. The eastbound movements are generally on train orders. There is one scheduled train from Granger to Council Bluffs, eastbound. That is the return Portland train. "Q. What is the number of the Portland train, eastbound? A. I was mistaken. There is no schedule of the eastbound Portland train." That is run as an extra. Green fruit trains are handled on schedule orders, or orders running them as extras.

(TESTIMONY RESUMED, NEW YORK,
THURSDAY, FEBRUARY 24, 1910.)

"Nellie Bly Special."

There was a very fast time freight train put on during the Summer of 1897. It was called by the train men and others the "Nellie Bly Special." (4288) That name was given it because "this newspaper correspondent, Nellie Bly, was making a flying trip around the world at that time, and the train was dubbed the 'Nellie Bly Special,' on account of its extraordinary speed. It consisted of about eighteen cars, 500 tons, and was run on passenger train time, with a passenger engine; either as a first section of the passenger train or on passenger train schedules. It was given right of way over passenger trains in the opposite direction, and over all freight trains. The inspections at the district terminals were disregarded. The caboose was frequently changed on the 'fly,' as the men call it, without stopping the train. Sometimes the engine was changed without stopping the train. And very frequently they went through the district terminals in two and a half to five minutes. Q. Explain how the engines and cabooses could be changed without stopping the train? A. Going into a district terminal they would cut off the engine and it would be run ahead; of course the train would be slowed down; and the out-going engine would assume the speed of the train, and make the coupling; the caboose would be dropped off and the other caboose would be run on with the switch engine." The time of the train through was 32 hours between Council Bluffs and Ogden. The fastest time was made from Cheyenne west, on the descending grades. At times the train ran at least 50 miles an hour.

Engine changed without stopping train.

A war measure.

The inauguration of that train witness understood, at the time, was a war measure, and rather abnormal. A war measure directed against the O. S. L.; an attempt to run the freight via Ogden and Sacramento to Portland. "I rode on it a number of times, on the

Unsafe rate of speed.

engine; and it was not a safe rate of speed for a freight train." The 32-hour schedule lasted about 60 days. Then the schedule was lengthened to about 54 hours. That was in 1900. Witness thought that there was a schedule of 53 hours intervening between the 54-hour and 32 hour schedule. The 53-hour schedule extended from the time the 32-hour schedule was abandoned, down until 1900; until the 54-hour schedule was effective. The method of handling the 53-hour and 54-hour trains was somewhat similar to the Nellie Bly Special. The inspection at district (4289) terminals was curtailed, and the train was given advantage over other freight trains of all classes, and quite frequently over passenger trains. The average rate of speed of that train between Council Bluffs and Ogden was about 18½ miles an hour including stops. It would very frequently run 40 miles an hour. If it was given the right of track over all trains witness thinks it could be put through on that time now, but it would not be practicable.

Inspection curtailed.

Service demoralized in 1900.

"In 1900, at the time of the 54-hour schedule, conditions became very much demoralized on the Wyoming division, between Cheyenne and Ogden. A great many wrecks occurred, and there was considerable congestion. I was sent to the Wyoming division in June, 1900, and found a congestion of freight at Green River, Wyoming, that was quite extensive. There was also considerable difficulty in getting the freight through the Laramie and Rawlins yards. I remained at Green River for 40 days without going to the office and without going to my home." The new work had something to do with that condition, and the running of fast trains without proper tonnage. "We were sawing this fast train through Green River, letting it go out of there with part of a train, with from 500 to 1,000 loads of other merchandise waiting to be moved in both directions. * * * A good many of the locomotives were necessarily employed in work-train service. There were a good many slow orders in effect, retarding the movement of trains and throwing them off their schedules. * * * The slow orders were necessary in order to safe-guard the trains in passing over the track that was being raised under traffic, and the connections that were made with the cut-offs, and the ballast work. * * * The ballasting and also the bridges." (4290) Referring to the want of tonnage interfering with the movement of traffic: "This westbound California time-freight 54-hour train, in particular, we were trying to put through as nearly as possible on its schedule time; and in order to overcome the delays and accomplish this, the train was permitted to leave the terminals with much less than the rating of the engine; and if we could have gotten rid of some of the other freight that was ready to go out, we could have more quickly removed the congestion." The traffic could have been moved to better advantage if the engines had been permitted to carry the tonnage which they were capable of hauling. After about 40 days at Green River straightening out the difficulties which existed at that time, witness was able to leave there; the conditions were about normal.

Cause.

Slow orders in effect, account betterment work.

Lack of tonnage.

Normal conditions obtained.

The traffic continued to increase up to the present time. As the business increased, the schedules of this 54-hour train were decreased, and the tonnage of eastbound freight trains was increased. The conditions were very satisfactory up to shortly after the earthquake in California, in April of 1906. During that fall we experienced another congestion that was caused by the backing up of the freight and holding it on our line for delivery to the S. P. As to the conditions which existed at that time, following the San Francisco fire: The relief trains that were started from Colorado and from Omaha and were run for several weeks after the earthquake, started a slight congestion, on account of engines running with light trains. The merchandise accumulated at Ogden and at Green River on account of the inability of the S. P. at Ogden to receive it; and was then set out on the passing tracks along the division. The U. P. was building a double-track between Rock Springs and Point of Rocks at that time, a new second track, which was just completed; and instead of putting it into service, some 7 or 8 miles of merchandise cars, destined to San Francisco, were set out on that track. "There were so many of them, I know, that in order to guard them I took the mounted train guards (4291) that we have employed in Wyoming to intimidate train robbers, and put them out along these merchandise cars, to patrol them, on horseback, and put out water barrels to protect against fire."

Satisfactory conditions disturbed by earthquake.

Track occupied by relief trains.

Traffic congestion.

The effects of the increased traffic growing out of the San Francisco fire lasted, upon the U. P., through the fall and winter of 1906; and the growth of the business in the meantime had steadily increased. In 1907 its through trains were not making their schedules, and there was some slight indication of another congestion—in the fall of 1907. The trains were not making their schedules on account of the density of train traffic; too many passenger trains, and too many freight trains. Everybody was doing their best to get the trains through on schedule time. "It had become a question of keeping the road clear, along in September; and on September 17, after looking the situation over on the road, I recommended to the vice-president and general manager that we lengthen out the schedules of the freight trains, in order to obtain the maximum efficiency of the locomotives, which was approved; and the schedules of the westbound time-freight trains were then lengthened to 100 hours to Ogden.

Congestion again caused, in 1907, by density of traffic.

Advised lengthening of train schedules to obtain engine efficiency.

"Q. Before you made that recommendation, please state the actual time that was being consumed by your westbound general merchandise freight trains in running between Council Bluffs and Ogden. Take it for the month of September, 1907. A. California expedited No. 1, on the 1st day of September—— MR. SEVERANCE. Is that the same as No. 53? WITNESS. Yes, sir. We numbered the trains. We called them California No. 1 and 2, etc., in order to keep a record of them—to keep track of them. Q. Was it numbered 19 at one time? A. That was the schedule number of the train—No. 19; and later the numbers were changed. We got so

Actual time of trains.

many passenger trains that we had to use the lower numbers for passenger-train service, so the freight-train numbers were shoved up into the fifties; and instead of calling it number 19 on the schedule it was then called No. 53. This No. 53, on the 1st of September, left Council Bluffs on time; went to Green River 92 hours 15 minutes late. Expedited No. 5, on the 5th, left Council Bluffs on time, and went to Green River 54 hours late. On the 15th, No. 15 left Council Bluffs on time and went to Green River 55 hours and 54 minutes late. Those were three trains taken on the 1st, 5th, and 15th of September. During the year preceding, from September 1, 1906, until August, 1907, of 20 trains, scattered from September to August, 8 left Council Bluffs on time, 12 late; an average of 47 minutes late. None of them arrived at Green River on time. 20 arrived there late, an average of 32 hours and 20 minutes late. Following the lengthening of the schedule, of 20 trains scattered through the different months from December, 1907, to Septem- (4292) ber, 1908, 13 left Council Bluffs on time, 7 late, an average of 8 minutes late. 11 of them arrived at Green River on time, 9 late; or an average late arrival at Green River of 5 hours and 54 minutes, * * * —that is the year following the extension of the westbound time schedule to 100 hours and 45 minutes."

Belated trains.

None arrived on time.

Prior to the lengthening out of the schedules in 1907 the trains were running behind their printed schedules. It was impossible to get them over the road in less than 100 hours. From September, 1906, to August, 1907, the schedule was 74 hours and 30 minutes. For a short time in 1903 it was 82 hours and 10 minutes; then it was shortened to 74 hours and 30 minutes, and from 1903 to 1906 it was scheduled at 74 hours and 30 minutes. It was scheduled at that up to the time the change was made in 1907. The cause of witness' inability to get the trains over the road on time in September, 1907, was the density of passenger traffic and freight-train traffic, and quite a good many slow orders incident to the reconstructing of the line. It devolved upon witness as the General Superintendent to move the traffic in the best possible way; to keep the road clear from congestion; and he saw from his experience on the same division in 1900 that there was no better way to do it than to increase the tonnage.

Necessary to increase tonnage.

He came to the conclusion as a practical operating man that that was the wisest course to pursue under existing condition; because "the tonnage ratings are fixed for certain speeds; and the train dispatchers are required to give the trains the tonnage which will enable them to maintain the schedules. They have very little discretion as to that. If the schedules were lengthened and the tonnage rating increased, it would be authority to the train dispatchers to increase the train load. If an engine was rated at 15 or 18 miles (4293) an hour, at 1,500 tons, and could haul 2,000 tons at 10 miles an hour, it would permit the dispatcher to get rid of 500 tons more on each train; and that, of course, would reduce the number of trains on the road."

Tonnage ratings.

Increase of tonnage rating.

As a matter of fact the engines had a certain amount of power which was being reserved for speed, which the locomotives could not possibly make on account of opposing trains. Witness proposed utilizing that extra power by adding tonnage to the trains, and that is what he actually did. It was impossible to increase the speed of the trains and thereby remove the difficulty because to increase the speed it would have been necessary to reduce the tonnage and that would either have caused a greater congestion or created more trains, which would have made the situation worse. It would have created more trains because each individual engine would be handling less tonnage, and that would make more trains necessary to haul the traffic. Witness was about up to the limit of his ability to handle trains on that track under existing conditions.

Power reserved for speed was being wasted.

Increased speed would make more trains.

The result following the changed methods which were adopted was that the congestions were cleared; all of the freight was moved; and some economies were effected in taking off switch engines and extra employees that were necessary when congestion existed, in order to do the extra work; and over time was cut down. A year following the lengthening out of the schedule, "of 20 trains taken at random, from December, 1907, to September, 1908, 13 left Council Bluffs on time, 7 late; an average at Council Bluffs of 8 minutes late. They arrived at Green River, 11 of them on time, 9 late; or an average of 5 hours and 54 minutes late. In 1906 the 20 trains referred to previously averaged 106 hours and 50 minutes; and the 20 in the year following the extension of the schedules averaged 106 hours and 40 minutes—practically the same time consumed on the two schedules."

Increased tonnage relieved congestion.

Actual time practically the same.

The recommendation made by witness on September 17th (4294) as to the extension of the schedules were approved by Mr. Mohler, and the extension was made. In the opinion of witness the most efficient rate of speed upon which to operate freight trains between Council Bluffs and Ogden to get the general merchandise traffic over the road in the best possible time, taking the traffic as a whole, would be between 10 and 12 miles an hour. That would make the trains run between stations probably 15 to 20 miles an hour.

10 to 12 miles per hour most efficient speed for merchandise trains.

As to the difficulties which surround the operation of a single-track road, when there are a great many trains to be operated over it: "Under the rules prescribed for the safety and operation of trains, they have certain direction rights and rights by class. Trains inferior to others under the rules and as designated on the time-cards, are required to clear the superior trains a certain prescribed number of minutes; to be off the main track and clear, with the switches locked. As between trains of the same class, the direction rights on the Union Pacific would require eastbound trains to take the sidings and clear the time of westbound trains. That would apply to freight trains of the same class; the eastbound trains being inferior, by direction rights would be required to take the side track for westbound trains. Trains are handled largely by train orders put out by dispatchers. The dispatcher has authority to supersede the time-table

Difficulties of operation on single track road.

rights of trains; and he does that by issuing train orders; which might give a train of an inferior class the right over a train of superior class either by direction or class rights. As the density of train traffic increase on a single track road, the contingencies increase; the liability of trains to break in two; engine failures; hot boxes; and the automatic block signals under some conditions, result in the delay of trains. In order to make them efficient it is absolutely necessary that the requirements be observed literally. At times these signals will fail and give a stop indication, through some mechanical defect. Although the engineer might see the track clear for five or ten miles ahead, the rules would require him to stop and wait a certain length of time before proceeding, and, under certain conditions, to send a flagman ahead until he could see the next block."

Principal difficulty in making time is the meeting points.

(4295) When the traffic is heavy the principal difficulty in making time is the meeting points—the meeting and passing of trains. During 1907, at the time the 74-hour and 30-minute and the 100-hour and 45-minute schedules were in vogue, there was an average, between Cheyenne and Rawlins of 20.23 freight trains, and 10.37 passenger trains. On the Wyoming division, Rawlins to Green River, there was an average of 21.29 freight trains and 10.22 passenger trains. At the time referred to by these figures the Wyoming Division extended from North Platte to Green River. The total for the Wyoming Division was 17.87 freight trains and 10.65 passenger trains. In 1900 there was an average of 901 gross tons and in 1909 1,538 between Council Bluffs and Ogden. It would have required 70 per cent. more trains or 8.86 more freight trains; a total of 21.52 freight trains in 24 hours or a total of 33.8 freight and passenger trains if the business of 1909 had been handled with the same number of average tons per train as were hauled in 1900. The additional trains would have caused more delays at the meeting points, and the contingency which witness has detailed as being the cause of delays to trains.

Additional trains required with same tonnage as in 1900.

Train priority.

(4296) The more passenger trains on the road the more delays to freight trains—for the reason that they have superiority both by class and direction. Stock trains eastbound were given priority over westbound time freight trains. The fast mail train is given rights over all passenger trains. Passenger trains are required to clear the time of the fast mail train five minutes. The dispatchers use their judgement as to the handling of the fruit trains. If they were not making their schedules, the dispatchers might give them right of track over the district, as against all westbound freight trains. He might possibly give it the right over unimportant local passenger trains.

Primitive conditions occasioned many train wrecks.

"In 1900 accidents were very numerous, particularly in the mountain territory. There were a good many passenger train wrecks and a good many freight train wrecks. Block signals and interlocking plants were installed. Better education of the train and engine men was inaugurated—constantly schooling them on the train rules and on the use of the air brake, and more attention was given to physical

examinations of the men; all of which are accomplished by keeping on the road the greater part of the year a school of instruction, consisting of three cars, one fitted up (4297) for the examination of train and engine men and other employees who have to do with the operation of trains; another to instruct the engine men and train men in the proper and efficient use of the air; and the other car run bi-annually, in charge of a surgeon who examines new employees and re-examines the old employees as to their physical qualifications. This and other methods of operation have tended to reduce accidents on the Union Pacific since 1900 very materially. From 1902 to 1907 inclusive, the accidents to passengers and employees, as indicated by the reports made by the Union Pacific Railroad to the Interstate Commerce Commission, were, in 1902, number killed to employed, one in 627 employees; in 1903, one in 495; 1904, one in 552; 1905, one in 715; 1906, one in 380; 1907, one in 418. The number of train accidents per million locomotive miles has decreased from 20 to 10 in about the same period."

School of instruction maintained.

Number of accidents greatly reduced.

Witness describes more in detail the betterments made on the U. P. subsequent to the receivership. (4298) The same. (4299) Witness thinks the betterments have been made in a very substantial manner. "The foundation has been laid for a first-class railroad; the work is not by any means completed; the bridges have been standardized, and the roadway signs have all been standardized. Buildings, depots, the standards of ballast, the standards of rail, the standards of fencing have all been arranged on the most substantial basis; and if the work continues as it should on that foundation, from my personal observation, the road will be as good as any in this country." The work has been done in a first-class manner in every particular. As compared with the betterments which have been made on other western lines witness thinks they have been, as far as track is concerned, of a higher standard and that the signals and interlocking plants have been of a higher standard than those of other lines west of the Missouri River.

Character of betterments.

(4300) Witness would not say that the shops and roundhouses were any better than some of the other transcontinental lines. "We have modern shops at Omaha, perhaps as good as any railroad machine shops in the country. Outside of that our shops and roundhouse facilities, while they would compare favorably with other lines, I think are no better." As to the roads west of the Missouri River in U. P. territory witness thinks the physical conditions of the U. P. are better than any other road. In the operation of trains upon the U. P. efficiency has not been subordinated to economy. In 1906 there were 94.65, and in 1907 there were 214.52 miles of double track in operation between Council Bluffs and Ogden. The additional double track put in operation in 1907 was ready for use probably in the Fall of that year. The work was generally completed at that time. The U. P. in 1875 as described by witness was the old-time railroad. There are no railroads in the country now so far as witness knows that are in the condition the U. P. was in

Physical condition of U. P. better than other western lines.

U. P. poorly constructed originally.

then. Witness thinks perhaps the U. P. was not quite as well built as some of the other roads that were built at the same time because it was to some extent a war measure and the construction work was pushed very rapidly. (4301) From 1875 the condition of the road was gradually improved up to the time of the reorganization. Up to 1888 the improvement was rather slow. From 1885 up to the time of the receivership there was considerable more activity than in the preceding ten years. Under the Charles Francis Adams' administration considerably heavier rail was laid, some depots were built, one at Cheyenne costing $100,000, and some stone depots at Valley and Columbus. Some of the yards were enlarged, especially the one at Denver, and shops were built.

Improvements up to receivership.

Witness thinks that less than $4,000,000 was spent in additions and betterments between 1885 and the receivership. Nothing charged to betterments during the receivership. The line was bettered a little--not very much. Business was poor, (4302) and earnings were poor. No money was spent that could be avoided. The property was kept in shape the best it could be, and after the reorganization the work of putting it up in fine condition was undertaken. It seemed to have been planned by the men who bought it and they brought on the scene those who were very capable of carrying the work out and understood what was to be done, and it proceeded from that time until the present time very substantially and rapidly.

Very few betterments during receivership.

Immediately after the panic there was some cessation in the work but it has been practically in progress all the time. The lengthening out of the train schedules was co-incident with the panic, "and I well knew that it would result in economies, and it did result in economies. We increased the trainload, and when you increase the trainload, certainly you decrease your expenses. But the prime cause of increasing the load at that time, came about from conditions that had existed some time prior—a threatened and existing congestion, and the recommendation for this particular lengthening of schedules came to me from the train dispatchers, and the train masters, and the assistant superintendents, and superintendents, who were wrestling with the operation of trains, and I conveyed that to the vice-president-general manager as my recommendation for a better and more efficient operation of the road, and to avoid the possibility of another congestion as had existed twice prior to that in my experience on the Wyoming division. But I will admit that it resulted in economies that were very much appreciated, and that we were glad to have at that time, and we were also obtaining economies from other sources."

Lengthening schedules brought economies, but was an operating necessity.

Recommended by those dealing with train movement.

(4303) At the time of the panic there was a heavy reduction of force in the shops at Omaha and in other shops. The new work was quite generally stopped. It was approaching the Winter season and the work would discontinue naturally in a short time. The new work was gradually resumed during the ensuing year, 1908. The new work at that time consisted principally of double tracking. In

Shop forces reduced during panic.

1907 there were 214 miles of double track and in 1908 there were 297 miles. The year referred to by the witness was the fiscal year which ends June 30th. "Q. * * * Now isn't it a fact that that double tracking was all done in the Summer of 1907 before the panic—that additional double tracking that brought it from 214 miles to 297 miles? A. No. Some of the ballasting and completion was done in the Spring. Q. Did you lay any rail in the Spring? A. Yes, sir. We operated the steam shovels. There never has been a season that we did not work our gravel pits. Q. You did not do very much that Spring? A. We did not go at it as heavily as we did in some of the previous years."

Property kept up.

At the time of the panic all men that were not absolutely necessary in the general offices were dispensed with. The Company put in effect all of the economies they knew of, but still maintained the property in a good physical condition. It was not allowed to run down. (4304) Borie where one of the new interlocking plants was put in, is the new junction of the line from Denver with the main line west of Cheyenne. The interlocking plant was put in absolutely as a safety precaution. The grade and other conditions at that point make the interlocking plant necessary. The Denver line ends on the main line in two legs of a wye, one at Borie and one at Corlett. The junction at Corlett is not protected in that way and there is only an ordinary switch there.

Interlocking plants for safety.

The difference in the two places is that Corlett is near Cheyenne and on level track and the dangerous conditions do not exist there. "Q. Outside of this interlocking plant, are there any others along the line that were installed solely for the use of the Union Pacific where you do not cross a foreign line? A. Yes, sir, at Lane Junction, the junction of the new line (new cut-off) and the old line, we established a modern, up-to-date, electric interlocking plant with 23 levers to let the trains from our old main line on to the double track." The road there is used exclusively by the U. P. (4305) In addition to the two interlocking plants just referred to, which were installed for the use of the U. P. exclusively, there is a mechancal interlocking plant at Watson's Ranch, at the end of the double track, and one at Archer, Wyoming. The one at Archer is at the end of the single track. There are ten miles of double track east of Cheyenne and an interlocking plant at the end of that by which trains are permitted to pass from the single track to the double track, or in the other direction only under the authority and direction of an operator stationed there—out of the hands of the trainmen.

Exclusive interlocking plants.

"Accidents have occurred where trains standing at the end of the double track were struck by trains coming in—somebody leaving the switch open. That is impossible of occurrence under these conditions. We have at Buford, the end of the double track between Cheyenne and Buford, an interlocking plant similar to that at Archer, and from Buford to Hermosa Junction an electric train staff installation; also in that territory the automatic electric signal

Protection against accidents.

Electric train staff and automatic electric signals.

installation, which, I understand, was peculiar to the Union Pacific until quite recently. I understand the Lehigh Valley have adopted a similar installation on one of their single-track gauntlets. The building of the double track from Hermosa to Laramie, 16 miles, and from Buford to Cheyenne, 26 miles, leaves a gauntlet of 11 miles between the ends of the double track on top of the Rocky Mountains, and at Buford there is located an electric staff machine, two machines at the next station, Sherman, and two others at the next station, Dale Creek, and one machine at Hermosa, the other side of the Sherman tunnel. A train can go from Cheyenne to Laramie without train orders, over this single track, and that is the object of the installation, and it is the only safe way that trains can be operated over a single track without train orders.

Safety afforded by staff.

"When the train arrives at Buford the operator gives them a staff, an instrument taken from the machine, and which cannot be taken from the machine unless it has synchronized with the machine at Sherman. In other words, the operator could not get this staff out of the machine unless the staff at Sherman was in the machine there. And no train crew is permitted to occupy the main track between these two machines unless they have in their possession the staff, except following each other; it has the permissive feature, and in that it is peculiar, and for that reason the automatic signals were established to protect the trains in the rear, so that one, two, three or four trains can go into a block following each other, but never two trains in the opposite direction unless the rules are (4306) violated by the trainmen. It is impossible for the man in charge of the machines to give two trains a staff at the same time, and the switches are electrically locked and connected with the machine, so that a trainman is practically locked in on the sidetrack; he cannot get out unless he has a staff authorizing him to go."

Some of the interlocking switches have been installed as a temporary measure and will be taken out when the double track is completed. The one at Lane and the one at Borie will remain permanently. There are interlocking plants at Council Bluffs, and at the east end of the Omaha bridge, and at Gilmore, but those are all used jointly by the tenant lines. The Company has seven electric interlocking plants and seventeen of the mechanical plants. Those are ordinarily put in at places where foreign lines cross the U. P. and the expense is joint.

Seven electric interlocking and 17 mechanical plants.

Advent of air brake.

Air brakes were invented shortly after 1875. Witness remembers being employed as a brakeman on passenger trains and using the hand brake. He remembers as a passenger conductor having the first air brake train in 1881. "I remember, coming east with Mr. S. H. H. Clark, the president; we started out of Laramie and the brake failed, we did not understand it, and we ran by Fort Saunders, and Mr. Clark said, 'We will just cut out the air-brake and go back to the old hand-brake—I think that is safer.'"

Economic effect of tonnage.

(4307) By increasing the train load you can decrease your expenses quicker and more effectively than in almost any other

way. "Q. This would be true, wouldn't it. That increasing the train load from 901 tons to 1,538 tons the percentage of increase in expense would be less than the percentage of increase in tonnage? A. I think so." The freight train movement to Denver was shortened from 58 hours to 48 hours in January, 1910. In 1900 witness thinks the time between Omaha and Denver was 48 hours; and the distance was shortened only by the construction of the Lane cut-off —a decrease of about nine miles. The main line to Ogden has been shortened 40 miles including the Lane cut-off.

Faster freight service to Denver.

(4308) The time on the main line remains the same as it was in the Fall of 1907. The competitor of the U. P. into Ogden is the D. & R. G. Witness has recently been over that line. "Q. Is that line in condition to make fast time? A. So far as its density of traffic is concerned I should say that trains are not very greatly interfered with. The physical conditions are such that it would appear to me not to be safe to make fast time with freight trains on a good many portions of it." The U. P. did not make the schedule of 100 hours and 45 minutes in April and May, 1909. It was running, witness thought, 6, 8, or 10 hours late. The trains varied. The winds and weather conditions affect some of them more than others. He has not made an estimate of the average time late. The U. P. is making the schedule now with fair regularity. The car service agent's office selected these 20 days that witness testified about. "Q. They picked out the days, did they? A. I don't understand that they were picked out. We took the 1st of September, and the 5th of September and the 15th of September (4309) which would be a fair indication of how the trains were moving then. I don't know whether the other trains were taken on any particular day each month. * * *

D. & R. G. not in physical condition for fast time.

Dates selected at random.

"Q. You selected the 1st, the 5th, and the 15th of September. The time taken by those trains would be no proof whatever as to the time of the trains on the 2nd, 6th and 16th of September, would it? A. No; just simply an indication. * * * That is all I offer it as." Now, about these other days. All the trains in those 20 days between September, 1906, and August, 1907, were late. He doesn't think any of them were running on time at that time. He knows about that only in a general way. He knew they were running late, and it was his opinion that none of them arrived on time. "Q. Do you know whether the 20 trains taken represented a fair average of the time that they were late, or do you simply know that 20 trains showed the result you have given, and you offer those as illustrative? A. That is all I know—that they were selected at random. * * *

No trains on time.

(4310) "The density of the traffic in 1907 between Council Bluffs and Ogden was 17.34 freight and 11.71 passenger; in 1909, 12.66 freight and 12.28 passenger. In 1907 the total of the two was 29.04, and this year 25.94. The density is a little lessened.* * * We have shortened the time on the Portland train and on the Denver train;" but not on the Ogden train. On transcontinental

Main line density.

Shortened time on Portland and Denver trains.

traffic to Portland the U. P. meets the competition of the N. P. and the G. N. On traffic to Denver it meets the competition of the Rock Island and the Burlington, the Santa Fe, and the Missouri Pacific.

Time of Overland Limited.

The time of the Overland Limited November 6, 1900, between Omaha and Ogden was 31 hours and 15 minutes. (4311) Witness has a memorandum showing that in December, 1900, it left Omaha at 8:20 a. m. and arrived in Ogden at 2 p. m. the next day. Witness gives the time for the train for each year, as follows: "November 6, 1900, 31 hours and 15 minutes; June 2, 1901, 31 hours and 25 minutes; December 31, 1902, 30 hours and 35 minutes; October 25, 1903, 30 hours and 30 minutes; November 24, 1907, 33 hours flat; November 20, 1908, 33 hours; November 7, 1909, 33 hours and 30 minutes, and February 20, 1910, 30 hours and 15 minutes."

Reasons for slower time.

(4313) Witness gives the following reasons for the slower time of the Overland Limited under improved conditions of track. "Since 1900, the time the reconstruction work was commenced, up

Time consumed by slow orders.

to the present time, we have had slow orders from Omaha to Ogden, from one to six hours, thus delaying a train of this class from 1 to 6 hours. Last fall I made a personal check of the slow

Reasons for slow orders.

orders on the fast mail and it aggregated over 3 hours. These slow orders are absolutely necessary; they are in connection with steel bridges that are going in, ballasting work that is being done, and other work of that character, which makes it absolutely necessary to lose this time, to be safe. It varies with the conditions. As I say, last fall in December, I made a check; took all of the slow orders that were out on the different divisions and applied it to No. 9, and it aggregated a little over the 3 hours that would have to be overcome by that engine in order to make its running time from Omaha to Ogden."

Average speed including stops.

The average speed, including stops, of the Overland Limited in 1900 was 31.6 miles per hour; in 1901, 30.9; in 1904, 29; in 1905, 29.1; in 1906, 31.2; in 1908, 30.3. Witness presumes the S. P. has been doing similar work and would naturally have slow orders of their own. The 3 hours on the U. P. could not be applied on the train through to San Francisco; it could only be applied to the U. P.

Helper engine eliminated.

proper. "Q. Has the fact that you have had less grades and less curvature enabled your trains to run faster? Is that any advantage? A. I hardly think so. Before the grades were reduced helper engines were used. I might give an illustration of that. From Laramie to Red Buttes, on the old line, it was practically level. A train would run there very fast, and then would obtain a helper engine, which would make the speed quite uniform to the top of the hill. Now that grade on the new line has been made uniform from Laramie to the top of the hill, 43 feet to the mile, and no helper engine is used. So that with one engine the train probably would not go between Laramie and Sherman as quick as formerly when using the helper engine, but the economy was there in dispensing

with the helper and the elimination of the risk that goes with a double header."

Lucin Cut-off.

(4314) Witness is familiar with the new Lucin cut-off across Salt Lake. The construction of that cut-off shortened the distance 43 miles. Trains are frequently delayed on the trestle across Salt Lake, because of conditions prevailing there. Witness believes that the S. P. can make better time ordinarily by using the Lucin cut-off than by going over Promontory mountain. The cut-off was built not only to save time, but in order to haul more tons of freight. The Portland freight train of the U. P. was shortened from 90 to 74 hours. That is the time on the U. P. between Omaha and Green River.

East bound freight trains.

(4315) The eastbound freight trains come so irregularly and are of such varying importance that they are run as extras. There are no regular eastbound through scheduled freight trains on the U. P. The eastbound fruit trains make about 12½ miles an hour—quite uniformly.

Knows of no agreement with fruit shippers.

Witness knows of no agreement with the fruit shippers. "I think we have said to the fruit shippers that that would be our time; that that was the time we were capable of making, and I have understood that they wanted faster time, and made some effort to get it. I have been approached by the traffic people to run the train a little faster, but felt that we were doing the best we could on the 80 hour proposition, and that it would be foolish to attempt a faster schedule when we were not able entirely to maintain the one that was in operation." (4316) The Nellie Bly train was put on as a war measure on account of some controversy as to the closing of the Ogden and Granger gateways as against the Union Pacific and an alliance was made by which the train was moved via Sacramento. At that time the Denver & Rio Grande was operating closely with the Short Line. (4317) When the trouble ended the time of the train was lengthened to 53 hours and 30 minutes. In 1900 the schedule was 54 hours and 30 minutes. At the time the 54 hour schedule was in force the train was run in sections as the traffic demanded. The congestion following the San Francisco fire lasted pretty well into the Winter of 1906.

Nellie Bly train.

Rules governing train operation.

Odd numbered trains on the Union Pacific have the right-of-way over the even numbers. The odd numbers run west and the even numbers run east. Trains of the same class, if eastbound, would take the side track for a westbound train. In the absence of specific orders given by the dispatcher a fruit train would take the side-track for a westbound train, but if he should issue an order that "engine 1620 will run extra from Green River to Rawlins on the following schedule with rights over second class trains" that would require the westbound train to clear the time of the fruit train at the stations specified on the order. (4318) In other words it would reverse the rights of the train and give the fruit train rights over all schedule freight trains running west. The dispatcher handles them at his own discretion, as circumstances may dictate in order to facilitate the movement of traffic. Ordinarily, however, the time

card rules apply, and the fruit train would take the side track for a westbound train.

Fast mail.

The fast mail has priority over all other trains. Taking out the delays that are incident to that train it makes the fastest time of any. There are heavy mail transfers at Council Bluffs, before the train starts out. It generally allows 30 minutes to an hour in making transfers. It is the heaviest mail train in the United States. At the terminals after the mail has been worked by the clerks in charge, it is necessary to take it back into the storage cars, and take up from the storage cars mail for other states to be worked by the clerks, so that at all district terminals there is a delay to that train that does not occur to the ordinary passenger trains. That train carries no passengers. It runs clear through to San Francisco (4319) and to Portland. No. 9 the fast mail runs in two sections and is scheduled faster than the Overland No. 1. The schedules of the fast mail were as follows: 29 hours and 30 minutes, 30 hours and 40 minutes, 28 hours and 25 minutes from 1903 to 1908 and 26 hours and 47 minutes on the last schedule February 20, 1910. The time of the Los Angeles Limited between Omaha and Ogden was a little faster than the time of the Overland Limited.

Heaviest mail train in U. S.

Time made by fast trains.

The Los Angeles Limited on November 24, 1907, when it was running, was scheduled at 30 hours and 40 minutes as against 33 hours on No. 1. (4320) The fast mail leaves Council Bluffs at 9:10 a. m. and arrives at Ogden at 11:17 a. m. the next day. The train travels at a speed of 37 miles an hour. With very few exceptions freight trains take the side track for all passenger trains. Occasionally a local passenger train will go on a side track for an important eastbound stock or fruit train. Witness had no personal knowledge except the talk that he heard as to the actual causes which led to the putting on of the "Nelly Bly" 32 hour train. (4321) The trouble grew out of the opening of the gateways to the D. & R. G. and the O. S. L. and closing them as against the U. P. Witness is familiar with those circumstances only in a general way. "Q. Wasn't there trouble over divisions as between the two lines? A. I understand that was the prime cause of the trouble." But as to what the exact details were he was not informed.

Factors in fixing schedule of Overland Limited.

A number of things from an operative point of view would control the schedule of the Overland Limited; the density of traffic; the condition of the roadbed under construction, as to the ability of the train to maintain its schedules. All would be factors in fixing the rate of speed from an operating standpoint. The passenger trains in 1900 numbered 7.31; in 1907, 11.70; in 1909, 12.28. The weight of the Overland Limited was greater in 1909 than in 1900. The date of the last time card of the Fast Mail is February 20, 1910. The Overland Limited is the U. P.'s preferred passenger train. (4322) "Q. That is what I mean. You do not contend, do you, for a moment, that if you had desired to do it you would have been unable to run the Overland right along through these years, as fast as it was run in 1900? A. I would not say that, for

the reason that construction work on the Union Pacific has been very heavy. We have had important bridges, which required a speed of four miles an hour, and the laying of rail, raising of grades under traffic, installation of automatic electric signals, and a great many things that cause slow orders. As I say, they would fluctuate from one to six hours between Omaha and Ogden. That period is pretty well passing away. We have got a double track and are constructing the bridges for the second track, and it necessarily makes slow orders on the present operated line. That class of work is getting pretty well out of the way. The large bridges have been completed, and with the advent of the second track, as it comes in now, I see that the service is bound to improve, unless the traffic grows to such an extent in density that it would present obstacles which we could not surmount. I do not think that will be true. I think with the second track through, we ought to operate better than we ever did, and we will begin to reap the benefit of all that has been done."

Speed retarded by construction work.

Second track will facilitate operation.

The U. P.'s fastest running time is very slow as compared with that of the eastern roads; "but I think that our engines exert themselves nearly as much in making the time or trying to make it as on the eastern lines with their completed double track and better facilities. And they are not necessarily confined to the second track. Facilities for taking care of your engines and taking care of your men, and all, have a great deal to do with the efficient operation of a railroad." Witness knows that the Pennsylvania has to put a helper on its train over the mountains from Altoona. The engine that is used on the Overland is much heavier and stronger than the one used in 1900.

Lincoln.

(4323) WILLIAM DAVID LINCOLN.

Omaha. Car Service Agent, U. P.

Resides in Omaha. Is Car Service Agent of U. P. Witness has charge of transportation, which includes the handling of the trains, the movement of cars, and the making up of schedules. He has been connected with that department since 1889.

Operating conditions in 1907.

"The San Francisco earthquake and fire had a great deal to do with the condition or the congestion on the Union Pacific Railroad in the fall of 1906 and up to 1907. As we all know, the earthquake and fire was about April 18th or 19th. The day after the fire we were called upon, about 11 o'clock, to furnish six cars to load with government stores and camp equipment, to go from Omaha to San Francisco. Those cars were furnished, and the train left there as the first section of our No. 3 passenger train, about 4:30 p. m., and went through to Ogden as the first section of that train, and, if I remember correctly (which I think I do), the train arrived at Ogden on time. (I will state that the cars furnished were baggage-cars.) After this train was forwarded, a large number of other trains went forward, loaded with relief goods, such as food and clothing. The cars which were loaded with this commodity were made up in solid trains and went forward to Ogden on the best possible time. They

Effect of San Francisco fire.

Relief trains.

were given preference over all freight trains, and some east-bound passenger trains were placed on the side-track for them. Some of them were given positive meeting-points with these relief trains.

Jobbers' supplies and building material.

After the situation or the distress in California had been relieved, then began the movement of jobbers' supplies to re-stock their stores, and of building material to re-build the cities. This material and supplies moved very heavily during the fall of 1906 and the winter of 1906. On account of the terminals of the Southern Pacific at San Francisco, and Oakland, being partially destroyed,

Cars used for storage.

the cars began to accumulate at those terminals; it was also on account of the jobbers not having (4324) storage-room for the freight as it arrived, and they used the cars for storage purposes. As the cars began to accumulate and congest in the San Francisco and Oakland yards, they would be set out at Sacramento and backed up. The cars reached us at Ogden or Green River at that time. The line between Green River and Ogden being operated from Salt Lake, we began setting out cars at Green River, then Rock Springs. Then we took our double track out of service. It had just been completed

U. P. tracks filled.

between Point of Rocks and Rock Springs. We filled that up with cars; we filled up quite a number of our passing-tracks, and the largest of our terminals were congested. This backed up to Council Bluffs. Along about April or May, the following spring, we practically cleaned up the cars which we had on the line, but the Southern Pacific were not in a position to accept regularly from us the cars we offered to them. There would be times when we would set a train or possibly two trains out east of Ogden. Then there was a very heavy movement of other freight, both west-bound (on account of the country on the North Pacific Coast and California being settled up) and eastbound, stock and fruit, which made a very heavy movement of traffic in September and October, 1907."

On account of this heavy congestion in the fall of 1907, trains, more especially freight trains, were not being operated on schedule.

Trains running from 10 to 24 hours late.

They were running on an average of from ten to twenty and twenty-four hours late, and some later. That would represent an average along about 90 to 100 hours and more of time between Council Bluffs and Ogden. This condition was very general on practically all of the westbound trains from the early fall of 1906 up until 1907. The cause of the trains running behind time to such an extent was the density of traffic. Through Wyoming the most difficult track to operate was between Cheyenne and Evanston. (4325) In October, 1907, there were between Cheyenne and Laramie 21 freight trains per day; between Laramie and Rawlins 23; between Rawlins and Green River 32; and between Green River and Evans-

Train density.

ton 30. In addition to that there were 11 passenger trains per day on each district between Cheyenne and Green River, and 13 between Green River and Evanston, which is about the capacity of those lines. In September, 1907, between Rawlins and Green River there were 33 freight trains in both directions. There were about 11 passenger trains. During the same month (September, 1907,)

there were 19 freight trains between Cheyenne and Laramie, and 29 between Laramie and Rawlins. There were about 11 or 12 passenger trains a day.

"The district terminals were congested. We were trying to move our time freight trains on their schedule, which at that time was 74 hours; not with the tonnage the engines were capable of handling. The engines which were handling dead freight were being loaded to their capacity, and were making an average of 10 miles per hour over the different districts. As the time freight trains were doing practically very little better, to relieve the congestion and to move the freight which was accumulating on us every day, we increased the tonnage on the time freight trains, and cleaned up our congestion. We got our time freight trains, and all other trains moving practically on schedule; and we have had no congestion since, except around Rock Springs and Green River in the past 45 days, which was on account of very severe weather conditions. Q. When confronted with the conditions which existed in the fall of 1907, why did you not relieve the situation by running your trains faster? A. Running the trains faster would have meant that we would have had to reduce the tonnage, which would have been less cars hauled per train, and would have meant more trains on the road, and (4326) more meeting points; and we came to the conclusion from the facts that the less trains we had on the road and the less meeting points, the more tonnage we could move in a given time." The principal difficulty he experienced in operating trains at times of heavy traffic was the large number of meeting points, which would naturally delay trains, and it was impossible to get them over the road. "When there is a heavy density of traffic moving over a district, it is quite often that there will be two, and many times three, freight trains on the passing tracks or at the station where they are to pass; and, as the passing tracks are not long enough to hold all three trains, they will naturally have to 'saw by each other,' as we say, and it will delay all three trains in getting by. If they have to meet passenger trains they have got to clear the time of the passenger train 10 minutes; that is, they have to go in on the sidetrack and have the switches locked 10 minutes before the passenger train is due. It will take them 5 minutes to go in on the passing track, and it will take them 5 minutes to get out. So they lose practically 20 minutes in meeting a passenger train, if the passenger train is on time. That would be only one train. If there are three freight trains there, and not enough sidetrack or passing track for all three trains, then the freight trains and also the passenger train will be delayed in getting by. Q. What were the results following the methods adopted by you in 1907 for the purpose of removing the difficulties of operation which then existed? A. When we increased the tonnage of our trains, we began to gain on the cars at the different district terminals, that were being held back, and we began to move all our freight on regular schedule. The terminals were soon cleared up, and all the freight was moved regularly. I can recall

Method adopted for relief.

Increased tonnage and cleaned up congestion.

Faster trains would mean more trains.

Difficulties attending meeting points.

Trains moving on time.

that after we had everything cleaned up, our freight trains were moving practically on time, and the traffic department congratulated us on the fact that we were moving our freight on schedule."

No. 53 could not make schedule time.

The reasons for the lengthening out of the 54-hour train, No. 19 originally and No. 53 afterwards, prior to the time it was lengthened out in 1907, were as follows: "In 1901, No. 19, I believe, was 54 hours and 30 minutes from Council Bluffs to Ogden. This schedule was not maintained regularly; I was watching the train myself, to see if it was not possible to make the schedule. We were continually after the superintend- (4327) ent to give it preferred attention. They would get the train on time a day or two, and then it would go off and get worse, until it was 8, 10 or 12 hours late. So as to make regular service with the train, we lengthened it out to 74 hours." The density of traffic was one of the principal causes of the train's failure to make its schedule time; another was the increased number of passenger trains; the increased movement of fruit and stock. "We made every effort possible to handle the trains over the line on schedule." In the judgment of witness, the most efficient speed, on the average, for running general merchandise trains between Council Bluffs and Ogden, under existing circumstances, is 11 miles per hour, from one district terminal to another, including stops. The proper speed, taking the distance from Council Bluffs to Ogden is 100 hours. "We have found by experience that that is the best speed that we can handle trains between Council Bluffs and Ogden and move all the freight regularly." Witness examined the records to refresh his memory as to the time made by train No. 53, or 19 as it was then numbered, in the years 1901, 1902 and 1903. The records that Mr. Mohler testified to were made up under the supervision of witness in his office. The data was obtained from the Chief Dispatcher's train sheets.

Most efficient speed, 11 miles per hour.

How records showing actual time of trains were made up.

They were made up as follows: "We gave these trains a special number, so we could locate them; so that the dispatchers from one district to another could advise the dispatcher ahead when the California time freight was due and what it was, and they could keep track of it; in other words, the dispatcher at Omaha, when the train left Council Bluffs, would number it, say 'California Special,' or 'California Expedited No. 1,' and he would report to the dispatcher at Grand Island that engine so and so, on California Expedited No. 1, would reach Grand Island at such a time, and he would show on his train sheet that number. The dispatcher at Grand Island would put the same information on his train sheet and the one at North Platte, and so on through. Some times the dispatchers failed to put that information down on the train-sheets. In telling the clerk in the (4328) office to get up the information for me, I told him to take the 2nd, 10th and 20th of June and October, California trains, but if he could not locate that train through to Ogden (some dispatcher may have dropped the number on his sheet so that he could not locate it through) to take the next one that he could run through. That is the reason that they are not all

on one day for the three or four years." At the time witness selected the days and gave instructions to his clerk, he did not know what the showing would be. He had not looked it up in advance. Witness told his clerk to take three days in June and three days in October. "He wanted to know what three days to take, and I said 'Take the 2nd, 10th and 20th.'" And the results of the investigation are as Mr. Mohler testified upon the stand here.

Dates taken at random.

In witness' judgment those examples are typical of the actual movement of that train at that time. Those train-sheets are practically in his charge. "They are in the dispatchers' offices, but I can have them at any time that I ask for them." They are where he can afford counsel for the Government or any representative they may select, an opportunity to examine them. "I can have them sent to my office so they will be convenient for any one who wishes to examine them. * * * I will be glad to give them any information they would desire to have at the time they examine the sheets." He will do the same as to the train-sheets covering the time made by trains in the summer and fall of 1907; or any other time between 1900 and the present time, with the exception that the sheets for 1900, between Green River and Ogden, have been misplaced and he cannot now locate them. He could not find them when he made up this report. With regard to his testimony about the S. P. terminals at San Francisco being destroyed by the earthquake, he could not testify as to that from personal observation. He got his information from the reports of the S. P. that they could not take the U. P. freight; also from newspaper reports. (4329) "MR. DUNNE. Mr. Severance, the fact is that the terminals were not destroyed; but the facilities of the shippers were destroyed. They were using our terminals and cars as storehouses. MR. SEVERANCE. Yes, I understand that. I know the ferry-house was not destroyed, but I know that the shippers' warehouses were destroyed. MR. LOOMIS. Are you willing to take that as a qualification of the witness' testimony on that subject? MR. SEVERANCE. Yes. I know it is true. Certainly."

Examples are typical.

Glad to afford opportunity to examine train sheets.

Terminals at San Francisco not destroyed.

The statement witness made in regard to the best speed to be maintained by freight trains from Omaha to Ogden to the effect that 11 miles an hour was the best, was intended to include the time between district terminals. It does not include the dead time at terminals—the time consumed in changing engines. A train is generally detained at a terminal about one hour, to make changes, and undergo the necessary inspection, to take the car numbers, etc. There are eight terminals between Council Bluffs and Ogden, not including Council Bluffs or Ogden. (4330) There are some district terminals where the time consumed would be more than an hour. More than an hour would be taken at Cheyenne. "At Sidney we would take more time than an hour, on that train, for the reason that it goes into Sidney about 10 or 10:30 at night. To save carrying the train on a dispatcher's sheet after the next day, we do not start it out until after midnight. It is an accommodation and a help to the dispatcher." Most of the grades and curvatures had

Best speed, 11 miles per hour, between district terminals.

been reduced in 1901. The new line over Sherman Hill was opened in the fall of 1901. There was not the same density of traffic in 1901 that there was in 1907 and 1906.

Merchants want regular rather than fast service.

(4331) The merchants at Salt Lake, all the merchants, are being given better service than was given them in 1901. "I think you will find that the merchants and the people generally want regular service, and not fast service. They want regular service. * * * They would rather have regular service that they can depend upon, than fast service that they could not depend upon." At times in 1909 the schedule was not made, but "I think as a general thing we have done very well with the schedule. * * * Say a train averages along about 4 or 5 hours late; that is doing very good, on a freight train of a thousand miles' run." He thought it was doing pretty well to get the traffic through in 104 or 105 or 106 hours. "It is an improvement on getting part of it through in 66½ hours and the balance of it a great deal longer—giving you more regular service, all of your freight." Witness' assistant was working on other work besides getting up these figures as to the run on various days; he was not assigned especially to that work; witness thought it took him nearly two months to get the information. This information appears on train sheets. There is one sheet for each district, there being 9 districts. They are filed by dates; by days. They are all filed together; but each district is kept by itself.

Improvement on practice of giving only part of traffic fast service.

Tracing train movements.

(4332) In compiling the information witness' assistant would have to select a train. The U. P. train leaving Council Bluffs to-day would appear on the sheet, from North Platte to Sidney, tomorrow, maybe. "It would generally appear by number; California Expedited No. 1, or No. 2, or No. 3; but, as I say, some of the dispatchers did not put it on their sheets, and we could not follow them all through. Q. If you would examine the first sheet and the last, showing the time of leaving Omaha and the time arriving in Ogden, if the number is on, you knowing about the number of days, would that help any, or do you have to look through each one? A. We naturally look through each one, to connect up each district—the train in to the district terminal and out, to see that some one has not made a mistake. * * * Q. You said you were giving the merchants of Salt Lake better time than before. I wish you would explain that a little more fully. A. Before, we handled a very high class freight on No. 53, which had the California and Utah freight; a few high class commodities; and the cars of other commodities, of lower class, were moved on extra trains. Now, we move practically all the Utah freight on the same schedule; there is very little if any freight which is not moved in the California Special at the present time. We run three and four sections of it, when we have the freight to move. * * *

Better service to Salt Lake.

No preferential merchandise freight.

"We give preference to high class freight; but practically all of it now we say is high class freight. We have very little dead freight—coal and lumber and grain, something like that. Then we use that freight to fill out our high class freight trains with. If we have not

enough of the high class freight to make a good train, we will fill it with the other freight, and it gets just as good service as the high class freight." When there is not freight enough to fill up a train, it is held for the next day, so as to be sure to get a full train load. That is in the interest of economy in operation; and also in the interest of economy in the movement of freight.

Tonnage requirements reasonable.

(4333) A shipper would not expect a railroad to run a train with his one car of freight or three cars of freight. He would want it to run a train with a reasonable number of cars of freight. If it was "20 cars of freight—the prospects are that we would arrange to get that freight out; in fact I know we would. We would use empty fruit cars to help out with, or other freight lying around. Give us a reasonable number of cars, and we will run them out of Council Bluffs as soon as we can get them ready." He doesn't send out anything except a whole train, if he can help it; because that is economical railroading. The schedule train leaves terminals every day, and practically on time every day. The schedule trains are not held waiting for freight to fill them up, but only the additional sections of the regular train.

Schedule trains not held for tonnage.

(4333) JAMES P. O'BRIEN.

O'Brien.

Portland. Vice Pres't and Gen. Manager, O. R. & N.

Resides in Portland, Oregon; Vice-President and General Manager of the O. R. & N. Company, and General Manager of the S. P. Lines in Oregon. Has been Vice-President and General Manager of the O. R. & N. about five years. (4334) Has been connected with that company all together about 17 years. Witness has had certain statements made up showing betterments made on the O. R. & N. from 1901 to 1909. The first statement, marked Defendants' Exhibit 154, shows the expenditures for additions, betterments and improvements made on the O. R. & N. Company's lines, from July 1, 1900, to June 30, 1909, showing a total amount of expenditures of $13,494,979.59. (4335) Defendants' Exhibit 155 is a detailed statement of the main line rail renewals referred to in Defendants' Exhibit 154, the total cost of which amounted to $1,422,721.62. Defendants' Exhibit 155 summarized, shows that during the period extending from July 1st, 1900, to June 30th, 1909, rails of weight less than 75 lbs. per yard were decreased to the extent of 367.71 miles, while mileage of rails of weight 75 lbs. per yard and over, was increased 418.39.

Statement showing expenditures for betterments on O. R. & N. from 1900 to 1909.

Rail renewals

(4336) Defendants' Exhibit 156 is a detail of the branch line rail renewals, included in Defendants' Exhibit 154. Summarizing on both main line and branches, there have been laid a total of 512.54 miles of rail, replacing rail of lighter pattern, at a grand total cost of $1,583,306.71. (4337) Defendants' Exhibit 157 is a detail of the items "Sidetracks," "Ballasting," "Tie-Plates," and "Turn-Tables," included in Defendants' Exhibit 154. The total amount expended for "Sidetracks" being $596,021.25; for "Ballasting," $495,159.35; for "Tie-Plates," $264,910.84; (4338) for "Turn-Tables," $72,231.35. Defendants' Exhibit 158 is a detail of the

Sidetracks, ballasting, tieplates and turntables.

Block signals, oil plants, track scales, fencing.

items "Automatic Block Signals," "Fuel Oil Plants," "Track Scales," and "Fencing," referred to in Defendants' Exhibit 154, the total cost of "Automatic Block Signals" being $373,933.06; of "Fuel Oil Plants," $98,564.36; (4339) of "Track Scales," $17,518.69; of "Fencing," $112,414.45. (4340) Defendants' Exhibit 159 is a detail of the item "Changes of Line," referred to in Defendants' Exhibit 154, the total amount expended for that item being $2,017,821.31. (4341) Defendants' Exhibit 160 is a detail of the item "Bridges and Trestles," referred to in Defendants' Exhibit 154, the total expenditure therefor being $2,280,407.66.

Changes of line.

Bridges.

Equipment.

(4342) Defendants' Exhibit 161 is a detail of the items "Locomotive Equipment," "Passenger Cars," and "Work Equipment," included in Defendants' Exhibit 154, the total net expenditure for "locomotives" being $1,437,656.24, for "Passenger Cars," $458,153.70, and for "Work Equipment" $285,401.67. (4343) Defendants' Exhibit 162 is a detail of the item "Freight Equipment," included in Defendants' Exhibit 154, the total net expenditure for "Freight Equipment" being $2,485,950.53. (4344) Defendants' Exhibit 163 is a statement of expenditures for additions, betterments and improvements on the O. R. & N. lines from July 1, 1909, to November 30, 1909. It shows a total expenditure of $768,864.96. The estimated cost of new work started and now under way, dating from November 30, 1909, is $8,247,861.54. It is shown in detail in Exhibit 164. (4345) Defendants' Exhibit 165 is a statement of the O. R. & N., showing new lines constructed and under way between July 1st, 1900, and January 1st, 1910, the total amount of the expenditure therefor being $4,742,220.25. (4346) Defendants' Exhibit 166 is a statement of the O. R. & N., showing freight and passenger traffic moved in 1900, compared with the year 1909. It shows tons carried one mile in 1909 to be 659,380,815, as against 338,429,897 in the year 1900, being an increase of 95 per cent. It shows the passengers carried one mile in 1909 to be 133,488,037 as against 58,034,786 for the year 1900, being an increase of 130 per cent.

Expenditures from July 1 to Nov. 30, 1909.

New lines.

Traffic moved in 1900 and 1909.

Defendants' Exhibit 167 is a statement of the O. R. & N., showing average consist of through passenger trains, January 1, 1900, to January 1, 1910. It shows the number of passenger trains in 1900 to have been 4; 1909, 6; 1910, 10. The number of mail cars in use in 1900 was 4; in 1910, 9. Dining cars in use in 1900, 2; 1910, 6. No observation cars in 1900; 2 in 1909; 6 in 1910. (4347) Witness produces six photographs showing the type of bridges which are now being erected by the O. R. & N. Witness thinks there were at least 40 new steel bridges erected during the time covered by the preceding statements. The lines of the O. R. & N., from Portland to Umatilla use oil as a fuel. Witness produces photographs showing the character of oil stations in use. The storage of the St. Johns plant is 55,000 barrels; at The Dalles plant 30,000 barrels, and the gravity tank from which the locomotives are oiled has a capacity of 28,500 gallons. Six oil storage plants have been erected on the

Consist of passenger trains 1900 and 1910.

Photographs of bridges.

Photographs of oil stations.

O. R. & N. during the time covered by the preceding statements. The photographs produced by witness are marked Defendants' Exhibits 168 to 175, inclusive. Witness produces a photograph of the new passenger station at Spokane. It was erected two years ago at a cost of about $55,000.00. (4348) The photograph of the Spokane depot was marked Defendants' Exhibit 176.

Spokane depot.

Witness has also caused to be prepared a statement, Defendants' Exhibit 177, of expenditures for additions, betterments and improvements on lines of the S. P. in Oregon, from July 1, 1904, to June 30, 1909,—totaling $4,213,660.00. This statement began with year 1904, because previous records were destroyed in San Francisco fire. (4349) Defendants' Exhibit 178 is a detail of rail renewals on the lines of the S. P. in Oregon, included in Defendants' Exhibit 177, the total expenditures for rail renewals being $663,626.27. (4350) Defendants' Exhibit 179 is a detail of the items "Ballasting" and "Tie Plates," included in Defendants' Exhibit 177, the total expenditure for "Ballasting" being $230,220.31, and for "Tie Plates" being $75,000.00. (4351) Defendants' Exhibit 180 is a detail of the item "Bridges and Trestles," which appears in Defendants' Exhibit 177, the total expenditure for that purpose being $1,251,173.45. Defendants' Exhibit 181 is a detail of the item "Automatic Block Signals," (4352) "Fuel Oil Plants," and "Track Scales," which are included in Defendants' Exhibit 177, the total for "Block Signals" being $120,988.48; for "Fuel Oil Plants" $105,015.88; for "Track Scales" $6,206.82. (4353) Defendants' Exhibit 182 is a detail of the item "Turntables," which appears in Defendants' Exhibit 177, the total expenditure for that item being $31,443.53. Defendants' Exhibit 183 is a detail of the item "Fencing and Cattle Guards" (4354) and "Side Tracks," which appear in Defendants' Exhibit 177, the total expenditure for "Fencing and Cattle Guards" being $3,552.09, and for "Side Tracks" being $144,252.36.

Expenditures for betterments on S. P. lines in Oregon.

Rail renewals.

Ballasting and tie plates.

Bridges.

Block signals, oil plants and track scales.

Turntables.

Fencing and side tracks.

Defendants' Exhibit 184 is a detail of the item "New Equipment Purchased," included in Defendants' Exhibit 177. In the detailed statement the equipment is subdivided into "Locomotive Equipment," "Passenger Cars," "Freight Equipment," the total expenditure for all new equipment being $1,247,670.55. (4355) Defendants' Exhibit 185 is a statement of expenditures for additions, betterments and improvements on S. P. lines in Oregon from July 1, 1909, to November 30, 1909, and of important new work started and under way, dating from November 30th, 1909. The total expenditures for additions, betterments and improvements between July 1, 1909, and November 30, 1909, amounts to $355,114.04. The estimated cost of new work started and under way is $372,757.59.

New equipment.

Estimated cost of new work.

(4356) Defendants' Exhibit 186 is an S. P. statement of new lines constructed and under way in Oregon, June 30, 1904, to June 30, 1909, the total expenditures therefor amounting to $2,785,121.09. (4357) Defendants' Exhibit 187 is a S. P. statement show-

New lines of S. P. in Oregon.

Average consist of S. P. through passenger trains in Oregon.

ing average consist of through passenger trains January 1, 1900, to January 1, 1910, on lines of that company in Oregon. In January, 1900, the average number of passenger trains per day was 4; in 1910, 6. The dining cars in 1900 numbered 2; in 1910, 6. Sleeping cars in 1900 numbered 6; in 1910, 16. Observation cars in 1900, none; in 1910, 2. Defendants' Exhibit 188 is an S. P. statement of freight and passenger traffic moved on lines in Oregon in the year 1900 compared with the year 1909. It shows that the tons carried one mile in 1909 amounted to 243,614,463 as against 132,142,241 in 1900, being an increase of 84 per cent. It shows that the passengers carried one mile in 1909 amounted to 117,934,081 as against 48,829,969, in 1900, being an increase of 142 per cent.

S. P. freight and passenger traffic moved in 1900 and 1909.

Leland bridge.

(4358) Witness produces three photographs, Defendants' Exhibits 189, 190, and 191, of a large structure known as bridge No. 495-A, erected near Leland, Oregon, showing the difficulties of bridge filling work being done by the S. P. in Oregon. The photographs show the old bridge and wooden structure. Witness produces a set of six photographs, Defendants' Exhibits 192 to 197 inclusive, typical of new bridge construction on the S. P. Lines in Oregon. (4359) Witness produces a statement, Defendants' Exhibit 198, giving a list of some of the new steel bridges constructed by the S. P. in Oregon. The statement includes twenty bridges and gives their numbers, location and length. Witness produces three photographs, Defendants' Exhibits 199, 200, and 201, typical of new depot buildings the S. P. Company is putting up in Oregon. The first one is at Albany, the next one is at East Portland, the next at Eugene. (4360) Witness produces photographs, Defendants' Exhibits 202, 203, and 204, showing the type of oil stations being erected by the S. P. in Oregon. The first is a picture of the storage tank and the gravity tank at Roseburg, Oregon; the next is a photograph of the large storage tank at Glendale; the next shows the storage tank at Glendale, also the gravity tank.

New steel bridges.

Oil stations.

(TESTIMONY RESUMED, NEW YORK,
FRIDAY, FEBRUARY 25, 1910.)

Corrected statement of total expenditures.

Witness states that since the last adjournment he has discovered an error in Defendants' Exhibit 186. The figures shown on the original exhibit simply cover the amount of money that was spent on the Pacific Railway and Navigation Company lines, which is shown in the last column. A correct statement of the total cost is $3,480,407.35, including what has been spent and what witness expects to spend (4361) to finish up the line. Defendants' Exhibit 205 is a corrected statement of Defendants' Exhibit 186. (4362-4364) Defendants' Exhibit 206 is a detail of the items "Buildings and Miscellaneous," contained in Defendants' Exhibit 177. The total amount expended for that purpose being $334,510.26. (4365-4368) Defendants' Exhibit 207 is a detail of the item "Buildings," contained in Defendants' Exhibit 154, the total amount expended

Buildings and miscellaneous —S. P.

Buildings— O. R. & N.

therefor being $673,765.29. (4369) Defendants' Exhibit 208 is a detail of the item "Water Supply," contained in Defendants' Exhibit 154, the total amount expended therefor being $134,017.83. (4371) Defendants' Exhibit 209 is a detail of the item "Miscellaneous," contained in Defendants' Exhibit 154, the total amount expended therefor being $107,745.29.

Water supply —O. R. & N.

Miscellaneous —O. R. & N.

(4372) Witness has been connected with the O. R. & N. 17 years as assistant superintendent, superintendent of rail lines, general superintendent, general manager; has been general manager about five years. Has been connected with the S. P. since July, 1904, as general superintendent. (4373) His jurisdiction on the S. P. extends from Portland to Ashbrook and the branch lines in the state of Oregon. Previous to 1904 there were no common officials of the two companies in Oregon. They were separate. The consolidation took place about 90 days previous to the time witness was appointed general superintendent of the lines in Oregon. He was appointed in July, 1904. (4374) Witness' attention is called to Complainant's Exhibit 107, being the U. P. and S. P. systems' map. Witness could not say whether it covered all the lines of the O. R. & N. and the S. P. in Oregon, or not, unless he checked it up. "Q. You had better check it up, because I want to ask you about those branches there. A. It does not include the Lake Creek & Coeur d'Alene Railroad branch line running from Lake Junction to Farmington Landing." Lake Junction is in Washington, about 20 miles west of Spokane. Farmington is on the lake; that is a cut-off from Spokane to the Coeur d'Alene country.

Witness' jurisdiction on S. P.

Map of Harriman lines.

New lines not shown on map.

(4375) There is also an extension of the St. Johns line to Maegley Junction, Oregon, 3.79 miles. "It extends from St. Johns in the direction of the Columbia River, and was built for two purposes; one to give us a direct connection with the S. P. & S. line, that is the North Bank line; and again, later on, with an extension to give us a double-track line from Albina, which is our freight terminal, to Troutdale, about 20 miles east of Portland, on the O. R. & N." This 3-mile road is only a few miles out of Portland. There is also another line not shown on the map, being an extension from St. Johns to Troutdale. It is in connection with the other road, to give a double track into Portland. It is 14.28 miles long. Troutdale is 19 miles east of Portland on the main line. The Des Chutes Railroad is not shown on the map. (4376) It extends from Des Chutes on the Columbia River. "Q. My question is directed to any track that had been laid, any existing lines in 1908; not to contemplated work or survey work, but merely to branches that were in existence, over which you could operate trains. You have stated them all, have you? A. Yes. The Des Chutes Railroad that I have referred to, I do not think any track had been laid; I think we had made some expenditures on the line, in the way of surveys and acquiring rights of way, etc., but I could not say definitely that construction had been started at that time."

Des Chutes line.

The 14.28 miles between St. Johns and Troutdale is now under

construction. Counsel states to witness that he is not asking about contemplated lines or surveyed lines, but about lines that were in existence at the time the map was made. "Q. * * * Now, how about that other line, the St. Johns line to the bridge; was that in operation then? A. That was in operation. Q. But the one you say was built for the purpose of giving you double-track was not in operation? A. No, sir." The Troutdale line has not been completed. Witness doesn't think there were any other lines that were in operation at the time this map was printed. He considers it a truthful map, so far as showing the lines that the O. R. & N. had in operation at that time, with the exceptions he has stated. The same correction should be made on the Lake Creek & Coeur d'Alene; it is not in operation; but is practically ready to be operated.

Branch lines.

The terminus of the O. R. & N. is at Huntington. That is where it joins the Short Line. (4377) The O. R. & N. line running from Biggs to Shaniko was built 10 years ago by a gentleman by the name of E. Lytle and his associates. It was acquired by the O. R. & N. about 2 years, possibly 3, after it was built. It has not been extended by the O. R. & N. It is about 70 miles from the main line to Shaniko. The next line east of that one seems to leave the main line at Arlington, and runs up to Condon; it has been in operation about three or four years. It is 45.31 miles long. It has not been extended since it was built. The next line runs up to Heppner; it is about 45 miles long. It is an old line. Witness thinks it was built 15 or 16 years ago by the O. R. & N. direct. The next branch line is the Pilot Rock branch, about 12 miles long. It was built about 3 years ago. (4378) The next branch line is one running from Pendleton to Wallula. The next branch is the Elgin branch, running from La Grande to Joseph. There are no other branches running towards central Oregon. The map indicates a railroad running from Baker City to Tipton, owned by Mr. Eccles of Ogden, Utah. It is a narrow-gauge line. Witness thinks it reaches timber principally. Mr. Eccles is a lumberman.

Lines constructed into or towards central and eastern Oregon.

"Q. What lines, if any, have been constructed into or towards central or eastern Oregon by the O. R. & N. since that date? A. The Des Chutes Railroad Company is constructing a line from Des Chutes station, on the O. R. & N., to Redmond, Oregon." Redmond is 133 miles south of the Columbia River. It is not located on any river. It is about 10 miles west of Prineville, (4379) about halfway between Prineville and the Des Chutes River.

The Des Chutes Railroad follows the river for about 70 miles; then it leaves the river and goes across the country. They have been laying track on the Des Chutes Line for 60 days. The Hill interests are also building a line up the Des Chutes River. The name of the corporation building the line is the Oregon Trunk Railway. They have not laid any track. They have done some grading; rock work. Witness could not say to what extent, however. "Q. How far up from the Columbia River have they progressed with that sort of work? A. I could not say. I think they

have a few men scattered along through the Des Chutes canyon, a distance of 60 or 70 miles." As to their work up in the canyon: "I think we started construction three weeks or a month before they took any action whatever toward building the line—I mean active work in connection with building the line. (4380) Q. At the time you commenced construction you knew they were going up there, didn't you, or understood they were? A. Well I didn't know it, but there had been some talk about it. * * * I understood that the corporation was about to change hands; but I didn't know what they were going to do with it—whether they were going to build or not. Q. But you got busy right away, when you heard that, didn't you? A. We had been getting busy for some time. We had been getting busy for a year and a half. I might say, right here, that I had in my possession, for over a year before we started work, authority from the executive board and an approved appropriation for the building of that line; but we had not started construction for the reason that we could not get our maps approved by the Interior Department at Washington. They were government lands, and we did not want to start unless it was absolutely necessary, until all of the maps were approved. Q. Did you get them approved before you started? A. Part of them. Part of them are not approved at the present time. Q. But you did consider it absolutely necessary, when you heard about this other line, did you? A. Yes; we started work. That shows for itself.

Building of Des Chutes line began before rival line started.

Had been preparing for year and a half.

Could not get maps approved.

"Q. You said you were not going to start until you regarded it as necessary. But as soon as you heard about another line going up into the Des Chutes, you regarded it as necessary, didn't you? A. Not necessarily so. There was a great clamor for transportation facilities into the interior; and the matter had been taken up with us by the Chamber of Commerce and different commercial organizations in Portland, and we decided to start work. Q. That was nothing new, was it—this matter being agitated and taken up by the Chamber of Commerce? They had been doing that for years, hadn't they? A. No, sir; it never had been taken up with me; I knew nothing about it being taken up with all those organizations, until the time I refer to. There had been general talk— Q. Weren't you aware that the people in interior Oregon went to the legislature of Oregon because you people would not build in and develop the interior of that country, and got the legislature to pass a constitutional amendment authorizing the State itself to build lines in, because you would not build? A. Yes; I know that. Q. That did not occur three or four weeks before you started work on the Des Chutes road, did it? That occurred two or three years ago, didn't it? A. No, sir. Q. How long ago? (4381) A. Not to exceed, I should say, 5 or 6 months before we started work"—actual construction work.

Clamor for transportation facilities.

Legislature petitioned for state to build.

The O. R. & N. started actual construction work about 6 months ago. At the last session of the legislature that action was taken—about 5 or 6 months ago. "Q. Don't you know that the citizens and

business men of Portland had been trying to get your people to build into central Oregon, for several years, and had approached your president for that purpose, on his visits to Portland, years ago? A. I understand so. Q. That is what I thought. A. But the question you asked was if the matter had been taken up with the commercial associations, and I said not until a short time previous to the work being started. Q. There had been a great deal of agitation there, hadn't there, and a great many requests in one way or another? A. A great deal of newspaper agitation. Q.—which you don't care much about, do you? A. No. Q. That doesn't interest you? A. Well, I have seen so much of it and in checking it up I have satisfied myself, in many cases, that it did not voice the sentiments of the public.

Newspaper agitation does not always voice sentiments of public.

"Q. But when another line of road starts into your territory, that does wake you up, does it? A. Another line of road had not started construction into our territory when we started construction of the Des Chutes line. I think I said that. Q. But you said you had heard about a change of hands of a certain corporation? A. Well, if you read the newspapers there in Portland I think you would have to be aware of that fact. Q. The fact is, that you are both going up there now? A. I don't know. I know that we are going up there. I am not familiar with the plans of the other gentlemen. Q. Didn't your corporation go into the courts and try to enjoin the other line from building up that valley? A. No, sir; we did not. Q. What did you do about that? A. We went into court over some right of way matters which we claimed we were entitled to and which they claimed they were entitled (4382) to. We had not done anything to stop them from building their line. Q. Except using certain lands that they claimed for right of way? A. Well, you put it that way. I say they are using certain lands that we claim as our right of way. Q. Well, the court let them go ahead in spite of your efforts, didn't it? A. The matter has not been settled yet, as I understand it. I might say right now that there is no particular reason for scrapping or trying to keep them from building, because there is plenty of room in that canyon for two railroads to build. Q. There is plenty of business in central Oregon for two railroads, isn't there? A. Time will tell. I should say no. I should say any one line will have pretty slim picking for a number of years to come. Q. Is that the reason you have been so long in starting —because you thought it would be slim picking? A. To some extent, yes."

Another line had not started.

"We are going up there."

Did not attempt to stop rival line.

Not enough business for two lines.

The present proposed terminus of the Des Chutes line is about 150 miles from Burns. Between Des Chutes and Redmond the line runs through some very fair wheat country. The soil is light, and crops are very uncertain, depending largely on winter snowfall and moisture. The lands are what are termed "light" lands. They require a great deal of moisture to get any kind of a crop. After leaving the wheat sections, the line will tap an irrigated district, of

Character of country.

which Redmond is about the center. The line does not reach any timber. In the canyon they may be able to drive a limited amount of timber—drive some of the streams and deliver a reasonable amount. It is chiefly an agriculture line. 4.09 miles of the Des Chutes line has been constructed. (4383) The balance of the expenditures on that road were for grading, surveying and other expenditures. The other line has not laid any track. "I might state, if permitted to do so, in connection with this 4.09 miles of track laid, that within 30 days we will have at least 50 miles more of grade ready for track. We have now ready for track probably 40 miles of grade, but it is spread out over the district, and they will have to clean up the little pieces in between; so in 30 days, I think there will be 50 miles of grade ready for rail. Q. You now intend to complete the line as soon as you can, to Redmond? A. Yes, sir. All the track material is on the ground, ready to lay, as far as the track is in shape for it."

Work done on Des Chutes line.

Albina is the Portland freight terminal for the O. R. & N. (4384) The Pacific Railway and Navigation Line is the most northerly of the branches of the S. P. shown on the map, and is west of Portland. It runs to the Pacific Ocean and follows the coast to Tillamook. That road was constructed about 18 months ago. It will serve principally a timber country; a little dairying on the coast side of the range, but that will give very little traffic. Witness believes the line will be running through to Tillamook not later than the first of August this year. The Crabtree-Albina cut-off is a line that was built on account of two very bad rivers—the Santiam Rivers; they were out of their banks all the time, leaving the bridges high and dry. "We have two steel bridges, 500 feet in length each. Every season the river would be out of the bank and cut a new channel. So we built this as a cut-off, so we could get a good foundation for the bridges and hold them." That road is shown on the map, running from Lebanon to Crabtree. It connects what is known as the Woodburn branch running from Woodburn to Springfield. That cut-off, witness thought was about 13 miles long. It is not shown on the map. About 5 miles of the old line had to be abandoned on account of water trouble.

Pac. Ry. & Nav. line.

Crabtree-Albina cut-off.

(4385) The next S. P. branch is the Lafayette and St. Joseph cut-off, 2.33 miles. That was built for cut-off purposes, too. It was found that by building this cut-off 5 miles of unprofitable line could be abandoned. There are very expensive bridges on the old line. The next line is the Springfield and Henderson cut-off, built to connect up the Woodburn branch with the main line. The only other branch that has been constructed since July 1, 1904, is the Beaverton & Willsburg. That is a cut-off leaving the west-side division at Beaverton, a short distance out of Portland; coming down to the Willamette River, crossing the river and connecting up with the east-side line at Willsburg. It was built principally to take the heavy freight traffic off from 4th Street in Portland. The Corvallis & Eastern was bought about three years ago. It runs from Yaquina

S. P. branches constructed.

Corvallis & Eastern.

Bay easterly, and ends at Detroit. It is about 149 miles long. That line had a right of way to the summit of the Cascades, but witness does not think it has any right of way east of the summit. (4386)

Coos Bay line.

Witness' attention is called to a series of dashes, which indicates a line leaving the Shasta Route main line at Drain, running westerly and southerly to Coos Bay. No work is being done on that line at the present time, but quite a large amount of money has been spent on it.

"Q. The fact is, about that line, is it not, that you did at one time, about the fall of 1905, do some work in the way of putting in bridges and grading, that you laid a little track which you afterwards took up, and finally declined to go on with the line unless the people at Coos Bay would guarantee you four per cent. on your investment over and above expenses of operation and maintenance. Wasn't that the story, in substance? A. I think that is right, except that I do not think there has been any track taken up. I might say, right here, that as far as the line you refer to is concerned, while it is in my territory it is not under my jurisdiction; it is under the jurisdiction of the chief engineer, at San Francisco, Mr. Hood, who is in charge of construction. Q. How long ago was construction work on that line abandoned? A. I think it was started early in 1907. Q. Wasn't it earlier than that? A. I don't think it was earlier than that. To the best of my recollection it was in 1907. I would not know definitely, because it is not under my charge."

Work stopped.

(4387) Witness qualified his testimony as to the work being abandoned by saying that it had been stopped. "Q. * * * And you have not resumed it, or your company has not? A. I don't think so." There is a line in Oregon, not owned by the S. P., running from the Willamette River, opposite Salem, through Dallas, Oregon, and into the timber; known as the Salem, Falls City & Western. Its main traffic is timber. The president of the company is Mr. Gerlinger of Portland. It is about 30 miles long.

Salem, Falls City & Western.

Oregon Southeastern.

There is another line running out of Cottage Grove, known as the Oregon Southeastern. It is 12 to 15 miles long. Witness does not know who owns it. (4388) There is also a line known as the Pacific & Eastern, going east from Medford, Oregon. That is down the Rogue River Valley, close to Ashland. It is 13 miles long, and there are about 20 miles or more under construction. It is being built by John R. Allen.

Pacific & Eastern.

(4389) The O. R. & N. mileage between Portland and Spokane is about 42 miles longer than the North Bank road. The O. R. & N. reaches Walla Walla, and it has branches that pretty well cover the fruitful part of southeastern Washington. It also reaches the Coeur d'Alene country in Idaho. It reaches Lewiston with the line owned jointly with the N. P. "The line from the Navigation tracks at Texas Ferry, that is, the main Spokane line, to Lewiston, was built by the O. R. & N. Company, but it had been turned in with some lines which the Northern Pacific built north of Lewiston, and is now being operated as a joint line by the Camas Prairie Railroad

Territory served by O. R. & N.

Company." The line is operated strictly independent, and the traffic departments have to solicit their own business. The employees of the joint line are neutral. All of the lines in eastern Washington that witness has spoken of are competitive with the N. P., and to some extent with the G. N. The Palouse country is a very rich wheat country reached by the rails of the O. R. & N.

S. P. passenger train service in Oregon.

(4390) Witness' attention is called to Defendants' Exhibit 187, showing the consist of through passenger trains on the S. P. in Oregon. From 1900 to 1909, 4 regular trains were run, 2 in each direction, between San Francisco and Portland. "These trains of course run in two sections and three sections, as the business required. We had only 2 regularly scheduled trains, but we frequently ran two and three sections on No. 15 and No. 16, which were the popular trains." Defendants' Exhibit 187 does not purport to show the extras that might be run, nor the sections. The same is true as to the 1910 statement, which indicates 6 trains. The third San Francisco train was put on four or five or six months ago. It is called the Shasta Limited fast train. It leaves Portland at 6 o'clock in the evening. It reaches San Francisco in 27 hours. The old time was 36 hours. Witness thinks the other trains are still 36 hour trains. Those passenger trains run pretty full, as a rule, in one direction.

Tide of travel changes.

(4391) "During certain seasons the traffic is heavy southbound, and then the tide of travel turns the other way. As a general rule, when it is running heavy in one direction, it is light in the other." Defendants' Exhibit 167 covers the through trains from Portland to Huntington and beyond. "They are, all of them, either through trains or have through connections." By through witness means Omaha and Chicago. It also includes the through train from Portland to St. Paul via Spokane and the Canadian Pacific. In January, 1909, the Soo-Spokane route was not open to Portland. "MR. DUNNE. That one train a day to Spokane applies to all of these years; as well to the previous years as to 1910? WITNESS. Excepting that previous to putting on that through Portland-St. Paul train by the Canadian Pacific, via Spokane, the train was strictly a local train between Portland and Spokane, (4392) but the train now does business between Spokane and Portland, and then it goes on through to St. Paul and Minneapolis over the Canadian Pacific."

Train via Spokane.

Trains via Huntington.

In 1900, when the exhibit referred to shows 4 trains a day, that would be only one train each way by Huntington, and after that 2 trains each day by Huntington. At present there are 4 trains by Huntington each way, as against one each way in 1900. Freight trains from Huntington to Portland, a distance of 404 miles, consume 34 hours and 55 minutes. That includes the terminal stops, which approximate from 5 to 6 hours. The Blue Mountains are located between Huntington and Portland. The maximum grade there is 116 feet to the mile for a distance of 17 miles at one point,

and a distance of 11 miles at another point. (4393) The speed per hour of the freight train referred to is a trifle under 12, between 11 3-4 and 12 miles per hour.

Handles 33½% to 40% of number of trains on U. P.

Witness is of the opinion that, between Umatilla and Portland, he is handling not over 33 1-3 per cent. of the number of trains, possibly 40 or 50 per cent., that are being handled on the U. P. main line. That is a mere estimate. There are about 4 miles of maximum .65 per cent. grade between North Powder and Telocaset. There is nothing more to speak of; rolling country up and down.

O. R. & N. has no double track.

The O. R. & N. has no double track. "We are running that fast train now with practically 75 per cent. of the regular rating for other trains.

"Q. Why do you try to expedite the business to such an extent instead of operating economically, the way the Union Pacific does at Ogden? A. I think the conditions are entirely different. We have a very peculiar situation at Portland. We do not own our own tracks, and operate on the west side of the Willamette River. The work is done by the Northern Pacific Terminal Company, which is owned (4394) jointly by the O. R. & N., the Southern Pacific and the Northern Pacific. The Terminal Company handles the business as it is delivered to them by each line. For instance, the Northern Pacific train comes in at 6 o'clock in the morning, and an O. R. & N. train comes in at 6:05, and a Southern Pacific train comes in at 6:10, and they are handled in their order. Inasmuch as practically all the merchandise business is handled on the west side of the river, in order to make early morning delivery we expedited this business so that the train would reach Albina and be delivered to the Terminal Company and leave a leeway of 5 or 6 hours for the freight to be weighed, switched and delivered at the warehouses as well as on the industry tracks which are located all through the Terminal yards. In other words, a train getting into Albina at 4 o'clock in the morning, by the time it was broken up by the Navigation switch engines, put into a transfer, and delivered on the west side of the river, would probably not get over there until 7 o'clock in the morning. If we found a Northern Pacific or Southern Pacific freight train in ahead of us, in all probability that freight would not be weighed up and spotted on the team tracks and on the industry tracks and on the house tracks until 10 or 11 o'clock. That meant practically delivery the following day, for the reason that the merchants there do all their teaming on the inbound business in the forenoon and use the afternoon exclusively for delivery of their outbound business. So that if a car was not placed on the west side, say, at 8 o'clock in the morning, in all probability it would not be touched by the teamsters until the following day, and it would make probably 24 hours later delivery.

Merchandise train expedited for early delivery.

"Q. And you would be handicapped in competing with the Northern Pacific to that extent? A. No, we would not be handicapped competing with the Northern Pacific, because they would

probably be in the same boat if their trains get in along early in the morning; but their trains arrived, say, 2 or 3 o'clock in the morning, which gave the Terminal Company a reasonable time to break up the trains, weigh and spot the cars at the different locations. Their trains were delivered into the Terminal yards direct, while our trains were delivered at Albina, and we had to switch and make transfer. We do not run any freight trains on the west side of the river; our terminals are on the east side. Q. If you were a day longer in getting stuff over to the merchants than the Northern Pacific, it would be a handicap to you in getting business? A. I presume it would. Q. It is for the sake of getting business and making prompt deliveries that you expedite this movement? A. I assume that is the point in question."

Prompt deliveries.

(4395) Witness thinks that the movement of freight equipment per mile per day on the O. R. & N. runs from 28 to 31 miles per day. (4396) "Q. Mr. O'Brien, I find that Mr. Kruttschnitt in his testimony did give those figures as to the average movement per car per day of freight cars. He gave the Oregon Railroad & Navigation Company at 23.9 instead of 31 as you gave it. A. I think he is right. I have a statement made up by the Bureau, the American Railway Association, handling freight car matters. It is for August, 1909. The statement is dated February 10, 1910. I assume this is the last period they have this information worked up for. In referring to it I find that the O. R. & N. made an average of 24.9. Q. Whatever period it was that Mr. Kruttschnitt intended to cover by this, he gave it as 23.9. It was for the year ending June, 1909; he had the entire year's average. A. Well, that is not far out of the way. This is for the month of August, and during a busy period. The bulletin also shows the average movement per car per day for the U. P. for the same month; it is 47.1. For the G. N. it is 25.1; for the N. P., 23.9; for Santa Fe Railroad, 27.6 miles, and the Santa Fe Coast Lines (they have it divided up) 49.5 miles.

Average car mileage per day O. R. & N.

Average movement per car per day on other lines.

(4397) Witness states that he has prepared details called for by Mr. Severance in regard to loss and gain in branch line mileage shown in one of the exhibits introduced in evidence, in connection with his direct examination. The statement is marked Defendants' Exhibit 210, and is set out on page 4397. In regard to lines being constructed in Oregon—the number of the different railroads operating in the state of Oregon not owned or controlled by the O. R. & N., the S. P., or the O. S. L. "I cannot testify for the line east of Huntington. I think on the Oregon Railroad & Navigation lines I mentioned the Sumpter Valley, the line leading from (4398) Baker City to Tipton, as the only one. I wish to add to that the Great Southern—a line of from 15 to 20 miles long, running from Dalles to Dufer; and the Mount Hood Railroad, a line about 15 miles long, running from Hood River in a southerly direction. I don't know the terminus of the line at the present time. They have put on a slight extension. Also the Cen-

Other roads operating in Oregon.

tral Railway of Oregon, a line about 10 miles in length, in the Grande Ronde Valley, running from Union to Cove; also the Oregon Electric, running from Portland to Salem, in the Willamette Valley, with a branch line serving Hillsboro, Oregon, with a mileage of about 65 miles." It does a freight business as well as a passenger business. Also the Portland Railway, Light & Power Company, operating a line from Portland to Oregon City and a line from Portland to Casadero.

"Q. Does it do a freight business as well as a passenger business? A. These are the portions of the line that do the freight business. The Portland Railway, Light & Power Company, I might explain, owns and controls all the city lines of Portland, also the suburban lines, handling passenger traffic, but the lines I refer to now are the lines that they handle both passenger and freight business over. I would also like to make another statement. Mr. Severance asked me this morning in regard to new lines under construction on the Southern Pacific. I did not include in the statement I made, which has been used as an exhibit, the Oregon Western, which is the name of the corporation, built from Drain to Coos Bay, or the Oregon Eastern, which is built from Natron in a southerly direction, connecting up with the Southern Pacific line at Klamath Falls. I wish to state that both of these lines, while a part of them are in my territory, are not under my jurisdiction, the construction work being under the jurisdiction of the chief engineer of the Southern Pacific Company, Mr. William Hood, located at San Francisco." The Oregon Eastern, however, has at present time under construction, 25 miles of line south from Natron. "Also 35 miles in a northerly direction from Klamath Falls, and it is my understanding that at the end of the fiscal year next year's appropriations will carry sufficient funds to finish the balance of the line between those points, I think about 100 miles, closing up the gap between the extensions."

Lines of S. P. under construction in Oregon.

Oregon & Western.

The Oregon Western, the projected line from Drain to Coos Bay, is not now under construction; work on that has been suspended for several years. "But I think work will be started at an early date. (4399) Q. You think there has been a change in the view since the change of management of the road? A. No, I wouldn't say that. I think possibly financial conditions might cause the change. I have reason to believe that work will be resumed on this line at an early day. I don't know definitely that it will be. Q. You don't know that definitely? A. No. Q. Now, the Oregon Eastern, that is the corporation, as I understand, building the line running around the east end of the Siskiyou Mountains, up to Klamath Falls? A. I don't know whether the line from Klamath Falls to Weed, where it connects with the present Portland-San Francisco line, has been built under the Oregon Eastern, but I know the work from Klamath Falls north, now under construction, and the work from Natron south, now under construction, is built under the Oregon Eastern corporation." This line was built from Weed, in California, up as

Oregon & Eastern.

far as Klamath Falls. "Q. That is what I say. A Southern Pacific line—we will put it that way. A. Yes, that is right." It was proposed and it was intended when that was started, to carry that line up to Natron. And connect with the S. P., so as to avoid the grade with the Siskiyou Mountains. "Q. That is the line you had in mind? A. Yes, the Oregon Eastern.

Electric lines.

"Q. Now these electric lines that you spoke of, the Oregon Electric line running up to Salem, with a branch line to Hillsboro, and the Portland Railway, Light & Power Company, Portland to Oregon City and Portland to Casadero; they are ordinary electric railroads, but they do freight as well as passenger business. A. Yes, sir. Q. Is it necessary in through shipments to transfer, or do they take your cars right out on those lines? or do they do a local business only? A. I would not say definitely about that. I think Mr. Miller can answer that question. I will say as far as the Portland Railway, Light & Power Company is concerned that they do not have to transfer. We deliver our equipment to the Portland Railway, Light & Power Company for loading at points on their line. We interchange not only traffic but equipment with them." They run up as far as Oregon City, about 10 miles out of Portland. (4400) That is where the paper mills are. Casadero is out in an easterly direction from Portland, about 20 miles. That company acts really as a feeder to the S. P. and the O. R. & N. "They have a rail connection with us also at Fairview, which is about 12 or 14 miles out of Portland * * * on the O. R. & N. And they make a direct transfer to the Southern Pacific at East Portland." The Great Southern, which runs from Dalles to Dufer, is 12 to 15 miles long. It is owned by a gentleman named Heimrich, living at Portland. It is operated for general railroad purposes. It serves an agricultural district. A great deal of the wheat raised on that line is brought to The Dalles, and then ground into flour and shipped out either by rail or water. The river boats go to The Dalles. The Mount Hood road runs 15 miles from Hood River, carries lumber principally, but they handle quite a little fruit. It is owned by David Eccles of Ogden. He owns a mill at the upper end of the line. He has no mill right at Hood River. (4401) The Central Railway of Oregon runs from Union to Cove in the Grande Ronde Valley. Union is on the O. R. & N., 310 miles from Portland; about 90 miles from Huntington. The road is about 10 miles long. It is controlled by some New England people. It taps an agricultural and fruit country. Handles wheat, fruit, beets, merchandise. As a matter of fact, the town of Union is about 4 miles off the O. R. & N. They have a Union station, but the town is not on the railroad. This line serves the town of Union, making connections between the railroad station and the town.

Great Southern.

Mt. Hood road.

Central Ry. of Oregon.

Sierra Nevada High Line.

The Sierra Nevada, High Line, 4.46 miles, is in the Coeur d'Alene district, northern Idaho. The Dayton-Turners line, 11.65 miles, is in the Walla Walla district, about 20 miles east. The Elgin-Joseph line, 62.83 miles, is the one running northerly from

Other lines.

La Grande. The East Portland-Albina line, 1¼ miles, is a double track in the city. The Albina-St. Johns track is the one witness spoke of this morning. (4402) The same is true of the St. Johns-Maegley Junction, 3.79. The Columbia River & Oregon Central Railroad Company, from Arlington to Condon, and the Umatilla Central, which runs out to Pilot Rock, are lines which witness spoke about this morning. The other lines acquired by purchase are the Columbia Southern, the Shaniko line, and the Washington to Howard streets, .4-10 of a mile, in the city of Spokane. That is the total branch line mileage in that period of nine years.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR DEFENDANT.

VOLUME X.

NEW YORK CITY, FEBRUARY 25, 1910.

(4403) E. E. CALVIN (2).

Calvin.

I am Vice-President of the S. P. and General Manager of its Pacific System—lines west of the Rio Grande, New Mexico, and Sparks, Nevada; and south of Ashland, Oregon. "I began in 1872, as messenger boy in the telegraph office. From that time until 1877 served as telegraph operator and agent upon the Big Four line, with the exception of about a year and a half when I went to school. I went to the Union Pacific in 1877, and was telegraph operator, station agent, conductor, train dispatcher, train master, until May, 1887, when I went to the Missouri Pacific as superintendent, remaining there four years. Returned to what is now the Oregon Short Line (it was then a part of the Union Pacific System) as superintendent of the Idaho Division, in February, 1891. Remained in that capacity for four years, and then spent two years as general superintendent of the International Great Northern Railroad in Texas, returning to the Oregon Short Line as general superintendent at the time of the reorganization, after the receivership, on March 16, 1897. Appointed assistant general manager about three years later, and remained there until the 1st of April, 1904, when I went to Portland as vice-president and general manager of the O. R. & N. Company and general manager of the Southern Pacific Company lines in Oregon. In February, 1905, went to San Francisco as vice-president of the Southern Pacific Company and general manager of the lines I have described."

San Francisco. Vice Pres't and Gen. Manager, S. P.

His railroad experience.

Within a few days after taking charge at Portland I was instructed to extend this Shaniko branch line into central Oregon, but on investigation protested against it, not thinking it was the proper way to develop central Oregon. (4404) "The products of cen-

Objected to extension of Shaniko branch.

Recommended an east and west line.

tral Oregon are small grain, live stock, wool, and timber, principally. The live stock, timber, and wool move eastward. I thought it unprofitable to build a line that would necessitate moving that traffic over a heavy grade to the O. R. & N. main line along the Columbia River, over two divides between there and Huntington, recommending instead the building of an east and west line through central Oregon, which would allow the products I have mentioned to move out over a practically level or generally descending grade to the Missouri River. The grain produced in central Oregon, or which would be to a greater extent if they had more railroad facilities and more irrigation, would of course go to the Pacific coast either for milling or export. It was, therefore, my recommendation that instead of building these lines in farther south from the Columbia River, than a distance necessary to take care of the grain on the plateau country, which generally extends from 30 or 40 miles south from the Columbia River, that this east and west line be built and a line around the Siskiyou Mountains, which we are now constructing."

Congestion following San Francisco fire.

The S. P. terminals at San Francisco were not destroyed in the fire—inadvertently so stated here, I think—but there was a condition of congestion after the fire from the destruction of the warehouses and jobbing houses and retail stores of the city, which necessitated the ordering of new stocks of goods, together with what was of course a greater volume of traffic, that of building material. Our facilities were not adequate to that burden. Our cars were used to a large extent as storehouses, it was hard to get the freight out of them, at one time we had as many as 8,000 cars under load in California for San Francisco Bay points. Since 1900 260 miles of new rails, 75, 80 and 90 pound, have been laid between Oakland Pier and Sparks, at a cost of $1,241,000; (4405) also 396 new bridges, culverts and trestles at a cost of $864,000, 425 miles of telegraph wire at a cost of $21,000, 290 miles of new ballast (including double track territory, it being only 246 miles from Oakland Pier to Sparks), at a cost of $612,000; 46.7 miles of new sidings and extension of old, at a cost of $450,700; 187 miles of automatic signals for main track, and 55 miles for second track, total 242 miles, at a cost of $223,000:—all between the same termini. Sunset freight is scheduled over the Coast Line, the line down the Coast from San Francisco to Los Angeles through Santa Barbara.

Betterments on S. P. since 1900—Ogden route.

Betterments on S. P.—Sunset route.

(4406) Items on Sunset Line, between San Francisco and Rio Grande, Coast Line included, "New rail, 75, 80 and 90 pounds, 728 miles, cost $520,000; automatic block signals, main track, 822 miles, second track 60 miles, total 882 miles, cost $911,000; new bridges, culverts and trestles, 1,567 in number, cost $1,552,000; miles of new telegraph wire, 1,627; cost $73,000; miles of ballast 1,229, cost $1,296,900; new sidings and extensions of old, 205 miles, cost $1,515,900." The snowsheds on the S. P. line between Sacramento and Sparks made that portion of the lines especially ex-

pensive. The Rio Grande River—being the line between Texas and New Mexico, is the point from which our trains run into El Paso, a distance of 4 miles, over the G. H. & S. A. line, which is under Mr. Fay's direction. My jurisdiction goes to Rio Grande, Mr. Fay's thence to New Orleans; in a general way, one line has been spoken of as the line to El Paso, and the other as the line from El Paso to New Orleans. Between San Francisco and El Paso on Sunset Line, "changes of line made since 1901, Montalvo to Burbank, California, 59 miles, cost $2,425,900; Strauss to Rio Grande, 13 miles, $626,000; change of line through the city of Santa Barbara, $500,000; the Bay Shore cut-off, from San Francisco southerly, 9 miles, $9,273,000." This is in round figures.

Changes of line on Sunset route.

For reconstruction on Sunset Line, San Francisco to El Paso, since 1901, elimination of curvature and reduction of grades, cost being estimated on account of loss of records in San Francisco disaster, I have the following: "Between Soledad and Santa Margarita, 36 miles; Elwood and Ventura, 25 miles; Los Angeles and Dolgeville, 7 miles; Yuma and Araz, 5 miles; Vail and Mescal, 19 miles; Sybil and Manzoro, 15 miles; Glade and Coholla, 9 miles —a total of 116 miles. * * * (4407) Estimated at $15,000 per mile would be a total of $1,740,000. This estimate was made by our chief engineer, who did the work." The Sunset Line goes through some desert country, and we have made very large expenditures for wells and water treating plants. The shortest route of the Oregon line intersects what is known as the Central Pacific line at Davis, 75 miles east of San Francisco. My jurisdiction goes to Ashland, and the distance for the line between Davis and Ashland is 329 miles. Since 1901 we have laid on that line, in round figures, 203 miles of 75 and 80 pound rail, costing $959,000; have put in 361 new bridges, trestles and culverts, costing $711,000; 151 miles of automatic block signals, costing $181,000; 23.4 miles of new sidings and extensions of old, costing $415,000; 244 miles of new telegraph wires, costing $7,000; and 218 miles of ballast, costing $450,000.

Curves and grades.

Water.

Betterments on S. P. between San Francisco and Ashland.

We have under construction a new California-Oregon line by way of Klamath Falls, the present starting point in California being Weed, but the completed line will have its junction at Black Butte, some 15 miles southerly from Weed, and the terminating point in Oregon will be Natron. The present line between Davis and Portland has a maximum grade of 3.3 per cent in both directions; this new line will have a maximum grade northbound of 2.3 per cent, and southbound of 1.5 per cent. The distance will be shortened about 15 miles. And we estimate the cost will be $18,900,000.

New line to Oregon.

(4408) The Klamath Falls line was authorized in the summer of 1905, but not begun, I think, until some time in 1906. When completed, we expect to move all through freight that way except what may originate on the old line. It will be a much more economical line to operate freight trains over. As against extending the Shaniko line, which I do not think was the best way to develop

Proposed east and west line through Oregon.

central Oregon, I recommended a line to come in from the east. It has not been built, but survey has been made; this line that we are building from Klamath Falls has not reached the proposed junction point of the east and west line. It is 300 or 350 miles from Klamath Falls, across to the east side of Oregon; the country there is still without railroad facilities, and the people in the vicinity of Burns have to drive their cattle 150 miles to Ontario; the line I recommended being built gives egress to cattle, wool, etc., to the east, and is through Malheur Canyon. (4409) It has been built westwardly, I think, stopping at 15 or 20 miles—that was not under my jurisdiction; it was put in operation, I think, some three or four years ago. The only line being built at present, reaching up into central Oregon, is this Des Chutes River line, as far as I know.

Fay.

(4409) THORNWELL FAY.

New Orleans, Vice Pres't and Gen. Manager, S. P. lines, New Orleans to El Paso.

I am and have been Vice-President and General Manager of the S. P. lines New Orleans to El Paso, since April 1, 1904; began service with what is known as the Morgan Railroad, June 1, 1878, as telegraph operator, then station agent, train dispatcher, private secretary and chief clerk to the General Manager, Manager's assistant and General Superintendent of the Louisiana lines from January 1, 1902. (4410) On the New Orleans-El Paso line, before 1895, there were no rails heavier than 61½ pounds—most of the rails 50 pounds. With the exception of a few rock cuts that had rock ballast, where the stone had been broken during the construction, there was no ballast except from alongside the road—dirt, sand. The first 75-pound rails were laid in the latter part of 1895. After 1901 the policy has been constantly to lay heavier rails; standard now is 90 pounds, and all the rail we are now laying is 90 pounds, we went from 75 up to 76, from 76 to 80, and from 80 to 90, beginning to lay 90-pound rail within the last three years. Since 1901 a large portion of the line has been ballasted with gravel, and some of it with slag from the El Paso smelter—the best ballast we have, we cannot get enough of it.

Rails before 1895.

Since 1901, standard rail, 90 lbs.

Ballast.

New bridges.

Our bridges have been reconstructed almost entirely from El Paso through to New Orleans, with the heaviest character of bridge construction, using steel in the bridges proper; and in renewing ordinary trestles we have used creosoted wood. The New York steamers originally went to Algiers, just across the river from New Orleans. The first freight steamer New York to Galveston was in August, 1902. (4411) Prior to 1902 we had generally three steamers a week each way, New York-New Orleans; some dull months in the summer time two steamers a week each way; since 1902 three steamers a week each way, generally, between New York and Galveston, and concurrently two steamers a week—between New York and New Orleans, the New Orleans freight steamers landing on the New Orleans side instead of the Algiers. As to the terminals at Galveston and Algiers, "I have a map here showing the comparative difference between the two terminals. In

Boat service.

Map of boat terminals—Algiers and Galveston.

a general way, at New Orleans there is a rise and fall in the river, from extreme low water to extreme high water, of approximately 20 feet. The wharves at New Orleans are built up and down the stream; and during extreme low water there is quite an elevation to lift freight up to get it into the cars. At Galveston the property purchased was a large block of property fronting on the bay, and it was practicable to build up to date facilities for handling the steamship business from ships to cars and from cars to ships. The rise and fall of the tide at Galveston is about two or three feet."

Improvements at Galveston and Algiers.

The improvements at Galveston up to January 30, 1909, cost $2,118,935—the terminal accommodating fourteen ships, while the capacity at Algiers is four. The trackage at the Algiers docks—leading immediately to the docks—held 71 cars, and at the Galveston docks 547. (4412) The steamship yards at Algiers had a capacity of 281 cars, and at Galveston 1,225. For December, 1909, average time New York to El Paso was eight days, 22 hours and 15 minutes; in 1902 it was 9 days 8 hours and 14 minutes; in 1900, via Algiers, it was 9 days 6 hours and 33 minutes. Since 1900 local business moving west of New Orleans, between Houston and New Orleans—362 miles in distance—has increased very much. Lafayette is the first through freight terminal out of Algiers, about 144 miles from New Orleans. "We are building what we call a cut-off, across there; it is a little less than 53 miles from Lafayette to the west bank of the Mississippi River opposite Baton Rouge. We have been constructing that for several years. It is not quite complete. The construction is very difficult; a great deal of it is through an extremely difficult swamp to build a road through. When completed, that line will make a saving in time, on through freight, in connection, for instance, with the Illinois Central at Baton Rouge, of from 24 to 48 hours in through time."

Cut-off between Lafayette and Baton Rouge.

Running time to El Paso.

In the summer of 1902, the schedule time for moving freight from Galveston to El Paso was 49 hours and 50 minutes (4413)—the running time was 17.6 miles per hour; in 1907 the schedule time was 60 hours and 40 minutes and the running time excluding stops was 17½ miles per hour. In 1901 the freight time, Algiers to El Paso—schedule time—was 68 hours 22 minutes. In 1909, Galveston to El Paso, 72 hours 19 minutes. In 1901 the time El Paso to Algiers was 78 hours 30 minutes—schedule time; (4414) and in 1909, El Paso to Galveston, 74 hours 30 minutes, running time 17.3 miles per hour. Total dockage frontage at Algiers was 1,755 feet; at Galveston 6,235 feet. (4415) Referring to the New Orleans-El Paso line, my jurisdiction going to the Rio Grande, 3½ miles west of El Paso. "The total expenditures, 1902 to 1909, inclusive, for track, roadway and other like improvements, were $7,938,151.30. During that time there was new equipment bought and charged to capital account, amounting to $4,744,910.87. This makes a total for those two items of $12,683,061.17. In addition to that there was charged against operating expenses, for renewing light rail with heavy rail, the additional weight of the rail, which, under the new Inter-

Expenditures for betterments, 1902 to 1909.

state Commerce Commission classification is charged to capital account, $2,504,630.07. And in addition there was equipment purchased and charged to renewal fund, that is, operating expenses, amounting to $3,780,041.03. * * * That makes a grand total of $18,967,732.27."

Expenditures, 1894 to 1901.

For the years 1894-1901 the amount spent for betterments and improvements, including new equipment purchased and charged to capital account, was $8,766,125; for the years 1902-1909, $12,683,061. Miles of single track in 1901, 1,195.96; in 1909, 1,193.61. "Miles of additional main track, that is, second track, double-track, 48.09 in 1909, and 39.76 in 1901; an increase of 8.33 miles in double-track. The next item is the weight of rail for different years. In 1909 we had eighty-seven hundredths of a mile of sixty pound rail; that was in a yard, but it was classed with the main track; and none in 1901; an increase of eighty-seven hundredths of a mile. In 1909 we had eighty-six hundredths of a mile of sixty-one and a half pound rail, also in a yard, as against 577.72 miles in 1901; a decrease of 576.86 miles. In 1909 we had 366.64 miles of 75 pound rail; in 1901 we had 448.98 miles; a decrease of 82.34 miles of 75 pound rail. In 1909 we had 7.69 miles of 76 pound rail in the main line; in 1901 we had 111.97 miles of 76 pound rail; a decrease of 104.28 miles. In 1909 we had 680.64 miles of 80 pound rail; in 1901 we had 97.05 miles of 80 pound rail; an increase of 583.59 (4416) miles.

Rails.

"In 1909 we had 184.99 miles of 90 pound rail, and in 1901 we had no 90 pound rail; an increase of 184.99 miles. Since June 30, 1909, we have bought 135 miles of 90 pound rail, most of which has been delivered, and the balance will be delivered in March and April. * * * Miles of track ballasted, in 1909, 881.88; in 1901, 771.43; an increase of 110.45. Second track ballasted: In 1909, 41.13; in 1901, 33.97; an increase of 7.16. In 1909, approximate percentage of timber trestling, creosoted, 81.40 per cent.; in 1901, 61.58 per cent.; an increase of 19.82. In 1909 the approximate percentage of track ties treated, burnettized, was 41.13; in 1901, 31.66; an increase of 9.47. In 1909, track fully tie-plated, 1,171.57 miles; in 1901, 951.73; an increase of 219.84."

Ballast.

Ties.

For the year ending June 30, 1909, we spent $1.453 per mile in maintenance of way, and in 1901, $1,232.14. "In 1901, through California train No. 9, the time from New Orleans to El Paso was 46 hours and 10 minutes, and in 1909 it was 44 hours and 35 minutes; both westbound. The time of the eastbound train in 1901 was 46 hours and 25 minutes from El Paso to New Orleans; and in 1909 it was 46 hours and 45 minutes from El Paso to New Orleans. * * * The time from New Orleans to San Francisco in 1901, was 95 hours and 35 minutes, westbound; in 1909 it was 97 hours and 45 minutes. My understanding is, however, that that train lays over for several hours at Los Angeles, and that it is practicable to make a connection at Los Angeles with a train that leaves for San Francisco sooner; so it is possible to cut out several hours by taking

Through train schedules.

another train at Los Angeles. * * * Eastbound the time is about the same in both years; in 1901 it was 96 hours and 25 minutes, and in 1909, 96 hours and 45 minutes."

(4417) Since I have been in charge of the lines, and reckoning from January 1, 1904, to December 31, 1909, we carried 26,350,990 passengers, which were carried 1,658,794,090 passenger miles, with only one passenger killed in a train accident, 262 injured. The Sunset Limited was a periodical train operated during the winter season. Before it was put on we had experimented unsatisfactorily with, and discontinued, the Montezuma special, a similar train to the City of Mexico, running once a week during the winter season. The Sunset Limited was operated weekly, beginning November 1, 1894, until April 11, 1895, one train a week east, and one west; in 1895 from October 31 till March 16, 1896, semi-weekly, and then until April 16 weekly. (4418) "In 1896 it was operated semi-weekly, commencing on November 9, 1896, and taken off semi-weekly on March 22, 1897, and operated weekly until April 1, 1897. In the season beginning in 1897 the train was not operated from New Orleans, because of yellow fever in the South. * * * In 1898 it was operated semi-weekly from December 1, 1898, to March 27, 1899, and weekly until April 22, 1899. In 1899 it was operated semi-weekly from December 17, 1899, to April 19, 1900. In 1900 it was operated tri-weekly from November 8, 1900, until April 1, 1901; then weekly to April 25, 1901. * * * In 1901 the train was operated again tri-weekly, commencing on December 2, 1901, when it was operated until March 31, 1902, tri-weekly; and then weekly until April 14, 1902. * * *

Accident record.

Sunset Limited.

"The periodical service was not operated any more after April 14, 1902. The following season, however, we very much improved the status of the through train, and we also put on an additional through train to El Paso, which made connection there with the Pacific system. * * * The trains that we call Nos. 9 and 10, the trains that are now operating between New Orleans and San Francisco, were equipped with dining cars and an observation car, as well as the regular sleepers. They had coaches and head-end cars, mail and baggage, also. Since that time, or within the past year, a further improvement has been made in that train, by running electric-lighted cars, equipped also with electric fans, having compartment car also equipped with electric lights and electric fans. I should have said 'observation car' instead of 'compartment car.'* * *But the ordinary sleepers are now equipped with electric lights and electric fans on those two trains. In addition to that train, we run another train with standard Pullman sleepers, through; Nos. 7 and 8. * * * (4419) That double daily service was continued from November 15, 1902, to July 26, 1903; then it was discontinued, and was resumed again on December 16, 1906, and operated until September 1, 1907, when it was again discontinued and to-day we have only a single service through between New Orleans, and San Francisco daily."

Additional through train.

Electric lighted cars.

Nos. 7 and 8.

Additional sleepers at San Antonio.

Since 1907 we found the service adequate to the handling of the passenger business; in the winter months, however, we put on an additional sleeper at San Antonio. A good deal of Pacific Coast travel stops over in San Antonio, and we have been putting on a third sleeper there, running as far as Los Angeles, to take care of that additional travel. The train was generally made up with two head end cars—a day coach or two day coaches—tourist car, two standard sleepers, dining car and observation car. In 1902 or 1903 the Rock Island put on a train called the Golden State Limited, running through from Chicago to Los Angeles, and possibly to San Francisco, via El Paso—very similar to the train we had formerly operated, our Sunset Limited, this Rock Island train operating into and out of California over the S. P. lines. (4420) The Overand Limited of the U. P. runs from Chicago to San Francisco. As to whether those trains are competing, "I should say that a passenger in Chicago, who wanted to go to San Francisco, would have a choice of either train; and in that sense they would be competing."

Golden State Limited.

(4421) My understanding is these trains, their advantages, are advertised, but I have nothing to do with either of them. I do not know what the consist of the Overland Limited is. I don't think the Golden State has as many cars as the Overland Limited—it has electric lights, and an observation and dining car. When the Sunset Limited was first put on it had a composite car—smoking car, barber shop, and cafe; a dining car, and two standard sleepers, later on a third sleeper with an observation end; later on a compartment car was substituted, seven staterooms and a parlor for ladies. It was a very handsome train, lighted with Pintsch gas, but never electric-lighted. (4422) It had no day coaches or tourist cars. Trains 9 and 10, New Orleans to San Francisco, were on at same time with Sunset, carrying a tourist car, two or three times a week, at one time from Chicago over the Illinois Central, once a week, at another time one from Cincinnati, and also from Washington. The tourist car from Washington is still running—I think they are operating three or four cars a week over the Southern Railroad from Washington to Atlanta, over the Atlanta & West Point from Atlanta to Montgomery, thence by the Louisville & Nashville to New Orleans, and thence by our road to San Francisco.

Sunset Limited.

Nos. 9 and 10.

Tourist car from Washington.

(4423) I do not think we run any tourist cars now except the Washington car, except we did run a short time back a tourist car—am not sure whether it is running yet or not, starting locally from New Orleans, but I think not from any point beyond New Orleans; I don't know that the tourist-car service from Chicago was abandoned; the passenger people can tell more about it than I can. I don't think any tourist car is running now from Cincinnati over our line; at one time it moved over the L. & N., and at another time over the O. & C. Route. Within the last year our trains 9 and 10 have had the sleepers and observation car electric-lighted —axle light, storage battery—the dining car practically goes

Tourist service from Chicago and Cincinnati.

through. "There is a night run on that train, each way, between Houston and San Antonio; and for convenience the diner is cut off at Houston and San Antonio; but there is a diner on the train continuously from San Antonio through to destination going west, and also a diner to operate between Houston and New Orleans. In other words there is a diner on it during the daylight hours." Passengers get dining car service all the time both ways, as they used to do, not on the daily trains, but on the Sunset Limited. Diners.

(4424) Trains 7 and 8 had run regularly for many years between New Orleans and San Antonio, and on July 26, 1903, were extended through to El Paso, connecting with a similar train on the Pacific System, and running through sleepers from New Orleans to San Francisco. The through train was up to July 26, 1893, but after that, did not operate any further west than San Antonio, until December 16, 1906, when it was operated as a through train until September 1, 1907. "When the Sunset Limited was first put on, the first season it operated it left San Francisco at 10:30 a. m. and arrived at New Orleans at 7:40 p. m. The hours, as shown by that statement, are 81 hours and 10 minutes. But there is a difference in time between San Francisco and New Orleans of two hours; so the actual time of that train was 79 hours and 10 minutes. In the other direction the actual time was 77 hours and 45 minutes. For the first four or five seasons, or three or four seasons, that was practically the schedule that the train was operated on. Later on, however, the time was shortened. In 1900 the time in one direction was 74 hours and 20 minutes, and in the other direction 72 hours." Trains 7 and 8. Time of Sunset Limited.

That schedule was maintained until the train was discontinued. Present passenger time New Orleans to San Francisco is 97 hours 45 minutes, but the train lays over several hours at Los Angeles, and it is possible to take another train at Los Angeles and get to San Francisco several hours before this train arrives, about 4 hours and 10 minutes. (4425) Westbound, Sunset Limited time was 72 hours, eastbound 74 hours 20 minutes. No. 10's present eastbound time is 96 hours 45 minutes, but it is a daily service; the other was periodical and only a part of the year. We had a daily service at the same time, but the equipment was not as comfortable or convenient as that on the daily service now. We had sleeping cars but no diners or observation cars. We had eating stations, spent and lost a good deal of money on them, probably they did not come up to those on the Santa Fe; they were not satisfactory to us, and they were not satisfactory to the passengers. Time of No. 10.

(4426) Freight service Algiers to El Paso in 1901 was 68 hours 22 minutes, distance 1,194 miles. In 1909 it was 72 hours 19 minutes, Galveston to El Paso. The distance there, the way those freight trains run is 882 miles. We have a regular schedule train, No. 243, running in one or more sections, as the business justifies, and carrying all the freight for El Paso and beyond—of course on the east end of the line we have local trains between local Freight service to El Paso.

No passengers by boat to Galveston.

termini. We still run ships to New Orleans, some of the ships carrying passengers, all of them freight, but we carry no passengers to Galveston. California freight now goes to Galveston. The bulk of the New Orleans freight goes to New Orleans proper, and is distributed into Mississippi, Arkansas and Louisiana. The Algiers docks are practically abandoned, the New Orleans steamers now landing on the east side of the river in New Orleans proper.

(4427) "Occasionally we have a tramp steamer that comes in there and discharges a cargo for some western point at these docks, but we now rent much more convenient docks from the City of New Orleans, on the east side of the river, because of the reason that the bulk of the freight handled in these steamers goes to New Orleans proper, and before it had to be loaded into cars at Algiers and transferred across the river, and it made much slower time than it makes when it is taken right out of the ships and put on the docks ready for delivery at New Orleans proper." Before the Galveston service, California service by Algiers was tri-weekly as a rule, sometimes in the dull summer bi-weekly. It is tri-weekly to Galveston. The ships formerly running to Algiers carried all the New Orleans cargo as well as the California and Texas cargo, but the Galveston ships carry California, Texas, Utah and Colorado cargo, while those to New Orleans carry the New Orleans cargo, which was always a considerable tonnage. I consider that there are five ships a week running now, against three previously. The New Orleans ships now do not take California freight, but the California ships formerly took New Orleans freight. In the old days the California freight was loaded so that it could be unloaded first, so that it would not make any difference in the handling of the freight whether you have a ship entirely for California, Texas and Arizona freight, or whether you have it loaded in the ship so that it will be unloaded first.

Steamers now go to New Orleans proper.

California boat service.

(4428) The number of ships is the same in the sense that formerly there were three ships a week that carried California freight, and that now there are three ships a week that carry California freight. The ships carry freight to Arizona, New Mexico, Texas, some for Oregon, and eastbound carry freight from Texas, copper from Arizona and New Mexico, and California goods. There was a time when they carried sugar from the Sandwich Islands to New York, but that tonnage several years ago was diverted to the Tehuantepec Route, and moves almost entirely by the American-Hawaiian line. The average time of movement, New York to El Paso, given by me as having been shortened by 7½ or 8 hours, was made up from actual movement of the entire freight business westbound, to and beyond El Paso for the times specified—December, 1900, December, 1902, and December, 1909. The average speed of the boats now is faster than in 1901 and 1902, and the Galveston facilities are very complete for the prompt handling of cargoes from ships to rail. In 1902 up to December the docks had only been open a few months; and as the men became more proficient the vessel time averaged

Territory served by boat line.

Time between New York and El Paso.

Galveston docks.

faster—slower time by rail being made up by a faster ship time, greater rapidity in transferring, the superior character of the Galveston terminals and facilities.

Time between Galveston and El Paso.

(4429) Schedule time, 1902, Galveston to El Paso, was 49 hours 50 minutes, card time, including stops—17.8 miles per hour. In 1907, 60 hours 40 minutes, card time, 14½ miles per hour, average actual running time of all those trains in both directions being 17½ miles per hour. Previously I did not give the movement of the other trains, which was probably confusing. The time on the eastbound train was 53 hours 20 minutes, 16½ miles an hour, average running time of the two, 17.6 (4430), exclusive of stops. Eastbound schedule in 1907 was 13.5 miles an hour, due to the fact that our trains are much heavier now, a great many more cars, and it takes a longer time to get them through the terminals and inspect them, etc.

Volume of passenger traffic.

Total number of passengers carried in 1904, 3,702,396; passengers carried one mile 242,522,149. "In 1905, there were 3,680,911 passengers carried. Passengers carried 1 mile, 215,597,861. In 1906 there were 4,570,532 passengers carried; carried 1 mile, 277,631,065. In 1907, number of passengers carried, 4,878,896; carried 1 mile, 314,337,578. 1908, passengers carried, 4,459,810; carried 1 mile, 288,194,961. In 1909, passengers carried, 5,058,445; carried 1 mile, 320,510,476."

(4431) I am not sure about the Chicago tourist car beyond New Orleans having been discontinued; the Washington car is still being operated; I thought the Cincinnati car had been discontinued, but I would not undertake to say positively about that; there are people here more competent to testify about that than I am. I see these tourist cars in the trains, but I don't know where they come from, don't know just exactly where they originate.

NEW YORK CITY, MONDAY, FEBRUARY 28, 1910.

(4431) A. F. BREWER.

Brewer.

Salt Lake. Sup't O. S. L.

Resides in Salt Lake City. Superintendent of the Utah Division, O. S. L. Has been connected with the O. S. L. proper since 1893. Has been closely associated with the General Manager and has come to New York to testify because of the inability of Mr. Bancroft, the General Manager, to attend.

Statement showing physical condition O. S. L.—1899 and 1909.

(4432) Witness produces a statement correctly showing the physical condition of the O. S. L. Railroad on July 1, 1899, as compared with its condition July 1, 1909. It includes branch lines, additional construction, during the period covered by the statement, and auxiliary companies of the O. S. L. controlled by it.

Total expenditures for betterments.

The statement shows a total expenditure by the O. S. L since July 1, 1909, of $20,069,316.29. It represents an expenditure of $11,714,882.61 on the main line of the original property. It represents an expenditure of $331,390.68 on the branch lines of the original property. It represents an expenditure of $355,351.75 for additions to the original property. It represents an expenditure of $5,626,702.41 for auxiliary branch lines, and an

expenditure of $2,040,988.84 for lines under construction. The last amount given includes moneys actually expended, and does not include estimated cost. The statement also includes certain lines of railroad constructed by the O. S. L. between July 1, 1899 and June 30, 1909, and disposed of during the same period. The statement is marked Defendants' Exhibit 211 and is set out on pages 4433 to 4443.

Expenditures, June 30 to Dec. 31, 1909.

(4443) Witness has prepared a statement, Defendants' Exhibit 212 showing mileage and estimated cost of sidetracks and second track built, authorized, and proposed for the period June 30 to December 31, 1909. It shows a total estimated cost of sidetracks of $746,088 and of second track of $666,286. (4444) Witness has also prepared a statement, Defendants' Exhibit 213, showing the amount of business handled by the O. S. L. between the years 1900 and 1909, inclusive, giving the tons per train, all freight; tons one mile, all freight; and passengers one mile. It shows in 1901, tons per train, all freight, to have been 390.64; for 1909, 569.61; tons one mile, all freight, for 1901, 990,570,383; for 1909, 1,495,759,248; passengers one mile for 1901, 71,426,735; for 1909, 165,591,504. Witness produces protographs of passenger depots erected by the O. S. L. during the period covered by Exhibit 211. Defendants' Exhibit 214 is a photograph of the freight depot at Salt Lake City. Defendants' Exhibits 215 and 216 are interior views of the passenger station at Salt Lake City. Defendants' Exhibit 217 is a photograph of the passenger depot at Boise, Idaho. Defendants' Exhibits 218 and 219 are photographs of the passenger depots at Nampa, Idaho. Defendants' Exhibit 220 is a photograph of the passenger depot at Caldwell, Idaho. Defendants' Exhibit 221 is a photograph of the passenger depot at Payette, Idaho.

Volume of freight traffic —1901 and 1909.

Photographs of depots.

Witness also produces the following additional photographs: Defendants' Exhibit 223 is a photograph of San Ridge cut-off, which is a shortening of the line into the Ogden union depot, affording a better entrance. Defendants' Exhibit 224 is a photograph of the Weber River bridge, in the same cut-off, located one mile south of Ogden. Defendants' Exhibit 225 is a view of block signals at a point approaching McCammon, Idaho. Defendants' Exhibit 226 is a photograph of ice-houses at Pocatello, Idaho. (4445) Defendants' Exhibit 227 is a photograph of the yards at Pocatello, Idaho. Defendants' Exhibit 228 is a photograph giving a view entering Beaver Canyon. The main line of the O. S. L. runs from Granger, Wyoming, to Huntington, Oregon. It also has a line beginning at Salt Lake City, passing through Ogden, intersecting the main line at Pocatello, and running up to Silver Bow, Montana. Silver Bow is about 4 miles south of Butte. The O. S. L. gets into Butte over the N. P. tracks, under a trackage lease. O. S. L. trains run right into Butte. Butte is the terminus of the line. The line, Sandy to McCammon, is just south of Salt Lake. It serves all the smelters in what is called the Utah Valley.

Various photographic views of O. S. L.

Description of O. S. L. lines.

McCammon is in Idaho, between Ogden and Pocatello, you might say. You really strike the main line at McCammon.

(4446) The miscellaneous structures referred to in Defendants' Exhibit 211 include all small buildings and structures that were not specially listed in another portion of the Exhibit, and covers section houses, small shop plants, etc. "Q. I notice that on page 9 you list 'Station Building,' and 'Water and Fuel Stations.' A. Yes, but there is very little reference made in this itemized list, to special structures, outside of one or two station buildings and the shop at Pocatello." The construction of the buildings has extended over a period of 10 years, and averages about $40,000.00 a year. Logan Junction is just north of Cache Junction. If you went from Ogden to Pocatello you would pass Cache Junction, and branch off to the north and east from Cache Junction; Logan Junction is a point just above Cache Junction. The line from Mendon to Logan Junction was built to serve a couple of small towns in there; Hyrum and Wellsville. That is in Utah. The Wood River branch extends north from Shoshone, Idaho, to Ketchum. That was built prior to 1890. It is one of the old branches. It was put into the statement on page 13, under the head of "New Branch Lines," because of a little addition, a mile and a fraction, involving the expenditure of $2,900.00.

Buildings.

Branch lines.

(4447) The Boise branch is also an old branch, and is shown on that statement because of the fact that the main track had been changed from 52 lb. steel to 60 lb. That change was made along about 1903 or 1904. Traffic on that branch is principally passenger traffic. Boise is the capital city of Idaho. (4448) Witness thinks Wallace is a larger town. Boise is the largest town in southern Idaho; is a jobbing point and is about 22 miles from Nampa, Nampa being on the main line to Huntington. The new construction between Brigham to Corrine, a little less than 4 miles, was built to make a connection between the S. P. and the main line of the Short Line. (4449) The North Kemmerer branch is in Wyoming in the coal fields. There is a big coal traffic out of there. The greater portion of the coal from that region is consumed in Idaho, some of it in Oregon and Washington. The greater tonnage from those mines is used by the O. S. L. for its locomotives, and by the O. R. & N. for the same purpose; that is, speaking of the Cumberland mine proprty. The Diamondville mine output goes to the Amalgamated Smelters at Anaconda. The branch line from Idaho Falls to St. Anthony was built in 1900, and the other two lines under the head of "St. Anthony R. R." are branches of that line.

Coal traffic.

Witness thinks that the Wyoming Western from Moyer Junction to Cumberland was about two years under construction. Moyer Junction is on the main line between Huntington and Granger, 42.3 miles west of Granger. (4450) The construction of the Salmon River R. R. was finished June 30, 1902, and was begun about three years prior to that date. That railroad extends from Black-

Branch lines.

foot, Idaho, just north of Pocatello, to the town of Mackay, headed toward Salmon City in Idaho, a distance of 85 miles, at a cost of a little over $880,000. Yellowstone Park R. R., built from 1906 to 1909, and 70 miles long, at a cost of something over $2,161,000, was built principally for tourist travel into the Park. The Northern Pacific and the Oregon Short Line both serve the Yellowstone Park. The travel is principally tourist travel from the east. The 70 miles is the mileage from St. Anthony. The line is 107.6 miles long from Idaho Falls.

Yellowstone Park line.

Branch lines.

The Malheur Valley Railway, 14 miles long, is in eastern Oregon. It runs through an agricultural country and extends up to the little town of Vale. The line was finished in the year ending June 30, 1907, and was only a little over a year in construction. (4451) The Northwestern Railroad is a line that is being constructed along the Snake River from the town of Blakes, just east of Huntington, towards Lewiston, Idaho. It follows the river pretty closely all the way. "Q. Your line runs along the Snake River now, doesn't it? A. Yes." This line is stated to be 41.54 miles long and to have cost a little under 2 million dollars, and has been under construction about 3½ years. The amount of $1,992,000, includes all that had been spent up to the time the statement was prepared. The line is just about half built. It is projected to give entrance to Lewiston. Lewiston is now reached by the water lines principally. Witness does not know but what the N. P. gets in there. Minidoka & Southwestern is a little spur that is out from the Twin Falls branch. It was under construction at that time. The Minidoka & Southwestern branch was completed from Minidoka to Twin Falls or to Buhl. (4452) Defendants' Exhibit 212 includes the item "Mileage and Estimated Cost of Side Tracks and Second Track, built, authorized and proposed," and aggregates, sidetracks, $746,088, but of that only $195,000 worth has been built. The total amount shown opposite the heading "Second Track" is $666,286. Of that $139,000 has actually been spent. Under the head of "Authority Requested but not yet approved," the sidetracks in round figures, amount to $416,000, out of $746,000. "You see $134,000 has been authorized. $195,000 has already been spent on sidetracks; and requested but not yet approved $416,837." The number of miles of second track built is 7.84; $139,387. Authorized but not constructed, estimated cost $246,000. Authority requested but not yet approved, $280,854, out of a total of $666,000.

Line to Lewiston.

Minidoka & S. W.

Amounts expended and authorized.

"Q. Then, out of this grand total, which aggregates about $1,400,000 in the two items, there is about $700,000 that may never be spent at all, as the request for authority to expend it has not been approved? A. I do not think there will be any question but what the authority will be received and it will be spent; it is an absolute necessity in fact, that they do it." From 1901 to 1909 the tons one mile, all freight, increased from 990,000,000 (in round figures) to 1,495,000,000, which is almost exactly 50 per cent.; (4453) and the passengers one mile increased from 71,000,000 to 165,000,000,

Increase in freight traffic.

which, in round figures, is 125 per cent. The tons per train all freight increased, from 1901 to 1909, from 390.64 to 569.61. Notwithstanding the heavier loading of the trains, the larger amount of freight that moved in 1909 is not hauled in less trains than it took to haul that freight in 1901. There was only one scheduled freight train each way in 1901. Heavier trains.

Additional traffic, whenever necessary, is carried in one or two sections. The freight train schedule in 1901 up to the present time has been almost stationary; that is, it has averaged about 41 hours from Green River to Huntington or 38 hours from Granger to Huntington; as witness recollects, about 13 miles an hour, then; and it is practically the same today. The schedule at the present time is about 38 hours and 35 minutes. Witness looked over the schedules just before he left Salt Lake. "We had a file of them there. They ran along very uniformly, about 41 hours from Green River to Huntington, in the last 10 years." (4454) Sometimes they go up to 42 hours, or back to 39 hours and one-half; hung around about 41 hours, there on the through schedule, all during the period of 10 years. The O. S. L. handles over the U. P. traffic to Butte originating east of the Missouri River. "Q. There is quite a traffic in there, isn't there? A. Not very heavy for us, no sir." It is mostly moved by the Northern lines. The O. S. L. has not a considerable traffic out of Butte—the copper does not run over three to five cars a week; 50-ton cars. The Northern lines get most of that. Freight train schedules. Butte traffic.

(4454) G. F. RICHARDSON. Richardson.

I am and have been Superintendent of Transportation of the S. P. since 1895. Speaking of the freight movement from Omaha to San Francisco based on 168 cars, referred to in the record, we took what we considered a representative number of cars, and followed the time made by them from Omaha to San Francisco, under a system that we have for following the movement of through freight, known as the manifest system. (4455) I asked a clerk in my office to give me the time made by about a hundred cars during a certain period, and he gave me the record of those particular 168 cars, not representing the entire San Francisco freight, but simply those cars. He had no instructions to select any particular cars, and didn't even know for what purpose the information was wanted. San Francisco. Sup't Transportation, S. P. 168 cars, as basis of train movement.

In 1900 we had one through passenger train daily in addition to the Sunset Limited; this daily train consisted of the usual head-end cars, coaches, sleepers, and tourist cars, without any diner or observation car. In 1902, after the discontinuance of the Sunset Limited, there was a second daily through train put on, which has run more or less continuously ever since, substantially like the other one. We have a daily train from New Orleans to San Antonio, and in addition to that a daily train between El Paso and San Francisco. Also a through train between New Orleans and San Francisco. In 1902 the Golden State Limited was put on. The Train service on Sunset route.

through train, New Orleans to San Francisco, was equipped with diner and observation car in 1902, when the Sunset Limited was withdrawn.

(4456) In addition to the through train between New Orleans and San Francisco, there was another passenger train operated from New Orleans west, which in 1902 went through to San Francisco. (4457) A part of the time it was two trains, and part of the time one train. Between 1900 and the present time we have been operating a train between New Orleans and San Antonio, and also a train between El Paso and San Francisco; and over and above that train service, we have been operating, since the discontinuance of the Sunset Limited in 1902, a through train all the way from New Orleans to San Francisco. The train put on in connection with the Rock Island in the fall of 1902 ran until May 1, 1903, resumed in December, until April, 1904, resumed in December of that year again, and has run continuously ever since—consisting of a mail car, baggage car, diner, sleepers, and observation car. In addition, we have another train, put on in Jaunary, 1910, making a Rock Island connection at El Paso, running between that point and Los Angeles, and consisting of a mail car, baggage car, chair car, diner, sleeper, and tourist cars. As against this, the train service in 1900 consisted of one through train, and the Sunset Limited.

Train service on Ogden route.

(4458) In 1900 there were three daily through trains in each direction between San Francisco and Ogden. There are four now, with improved equipment, chiefly by the addition of dining cars and observation cars, and installation of electric lights. The schedule of the Overland Limited westbound, Ogden to San Francisco in 1900 was 28 hours 30 minutes, now it is 28 hours 18 minutes; eastbound in 1900 it was 28 hours 45 minutes, and now 26 hours 30 minutes. In 1900 we had two daily through trains between San Francisco and Portland, one of them equipped with mail car, baggage car, coaches, tourist cars, and sleepers; the other had, besides, a dining car. (4459) The schedule of these trains was about 36 hours each way. Now we have three daily trains each way, all equipped with diners, one of them having an observation car, which none of the earlier trains had, and which is electric-lighted throughout, its schedule being 27 hours 30 minutes.

Time, New York to San Francisco, Sunset route.

Average time of through freight New York to San Francisco by Sunset Route, in 1900, was 15 days and 7 hours, and in 1909, 15 days 5 hours. The first figure is based on the movement of 15 cargoes during different months, February to October, 1900, and the second figure on the movement of all cargoes during May, June and July, 1909. The records of my office during the first period were destroyed, and I had recourse to the records of our agent at San Francisco, which had been saved, showing the departure of the cargoes at New York, and the arrival of the freight in cars at San Francisco; for the latter period my own records were available and used. (4460) I simply asked the agent to give me his record of a sufficient number of cars to indicate the performance, just as I

did in the case of the 168 Ogden cars. Eastbound Sunset freight is manifested. "We have a system known as the manifest system, whereby we follow the movement of through freight on various lines. It is reported by wire, time of departure from initial point, time of passing various designated points en route, and the time of arrival at destination; that includes the arrival of the trains at Galveston, the departure of the ships from that point, and their arrival at New York."

Manifest system.

Practically all commodities are manifested by the Sunset line. The system was in use prior to 1901, but I made a trip throughout the East in that year, looking into similar systems on other lines, and revised ours to embody the desirable features, and we improved somewhat upon our former methods, securing more regularity in the movement of the freight. The improvement was principally in changes in the blank forms used in connection with it, we also multiplied the number of points at which the passing of cars is reported, we also had distinctive forms for reporting where cars are set out for any reason, so that they will be picked up as early as possible and avoid any delay in that way. It is difficult to explain very much in detail. (4461) At the present time the average time of through freight Los Angeles to New York, Sunset, is about 15 days—a trifle less. We took the actual time consumed by 200 cars, without special selection, from their departure from Los Angeles until arrival of steamer at New York dock.

Time, Los Angeles to New York, Sunset.

In 1900 the Sunset went from San Francisco to Los Angeles by the Valley line, by the San Joaquin Valley and Bakersfield, crossing the Tehachapi Mountains by way of Bakersfield and Los Angeles. In 1901 another Sunset line between San Francisco and Los Angeles was opened, known as the Coast Line, running down the coast from San Francisco to Los Angeles by way of Santa Barbara, through the Santa Clara and Salinas valleys, where it is practically a level line, then a very short but rather steep grade from Santa Margarita, and from there to Los Angeles it is a line of very much more favorable grades than the Tehachapi line, a line of much less resistance than the Valley line for moving freight, and the use of the Coast Line has improved the freight service by the Sunset very much. (4462) It enables us with the more favorable grade to handle freight in large lots, promoting the regularity of the service, and avoids the troublesome water transfer from Oakland to San Francisco. Valley line freight cars must be ferried across San Francisco Bay, but the Coast route enters the city direct by rail, without water transfer.

Change in Sunset line through California.

Dumbarton cut-off will enable us—it is 20 miles south from San Francisco across the arm of the bay—to move a good deal of freight for local points in the San Joaquin Valley, and also freight in the direction of Ogden and Portland. Sunset freight moving through the San Joaquin Valley could be handled into San Francisco over this cut-off. We have a manifest system on the Ogden line, first put in use in 1896, but modified somewhat in 1902, the form

Dumbarton Cut-off.

Manifest system—Ogden line.

not being precisely the same as on the Sunset. (4463) The same form of improved manifest system was applied in 1902 on both S. P. lines, Ogden and Sunset, and was extended to Omaha in the fall of 1904. By actual movement, taken from our records, we found the average time of a representative number of cars Omaha to San Francisco moving in May, June and July, 1909, to be 9 days and 3 hours. I simply instructed the clerk to take off the record of 100 or more cars, and give the time made by them from Omaha to San Francisco. This figure is based on the movement of 168 cars as described a little while ago. (4464) The present time of the westbound through train between San Francisco and New Orleans is 97 hours 45 minutes, eastbound 96 hours 45 minutes. This is an extra night as compared with what the Sunset Limited was, but the present train is a daily one.

Time, Omaha to San Francisco.

(4465) I do not think that washouts were more frequent on the coast line, or delayed traffic more by that line, than by some other. (4466) We have started a train by that line, and it had trouble from a washout after it started, which could not be foreseen, and the train was brought back and sent down the other way, and perhaps in that way consumed two days in reaching Los Angeles. It is true that regularity of movement of coast line freight has been much interfered with during the winter season by floods every year, and the same is true of other lines; there has been a great deal of trouble from washouts on the San Joaquin Valley line. The Coast Line was opened in the fall of 1900, and was closed entirely for a short time after on account of washouts and other trouble, but I am speaking of its permanent opening in the fall of 1901. (4467) It is possible that line has suffered more from the fact that it has had much more frequent train service and a greater number of trains have been affected.

Washouts on Coast line.

The schedule freight train time on New York traffic between El Paso and San Francisco is, I think, about five days. The Rock Island connection by way of El Paso, put on in January, 1900, consisted of a mail car, one way, baggage car, chair car, diner, sleeper, and tourist cars. (4468) There are two sleepers, one I think from Chicago, and one from Kansas City. The Golden State Limited carries tourist cars during the summer months, whether from Chicago or some other point I can't say. The new train put on in January, 1910, hauls two tourist cars daily to Los Angeles. The tourist car on the New Orleans train westbound runs to San Francisco. (4469) The present time of the Overland from Ogden to San Francisco is 28 hours 18 minutes, and the other way 26 hours and 30 minutes. In 1900 the time Ogden to San Francisco was 28 hours 18 minutes, and the other way 28 hours 45 minutes. We have numbers 9 and 10; I believe it is called the China and Japan Fast Mail, running between Ogden and San Francisco.

Time between El Paso and San Francisco.

Consist of Golden State Limited.

Time of Overland.

(4470) All the 168 representative cars selected are westbound, Council Bluffs to San Francisco. (4471) Under the manifest system there are a certain number of cars on each man-

ifest. The clerk took these records from those manifests and would naturally take whatever cars appeared on the manifest —may run anywhere from 1 to 20. On May 1st two cars left Council Bluffs at 8:30 p. m., one of them being 11 days 8 hours to San Francisco, and the other 8 days 18 hours. This is quite natural, no doubt some accident to the car that was longest on the road, and perhaps it was set out for repairs. Four cars got through in 8 days 20 hours, one in 9 days 16 hours, one in 9 days 19 hours, one in 9 days 13 hours, one in 7 days 11 hours, and the two I have just spoken of. Including the car that was perhaps set out for repairs, I don't think there is anything unusual about that showing, or anything extraordinary, considering the length of the run. In June, the clerk seems to have started with the first, and run up several cars a day to the 8th outside of the 4th, when there were no cars; one car on the 12th, and one on the 19th; no more that month. This was probably for the reason I stated, that he took whatever was on certain manifests. A car moving on the 8th would not ordinarily be on the same manifest as one moving the 19th, though it might be a part of the way. If the first car had been set out, or delayed from any cause, the second one might have been added to it. Movement of the 168 cars.

(4472) Where the last car, however, on the 8th, made the run in 8 days 19 hours, it would have arrived before the 19th and the manifest would not have been added to. The schedule of through freight asked for from El Paso to San Francisco is 109 hours 15 minutes; very little New York business moves on that—very little of it in regular numbered trains; most of it moves in extra trains; local traffic moves more or less in this train. The new Portland train of June, 1909, has a pretty good business. I think the other train still does a good business. The traffic warranted the third train. (4473) The distance between Portland and San Francisco is about 750 miles. The schedule for fruit trains Los Angeles to Sparks is 50 hours, Sparks to Ogden 40 hours. The time Omaha to Chicago is 26 hours; the total time, Los Angeles to Chicago, includes transfers U. P. to S. P. at Ogden, and U. P. to Northwestern at Omaha. New Portland train.

Fruit train schedule.

(4474) To the best of my recollection, the schedule, Los Angeles to Chicago, has been about 8 days or a little more for several years, the shippers being satisfied with the schedule. (4475) Colton is 60 miles out of Los Angeles, near the center of the fruit district, and 755 miles from El Paso, the fruit train time being nearly 12 miles an hour. We exchange that business at El Paso with the Rock Island and Texas Pacific. The average time New York to San Francisco, February to October, 1900, by the Sunset was I belive 15 days 7 hours, and for May, June and July, 1909, 15 days 5 hours. (4476) The data upon which the figures 15 days 7 hours New York to San Francisco in 1900, were made up, show the day of the month on which the steamers left New York, and on which the cars arrived in San Francisco. It does not appear from the San Fran- Time, New York to San Francisco, Sunset.

cisco agent's memorandum, what the hour was of leaving or arriving. On the first page of the movement for 1909 is the detail, steamer "El Mar" New York, February 10, 1909; 16 cars out of that steamer arrived on the 24th, 2 cars on the 25th, and the average time is given as 14 days. I have the details of that statement, which gives the actual time for all the cargoes, and upon which is based the figure of 15 days and 5 hours, not upon the first memorandum or detail.

(4477) The hour of the day of arriving in San Francisco is not shown. The statement averages 15 days 5 hours. It could not be very far wrong, it could be several hours. The first page of that schedule shows that out of 34 carloads 27 arrived in San Francisco behind time. The detail shows the entire movement of San Francisco freight during the three months. (4478) This is not the ultimate detail. I have not the ultimate detail with me, did not make it up myself. There is very little difference, comparatively none, in the distance El Paso to San Francisco by the Tehachapi and by the Coast Line—about 2 miles only. We can handle freight over the Coast Line in larger trains, larger lots, with more regularity of movement, and more economically. (4479) The Dumbarton cut-off, now being built, was commenced about three years ago. Under ordinary circumstances Sunset traffic will continue to move over the Coast Line. The Dumbarton cut-off will to a great extent remove the necessity of ferrying across the Bay, which has to be borne by the Railroad Company, and the cut-off will be an economy in that respect. The Overland Limited was first electric-lighted in April, 1902. Some trains east of the Missouri River had been so lighted a long time before that, and I presume a great many west of Chicago, between St. Paul and Chicago.

Relative distance—Coast and Valley lines.

Dumbarton Cut-off avoids the ferry.

(4480) In the last six or seven years electric lighting is in much more general use than formerly, served in many cases, by power from the axle. All the Overland trains are not electric-lighted; our Overland trains. The Golden State Limited is electric-lighted, and I think the Santa Fe Limited. It is customary now to run dining cars on all the roads in this country. We took off the car having buffet smoker, barber shop, and bathroom, on Overland Limited, but substituted another car that our people thought more popular with the patrons of the train. (4481) We ran a compartment car on the Overland Limited, a car all compartments, but we do not run that car now. As to the manifest system, "the numbers and initials of cars are noted on a blank form and reported to my office by wire from the initial point of a train. There is also given to the manifest itself a number. Thereafter at certain designated points passed by the train, the time of passing is reported by wire by reference to the manifest number only, so long as all of the cars are intact and moving. If any car has been set out for any reason, repairs or anything of that kind, that is also noted, and orders given to pick it up, and when it is picked up it is again reported as showing the delay it suf-

Buffet car.

Manifest system.

fered and the time it left the point, and the arrival at destination is reported in the same manner. That is a very brief outline of it."

I don't know that I should say that the manifest system is quite common on the Western roads; two or three roads west of the Missouri River besides our own make use of the system. We do not operate altogether under the same classification as the U. P. (4482) We have a list of commodities, aside from packing house products or fruit, included under "For Preferred Attention." It is not quite as extensive, I think, as the U. P. list. We make a distinction between dead freight and livestock and perishables. We sometimes move both classes of freight—perishables and dead freight—in the same train when there is not enough of the perishable freight to make a train; if there is, it is run separately. Where you have full trains of perishable freight, the preferred attention results in a substantial saving of time. The perishable freight moves on the fruit train schedule, and we make it most of the time.

Dead freight — live stock and perishables.

(4483) I gave the time of the through freight movement to San Francisco for a specific number of cars only, as an average, for all classes of freight outside of fruit and packing house products and things of that sort. The detail in respect to cargoes indicates the time when the cargo leaves, and when the cargo arrives, so that substantially the time is shown for which the freight composing that cargo is in movement betwen origin and destination, and that is shown for 1900 and 1909. When we first attempted to open the Coast Line we had some trouble with washouts and other conditions. The line was afterwards strengthened very materially, and since that time we have had no more trouble with washouts on that line than on any other line, and the bulk of the Sunset freight and passenger travel moved and for years has moved over the Coast Line. I stated that I had not a detail of the 200 cars Los Angeles to New York. (4484) The movement of cars Los Angeles to New York by the Sunset depends somewhat on whether they reach Galveston in time to catch a ship, and if they arrive just in time the movement is faster. In making up this average movement of 15 days Los Angeles to New York, cars that were more than 15 days, and cars less than 15 days—depending on whether they caught the ship—were put in and a general average taken.

Coast line.

Movement of cars Los Angeles to New York

(4484) R. B. MILLER (2).

Miller.

I live in Portland, Oregon; am Traffic Manager of the O. R. & N. and Oregon-Washington Railroad, and General Freight Agent of the S. P. Lines in Oregon; have been General Freight Agent of the S. P. Lines in Oregon since 1905, and also since that time, of the O. R. & N., having previously been in the Traffic Department of the O. R. & N., where I began as a boy in 1886. (4485) During 1899, 1900 and 1901 the O. R. & N. operated four boats at different times on the Willamette River, two concurrently, sometimes three. The freight capacity of the "Ruth" was 175 tons, "Modoc" 160 tons, "Elmore" 200 tons, and the "Gypsy," which sank July 11, 1900, 75

Traffic manager O. R. & N.

Willamette river boats.

Points served.

tons. The draft of the Ruth, Modoc, and Elmore was from four to five feet loaded, of the Gypsy very much less. The river points served both by these boats and the S. P. were Oregon City, New Era, Salem, Independence, Albany, and Corvallis. Other points served by the boats are not served by the S. P.—it does not take the business—but the traffic might, and probably would be delivered to the S. P. if no boats were operated. These other points are Butteville, Cane Landing, Champoog, Gearing Landing, Herris Landing, Newburg, Reeds Landing, Wilsonville, Wheatland. Oregon City is 15 miles south of Portland, New Era 21 miles, Salem 57 miles, Independence 76 miles, Albany 80, Corvallis 97. Harrisburg is 110 miles by rail from Portland. Boats have not gone to Harrisburg since 1896.

River shallow.

(4486) At times the river is so shoal that the boats are not able to get above Salem, in fact, they get above Salem only during the winter and spring months, from November 1st or sometimes 15th to June 1st, sometimes July 1st. The boats take some local business to and from Portland, as well as business through Portland. During 1899, 1900 and 1901, besides this boat service there was boat service maintained by the Oregon City Transportation Company. Hops were produced along the Willamette River at the points I mention in 1899, 1900 and 1901—about 10 per cent. of the total hops of the Willamette Valley crop are shipped by Willamette River boat, the other 90 per cent. being local to the S. P. The river boats carry practically no wool. From 1899 or 1900 to 1904 these river boats operated at a loss. For the fiscal year ending June 30, 1900, the Willamette River steamers of the O. R. & N. had a deficit of $6,008.43; for 1901 there was a deficit of $15,465.37; in 1902, of $26,413.02; for 1903, of $30,221.87, and in 1904, of $37,062.05. These river boats have been operated below Oregon City since 1904, between Portland and Oregon City. (4487) The boats discontinued going above the mouth of the Yamhill River in 1904. Oregon City is 15 miles from Portland. The river runs north, when I say "below" I mean Oregon City. During 1899, 1900, and 1901, two of the four steamers of the O. R. & N. operated at one time; sometimes three. The Gypsy was used as a wild boat, operating when the water was very low on the upper river. As a matter of practical operation, we were running two regular boats during any given interval of time. The general character of the freight by steamer from Portland to San Francisco was grain, potatoes, and box shooks, originating respectively in O. R. & N. territory, on the Willamette River and at points south of Portland, and locally at Portland, the return freight being general merchandise distributed locally through Portland to points in Eastern Oregon, Washington and Idaho, and points south of Portland. (4488) During 1899, 1900 and 1901, the sailings of the two steamers between Portland and San Francisco were every five days. There had been steamer service between Portland and San Francisco as far back as 1849. This local stuff was taken down by the steamers to

Freight from Portland to San Francisco.

Steamer service.

San Francisco, and the merchandise brought back to Portland and distributed out for a great many years. The time of service is about 60 hours from port to port. Rail service began between Portland and San Francisco in 1887. During 1899, 1900 and 1901 the time of this freight service by rail was five, six, seven days, the freight being handled on way trains.

Rail service.

During 1899, 1900 and 1901, the gross earnings for the ocean steamers Portland-San Francisco were as follows: Fiscal year ending June 30, 1899, $359,393.06; a deficit of $3,872.87. Year ending June 30, 1900, gross earnings $447,690.68, surplus $59,629.69. Year 1901, gross earnings $457,575.17, surplus $20,233.44. The ratio for those three years of operating expenses excluding taxes, to gross earnings was, 1899, 101 per cent.; 1900, 86 per cent.; 1901, 95 per cent. "The local tonnage carried between Portland and San Francisco was as follows: For the fiscal year ending June 30, 1899, northbound 38,944 tons; southbound 46,794; total 85,738. 1900, northbound, 48,834 tons; southbound 37,302; total, 86,136. 1901, northbound, 44,724 tons; southbound, 31,976 tons; total 76,700 tons. * * * (4489) The earnings: 1899, northbound, $112,768.98; southbound, $117,826.01; total, $230,594.99. 1900 northbound, $139,058.19; southbound, $100,600.99; total, $239,659.18. 1901, northbound, $131,860; southbound, $85,190.55; total, $217,050.55." The carload tonnage and gross earnings of the rail lines of the O. R. & N. were: "1899, 1,375,737 tons; earnings, $6,258,282.33. 1900, 1,506,265 tons; earnings, $6,683,114.85. 1901, 1,843,833 tons; earnings, $7,542,954.75."

Earnings of ocean steamers.

Local tonnage.

Earnings.

Tonnage and earnings of O. R. & N. rail lines.

The carload movement by rail—taken on way trains—between San Francisco and Portland during 1899, 1900 and 1901, would be substantially the same as in 1898. The actual figures for the first three years mentioned are not available, because of the destruction of the S. P. records in the fire of 1906, and because the Portland office records are not available for those years. For 1898 the carload movement San Francisco to Portland was 144 cars, and the southbound movement substantially the same. Of those 144 cars, 84 were tin cans in bulk for delivery on S. P. tracks in East Portland, and 36 were sugar for delivery in warehouses on S. P. tracks in Portland. Tin cans in bulk were not desirable freight, and it was not practicable to carry them on an ocean steamer. The northbound carload movement San Francisco to Portland for 1908 was 640 cars, of which 289 were scrap iron, the shipments being abnormal, due to the San Francisco fire. This was business having destination at Portland and East Portland.

Carload movement by rail—San Francisco and Portland.

A steam schooner is propelled by steam, it has sails also, is somewhat smaller than a steamship, and equipped for carrying freight more particularly than passengers. During 1899, 1900 and 1901, steam schooners were plying between San Francisco and Portland, engaged largely in transporting lumber southbound, although some of them took other cargo; northbound they took such cargo as they could get, in preference to ballast. In addition to lumber, south-

Steam schooners.

bound, they carried grain principally, some box shooks, possibly some potatoes. During the same years, water crafts were plying between Puget Sound and San Francisco, carrying substantially the same character of freight as between San Francisco and Portland—first-class steamships operated by the Pacific Coast Steamship Company, and steam schooners like those between San Francisco and Portland.

Puget Sound lines a factor in rate making.

(4491) This Puget Sound water transportation was a factor in the San Francisco-Portland rates by water. "It was not practicable to charge any higher rate between San Francisco and Portland than was charged by the steamers betwen San Francisco and the Puget Sound ports, without handicapping the Portland merchants as against the Puget Sound merchants (particularly Tacoma and Seattle) in the distribution of goods of California origin or production, at points in eastern Oregon, Washington and Idaho. And in the opposite direction, it was not practicable to get any higher rate on grain from Portland to San Francisco than in effect from Puget Sound to San Francisco, without causing a diversion of the grain to the Northern Pacific in eastern Washington and parts of eastern Oregon for shipment via Puget Sound. * * * If the rate from Portland had been higher than from Puget Sound, the business would move through Puget Sound ports."

Lumber movement.

Lumber and other traffic moved from Portland to points on and beyond the D. & R. G. in 1900. As to the movemnt of lumber via Huntington to Ogden and Salt Lake, it was, from Portland: "The movement of lumber from Portland via Huntington was as follows: In 1899, to Ogden, 702 tons; Salt Lake, 3,506 tons. 1900, Ogden, 632 tons; Salt Lake, 5,925 tons. 1901, Ogden, 1,510 tons; Salt Lake, 9,379 tons. * * * Freight other than lumber: 1899, to Ogden, 101 tons; Salt Lake, 455. 1900, Ogden, 98 tons; Salt Lake, 591. 1901, Ogden, 108 tons; Salt Lake, 176. * * * I have the revenue. On lumber, Union Pacific system revenue (that is to say, the revenue from Portland to Ogden and Salt Lake, as the case might be) was as follows: 1899, to Ogden, $5,070.52; Salt Lake, $26,183.22. 1900, Ogden, $4,345.71; Salt Lake, $44,222.81. 1901, Ogden, $11,752.98; Salt Lake, $66,808.39."

Freight other than lumber.

(4492) On freight other than lumber the U. P. System revenue for 1899 was, to Ogden, $960.34; to Salt Lake, $4,048.46; 1900, Ogden, $778.51, Salt Lake, $4,932.38; 1901, Ogden, $1,531.39, Salt Lake, $2,692.62. No lumber or other freight in any appreciable quantity moved to Ogden or Salt Lake from Portland by the roundabout route through Roseville. There was some movement in lumber or other traffic from Portland via Roseville to points on and via the D. & R. G. and its connections, but I don't think it ever amounted to much. As to the lumber rate from Hood River, referred to in the record, I am familiar with the circumstances.

Lumber via Roseville to D. & R. G. points.

Hood river lumber rate.

"On October 21, 1905, the O. R. & N. Company published a rate of 40 cents per 100 pounds on lumber from Portland and certain Southern Pacific points in Oregon to Umbria and Lucin, Utah,

which was the same rate as applied via Shasta or Roseville route. On January 17, 1907, the O. R. & N. published a rate of 40 cents per 100 pounds on lumber from Portland only, that is to say, not from points south of Portland, to Palisade, Nevada, which was the same as applied via the Shasta route. The tariffs carried the long and short haul clause, and therefore applied as a maximum from and to intermediate points. Hood River is a point 66 miles east of Portland, and, being intermediate, the Portland rate was not exceeded from that point. The rates were originally established largely for the purpose of assisting in the movement of the traffic owing to the conditions that existed on the Southern Pacific lines at that time. * * *

"The rate to Palisade was canceled October 10, 1907, and to Umbria and Lucin on July 31, 1907. Now, Lucin is a point on the Southern Pacific lines 102 miles west of Ogden. Umbria is a point on the Southern Pacific lines 104 miles west of Ogden. Palisade is a point on the Southern Pacific lines 259 miles west of Ogden. Now, the rate which was applied from Portland to these points was the same as applied to Ogden, notwithstanding the fact that the distance to Lucin, Umbria and Palisade was considerably greater than to Ogden. Out of the 40-cent rate to the points in question, it was necessary to allow the Southern Pacific Company something for its service west of Ogden. It seemed to (4493) me quite objectionable to permanently continue carrying the Ogden rate to a point west of Ogden for the additional distance. Therefore the rates were canceled; the Southern Pacific in the meantime having been in better position to take care of the traffic over its own lines. * * * When the rates from Portland were withdrawn we established a special rate of 5 cents per 100 pounds from Hood River to Portland for the benefit of the mills at Hood River, the local rate at that time being, I think, practically 10 cents per 100 pounds from Hood River to Portland."

Carload movement from the east to Portland.

As to the approximate carload movement from eastern points to Portland: "In 1898 the movement via Ogden and Roseville was 298 cars, while the total movement via all lines to Portland was 4,214 cars. Southern Pacific percentage via Ogden and Roseville 7 per cent. In 1899 the movement was 251 cars via Ogden and Roseville, and 4,400 cars via all lines; Southern Pacific percentage via Ogden and Roseville 6 per cent. In 1900 the movement via Ogden and Roseville was 265 cars; via all lines 4,400; Southern Pacific percentage 6 per cent." The cars that went by Roseville passed through Ogden. The largest part of the merchandise consumed in the Willamette Valley is distributed from Portland, and the credits and banking of the Valley points—the business—are chiefly if not entirely with the financial institutions of Portland.

Portland is jobbing and financial center for Willamette Valley.

Difficulties of Roseville route to the east.

(4494) The difficulties and length of haul by the Roseville route are complicated with the further difficulty of the hauling of empties north to points of origin—the preponderance of Willamette River tonnage is outbound. Rough lumber from the valley

90% of hops local to S. P. rails.

moves principally to California. The Willamette Valley does not stop with a few river points served by the river boats. Ninety per cent. of the output of hops, the principal Valley product, is local to the S. P. rails; about 10 per cent. of the total hop crop moved to Portland by boat—the other 90 per cent. would be shipped over the S. P. rails. (4495) This rough lumber to California goes, some of it, to San Francisco and Bay points. The preponderance of the outbound Valley tonnage has necessitated the hauling of empties into the Valley to supply southbound traffic. The S. P. car supply points for the empties would be Sacramento and San Francisco, the San Francisco system to Portland over the Short Line being 746 miles.

Long haul for empties northbound.

Lumber shipper better served via Portland.

The Willamette Valley finds its market for the clear lumber in Utah, Colorado, Kansas, Nebraska and beyond, and as between Portland and Sacramento, the shipper is better served from Portland the distance from which is a great deal less than from San Francisco, and there is a long and expensive haul from Sacramento. Those empties hauled north from Sacramento or San Francisco to supply the outgoing Valley tonnage could, generally speaking, be loaded to advantage in California. Prior to 1900, and ever since, so far as the Portland gateway is concerned, in respect to a through route and joint rates and divisions on business from the Willamette Valley points, through rates were in effect between the S. P. and the O. R. & N.[1] on all traffic except eastbound lumber, and those joint rates have been applied for several years prior to 1900.

Since prior to 1900 through rates were in effect via Portland on all traffic but lumber.

(4496) For some years before 1900 the Portland gateway was open on the same through rate as the Roseville gateway for all Valley traffic except lumber. Prior and subsequent to 1900, rates and divisions on Oregon business have been maintained through the southern gateways, Mojave and El Paso; I think there is a through rate on lumber through those gateways, but I do not think the same rate applies as via Portland, but no business moves that way. No through rate was discontinued after 1900 on the Oregon business, except as to this route over the Siskiyou and Sierras by way of Roseville and Ogden. Prior to what has been called the closing of the Roseville gateway, the Portland gateway had been open for years on all Valley traffic except lumber. It was to the shipper's material advantage that business originating at S. P. points in Oregon should be sent through Portland instead of Roseville, and the S. P. had been requested by valley shippers prior to 1901 to open the Portland gateway to lumber. On the through route via Portland, open for some years prior to 1900 on all this Valley traffic except lumber, the S. P. received south of Portland 30 per cent. of the west of Missouri proportion of the through rate; while the division accruing to the S. P. for the haul through Roseville via Ogden was 58 per cent.

No through rate discontinued except as to Roseville route.

S. P.'s division.

S. P.'s through arrangement with N. P.

(4497) The S. P. had the same through arrangements and through routes with the N. P. as with the O. R. & N. via Portland, on all Valley traffic except lumber, prior to 1900. The O. R. & N. and the N. P. distributed lumber from their own rails to local points.

S. P.'s division of through rate.

After the so-called closing of the Roseville gateway the S. P. received 40 per cent. of the west-of-the-Missouri proportion of the through rates except on lumber. Lumber was a low-grade commodity, and the percentage accruing to the S. P. on lumber for the short haul was 25 per cent. of the west-of-the-Missouri proportion. The S. P. never has had any through rate on lumber with the N. P. via Portland. The Portland gateway was opened to lumber originating at S. P. points in the Willamette Valley some time in 1901. At that time the S. P. lumber in Oregon was given an outlet through the Portland gateway and treated like any other traffic originating on S. P. rails in Oregon, so far as the Portland gateway was concerned. I have been for a number of years in the railroad business in that country.

Lumber put on parity with other traffic by opening of Portland gateway.

Shipper's advantage.

The arrangement by which the Portland gateway was opened and the traffic originating in Oregon sent through Portland instead of being sent over the Siskiyous and the Sierras via Roseville, was to the material advantage of the shipper. To the territory Utah and east, when the Portland gateway was opened and the Roseville closed, the same rates on eastbound lumber were accorded the shippers in the Willamette Valley as applied from Portland in the first instance. (4498) The lumber rate to the Missouri River was $10 a ton, to Utah and Colorado $8 a ton, and to Chicago $11, out of which the lines west of the Missouri River earned $9. These were the 1901 rates. Beyond Portland the O. R. & N. carried freight from San Francisco to points reached by the N. P. in Oregon, Washington and Idaho. The O. R. & N. has no rails to Montana, and their business moved to Montana points via Wallula, Spokane, and Huntington, largely via Wallula to Montana common points. The O. R. & N. had broken service to these common points with the N. P.—steamship San Francisco to Portland, rail line beyond. The N. P. had steamship San Francisco to Tacoma and Seattle, rail beyond. The S. P. had no means of reaching those points except as a connection of the N. P. or the O. R. & N. It had through rates with the O. R. & N. to these points reached by the latter, and also with the N. P.

Routes to common points in northwest.

Higher rate via S. P. route.

Routes to common points.

(4499) The rate applying over the all-rail route of the S. P. and its northern connections, as compared with the rate made by those connections over their own broken service routes, was higher to all points in Washington, Oregon and Idaho. The S. P. business to Montana common points from San Francisco moved principally via Ogden. Points in Southern Idaho, like Boise, could be reached by the O. R. & N. or the S. P. only in connection with the O. S. L. To Montana common points rates all rail and by broken service are the same. The traffic could move from San Francisco via the S. P. to Portland, and thence over the N. P. rail line, to Montana common points at the same rate as to Portland via the O. R. & N. ships, and thence to Huntington by the O. R. & N. rail lines, thence to Pocatello and to Montana by the O. S. L. The differential between all-rail rates to Eastern Oregon, Washington and Idaho, and the rate by

Differential to eastern Oregon, Washington and Idaho.

broken service, ranged, I think, from 10 cents first class down to about 3 cents on the lower classes. All character of tonnage moved, sugar perhaps would be one of the heaviest commodities.

Sugar rates.

(4500) Sugar we call a California product, an important one; it moved under a commodity rate San Francisco to Portland, and under a fifth-class rate, in carloads, Portland to these points. On sugar in carloads the differential was 3 cents a hundred on the through rate, the commodity rail rate San Francisco to Portland being 3 cents higher than by the boat line, and the same rate applying to Portland—the differential applying to all points in Idaho, Washington and Oregon during 1899, 1900 and 1901. (4501) The differential has not been abolished, except on traffic to Oregon points served by the O. R. & N.; the rates have been the same two or three years. "The rates from San Francisco into this Oregon territory on the Navigation Lines by boat through Portland were established on the basis of the same water differential or water arbitrary that was used in forming through rates from San Francisco to points in eastern Washington and northern Idaho, and those rates in turn were fixed by the water rates that were charged from San Francisco to Puget Sound. The rates by rail were higher to the extent of about 10 cents per hundred pounds first class.

Rates from San Francisco into Oregon territory via boat line.

"Then we concluded that the rates from San Francisco to points in Oregon east of Portland should not necessarily be the same as the basis used in arriving at the rates to Puget Sound for the purpose of meeting competition through the Tacoma and Seattle gateways; therefore, they were put on substantially the sum of the locals on Portland both by rail and by water. In other words, we could find no good reason at our dead local points in making rates from San Francisco, either all-rail or by water and rail, less than the full combination of the locals through Portland. And I think they stand that way to-day. * * * I made this explanation for the purpose of informing you of the basis upon which these rates were constructed from San Francisco to all of these interior points. Now, if we make a mistake in fixing our rates from San Francisco to Oregon points where we did not find the conditions to be the same as elsewhere, there was no reason why those rates should not be changed."

Differential abolished.

(4502) The differential was started about 1897, and continued up to about three or four years ago. It was abolished about two years after I became General Freight Agent, something like that. It is very questionable in my mind whether the rates were advanced in all instances; and those cases where the rates were advanced, if they were advanced, were not of any great magnitude. (4503) In explaining that there was no reason for the maintenance of these low rates in the absence of Puget Sound competition, I wanted to have it understood that there are two different bases of rates observed in that territory. Some of the rates were advanced, I cannot give any instance where the rates were advanced, nor where they were cut down. "In other words, the rates from San Francisco to

No reason for the maintenance of the low rates.

all points in the state of Oregon on the Navigation line east of Pendleton, Oregon, are the rates from San Francisco to Portland (whether they are the water rates or the rail rates) added to the rates from Portland to destination. Now, if that in any case has resulted in an advance, it has resulted in an advance."

Changes in rates.

Rates have been advanced in some instances, and I think possibly they have been lowered. I cannot name instances, the whole business doesn't amount to much, the whole thing doesn't amount to much. We could not advance the rates or take out the differentials into Idaho or Washington, where we are in competition with the N. P. (4504) "The rates from San Francisco to points in eastern Washington and Idaho should properly be made on exactly the same basis as we are making rates to-day from San Francisco to points in Oregon. But they are not, although they ought to be." It is the result of competition created by steam schooners plying between San Francisco and Puget Sound. And not by reason of another rail line reaching these points. That has nothing to do with it—the fact that the N. P. rail line reaches the points has nothing to do with it. We have no agreement with the N. P. as to maintaining rates. We discussed these matters, I won't even say that there is an understanding about it. (4505) "Previous to 1901 the Southern Pacific carried no rates on lumber whatsoever to the territory east of Colorado. They were established about 1900—not before that—to Kansas and Nebraska and to Chicago in connection with the Union Pacific Railroad only. They remained in effect to Chicago for ten days, and to Kansas and Nebraska for about sixty days, but prior to that time the Southern Pacific carried no rates on lumber to the territory east of Colorado."

Basis of rates into eastern Washington and Idaho.

S. P. rates on lumber to the east.

I think they carried the same rate to Denver and Colorado common points as the O. R. & N. and U. P. I know they did not carry the same rate to Utah, and somewhere about 1897, 1898, 1899, or 1900, the rates from the Willamette Valley and Portland to Utah via the S. P. were higher than by the Huntington Route. To the territory east of Colorado the S. P. had rates into Chicago for ten days only, and to Kansas and Nebraska for about 60 days only. (4506) The mills on the line of the O. R. & N. were at no disadvantage; if there was any disadvantage it was with the mills on the S. P. It was the policy of the S. P. and of the O. R. & N. and the O. S. L. to place their mills on a parity at Salt Lake and at Colorado common points—they carried the same rates to Colorado common points—it was the policy of the O. R. & N., but apparently not the policy of the S. P., because they did carry higher rates in some instances, and in some territory did not carry any rates at all. (4507) The movement of lumber into Colorado common points from Portland and vicinity was quite substantial via the Huntington route.

Mills placed on a parity.

(TESTIMONY RESUMED. NEW YORK CITY, MARCH 1, 1910.)

Statements of lumber tonnage from Portland.

Utah common points to which same rates apply are Ogden, Salt Lake, I think Provo, and intermediates. (4508) We prepared two statements, one for the tonnage to Ogden and Salt Lake separately, another for the tonnage to points on and via the Rio Grande line, which of course would take in everything on the Rio Grande line east of Ogden or Provo, taking in Provo. The lumber tonnage from Portland to points on and via the Rio Grande lines via Huntington for 1899 was 5,852 tons; 1900, 14,106 tons; 1901, 11,436 tons. (4509) The combined O. R. & N. and O. S. L. revenue for 1899 was $30,819.44; 1900, $67,461.88; 1901, $55,937.61.

Lumber movement from S. P. points in Oregon.

The movement of lumber from S. P. points in Oregon to Utah and Colorado via Roseville was, for 1894, (4510) 219 cars; 1895, 1,067 cars; 1896, 1,455; 1897, 1,157. Subsequently to 1897 I have the figures including the movement to California, but not segregated. I don't think there was any movement to California prior to 1897. These later figures were found in the office of the S. P. freight agent at Portland, showing the movement of lumber south to Ashland, not segregated as to territory. For 1898 the lumber shipments from S. P. points in Oregon to Utah, Colorado and California were 2,168 cars; 1899, 3,954; 1900, 6,578; 1901, 7,048. Subsequently to that the figures cover only California business, the Utah and Colorado business moving via Portland. The California movement for 1902 was 7,559 cars; 1903, 4,914; 1904, 4,284; 1905, 5,240; 1906, 6,245; 1907, 5,443. I have not the later figures.

Lumber rates.

It was not until 1898 that the S. P. established rates on lumber to California. They had in rates to Utah and Colorado, their Utah rates at that time being 40 cents per 100 pounds, while the O. R. & N. rates were 37½. That covers the period from 1897 to December 1, 1900, when the rate via Huntington was made 40 cents; and during the same period the S. P. rate Portland and points south to Utah common points was 40 cents. (4511) During this same period, the rate Portland and points south on the S. P., and points east of Portland on the O. R. & N., to Colorado common points, was 40 cents on lumber by both routes. The S. P. rate applied later all through to Ashland, but originally was confined to the lumber shipping points extending as the business developed. The O. R. & N. rate went east from Portland to the various lumber producing points. The S. P. movement south of Portland, 219 cars for 1894, and so on, included Portland and points south.

Westbound business from Colorado and Utah to Portland negligible.

There is some westbound business between Colorado and Utah points and Portland, but so small as to be practically negligible. (4512) It is practically negligible outside of the business of the Colorado Fuel & Iron Company, manufacturing iron and steel. The coal movement is very, very small in Colorado. My figures for the lumber movement 1894-1897, which I said included the business to Utah and Colorado, also include Nevada. I testified yesterday as to

the approximate carload movement from eastern points to Portland: "In 1898 the movement via Ogden and Roseville was 298 cars, while the total movement via all lines, to Portland was 4,214 cars. The Southern Pacific percentage via Ogden and Roseville, 7 per cent. In 1899 the movement was 251 cars via Ogden and Roseville, and 4,400 cars via all lines; Southern Pacific percentage via Ogden and Roseville 6 per cent. In 1900 the movement via Ogden and Roseville was 265 cars; via all lines 4,400; Southern Pacific percentage 6 per cent." I have the figures via Sunset Route—via all routes other than the Ogden and S. P., including the S. P. routes via El Paso and Mojave—not exclusively Sunset: In 1898, 182 cars; in 1899, 146, and in 1900, 151. (4513) These figures include the traffic to Portland and East Portland, and I think Albina, not to points in the Willamette Valley south of Portland, taking the same rates, or points north of Portland, or on the Columbia River reached by the O. R. & N. boats and by boats in connection with the S. P. In all cases they are carload business. It is not the fact that in 1898 and at all times the largest rail movement San Francisco to Portland has been less than carload.

Movement to Portland via Roseville and via all other routes.

Figures via Sunset.

(4514) I am sure of this. The L. C. L. movement San Francisco to Portland has not been substantial by rail. There is some movement from San Francisco to points south of Portland by rail. The San Francisco merchants wholesale into that territory, but to a limited extent. My figures for 1908 San Francisco to Portland dealt with carload business to Portland proper. I took 1908 just to show what the carload business is at the present time—no other reason for taking 1908 and not 1909. (4515) Tin cans have been brought up from San Francisco by boat to the Columbia River canneries, but always in crates. If any arrive in Portland in cars they would be taken to the river points by boat. Previously to 1901 the O. R. & N., with which I was connected, was working the Willamette Valley hop traffic actively, both by its boats to Portland and also by the S. P. rails to Portland. The S. P. was then working the hop and wool business preferentially by the Sunset Route. The N. P. had joint rates, and were working this Willamette Valley traffic. (4516) "For the year 1899 the movement of hops from the Willamette Valley via the Southern Pacific was 35,000 bales via Sunset, and 32,000 bales via Ogden. In 1900 the movement via Sunset was 47,000 bales and via Ogden 22,000 bales. Those are the only two years that I have."

L. C. L. movement, San Francisco to Portland, small.

Tin cans.

Hops.

I am speaking of the entire Willamette Valley. Ten per cent. approximately of the Valley hop crop moves by river steamer to Portland. I do not mean to testify that only 10 per cent. were so tributary that they could have moved by the boats. One of our large cars will take a hundred bales of hops, 180 to 185 pounds to the bale. In 1899 and 1900 the carload would be about 80 bales. Very little wool, relatively to Eastern Oregon, is produced in the Willamette Valley—three or four, possibly five million pounds for the entire S. P. lines in Oregon. The movement of business between

Very little wool in Willamette Valley.

San Francisco and Portland by ship, put by me as every five days, was not oftener, except that occasionally an extra steamer was put on to take care of the surplus freight traffic. (4517) The two regular steamers carried passengers, it being a five-day service and for about two years, seven days. The S. P. has a regular freight train San Francisco-Portland, but I don't know whether they send a train out every day with freight for Oregon points; it takes all kinds of freight offered, the cars going through to Portland or to points beyond, and going to California points too. I am not posted about that. A train starts every day from Portland, carrying freight for points south. The differential between the O. R. & N. boat line and the S. P. rail line was established about 1898 at the conclusion of the rate war.

Regular steamers carried passengers.

Freight trains between San Francisco and Portland.

(4518) The differential has been maintained to an extent only. The S. P. does not make all its rates San Francisco-Portland on this fixed differential higher than the water rate. In some instances it does, in some it does not. Where it does not the rate would be lower than it cared to make. There are a number of such commodities, salt is one, the published water rate is $1.50 a ton, and rail rate $3 to $3.60 a ton. The less than carload business moves on class rates by rail, but not by water. On the less than carload or merchandise business the differential is not always observed. The S. P. class rates are on a scale of 51 cents first-class, and the San Francisco & Portland Steamship Company carries merchandise—they use that term—at 35 cents per 100 pounds. The term "merchandise" as applied by the Steamship Company covers everything not otherwise specified in their tariff.

Differential between rail and boat line.

(4519) As to why there was an advance of some rates, leaving others stationary, under the following state of facts: "Q. * * * It appears by Complainant's Exhibit 81-K, at page 881 of the record, being a statement showing the changes in class and commodity rates from Portland to San Francisco, from February 10, 1898, down to July 1, 1908, down to the time when the statement was made up, (December 29, 1908) and also by Complainant's Exhibit 81-J, which is a comparative statement showing changes in class of commodity rates from San Francisco, California, to Portland, Oregon, from February 10, 1898, that outside of the first two classes, there has been a very distinct increase in the class rates from San Francisco to Portland and from Portland to San Francisco, also a distinct raise in the commodity rates, since the unification of these two lines in 1901. Why was it that you made the changes in classes 3, 4, 5, A, B, C, D and E, raising those rates, and left the first and second classes as they were—51 and 41? On the 26th of September, 1901, class 3 was raised from 31 to 36 cents, and class 4 from 26 to 31 cents; class 5 remained the same, 18 cents, and the other classes were unchanged. On July 15, 1905 (that is about the time you got charge of both lines up there) class 3 was raised from 36 cents to 41 cents, making it the same as class 2, and class 4 was raised from 31 cents to 41 cents; class 5 from 18 cents to 28 cents;

class A from 23 cents to 28 cents; class B from 23 (4520) to 28; class C from 18 to 28; class D from 18 to 28; and class E from 18 to 28; and those have been the rates from that time down to December 29, 1908. Now, what was the reason for advancing those lower class rates, beginning with class 3, which has been advanced since 1901 10 cents—from 31 to 41; class 4, which has been advanced from 26 to 41—15 cents; class 5, advanced from 18 to 28—10 cents; class A from 23 to 28—5 cents; class B likewise; class C from 18 to 28—10 cents; class D from 18 to 28—10 cents; and class E from 18 to 28."

Reasons for advancing certain rates.

Answering the above: "One reason is that the rates on those lower classes were too low. The distance from San Francisco to Portland is 746 miles, and here is a scale of rates on the basis of 51 cents first-class—lower than the rates from Chicago to St. Paul for 400 miles; and they are even relatively lower than the rates from New York to Chicago. So I say that one of the answers is that the rates on those lower classes were lower than they ought to have been." When you speak of a 51-cent scale of rates first-class, that is the highest one of the class rates, and the others are scaled down. The relation between those classes varies on different roads and in different territories. I do not know the reason for those lower rates. I think those rates to-day are too low. We have not raised them since December 29, 1908. It is possible some commodity rates have been changed, although I cannot say about that. Fifty-one per cent. first-class does not indicate anything as to the lower classes, except that 51 is the maximum.

Commodity rates.

(4521) The bulk of the traffic on commodities taking class rates would move under third, fourth and fifth class. A great deal moved on commodity rates. I think on the S. P. between San Francisco and Portland most of the traffic moves on a commodity rate considerably lower than the class rate. I think canned goods in carloads are one of the commodities where the differential is not observed, moving up to July 10, 1904, at 15½ cents commodity rate, and up to July 15, 1905, at same rate, and then the rate was put up to 18 cents, which is still, I think, in force. Canned goods take fifth class in carloads, fourth class L. C. L. They take the same rate now that fifth class took prior to the rates of 1895—18 cents; we put the class rate up then to 28 cents. Dried fruits take fourth class in carloads, second class L. C. L., some kinds taking third. That rate was put up the same time from 15½ cents to 18 cents. The rail rates San Francisco-Portland are made, influenced or controlled as the result of water competitive conditions. But not always, "because originally the Southern Pacific put in rates from San Francisco to Portland that were very much higher than these rates; so high in fact that they did not come anywhere near meeting the water competition, and I do not suppose they started out with the idea of meeting water competition, because at one time they had a scale of rates on the basis of 81 first class."

Rates on canned goods and dried fruits.

Low rates during rate war.

They afterwards put in low rates to meet water competition during that rate war. I think those rates are too low to-day, not lower than necessary to meet water competition, in fact they are too high to meet water competition, but too low for the service involved between San Francisco and Portland. (4522) I think they are still influenced by the water competition, but they do not get the business. For several years before 1901, the O. R. & N. bought space in the steamers of the other lines and filled that space when they cared to do so, but we frequently made lower rates ourselves than our published rates on freight which we put into these other steamers, in order to meet to better advantage the competition we found on the ocean division. My attention is called to the testimony of Mr. Jones, Freight Traffic Manager of the S. P., as follows:

Bought space in steamers.

Testimony of Mr. Jones as to changes in rates.

"(Page 593, Vol. 2 of the printed record.) 'Q. It appears by the testimony here that from time to time rates are increased or lowered between here and Portland. Under whose authority is that done? Under whose immediate direction is that done? A. Well, in fixing rates, we have a basis that the rate clerk has adopted for that, a basis—either a differential, higher or lower than certain rates, or a mileage basis, or a rate to the terminal and a rate back. In a change of rates, if a line were to change a rate to-day the rate clerk would naturally change his rate, unless he had instructions otherwise. That is how rates are generally made. Q. I am familiar with that fact, but I want to apply it to this particular case. A. I could go on and say that I suppose that in any change it would be natural, if either line changed the rates, for the other to either raise or lower their rates accordingly on that basis. (4523) Q. Now, take the line of road over which you preside, so far as traffic is concerned, between here and Portland. A. Yes, sir. Q. Mr. Schwerin testified yesterday that he had recently raised the rates by boat between these two points, San Francisco and Portland? A. Yes, sir. Q. And he said that he presumed that the rail rates would go up, as they ordinarily do. Is that the fact—dependent upon the boat rates? A. That would be the natural result on account of the basis I have mentioned. Unless the rate clerk had orders otherwise, he would advance the rate.

Relation between rail and water rates.

"'Q. I assume that, as a matter of fact, where there are two lines such as the boat line between here and Portland, and the rail line between here and Portland, and there has by some agreement been established a differential between the two, if either party to that arrangement changes the rate, the other party, as a matter of course, changes the rate so as to maintain the same differential? A. That would be the natural result. Q. That would be the natural result? A. Yes, that would be the natural result. Q. So that if, as Mr. Schwerin testified yesterday, he found it necessary or advisable to advance the boat rate because the stevedores and longshoremen and the officers on his ships were demanding and receiving higher wages than they had theretofore received, your rail rates would go up automatically because of that fact, * * * —because

of this advance? A. Yes, sir.'" I think that is true with respect to the advances, but not always with respect to lowering rates, because the all-rail rates are down to-day to practically a minimum figure, and are very much lower than they would be if it was not necessary to meet this competition. There is a limit to which the S. P. can go in fixing these rates between San Francisco and Portland for the all-rail service. We have a grain and grain products rate Portland to San Francisco, of 20 cents a 100. The rate on grain and flour from Minneapolis to Chicago is 10 cents.

Rail rates down to a minimum.

(4524) My statement about the rates being higher is incorrect with respect to that particular commodity, but there are a good many others where the reverse is the case. It is more than half as far from Minneapolis to Chicago as from Portland to San Francisco; while our rate on grain and grain products is double, the first-class rate from Chicago to St. Paul is 60 cents. The canned goods rate is 20 cents. I think in the main the statement made by Mr. Jones may be correct, that the making of rates between San Francisco and Portland is something that involves no discretion on the part of the Traffic Manager, but is laid down as a general rule, the rate clerk moves the rate up and down automatically, unless he is instructed otherwise; the rates being put in for the purpose of moving any traffic that may be tendered to us, and we have found by experience that it is better to have rates in force than to have agents telegraphing all the time for rates, and they are fixed as far as possible, the basis is fixed. (4525) Hood River to Ogden by the O. R. & N. is approximately 819 miles; Ogden to Portland 885 miles. Hood River took the 40-cent lumber rate when it was put in from Portland. Whether it is the same as the Portland rate or not, I do not know. It may be slightly less. The distance from Portland to Ogden via the Shasta Route is 1,343 miles.

Duties of rate clerk.

(4526) In going to Palisade by the Shasta Route you have to go over the two mountain ranges about which so much complaint has been made in the testimony, the Siskiyou and the Sierra Nevada. "Q. And you have the advantage of only the climb of eastern Oregon if you ship by the O. R. & N. and the Short Line; is that true? A. Yes. Q. And still you force that traffic now by the Shasta route, although you are the representative of both lines there? A. Yes. It would not make any difference in my position, however, if I was the representative of only one of them. To apply a rate of 40 cents per 100 pounds from Southern Pacific points to these points west of Ogden, and allow the Southern Pacific south of Portland 10 cents per 100 pounds, and allow it 5 cents per 100 pounds west of Ogden or thereabouts, or a total of 15 cents per 100 pounds, would leave 25 cents per 100 pounds for the service from Portland to Ogden. At that time the local rate from Portland to Ogden was 40 cents. Here we were in the attitude of making a rate of $5 a ton from Portland to Ogden on business destined to a point west of Ogden, and we were charging for the same service from

Rates on lumber from Portland to points on S. P. west of Ogden.

Portland to Ogden $8 per ton. It seemed to me that it was an objectionable proposition, particularly when the service from Portland to these points west of Ogden could be performed entirely over one line and in one direction, while via Ogden there was a reverse movement."

I did not refer to Palisade because in that case the rate did not apply from points south of Portland. But take Lucin and Umbria. "Not to Palisade, but let us discuss Palisade for a minute. Palisade is 259 miles west of Ogden. We applied there the Ogden rate of 40 cents; allowed the Southern Pacific, I think, half that service west of Ogden 10 cents per 100 pounds, which left for the service (4527) from Portland to Ogden 30 cents per 100 pounds, while our local rate to Ogden was 40 cents. The reverse movement was still there." The rate on lumber to Chicago is $11 per ton, 55c per 100 pounds. The proportion of that rate west of Omaha is 45 cents per 100, the lines from the Missouri River to Chicago getting the 10 cents. We have no division via Ogden because the business does not move via Ogden. I think we have divisions with the Rio Grande. Assume a lumber shipment to originate on the line of the S. P. south of Portland. It would move east by Portland.

Lumber rate to Chicago.

(4528) The Roseville gateway would take a higher rate, and the desire and purpose was to move the business via Portland. It would move on the locals via Roseville. I do not think anybody would ship that way as against the lower rate by Portland. If that traffic moved to Omaha from Ogden in connection with the Rio Grande, and its connecting lines east of Denver, my impression is the line east of Granger receives 16 cents per 100 pounds. "Q. (By Mr. Severance.) Suppose it goes by the Rio Grande. I suppose in isolated cases traffic has moved by the Rio Grande? A. It would be the same division," but I do not think the lumber rates apply from the Willamette River to Chicago via the Rio Grande lines; they have declined to join because they thought the revenue on the business was too thin—the 16 cents east of Granger. West of Granger the S. P. gets 10 cents, their local, which is a maximum, leaving 19 cents for the O. R. & N. and the O. S. L. to Granger.

Division of rates on lumber to the east.

(4529) In the case of the 40c rate from Portland to Palisade, allowing 10c to the S. P., this leaves us 30c a hundred against 19c a hundred in the other case. "The circumstances and the conditions are dissimilar. In the case that you have recited the movement is continuous in the same direction and is business destined to a point beyond our immediate lines, and the rate is made 55 cents to Chicago by reason of a rate of 45 cents that is made by the Northern Pacific and the Great Northern roads to St. Paul added to the local rate from St. Paul to Chicago. If it was not for that fact the rate to Chicago would be 60 cents per 100 pounds, but the movement is continuous, that is to say, it is in the same direction and to a point beyond our own line. The Palisade shipment is to a point on another line when routed by Ogden and is going

The lumber movement to Chicago is continuous, in the same direction.

The Palisade shipment involves a back haul.

west of Ogden in an opposite direction to which the business moved when it started from Portland or from the point of shipment, and the movement could take place from Portland to Palisade or from the Willamette Valley to Palisade over the one line—Southern Pacific, both points being on the same road and the movement being continuous, or, that is to say, in the same direction from the point of movement to destination."

As to lumber to Utah common points, originating in the Willamette Valley south of Portland, and the forcing of that business through Portland and around by the O. S. L., instead of carrying it right through on the S. P., the distinction is because Ogden, which is the most westerly point, is on the U. P. (4530) As to the movement of traffic in lumber to Ogden from the Willamette Valley over the S. P. to Portland and then east over the O. R. & N. and O. S. L.: (4531) It does not move against itself or in the reverse direction, but continuously in one direction. Via Portland, you move it north and east, and via Roseville south and east. The reasons for doing it are just as I have stated. In reference to the statement of Mr. Eccles at Salt Lake, that we took out the 40c lumber rate, Hood River to Nevada, and he had to ship west from Hood River into Portland, and thence by the Shasta Route at an increase of 5c a hundred, "the rate applied from Hood River only as an incident, because the rate was made from Portland, and Hood River, being intermediate, the rate was not exceeded from that point. The rate was put in from Portland to assist the Southern Pacific Company or assist the shippers in moving their traffic to that territory as against the route via Shasta or Roseville because they could not take care of the business." That was in 1905, when one of the rates was put in, the other in 1907. The Shasta Route could not take care of the business because it could not furnish the cars or the equipment.

Lumber from Willamette Valley to the east via Portland does not move in the reverse direction.

Hood river rate put in as an incident.

Shasta route could not furnish cars.

(4532) The S. P. had to bring cars up empty from California. The O. R. & N. and the O. S. L. would not haul empty cars from the East over their lines to be delivered to the S. P. to move traffic originating in the Willamette Valley south of Ashland. It is not done—except possibly in an occasional instance, where the exigency of the case demands some such action. Lucin is 112 miles west of Ogden, and Umbria 104. By the S. P. line, Portland to Lucin would be 1,241 miles, as against 921 by the O. R. & N., O. S. L., and back over the S. P. "Q. (By MR. SEVERANCE.) And you think it is in the interests of moving traffic economically and comfortably and speedily in this case to force traffic over these two mountain ranges and 300 miles further, although you think that would not be the case if the movement was clear through to Ogden. A. My own judgment about it is that it would be very much to the interest of the Southern Pacific to move the business via Portland and Ogden. * * * (4533) I also think that the public could get better service that way than they could via the other route."

Distance, Portland to Lucin, via Roseville and via Ogden.

To the interest of S. P. to move the traffic via Portland and Ogden.

Public could get better service that way.

Reasons why it is not moved that way.

I do not move it that way because I do not think it was to the interest of the O. R. & N. and the O. S. L. to do it, because of the comparison it is possible to make of the proportion that we would get of the through rate from Portland to Oregon with our local rate from Portland to Ogden, and in these times that is one of the controlling forces in the making of rates that are abnormally low—the comparison which could be used on other traffic or traffic in other territory. We paid the S. P. for handling that traffic from Ogden to Umbria 5c a hundred, leaving us 35c from Portland to Ogden, but the stuff came from the Willamette Valley. On Mr. Eccles' business the O. R. & N. and the O. S. L. had 35c for moving the business to Ogden. "Mr. Eccles has a very large lumber trade in Ogden, Salt Lake and throughout Utah. If we can haul Mr. Eccles' lumber from Hood (4534) River to Ogden when destined to Lucin for 35 cents a hundred pounds, why is it not natural that Mr. Eccles would expect us to haul his Ogden lumber from Hood River for 35 cents a hundred? Now on this business from the Willamette Valley to Lucin and Umbria the S. P. will perform a maximum haul of 125 miles to Portland, for which it would earn 10 cents per hundred pounds, and it would perform a haul of 102 miles west of Ogden for which it would earn 5 cents per hundred pounds, or a total distance hauled of 227 miles, for which it would earn 15 cents per 100 pounds.

"Now, if it took the business from Portland to Lucin or Umbria via Shasta, it would haul the freight about 1,240 miles—— * * * 1,241—and deducting 125 miles for the service south of Portland, which it would not perform in that case, it would leave the haul from the Willamette Valley 1,116 miles. Now, the difference between 1,116 miles of service via Roseville and 227 miles which it would perform to Portland and west of Ogden would leave 889 miles. Now it has earned 15 cents or would earn 15 cents for this 227 miles, and it would earn 40 cents for the 1,116 miles—or a difference of 25 cents per 100 pounds for a haul of 889 miles, with an empty car haul northbound and a loaded car haul southbound over the Siskiyou Mountains and the Sierra Nevada Mountains. So I think there would be more net money for the Southern Pacific to haul from the Willamette Valley to Umbria via Portland and Oregon than as against the route via Roseville." From a S. P. standpoint I think the business would be more profitable to the S. P. moved by Portland than via Ogden.

Paper from Oregon City.

(4535) As to the movement of traffic from Oregon City to San Francisco, speaking of paper: Some of that paper is brought down to Portland and sent down by the boat, and some of it is taken by a little boat across the river to a small station and sent south by the S. P. rail lines. Mr. Stubbs said none of it moved by rail; well, Mr. Stubbs referred to the San Francisco paper, I take it, which is true. I have spoken of certain Oregon points that could be reached either by the O. R. & N. broken service, and which could also be reached by the S. P. as a connection of the O. R. & N.

Those were points not reached by the Puget Sound Route of the N. P. There are no points west of Pasco reached in common by the N. P. and the O. R. & N. As to this matter of raising rates, and of the differential between rail and water, and the lifting up of the water rate above its original lower basis, I have looked into that matter.

No points west of Pasco, common to N. P. and O. R. & N.

(4536) "I find that we have in effect to-day a tariff which names the same arbitraries for the ocean service between San Francisco and Portland on business destined to all points on the Navigation lines in Oregon as are used on business destined to points on the Navigation lines in Washington and Idaho competitive with the Northern Pacific. In other words we use to-day but one scale of arbitraries between San Francisco and Portland on business originating at or destined to all points on the Navigation lines. The tariff is O. R. N. No. 71-A, effective February 1, 1910. * * * I mean to say that those arbitraries, to use that expression,—I was referring to certain rates that are lower than the local rates between San Francisco and Portland. Formerly the rates between San Francisco and points in Oregon were built or made on the basis of the local rates between San Francisco and Portland added to the rates between Portland and destination."

Raising of water rates.

Our present rates to these Oregon points reached by the S. P. in connection with the O. R. & N., but not by the N. P., as to those points the lower rate by the water is a component part of the rate to such points. The rate is now made up to those points from San Francisco as a combination by water to Portland, and rail thence to destination. The S. P. rail rate is made up of its own rail rate to Portland, plus the rate thence to destination. The fact is we have a lower rate by the O. R. & N. water and rail route to these points to-day than all rail S. P. and O. R. & N. So far as these Oregon points spoken of are concerned, the S. P. never could reach them at any time except as a connection of the O. R. & N. (4537) The volume of the less than carload freight from San Francisco to Portland represents on an average about 2½ tons per day. The tonnage of lumber from Portland to points on and via the Rio Grande lines via Huntington for 1899 was 5,852 tons; 1900, 14,106; 1901, 11,436; U. P. System line's revenue, 1899, $30,819.44; 1900, $67,461.88; 1901, $55,937.61.

Rates to Oregon points reached by S. P. in connection with O. R. & N., but not reached by N. P.

Lumber tonnage to Rio Grande points.

When we took out the joint rates by the O. R. & N. and O. S. L. to Ogden and thence west over the S. P. to Nevada points, we took out all rates of that kind west of Ogden. Traffic from the Willamette Valley or Portland to points immediately west of Ogden across Utah and Nevada would go S. P., to get the direct rate, unless it went on the sum of the locals—in fact, the only rates we had in to points west of Ogden were lumber rates. (4538) Tariff I. C. C. No. 1494, effective February 10, Supplement No. 2, effective March 20, has proportional class rates between San Francisco and Portland, East Portland and Albina, and between points in Group 1, page 5, and the last-named points, on shipments to or from points on the

The only rates from Portland to points west of Ogden via O. S. L. were lumber rates.

Basis of certain through rates from San Francisco to points east of Portland.

Camas Prairie road, and the O. R. & N. Co. east of East Portland, including Mullen, Idaho, 35c first-class down to 13c class 5 and the subsequent classes; that is merely a basis that is used in arriving at through rates—the rate used from San Francisco to Portland, added to the rate from Portland to destination makes the through rate. We take the through charges between San Francisco and point of origin and destination, and subdivide between the O. R. & N. rail line and the San Francisco and Portland Steamship Company. The 35 cents first class, shown as the proportional rate San Francisco to Portland, is not the amount that the Steamship Company receives for its service, but an arbitrary basis used in fixing the through rates.

(4539) We add the rates, San Francisco-Portland, to the rates between Portland and Oregon, Washington and Idaho points, and the result is the joint through rate. The first-class rate Portland to Spokane is $1.35, and the first-class rate from San Francisco to Spokane by water would be this $1.35 from Portland, added to the 35cts, shown in the tariff from San Francisco to Portland, $1.70 being the first-class through rate to Spokane; all rail, the through rate would be $1.35 plus the 45-cent scale San Francisco to Portland, or $1.80. There is a differential to all of these points. The N. P. reaches Spokane. (4540) Down to these points in Oregon, which I spoke of yesterday, a differential exists, and has always existed. Let me recite a little history: "There are certain local rates in effect between San Francisco and Puget Sound and San Francisco and Portland via water; there are certain local rates in effect between San Francisco and Portland by rail. Ordinarily through rates between San Francisco and points east of Puget Sound and east of Portland would be made on the basis of the full combination of the ocean local to Puget Sound and the rail rates beyond. * * *

Basis of rate making to points east of Puget Sound and Portland.

(4541) "Or Portland, or on any basis of the local rail rate to Portland added to the full local rates beyond. But owing to the competition that exists on the ocean and the desire or disposition on the part of the rail lines to hold as much of the San Francisco traffic as is practicable to their regular connections, rates from San Francisco to the territory east of Puget Sound and east of Portland are in some instances made on a slightly lower basis than the local water rates, and these slightly lower rates are the proportional rates shown on that tariff in front of you. Now, to points in eastern Washington and northern Idaho served by the lines of the Navigation Company, and which is almost in its entirety competitive with other lines, the rates are made on the basis of the proportional rates referred to, added to the full local rates of the rail carriers. That in order that the rates from San Francisco through Portland may be no different than the rates through Puget Sound. In Oregon a different situation exists. The competition through Puget Sound does not have to be met because there are no through rates from Puget Sound to that territory. Therefore, it has been our

practice for several years to make the rates from San Francisco to these Oregon points both by water to Portland and by rail to Portland the full combination of the local rates from San Francisco to Portland added to the rates from Portland to destination where at least the full combination of local rates was not exceeded.

"Now, it so happens that the rail rates from San Francisco to Portland are higher than the water rates from San Francisco to Portland. Therefore, when the rates from San Francisco to points east of Portland are based on the full combination of the local rates, the rates by rail naturally would be higher than by the mixed water and rail service. And it might so happen that in some instances the rates by the mixed water and rail service would be the same as the all-rail service. Since February 10th, and I think for some two or three months probably prior to that time, the rates from San Francisco to these Oregon points by the mixed water and rail service, instead of being on the full combination of the local rates are on the basis of this 35 cent proportional scale and the commodity rates as shown in that tariff, which in some instances are lower than the local commodity rates on Portland proper business. In other words, as the rates stand to-day, the basis that we use from San Francisco to points in Oregon for the mixed water and rail service are no different than the basis used in arriving at the through rates to points in Washington and Idaho."

(4542) To Oregon points served by the O. R. & N., the rates all-rail and broken service have been the same for three or four years. But to-day the rates by water are considerably lower than by rail. This change occurred by tariff two or three months ago, of which, with a few changes, the tariff of February 10, 1901, is a reissue. This so-called arbitrary, under this February 10 tariff and the tariff immediately preceding it, which we have been using, is somewhat lower than the local water rate—quite usual in making a proportional rate, otherwise there would be no occasion to make the through rate, the rate then being the sum of the locals.

(4542) GEO. W. LUCE.

Luce.

I live at San Francisco, and am General Freight Agent of S. P. San Francisco. Gen. Freight Agt. S. P.

(4543) "I first started with the Central Pacific Railroad in 1875; continued in that service until 1887, when I accepted a position with the Gould lines, with headquarters at San Francisco. After being in their service from September 1, 1888, until September, 1891, I accepted service with the Union Pacific Railroad system, with headquarters at San Francisco, and remained in that service until November 20, 1894, when I re-entered the service of the Southern Pacific as assistant general freight agent, and continued in that position until October 15, 1901, when I was made general freight agent, and occupy that position at the present time." When I was representing the U. P.—General Agent of the Freight Department—in San Francisco, and for many years before that, before the railroads had a

Time when all San Francisco-Portland business went by steamship.

line, business between Portland and San Francisco was moved by the steamships. While I was representing the U. P., I don't think the railroad ran any through trains to Portland, I don't believe they handled any business sufficient to warrant any trains on the Portland business. They naturally ran a daily train out of San Francisco as they do in all directions, to take care of the local business beyond San Francisco—for example, they would take freight to Sacramento.

Local freights only on Shasta route.

(4544) The freight train between San Francisco and Portland would handle freight for Sacramento, Lincoln, Wheatland, Marysville, Oroville, Durham, Nelson, Chico, Red Bluff, up to Dunsmuir and beyond, the points named being in the Sacramento Valley, California. That train would render similar service to S. P. local points in Willamette Valley—that is, handling that traffic as far as Dunsmuir, but I do not think they would have sufficient in any train to run a train beyond there without gathering together trains of three or four days, and then possibly they could run a way train from there toward Portland. The way train service for illustration, would be rendered to Ashland at the Oregon-California State line, and to Grant's Pass, about 100 miles beyond, the train moving along from place to place from San Francisco until it finally reached Portland. At the present time, the freight would make six or seven days from San Francisco to Portland. In 1900 we never considered the rail line traffic in those days. The service in 1900 and 1901 would be about seven or eight days.

Freight service to Portland 6 or 7 days.

S. P. not in the Portland business.

San Francisco route via Portland never used.

(4545) While I was U. P. agent in San Francisco we never considered the S. P. interested in the takings of freight business, San Francisco and Portland, they didn't engage in it, didn't handle the business, didn't seek it. The ocean lines generally handled that business. During my time as agent of the U. P. at San Francisco the route by way of the U. P. to Portland, and thence to San Francisco by steamship, was not at any time operated as a transcontinental route. I never attempted, as freight agent of the U. P., to work any business that way. That business always went, and I always worked it, via Ogden in connection with the S. P. I never knew of any shipments while I was U. P. agent at San Francisco to go by the route of U. P. to Portland, and ocean to San Francisco. The situation in 1900 and 1901 was precisely the same, and since that time the U. P. business has always moved through Ogden by the S. P., eastbound business moving S. P. through Ogden and the U. P. Of that business, through Ogden, in 1900 and 1901, I should say 70 per cent. went to the U. P., and about 30 to the Denver & Rio Grande. Since 1901, recently, the business divided at Ogden, 90 per cent to the U. P., and 10 per cent to the D. & R. G. In 1900 and 1901 the S. P. moved business from the Willamette Valley.

Division of eastbound S. P. business at Ogden.

Willamette Valley traffic.

(4546) There were certain river points in 1900 served by the O. R. & N. boats. The Willamette Valley extended south of those points. The S. P. moved business from the points that were served, or could have been served, by teaming or otherwise, through the

river boats. The tonnage of the S. P. attributable to those river points for 1900 and 1901, as compared with its tonnage from the Willamette Valley as a whole, was about 10 or 11 per cent. It may be fairly stated that the great volume of S. P. tonnage from the Willamette Valley was from points exclusive of these so-called river points. Taking 1899, 1900 and 1901, "the Asiatic business did not go east by the Sunset route. It was always forwarded by Ogden and U. P. and our preferred connections, the Northwestern and the Milwaukee & St. Paul Railroads. Not all of it by those two lines, but I should say about 70 per cent. And that is true of the westbound, except that there was a small portion of westbound Asiatic business that moved via the Sunset route—no eastbound via Sunset."

Asiatic business went east via Ogden route.

Recurring to the steamship business between Portland and San Francisco. "The freight would be unloaded from the ship on to the dock in San Francisco; it would then be loaded on teams and transferred (4547) by the team to the railroad depot or wharves of the river boats, Jackson Street wharf or Washington Street wharf, and then handled again from the wharves into cars or into the steamers, and then locally from the wharves or the depot to the point of destination of the freight. * * * Steamers of light draught, river steamers, plying on the Sacramento River between San Francisco and Sacramento, and also on the San Joaquin River and Stockton Channel, between San Francisco and Stockton. They were light draught river boats." The traffic is not susceptible of delivery by water from San Francisco to places like Sacramento or Stockton by ocean steamers, which are of too great draught and cannot ply those streams at all, but must transfer their freight to the light-draught river boats.

Delivery of O. R. & N. cargoes at interior California points.

In 1900 and 1901 the S. P. reached points in eastern Oregon, Washington and Idaho by connection at Portland with the O. R. & N. or the N. P. At that time the O. R. & N. had its own boat line from San Francisco to Portland, connecting there with its rails, and the N. P. had a traffic arrangement with the Pacific Coast Steamship Company, plying from San Francisco to Tacoma, and their rails thence to these points. The rate by this mixed service was lower than all rail. The principal rail connection of the S. P., over which its business principally moved, was the O. R. & N.—greater division with that line than with the N. P. General merchandise and eastern manufactured goods were quite largely distributed to these Oregon, Washington and Idaho points from Portland, Seattle, Tacoma.

S. P. routes to eastern Oregon and Washington and Idaho.

Jobbing points.

(4548) To some extent Spokane would job into the same territory. The rates to Portland, Tacoma and Seattle are the same as San Francisco, and the distributive rates from those points into the immediate interior are considerably less than from San Francisco. Rates from eastern points to Pacific Coast terminals like San Francisco, Portland, Seattle, Tacoma, are alike. To Montana points, S. P. freight from San Francisco moved via Ogden and O. S. L. and N. P., also Portland and N. P., but mostly via Ogden

Rates from east to coast terminals alike.

S. P. routes to Montana points.

and O. S. L. General merchandise and eastern manufactured goods were principally distributed direct to Montana, for the reason that the rates to Montana are lower than the rates to Portland and San Francisco, considering the local to be added back from San Francisco and Portland. Mr. Jones came to San Francisco as Freight Traffic Manager in September, 1906, from Houston, Texas, and could not possibly have had, in so short a space of time, the local familiarity with conditions that I have. The $3.10 rate, Willamette Valley to San Francisco, was in effect first on green lumber and its products, and included ties. It was concluded that the $3.10 rate was too low, even on green lumber, and the rate on ties in its entirety was increased to $5. The lumber people in the Valley objected to that increase in the lumber rate, and our people negotiated with them and concluded to recede from the $5 rate on green lumber, and reinstated the $3.10 rate on green lumber, leaving ties and all other lumber products at the $5 rate.

Mr. Jones not yet familiar with local conditions.

Rates on ties and green lumber.

(4549) Pine ties are 6 ft. x 8. I think they are selected stock, same class with sills, joists or scantling. With respect to the higher rate on ties, than on ordinary rough lumber, I do not recall a territory where the same conditions exist as do exist upon that line. Generally, I would be willing to apply the same rate on ties as on lumber. But in a territory such as this, where the rates are so extremely low, we believe that ties can stand a higher rate than the rate forced upon the lumber. (4550) I don't happen to know of any instance at the present time of ties taking a higher rate than rough lumber, but probably I could locate some. The fact that the Western Pacific was being built into San Francisco, getting its supply of ties from the Willamette Valley, had nothing to do with keeping the tie rate higher than that on rough lumber. Of that I am sure, the rate was made as I stated. Surface lumber, all other lumber, was left at the $5 rate, excepting the green lumber. Ties are a commodity, they are not green lumber any more than a door is lumber after the door is made. A tie is a finished product for the purpose.

Western Pacific, nothing to do with tie rate.

(4551) The tie can only be used for that purpose, properly speaking. A sill can be cut up and used for various purposes. Others would have done the same as we did if they had the same conditions, with that low rate of $3.10 on; they would have escaped every product of lumber they possibly could, rather than carry it at $3.10. The mill men had started their mills and cut the lumber, and thought it was not fair to advance their rate from $3.10 to $5, and on negotiation we concluded to reduce the rate on green lumber so that it could freely move as before to San Francisco Bay points. I read Mr. Kelly's testimony, of the Booth-Kelly Lumber Company, as to the putting up of the rate on ties to $5 per 1,000, making it impossible for him to deliver in San Francisco or in territory where the Western Pacific was trying to buy ties. He is a big manufacturer of lumber in the Valley. I said I never considered that the S. P. was interested in that traffic between San Francisco and Portland, I say

S. P. never interested in Portland traffic.

they did not seek the business. They did seek business out of San Francisco for Montana.

(4552) I don't know that they did actively, but they sought, handled the business, and handled a majority of the business through Ogden in connection with the O. S. L. I don't think they solicited the business. It came to us naturally, because we were the shortest line, and it was daily all-rail service, and I don't believe that they solicited very much. Mr. F. F. Connor, when he represented the O. R. & N., was on the street soliciting business for the O. R. & N., and he probably would notice that more than I would in the general office after that. In respect to the S. P. taking the business moving locally, between San Francisco and Portland, California products like sugar, canned goods, and things of that sort —if they would back up their cart and deliver it to us we would take it, but we never sought the business. We did not try to get the business at the going rates by steamer; if they would make the delivery to us we would take it, but we would not solicit business for rates higher than the ocean rates, and never did.

Montana traffic.

Portland business handled.

"Q. If that is the case, will you explain to me why on the first day of December, 1895—which was when you were with the Southern Pacific, after you left the Union Pacific—rates were put in by the Southern Pacific Company applying between San Francisco, California, only, and Portland and Salem, Oregon, and points between, as follows: On the first four classes, 12½ cents per hundred pounds, and on the 5th and A, B, C, D and E classes 10 cents per hundred pounds, with the following notation on the traiff: 'These rates are not regarded as fair compensation for the service but are forced by the excessive competition of ocean lines?' (4553) If the Southern Pacific Company was not competing for business local to Portland, why did they put in that tariff? A. As Mr. Stubbs explained, that was that foolish war measure. They simply attempted to get into the business. It was a failure, and they got out of it and have kept out of it ever since." I recall some of the Portland testimony, Portland merchants testifying that they were solicited, but I don't recall any San Francisco merchant having so testified—in Portland probably that was a fact, southbound business. I had general charge of the solicitation of business for the S. P., looked after it. In the last six months I have talked with our General Agent in San Francisco, and he states absolutely that they never solicited the Portland business.

"Foolish war measure."

Never solicited Portland business.

(4554) The S. P. had soliciting agents on the streets seeking S. P. business, at the time when the O. R. & N. was separate. Cars were leaving San Francisco daily, S. P. movement, with traffic, some to northern California, to Southern Oregon, to Portland and beyond. Once in five days the O. R. & N. steamers left San Francisco for Portland, with traffic to Portland and beyond. Ships sail now once in seven days. The present rail freight schedule between San Francisco and Portland is six or seven days. From my general knowledge of the traffic I estimate the river business out of the Willamette Val-

Amt. of river business in Willamette Valley.

ley at 10½ or 11 per cent. I never heard of any arrangement between California citrus fruit shippers and the S. P. with reference to the time of the movement of that traffic to Chicago.

Stebbins.

(4555) C. S. STEBBINS (2)

I was examined in this case, and prepared some statements for Mr. Severance that were introduced into the record, and were compiled from the records of the companies. I was assistant to the General Auditor of the U. P. and S. P., Mr. Young, now succeeded by Mr. C. B. Segar. I have the statement here, marked Defendants' Exhibit 45, Westbound Asiatic Traffic Volume, and U. P. and S. P. Revenue via Portland and via Sunset-Gulf; item via Portland, total traffic tons 262, U. P. revenue $1,044.27. Those were compiled from the records of the company, the same record from which the reports were made to the stockholders and to the Interstate Commerce Commission. (4556) The statement showing the total traffic via the Sunset-Gulf Route, tons 1,098, S. P. revenue $24,789.92, was compiled by the Auditor of the S. P.'s Atlantic Steamship Lines under my direction. In the expression "Movement outward and inward," the words "and inward" should be stricken out. I have the detail for the 262 tons, which is a round figure, the detail showing 261.95. This is for the year ending June 30, 1901. I have not divided it by months. The item "Via Sunset-Gulf" refers to the tonnage via the Sunset Route to San Francisco, including the Atlantic Steamship Lines. The detailed statement, Defendants' Exhibit 45-A, is identical with Defendants' Exhibit 45, heretofore set forth in full (ante pp. 518-519), except that matter preceding the italicized heading, "Statement of tons carried and freight revenue of the Union Pacific system, on westbound freight traffic," etc., is omitted.

Statistics showing tonnage and revenue of certain traffic.

(4559) I have the detail from the Auditor of the Atlantic Steamship Lines to be attached to Defendants' Exhibit 45 for the item Sunset-Gulf Route tonnage 1098, revenue $24,879.92, as follows:

(4560) "The statement last referred to by the witness as being in detail was marked Defendants' Exhibit 45-B, Supplemental, (Stebbins), was offered in evidence by the defendants, and is as follows:"

DEFENDANTS' EXHIBIT 45-B, SUPPLEMENTAL.

(Stebbins)

SOUTHERN PACIFIC COMPANY.

ATLANTIC STEAMSHIP LINES.

Statement of tonnage and revenue accruing to system lines on business forwarded to China and Japan, for fiscal year ending June 30th, 1900.

Tons	Ship Revenue	Rail Revenue	Total System Revenue
1,098	$4,338.24	$20,451.68	$24,789.92

AUDITOR'S OFFICE,
New York, N. Y., Jan. 12th, 1910.
(Sgd) B. G. BARTHOLOMEW,
Auditor.

Defendants' Exhibit 45-C, Supplemental, refers to the movement to San Francisco outward and inward of Asiatic traffic, with volume and U. P. and S. P. revenue for year ending June 30, 1901, and as referred to Portland gives the total traffic as 6,737 tons, with U. P. earnings, outward and inward, compiled from the records of the companies, and in addition to the westbound tonnage of 262 tons included in Defendants' Exhibit 45, comprises similar eastbound tonnage of 6,475 tons with the detail. It is as follows:

(4561)

DEFENDANTS' EXHIBIT 45-C, SUPPLEMENTAL.

(Stebbins)

Lovett's question No. 13.

Sub-Division "A."

ASIATIC TRAFFIC.

Authority: Auditor's statements (4) attached.

I have the detailed statement for the eastbound traffic via Portland, 6,475.06 tons. The figures were compiled from the records of the Company. The total tons of freight carried by U. P. system for the year ending June 30, 1901, 8,209,209, have been partially approximated as stated in the foot note, owing to the destruction of records by fire, but the gross operating revenue is exact. (4562) The records of the San Francisco office, and a portion of the records of the Omaha office, were burned. The records of the Portland office are intact, and this statement was compiled from them—I refer to Defendants' Exhibit 45-D Supplemental, in which the figures of the Sunset-Gulf Route were compiled from the records of the Steamship Line. This exhibit is identical with the latter part of Defendants' Exhibit 45, beginning with the italicized heading, "Statement of tons carried and freight revenue of the Union Pacific system, on eastbound freight traffic," etc. (ante p. 519).

(4563) In respect to Defendants' Exhibit 45-C, Supplemental, the figures for Asiatic tonnage via San Francisco, east and west bound, 26,515—S. P. and U. P. records having been destroyed—(4564) were compiled from the records of the C., M. & St. P. and the C. & N. W., to determine the amount of Oriental business via the U. P., Ogden and San Francisco carried by these two lines. The total tonnage shown for the U. P. is estimated on the assumption that the Milwaukee and Northwestern companies carried 70 per cent. of the total.

This detail is in two statements, one bearing the word "To" certain defined territories, and the other the word "From," indicating east and west bound movement, westbound detail and eastbound detail being respectively Defendants' Exhibits 45-E Supplemental, and 45-F Supplemental, which are as follows:

DEFENDANTS' EXHIBIT 45-E, SUPPLEMENTAL.

(Stebbins)

Statement of Freight Traffic from points in Missouri River and Common Points Territory and points east thereof, via the Chicago, Milwaukee & St. Paul Railway and Chicago & North-Western Railway to the Orient, via Union Pacific Railroad, Ogden, Utah, and Southern Pacific Company—Pacific System, for the fiscal year ending June 30, 1901.

Statement of Freight Traffic from points in Missouri River and Common Points Territory and points east thereof.—Continued.

	Tons Carried.	Freight Revenue
Estimated Total Westbound Oriental Freight Traffic via U. P. R. R., Ogden, and S. P. Co. from territories specified above, Union Pacific System Revenue	16,869.29	84,890.77
Estimated Total Westbound Oriental Freight Traffic via U. P. R. R., Ogden, and S. P. Co. from territories specified above, Southern Pacific Company Revenue	16,869.29	72,314.36
Total Tons of Freight carried by and Gross Operating Revenue of Union Pacific System for fiscal year ending June 30, 1901 (see Note 2)	8,209,209	43,538,181.01
Total Tons of Freight carried by and Gross Operating Revenue of Southern Pacific Company Lines for fiscal year ending June 30, 1901 (see Note 3)	14,272,278	77,244,898.18
Ratio of Estimated Total Westbound Oriental Freight Traffic via this route to Total Tons of Freight Carried by and Gross Operating Revenue of Union Pacific System	0.21%	0.19%
Ratio of Estimated Total Westbound Oriental Freight Traffic via this route to Total Tons of Freight carried by and Gross Operating Revenue of Southern Pacific Co. Lines	0.12%	0.09%

NOTE 1.—The Total Westbound Oriental Freight Traffic via U. P. R. R., Ogden, and S. P. Co. is estimated on the basis that the traffic carried by the C. M. & St. P. Ry. and C. & N. W. Ry. is 70 per cent. of the total traffic via this route.

2.—Union Pacific System includes Union Pacific Railroad Company, Oregon Short Line Railroad Company, and the rail and water lines of the Oregon Railroad & Navigation Company. Owing to destruction of records by fire the total tons carried have been partially approximated. The gross operating revenue is correct.

3.—Southern Pacific Lines include Southern Pacific Company—Pacific System and the lines east of El Paso in which the Southern Pacific Company has an interest, including the Sunset-Central Lines (so-called) and the Southern Pacific Company's Atlantic Steamship Lines.

Compiled by: (Sgd) C. S. STEBBINS,
Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

(4566) "Defendants' Exhibit 45-F, Supplemental, (Stebbins) is as follows:"

DEFENDANTS' EXHIBIT 45-F, SUPPLEMENTAL.

(Stebbins)

Statement of Freight Traffic from the Orient via Southern Pacific Company—Pacific System, Ogden, Utah, and Union Pacific Railroad to points in Missouri River and Common Points Territory and points east thereof, via the Chicago, Milwaukee & St. Paul Railway and Chicago & North-Western Railway, for the fiscal year ending June 30, 1901.

Total Tons carried by and Gross Operating Revenue of Union Pacific System for fiscal year ending June 30, 1901 (See Note 2)	8,209,209	43,538,181.01
Total Tons of Freight carried by and Gross Operating Revenue of Southern Pacific Company Lines for fiscal year ending June 30, 1901 (See Note 3)	14,272,278	77,244,898.18
Ratio of Estimated total Eastbound Oriental Freight Traffic via this route to Total Tons of Freight carried by and Gross Operating Revenue of U. P. System	0.12%	0.20%
Ratio of Estimated Total Eastbound Oriental Freight Traffic via this route to Total Tons of Freight carried by and Gross Operating Revenue of Southern Pacific Co. Lines	0.07%	0.19%

NOTE 1.—The total Eastbound Oriental Freight Traffic via S. P. Co., Ogden, and U. P. R. R. is estimated on the basis that the traffic carried by the C. M. & St. P. Ry. and C. & N. W. Ry. is 70 per cent. of the total traffic via this route.

2.—Union Pacific System includes U. P. R. R. Co., O. S. L. R. R Co. and the rail and water lines of the O. R. & N. Co. Owing to destruction of records by fire the total tons carried have been partially approximated. The gross operating revenue is correct.

3.—Southern Pacific Company Lines include Southern Pacific Co.—Pac. Sys. and the lines east of El Paso in which the Sou. Pac. Co. has an interest, including the Sunset-Central Lines (so-called) and the Sou. Pac. Co.'s Atlantic Steamship Lines.

Compiled by: (Sgd) C. S. STEBBINS,
Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

(4567) Our own clerks were given access to the Milwaukee and Northwestern records, and made the compilation.

For Defendants' Exhibit 46, compiled from the records of the O. R. & N., I have a detail attached to that exhibit, which is the detail attached thereto and put into the record on Mr. Stubbs' testimony. The statement in Exhibit 46 beginning "The showing for the Southern Pacific," etc., was Mr Stubbs' estimate. The detailed statement, Defendants' Exhibit 46-A Supplemental, is identical with the latter part of Defendants' Exhibit 46, beginning with the italicized heading, "Statement of tonnage," etc. (ante p. 521.)

(4568) Referring to Defendants' Exhibit 47, and to the statement of the O. R. & N. tonnage, 37,066, and the U. P. System earnings against them, and to the statement "Deduct non-competitive 30,704"—this was supported by a detailed statement in which a portion of the figures were shown as approximated. I now have a revised statement, in which actual figures are given for all amounts shown thereon, and the detailed statement here in which actual figures are substituted for approximate. These statements, Defendants' Exhibits 47-A and 47-B, are as follows:

DEFENDANTS' EXHIBIT 47-A, SUPPLEMENTAL.

(Stebbins)

Sub-Division "D."

Lovett's question No. 13.

WILLAMETTE VALLEY TRAFFIC.

Year Ending June 30, 1901.

Excluding traffic to and from local points on Union Pacific System, rail and water lines, West of Ogden.

	Tons		
Via O. R. & N. Co.	37,066	U. P. Sys. Earnings	$120,291.39
Average per Month	3,088	"	10,024.28
Deduct Non-Competitive	30,186	"	77,169.79
Remaining Competitive	6,880	"	43,121.60
Average per month	573	"	3,593.47
Via Southern Pacific Estimated Average per month	2,120	Earnings	12,196.50
Total Average per month	2,693	"	$15,789.97

(4569) Authority: For the O. R. & N. Co. Auditor's statement attached. For the *Southern Pacific*: Tonnage is estimated at 50 per cent more than Steamship tonnage, and the earnings are computed at 90 cents per ton higher than the rate via O. R. & N. Co.

Defendants' Exhibit 47-B, Supplemental, (Stebbins) is as follows:

DEFENDANTS' EXHIBIT 47-B, SUPPLEMENTAL.

(Stebbins)

Statement showing tonnage and Union Pacific System freight revenue on certain freight traffic handled by the Oregon Railroad & Navigation Company's Willamette River boats for the fiscal year ending June 30, 1901.

	Tons Carried	Union Pacific System Freight Revenue
From San Francisco to the River	3,649	11,713.03
To " from "	23,992	71,899.58
From Ogden and Beyond to the River	592	16,615.54

Total from the River	32,070	88,050.33
Grand Total	37,066	120,291.39
Deduct the following traffic to and from the paper mills at Oregon City, which traffic is not competitive:		
From San Francisco to the River	2,512	6,553.68
To " from "	20,104	56,557.75
From Other Points to the River	798	851.27
To " from "	6,772	13,207.09
Total	30,186	77,169.79
Balance	6,880	43,121.60

	Total Tons Carried	Gross Operating Revenue
Total tons of freight carried by and gross operating revenue of Union Pacific system for year ending June 30, 1901 (See Note 1)	8,209,209	43,538,181.01
Ratio of competitive freight traffic handled by O. R. & N. Co.'s Willamette River boats to total tons of freight carried by and gross operating revenue of Union Pacific System	0.08%	0.10%

NOTES:

1.—Union Pacific System includes Union Pacific Railroad Company, Oregon Short Line Railroad Company, and the rail and water lines of the Oregon Railroad & Navigation Company. Owing to the destruction of certain records by fire, the total tons of freight have been partially approximated. The gross operating revenue is correct.

(4570) 2.—This statement does not include traffic to and from points on the O. R. & N. rail and water lines, except San Francisco, or traffic to and from points on O. S. L. R. R. west of Ogden.

3.—"Non-competitive traffic from other points deducted, covers traffic from Northern Pacific and Columbia River points" via Portland.

4.—"Non-competitive traffic to other points," deducted, covers traffic to Seattle, Tacoma and Australia via Seattle, to Salt Lake City, and to points on S. P. Co. via Portland.

Compiled by: (Sgd) C. S. STEBBINS,
Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

These figures were compiled from the records, except one amount of the total tons carried of the U. P. System, which is approximated, the revenue against it being actual. The deduction to and from the paper mills of noncompetitive traffic is Mr. Stubbs' memorandum. The figures in 47-B following the statement of deduction, aggregating 30,000 tons, are the deducted traffic, the deduction based on that note, and these notes at the foot of the statement, 3 and 4. The items from San Francisco to the river, and to San Francisco from the river, are the San Francisco paper mill business at Oregon City, back and forth. (4571) The figures for Defendants' Exhibit 48—via Southern Pacific, tons 1,428, with Southern Pacific earnings against it—(under heading of Lumber and other traffic from Portland to Ogden and common points and beyond, via S. P. Co. and D. & R. G., and via U. P. System) were furnished by the General Auditor of the D. & R. G., the S. P. records having been destroyed, and I have a copy of the detail of that General Auditor. The item via U. P., tons 13,768, was compiled from the records. These detailed statements are Defendants' Exhibits 48-A Supplemental, and 48-B Supplemental.

(4572) Defendants' Exhibit 48-A supplemental is identical with the latter part of Defendants' Exhibit 48, beginning with the italicized heading. "Tonnage and revenue on freight traffic," etc. (ante pp. 525.)

Defendants' Exhibit 48-B is as follows:

DEFENDANTS' EXHIBIT 48-B, SUPPLEMENTAL.

Total	1,428	$10,080.79

NOTE.—See detail for partial information as to lumber shipments, included in above figures, full information not being available.

The figures for Defendants' Exhibit 49 were compiled from the U. P. and S. P. records. We have the records for the traffic via the S. P., except one book of Waybills for one month from New Orleans to Oregon points, which was missing from the files, and the statement is incomplete to the extent of whatever Portland traffic might have been covered by the missing waybills. It was the opinion of Auditor Edwards of New Orleans, who made the statement and did the detail work, and who is here, that this would not change the total more than one per cent. The S. P. records for the year were obtainable at New Orleans, covering the S. P. Sunset Route via El Paso and New Orleans. The approximation of the total tons carried of the S. P., 12,243,763, was taken from a record made in 1900 or 1901. On a critical examination of these figures within the last few days, I am satisfied they should be reduced 5 per cent. (4575) The revenue is actual. The reduction of 5 per cent. in the tons carried would not be sufficient to change the percentage based thereon, which is the ratio that the freight traffic between Portland and the specified territory bears to the total tons of freight carried by S. P. lines—three-hundredths of one per cent. Defendants' Exhibits 49-A Supplemental is identical with that part of Defendants' Exhibit 49 beginning with italicized heading, "Statement of freight traffic between Portland, Oregon," etc., and ending with Mr. Stebbins' signature just preceding the italicized heading, "Statement of tons carried," etc. (ante pp. 526-527.)

(4576) Defendants' Exhibit 49-B Supplemental is identical with the latter part of Defendants' Exhibit 49 beginning with the italicized heading, "Statement of tons carried," etc. (ante p. 527.)

Referring to Defendants' Exhibit 50-A, and to the item "Via Rio Grande and Southern Pacific," those figures were furnished by the D. & R. G. Railroad Company. (4577) The figures 1,958 tons

westbound traffic are a correct transcript of the figures received from the D. & R. G. The traffic eastbound, marked on the statement as "Estimated," was incorrectly drawn off from the D. & R. G. statement. I have here a corrected statement in which the correct figures for the D. & R. G. business are used. The figures from that company applying to six months business only were doubled to make the estimated figures for the year. This eastbound traffic should be corrected from 774 tons to 740. I have the detail as to that. The correct statement of earnings is $7,259.28, instead of $1,533.74. On that statement also the total tons carried by the S. P. lines should be reduced about 5 per cent., but this would not affect the percentage based on the tonnage. The details are shown by the Defendants' Exhibit 50-A Supplemental and 50-B Supplemental, which are as follows:

DEFENDANTS' EXHIBIT 50-A, SUPPLEMENTAL.
(Stebbins)
Lovett's question No. 13.

Sub-Division "G."

TRAFFIC.

To and from Portland and Atlantic Seaboard, Pittsburgh, and Ohio River Territories.

The showing below includes all traffic between Portland and points on and east of Missouri River, year ending June 30, 1900.

(Is included in answer to "F.")

Via Union Pacific

Via Rio Grande and Southern Pacific W. B.	Tons 1958	S. P. Earnings	$19,192.83
Estimated E. B.	740	" "	7,259.28
Total	2698	" "	$26,452.11
Average per month	225	S. P. Earnings	2,204.34

(4578) Authority: Auditor's statements attached. Owing to destruction of S. P. records this information was furnished by D. & R. G. R. R. Co. See A. S. Hughes' letter to J. C. Stubbs, Sept. 9, 1909, and accompanying papers, which are attached as vouchers to Sub-Division "E." The Eastbound Tonnage and Earnings were given for six months only. That showing has been doubled to get the above exhibit.

DEFENDANTS' EXHIBIT 50-B, SUPPLEMENTAL.
(Stebbins)

Statement of freight traffic between Portland, Oregon, and Missouri River and Common Points Territory and points east thereof, via Southern Pacific Company Lines via Ogden and Rio Grande Western Railway, for year ending June 30, 1900.

Westbound		Eastbound		Total	
Tons Carried	S. P. Co. Freight Revenue	Tons Carried	S. P. Co. Freight Revenue	Tons Carried	S. P. Co. Freight Revenue
1,958	19,192.83	740	7,259.28	2,698	26,452.11

Statement of freight traffic between Portland, Oregon, and Missouri River and common points territory and points east thereof, etc.—Continued.

	Total Tons Carried	Gross Operating Revenue
Total tons of freight carried by and gross operating revenue of Southern Pacific Company Lines, for year ending June 30, 1900 (See Note 1).....	12,243,763	63,920,414.22
Ratio of freight traffic between Portland and territory specified, via Ogden, and Rio Grande Western Railway, to total tons of freight carried by and gross operating revenue of Southern Pacific Company Lines.....	0.02%	0.04%

NOTES.—1. Southern Pacific Company Lines include the Southern Pacific Company-Pacific System and the lines east of El Paso in which the Southern Pacific Company has an interest, including the Sunset-Central Lines (so-called) and the Southern Pacific Company's Atlantic Steamship Lines. Owing to destruction of records by fire the total tons carried have been partially approximated. The gross operating revenue is correct.

2. Owing to destruction by fire of the records of the Southern Pacific Company, the information in respect to business carried via Rio Grande Western Railway was obtained from the Denver & Rio Grande Railroad Company, successor to Rio Grande Western Railway Company. Figures for eastbound traffic were given for six months only and these were doubled for the year.

Compiled by: (Sgd) C. S. STEBBINS,
Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

(TESTIMONY RESUMED, NEW YORK CITY, WEDNESDAY, MARCH 2, 1910.)

(4579) Referring to Defendants' Exhibit 51-A. "Hops and Wool to the East," the U. P. figures, 1,290 tons, were compiled from the records of the company. There is an error of the typewriter in the footing of the second column, which should be $6,978.12, instead of $6,826.69. The figures for the S. P. and El Paso, 128 tons, were compiled from the records of the companies. Those being records being accessible. The detail for the S. P. and D. & R. G. was furnished by the General Auditor of the latter company. I have a copy of his letter and of our letter. The detail is shown in Defendants' Exhibit 51-A Supplemental, in which the same reduction should be made as previously noted, of 5 per cent. in the total S. P. freight tonnage, making no change in the percentage based thereon. (4580) Exhibit 51-A Supplemental, is identical with the latter part of Defendants' Exhibit 51, beginning with italicized heading, "Tonnage and freight revenue," etc. (ante pp. 530-531.)

(4581) Referring to Defendants' Exhibit 52, the figures representing the O. R. & N. traffic were compiled from the records of that company; and owing to the destruction of the S. P. records the figures for the S. P. and N. P. were obtained from the Comptroller of the N. P. This information is given just as it was obtained from the N. P. I understand that the term "Competitive points" used in respect to such information relates to points served by some other road than the N. P., which could reach San Francisco over its own rails, or over its connections. This detail, shown by Defend-

ants' Exhibit 52-A, supplemental, is identical with the later part of Defendants' Exhibit 52, beginning with the italicized heading, "Tonnage and freight revenue," etc. (ante pp. 532-533.)

Referring to Defendants' Exhibit 53, the figures for the S. P. Gulf routes, in respect both to Colorado and Utah, were compiled from the Company's records at New Orleans. The supplemental statement as to Utah points is Defendants' Exhibit 53-A Supplemental, and as to Colorado points, 53-B Supplemental, the same being as follows:

(Sgd) B. G. BARTHOLOMEW,
Auditor.

Northbound means business to New York, or eastbound business from Utah or Colorado to New York; southbound business is business from New York to Utah or Colorado. In Defendants' Exhibit 53 the figures via U. P. all routes are stated for October, 1906, and April, 1907, taken from the statements compiled by me, introduced in evidence by the Government. The statements X, Y, and Z introduced in evidence are the arithmetical computations made by me. (4585) They are Defendants' Exhibit 54. The statement of the total revenue therein of the S. P. and the U. P. was taken from the records of the companies. The total freight revenue for the U. P. System for the fiscal year ending June 30, 1900, was $28,321,016.06; year ending June 30, 1901, $32,025,792.62; S. P. for same years, $41,220,025.59 and $51,946,343.05.

I have a statement of the Willamette Valley business of the S. P. by the Sunset Route, from the so-called River points, and from points in the Willamette Valley which are not served by boat, covering the fiscal year ending June 30, 1900, compiled from the records of the company in the Auditor's office at New Orleans, and including the detail, station by station, prepared by the Auditor of the S. P.'s lines in Louisiana, Mr. Edwards, who is here. The statement is complete, except that one book of waybills, New Orleans to Oregon points, for August, 1899, is missing from the files, but that would make a very small percentage of difference in the result—in the opinion of the Auditor of the Louisiana Lines, of not more than one per cent. The statement itself, contains an expression "To points served by Willamette River boats," and "To points on S. P. Co. not served by Willamette River boats;" both in the statement of the westbound and of the eastbound business. (4586) The points designated are mentioned station by station in the detail. The westbound statement is Defendants' Exhibit 55-A Supplemental, the eastbound is Defendants' Exhibit 55-B Supplemental; the detail for the westbound, Defendants' Exhibit 55-C Supplemental, and for the eastbound Defendants' Exhibit 55-D Supplemental. They are as follows:

DEFENDANTS' EXHIBIT 55-A, SUPPLEMENTAL.

(Stebbins)

Statement of total freight traffic to points in Willamette Valley, Oregon (excluding Portland) via Southern Pacific Company—Pacific System, El Paso, Texas, and New Orleans, Louisiana, from Eastern Territories as specified below, for fiscal year ending June 30, 1900.

From—	Tons Carried	S.P.Co. Freight Revenue
Chicago and Common Points Territory	.3	9.32
Cincinnati, Detroit and Common Points Territory	1.9	37.19
Pittsburg, Buffalo and Common Points Territory	.6	13.45
New York, Boston and Common Points Territory	196.4	6,091.36
Total	199.2	6,151.32
To points served by Willamette River Boats	139.5	3,872.02
To points on S.P.Co. not served by Willamette River Boats	59.7	2,279.30
Total	199.2	6,151.32

NOTE.—One book of waybills from New Orleans to Oregon points for August 1899 is missing and this statement is incomplete to the extent of the traffic covered by such waybills.

Compiled by:

(Sgd) C. S. STEBBINS,
Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

Referring to Defendants' Exhibit 47, and the statement therein of the estimated average monthly tonnage of the S. P. 2,120 that was an estimate made by Mr. Stubbs, the tonnage being estimated at 50 per cent. more than the steamship tonnage. It is evident that his figures were based upon the total tonnage, taking out only the tonnage to San Francisco from Oregon City amounting to 20,104 tons. The first factor, then, would be the total tonnage to and from the Willamette River points, 37,066; the second factor is the 20,104, and third factor is the 50 per cent.

(4592) The first page of Defendants' Exhibit 45 refers only to outward bound traffic to the Orient. It does not show the earnings of the steamships on the Pacific Ocean. The second sheet, headed "Asiatic Traffic, Volume U. P. and S. P. Revenue for the year ending June 30, 1901, movement outward and inward" shows the movement both ways through both ports, San Francisco and Portland, including rail revenue but not steamships on the Pacific Ocean. Exhibit 45 referred only to traffic—S. P.—via the Sunset-Gulf route. The statement of traffic to and from the Orient via San Francisco includes—as shown in the heading of the statement—traffic from and to points on the Missouri River, and common points territory, and points east thereof, via the C. M. & St. P. and the C. & N. W., via U. P., Ogden, and S. P. Pacific System. On the first page of Defendant's Exhibit 45, S. P. revenue by the Sunset Route is $24,789.92, year ending June 30, 1900; the next page of this exhibit is for the year ending June 30, 1901. On Defendants' Exhibit 45-C Supplemental, the S. P. revenue, $146,872, for the year ending June 30, 1901, is revenue accruing only by the Ogden route.

(4593) I have no showing here of the S. P. Sunset revenue for the year ending June 30, 1901. The figures were made up S. P. Gulf

route for 1900, and these others for 1901—I know of no reason for this except that we made up just what was requested by the attorneys or by Mr. Stubbs.

"MR. DUNNE. I will state, Mr. Severance, that the request on the New Orleans Auditor seems to have been addressed to the fiscal year ending June 30, 1900; and in the Union Pacific office I think in most cases it was the year ending June 30, 1901." Referring to Defendants' Exhibit 46, traffic between San Francisco and Portland, volume and U. P. and S. P. earnings for year ending June 30, 1901, showing $217,055.55 as the O. R. & N. earnings, and $110,691.80 as the S. P. earnings—this is local business, San Francisco and Portland, not including business in the Willamette Valley or beyond Portland, or to points in California or other places beyond San Francisco.

(4594) In arriving at the business excluded as non-competitive in Defendants' Exhibit 47, all business to the Oregon City paper mills, both from and to San Francisco, amounting to about $63,000, being the traffic between the paper mills and San Francisco, was excluded. As stated in note 3, at the foot of the Exhibit, the non-competitive traffic from other points deducted covers traffic from N. P. and Columbia River points via Portland. I do not happen to know why Columbia River points and traffic to Salt Lake was treated as noncompetitive. In Defendants' Exhibit 47-A Supplemental, the item of Average Earnings per month $12,196.50, via S. P., is Mr. Stubbs' estimate, including only San Francisco business, the S. P.'s proportion of the hop movement, for example, to Boston or New York, moving by Ogden, being given in other exhibits.

(4595) The traffic covered by Defendants' Exhibit 48 originates in Portland locally, and the traffic from Portland to Ogden via the S. P. is excluded on account of the destruction of records —only eastbound business is included. Defendants' Exhibit 49 is to and from Portland proper. The S. P. part of the statement was made up by the New Orleans Auditor, who audits all the business east of El Paso—through business. This statement shows the Sunset Route; not the business to and from Portland, and the specified eastern territories moving S. P. by Ogden. Defendants' (4596) Exhibit 49 includes all traffic from the eastern territories named therein—between those territories and Portland, by the Sunset Route. The first part of the heading of Defendants' Exhibit 50 should be disregarded; it is intended to show all business between Portland and points on and east of the Missouri River; and the information was received from the General Auditor of the D. & R. G., who, as I recollect it, was unable to separate the business by territories. Defendants' Exhibit 51, hops and wool to the east—mainly Atlantic Seaboard—from Portland to Missouri River and east, includes only the traffic of Portland proper.

(4597) Defendants' Exhibit 52—traffic between San Francisco and Montana and Idaho points, including eastern Oregon, Washington and British Columbia, served by Northern Pacific and com-

peted for—for the service between San Francisco and Portland—by the S. P. and the O. R. & N. for 1900—is the calendar year, via S. P.-N. P., and the fiscal year ending June 30, 1900, via O. R. & N. It does not include S. P. business by way of Ogden to Montana points, or moved to Portland by rail, and then turned over to the O. R. & N. for distribution at local points on the O. R. & N., but relates to S. P. revenue on business interchanged with the N. P. at Portland. As shown by the headings of the columns, the O. R. & N. revenue is only the steamship revenue, not the rail lines. (4598) Defendants' Exhibit 53, with detail, includes S. P. ship revenue to the Gulf from New York, or conversely, and rail revenue Gulf to Fort Worth; and U. P. revenue either from the Missouri River or from Denver, in case of Utah business, if they have any, or business destined to the Colorado and Utah common points. The U. P. revenue, owing to loss of records, could not be given for the period in 1900 to which the S. P. revenue relates, and is shown to October, 1906, and April, 1907, taken from the statements made up at the Government's request. I have a revised statement of Defendants' Exhibit 54, marked "Defendants' Exhibit 54-A Supplemental," as follows:

C. S. STEBBINS,
Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

Complainants' Exhibit 211 is a carbon copy of a letter by General Auditor Young of the U. P. and S. P. to General Auditor Murphy of the D. & R. G., requesting statistics, and in response the D. & R. G.'s statistics were furnished us, except as to one statement, for which the statistics were covered by a letter from Traffic Manager Hughes of the D. & R. G. to Mr. Stubbs. This exhibit is as follows:

(4605)

COMPLAINANT'S EXHIBIT 211.

(Stebbins)

U. S. vs. U. P. R. R. Co. et al.—statistics desired. Sep. 1, '09.

MR. E. R. MURPHY,
General Auditor, D. & R. G. R. R., Denver, Colorado.

DEAR SIR: For use in certain suits, our attorneys desire statistics of certain freight traffic carried by the Southern Pacific Company from or to Ogden, in connection with your line.

Owing to the destruction of records by the San Francisco fire, we are unable to secure the information desired from our own records now existing, and I would esteem it a great favor if your company would furnish information of traffic received from or delivered to the S. P. Co.—traffic in one direction only—as follows:

1. Freight traffic originating at Portland, destined to Utah Common Points (except Ogden), Colorado Common Points, and points east, for six selected months, as follows: July, September, and November, 1900; January, March, and April, 1901. Lumber to be shown separately from other traffic. Statement to show tonnage and (if your records show it) S. P. Co. revenue.

2. Freight traffic from Missouri River and points east to Portland (proper) via your line to Ogden and S. P. Co. Ogden to Portland. Statement to show tons carried and S. P. Co. revenue for the fiscal year ending June 30, 1900, for each of the following territories:

New York, Boston and common points.
Pittsburgh, Buffalo and common points.
Cincinnati, Detroit and common points.
Chicago and common points.
Mississippi River and common points.
Missouri River and common points.

3. Hops and wool originating at Portland, destined to Missouri River and east, for the fiscal year ending June 30, 1900. Tons carried and S. P. Co. revenue, to be shown separately for each of the territories specified in Section 2.

My understanding is that all this traffic was covered by through billing; but possibly it may be necessary to obtain some information from the records of your Ogden office of traffic (4606) received or delivered on transfer billing, if such records have been preserved.

The necessities of the case make it important that we should receive this information at the earliest date at which it can be conveniently furnished. We shall be glad to bear any expense that may be incurred in securing the information. Will you kindly inform me as soon as possible whether the information desired is available from your records, and whether you will have it furnished.

Yours truly,

ERASTUS YOUNG,
General Auditor.

CSS S

(4606) B. G. BARTHOLOMEW.

I am the Auditor of the S. P. Atlantic Steamship Lines. Information has been asked as to some years between 1901 and 1906—I carried it down to 1909—for Colorado and Utah business. I have the tables, the Utah Tables, Defendants' Exhibit 229, and the Colorado table, Defendants' Exhibit 230, which are as follows:

B. G. BARTHOLOMEW,
Auditor.

(4609) The statements 1898 and 1900—for Sunset business, put in evidence when Mr. Spence was on the stand, were compiled from the records of the Company, and the Portland business includes everything into and out of Portland, including the Columbia

River business. It does not include business south of Portland, the Willamette Valley. The statements for all the years are made up from sources that I am satisfied are correct and I am satisfied the figures are correct.

Plaisted.

(4609) FRANK H. PLAISTED.

Salt Lake. Ass't Gen. Freight Agt. O. S. L.

Resides in Salt Lake City; assistant general freight agent of the O. S. L. (4610) Has been in the railroad business about 25 years. The whole of that time in the general freight office or traveling, soliciting freight for that department. Has been connected with the O. S. L. and U. P. roads since March, 1889. Has been 3 years in the office, traveling for 13 years and another period of 4 years in the office. "I solicited the wool traffic in those states for a number of years. During 1893, 1894 and 1895 I had charge of the railroad shearing corrals in southern Utah, at Milford and Black Rock and Churchhouse switch, also solicited wool business generally in that territory. Those corrals were established for the purpose of securing transient sheep which drifted across the line of the Union Pacific and later went into the D. & R. G. territory or territory between the D. & R. G. and the Union Pacific. My time was occupied during the later part of March and the month of April and part of May in inducing the sheep men to shear at these corrals. That took me, of course, a great deal into the country, on to the desert, to see the sheep men. Later in the season I solicited wool in the ordinary way at various points along the line."

Solicited wool traffic.

Visited sheep men.

Familiar with wool traffic.

Witness became familiar during that period with the sheep business and the wool traffic. Subsequently he went to California in 1896, but returned to Salt Lake territory in March, 1897, and solicited wool business in northern Utah, Nevada, Idaho and Oregon, for the years 1897 to 1905. Since 1905 witness has been in the general freight office at Salt Lake City but has been familiar with the wool business since, as an official of the company. "The wool business is solicited ordinarily very much as any other freight business is solicited; but in southern Utah the Union Pacific Railroad, some years ago, at the time it controlled that line, (4611) adopted the policy of erecting sheep shearing corrals to intercept transient sheep which later drifted into the territory of the D. & R. G. These corrals were at Milford, Black Rock and Churchhouse Switch, and it was necessary in soliciting that business to go on the desert, out into the country, and interview the sheep men, urging to them the advantage of early shearing. That took up part of the month of March, all of April, and along until about the 10th of May. Later in the year we solicited wool all along the line, wherever it was loaded. * * *

Manner of solicitation.

Sheep ranges—winter and summer.

"All the higher mountain country in those states, wherever there is a sufficiency of water and feed, is utilized by the sheep men as a summer range. During the winter these sheep are taken to the lower altitudes, to what we call desert country out there, and kept there until the following spring, when they are re-

turned to the higher mountains or summer range. The movement of these sheep from summer to winter range is in several directions, not necessarily from north to south or east to west, or vice versa, but rather from the higher to the lower altitude. When the winter comes and the snow falls in these higher altitudes, it becomes impossible for them to stay there, and they drift to the lower country, where they stay for the winter. There are summer ranges for instance in the State of Utah, and there are sheep which summer range there and winter range in other parts of the State of Utah. The same is true of Nevada, and the same is true of Idaho, and it is also true that some sheep run occasionally from one state to another. Some of these drives are short, running only 45 to 75 miles, and others run from 150 to 250 miles, according to circumstances."

Desert in winter, mountains in summer.

Witness has taken a railroad map and indicated thereon in a general way some of the leading currents of the movement of sheep from summer to winter range. He has indicated by arrows the movement from the summer range to the winter range. The arrow points toward the winter range; the return movement to the summer range would, of course, be in the reverse direction. It would not necessarily be about on the same lines, but generally in the same direction. "They do not follow any exact beaten trail. You will notice in Central and Southern Utah a movement from points east of the Denver & Rio Grande lines and from points between the Denver & Rio Grande (4612) lines and the present San Pedro tracks out on to the desert country west of the San Pedro; also from points on the D. & R. G. to another country we call the East Desert in that territory, over towards Green River you will notice. Also in Nevada you will see a movement from the Ruby Mountains, south of Halleck and Death to desert country farther south. Also from points just north of the Southern Pacific, say at Grouse Creek and through territory west of that to points south of the Southern Pacific. In Idaho there is also a movement from points north of the Oregon Short Line to desert range south of that line in Idaho. And there is a movement from the extreme eastern part of Idaho and western Wyoming across the southeastern portion of Idaho into northwestern Utah and northeastern Nevada. The map produced by the witness was marked Defendants' Exhibit 231."

Map showing sheep migrations.

There are many other local movements of sheep. The map is typical of some of the main currents of that movement. The sheep quench their thirst upon the desert in the Winter time by eating snow. "And that is the reason that those deserts are available for this purpose in the winter and at no other time. After the sheep leave there in the spring, at the time the spring rains fall there is a growth of vegetation which cures during the summer and remains undisturbed until the return of the herds in the fall. They then live on this vegetation until the following spring, and must leave there when the snow melts off, because there is no water." The line which has tracks nearest to the point where sheep are shorn will

Sheep must leave desert when snow melts.

Shearing points fix route.

Wool shorn on S. P.

secure the wool. There are about 2,000,000 pounds shorn at points tributary to the S. P., Elko and east. This wool comes from sheep that range in Nevada both summer and winter, and a few of them in extreme southern Idaho. (4613) That has been true for many years. Witness had some figures made for 1909, that showed about that number. For the years 1900 and 1901 it would not be much different. The situation is the same now as it was then. Depending on the loading, that represents from 75 to 85 or 90 cars. The

O. S. L. never solicited wool from S. P. territory.

O. S. L. never solicited this business—wool sheared from sheep along the line of the S. P. It has never undertaken in any way to get this business. There was no way in which it could obtain it. There were no inducements which they could have offered to induce the sheep owners to drive the sheep to points on the O. S. L. to be sheared. The sheep from which this wool that witness mentioned as tributary to the S. P. comes, never go near O. S. L. territory, nor could they be induced to go near O. S. L. territory, with the exception of a very few which summer in the mountains in the neighborhood of Brigham. That wool would not amount to over 2 or 3 cars. Brigham is on the O. S. L., 20 miles north of Ogden.

In giving the amount of wool sheared along the line of the S. P., the wool from sheep summered in Idaho along or north of the O. S. L., and wintered in Utah and Nevada at points south of the

Sheep which cross S. P. tracks.

S. P. tracks has not been included; because the sheep which summer on or north of the O. S. L. and winter in the country south of the S. P., when crossing the S. P. rails on their way to the summer range in the spring, have a drive before them of from 150 to 250 miles. This brings the time of crossing the S. P. tracks entirely too early for them to shear with safety; the weather is too cold at that time and the drive is too long. Heavy losses would be certain to result if it was attempted. Furthermore, the wool brings 2 or 3

No inducements could be offered.

cents per pound more on the O. S. L. It would not be possible for the S. P. to offer inducements to persuade the owners of the sheep that witness has described, to shear them along their line. No inducements could be offered, because it is too dangerous. They would be certain to lose a large proportion of their sheep if they

Amt. of wool from Idaho.

took the wool off from them that early in the year. (4614) Between 22 million and 23 million pounds of wool are shorn annually along the O. S. L. in southern Idaho. It has varied somewhat from year to year. It is heavier now than it was years ago. It has averaged about what it is for the past five or six years.

S. P. could not get wool from O. S. L. territory.

It was never possible for the S. P. to secure any of the wool traffic from sheep sheared along the railroad of the O. S. L.; because as already explained, the sheep sheared along the O. S. L., at the time they crossed the S. P. tracks (supposing that they have wintered south of the S. P.) cross the S. P. tracks too early; it would be too cold and too dangerous for a man to take the wool off his sheep at that time of the year. Now, if you have in mind any teaming of wool from the O. S. L. after it has been shorn at some point near there,

the distance is entirely too great, and the expense of teaming would be too great. The S. P. could not secure that business.

Sheep between S. P. and O. S. L.

It was never possible for the O. S. L. to secure any of the wool traffic from sheep sheared along the railroad of the S. P. in northwestern Utah and northeastern Nevada; because those sheep never go to the vicinity of the O. S. L. The distance is too long and the expense would be too great to have it teamed over. "Q. Are there any sheep between the Oregon Short Line and the Southern Pacific, which might gravitate to the one or the other according as inducements might be offered? A. There is some shearing done in there, but at points that are much nearer to one track or the other, according to the location of the range. There are about 125,000 pounds or something like that amount shorn in the Oakley and Albion country, that it has been claimed was competitive—but it is not. * * * It is too close to the Oregon Short Line."

The Oakley and Albion country is in what is called the Goose Creek country; it is south of Burley, on the present Twin Falls branch or south of Minnedoka or Kimama on the old main line. Five or six cars of that wool used to come in to those points. Witness supposes it comes in now to points on the Twin Falls branch, as that would be shorter. (4615) The haul from the same territory over to the S. P. would be considerably longer; he doesn't know exactly how much—he has never been in that country. The wool shorn in that locality, that he has just described, represents about 5 or 6 carloads. It was not a sufficient volume to justify solicitation. Nobody ever solicited it, except that it has been solicited for routing east after it reached the railroad.

Sheep along San Pedro and Rio Grande.

There are a large number of sheep shorn in southeastern and southwestern Utah along the lines of the San Pedro and D. & R. G. Witness would estimate the volume of the wool traffic from that territory at about 9,000,000 pounds. That has been true for a number of years. The wool business from Utah to-day is rather lighter than formerly. He doesn't think there is as much wool in Utah as there was in 1900 and 1901. Although it would be a guess on his part, he doesn't think there is as much in this particular part of Utah now as compared with then. The factors which determine the routing of the wool originating in that territory are the same there as elsewhere. The point where it was shorn. It would be loaded on the line of road nearest which it was shorn.

East and west migration in Utah.

Sheep migrate in an easterly and westerly direction to the lines of the San Pedro and Rio Grande railroads in central or southern Utah. There is a large migration of sheep from central Utah to southeastern and southwestern Utah. This southwestern movement on to what is called the west desert or Escalante desert, takes them across the San Pedro tracks. From the point they cross those tracks on their return to the summer range, their drive is about 25 to 75 miles to the lambing grounds, and a great many of these sheep are shorn at the railroad corrals along the San Pedro, during April and early May. The San Pedro secure probably 2 million pounds of

wool there that otherwise they might not get, by maintaining these corrals. Only the San Pedro and the D. & R. G. and their connections compete for this wool traffic originating in territory south of Salt Lake City. The wool has to be loaded on one of those lines.

San Pedro and D. & R. G. only competitors.

It was never possible for the S. P. to secure any of the wool traffic from this territory; (4616) because the S. P. does not reach that territory. It is at least 200 miles from the nearest point on the S. P. to this southern Utah winter range; and the sheep that winter-range there summer-range in eastern or southern Utah, in an entirely different direction. No inducement that the S. P. could offer would justify them in going so far out of their way. To understand that situation, it must be remembered that all the available range suitable for summer or winter, in that country, is occupied. The herds move from summer to winter range and back, year by year, but they return continually to the same locations. A man who summer-ranged his sheep in eastern or southern Utah would not take them 200 miles north to the S. P. and back; that would be entirely out of his track. In order for a railroad to secure wool in the manner I have described, the sheep must be shorn in transit on a track that they cross in their regular line of travel back to the summer range. The S. P., therefore, could not secure that business, because they are out of the track of travel. The S. P. has made no efforts whatever to secure the routing of wool from territory south of Salt Lake.

Railroads maintain corrals.

As to the inducements the San Pedro and Rio Grande roads have offered, in their efforts to secure the wool traffic from this territory—the San Pedro still maintains the corrals at Black Rock and Milford which was erected by the U. P. and they have also built new corrals at Lund and Modena; and, witness understands another one on their Fairfield branch, west of Lehigh Junction, between Lehigh Junction and Tintic. The corrals were built by the railroads in a suitable manner for shearing sheep, and furnished free to the sheepmen, to induce the shearing of these transient herds. The S. P. has never offered similar inducements to secure the shearing of sheep along its line west of Salt Lake City; because the only sheep that would be shorn in corrals on the S. P., if they were provided, would be sheep which would be shorn in that vicinity anyway. They could not secure any transient sheep there that drift later into any other territory, and for that reason they have never furnished any of those facilities.

Why S. P. does not.

Salt rates.

(4617) Referring to the testimony of Mr. Love, at Salt Lake, in this case, in regard to a reduction in rates on salt having been made by the O. S. L. to induce the routing of wool over that railroad as against the S. P., he mentioned a rate which he said Mr. Eccles told him was made to Minnedoka for the purpose of having sheep driven to that station. "That rate was made—I do not recall the exact figure—but there was a reduction made on stock salt in the year 1893, at the time the sheep industry was in very bad condition on account of the Wilson bill. Wool had been placed or was about to be

placed on the free list, and there was a tremendous drop in prices. This rate on stock salt was one feature of a number in a policy of encouragement to sustain the wool industry. Mr. Eccles reduced the rate on wool at that time, from Idaho; made some rates on wool bags and other things. The rate on salt was made not only to Minnedoka but to most all other stations in Idaho, and had nothing to do with the driving of sheep from any territory."

McCarthy's testimony.

Witness heard Mr. McCarthy's testimony at Salt Lake, in this case, in regard to the wool traffic from territory adjacent to Salt Lake. He was acquainted with Mr. McCarthy when the latter was connected with the U. P. at Salt Lake City. Witness was traveling freight agent out of the same office. The course of McCarthy's duties did not bring him into close association with the wool traffic. He was contracting freight agent on the street. He attended to the city business there, soliciting merchandise. He did not go into the country, and would not know anything about these matters. Witness thought McCarthy confused the situation in northern Utah and Nevada and Idaho with the one in southern Utah. The latter knew that this migration of sheep occurred, and probably confused it.

McCarthy not familiar with wool business.

Babcock's testimony.

Witness heard Mr. Babcock's testimony in Salt Lake. (4618) He used to be connected with the D. & R. G. He remembered Mr. Babcock giving the following testimony (Vol. 6, p. 2390-1): "Q. At the time the Union Pacific system was separate in management from the Southern Pacific system what was the fact as to whether there was any competition for wool shipments out of any of this territory, between those systems? A. The competition in wool commenced very early in the season—before it was taken off the sheep's back. Q. Explain that whole situation. A. The Oregon Short Line people endeavored to attract the sheep away from the line of the Southern Pacific west of Ogden; on the part of the Union Pacific they tried to attract it away from us to Ogden by trailing the live sheep into western Wyoming, and in southern Utah we did our part towards trying to attract sheep over on to our line, away from the Oregon Short Line, and letting them be sheared on our line. * * * Q. Do you think that Mr. Babcock was mistaken, as well as Mr. Love and Mr. McCarthy? A. I know that they were mistaken. * * * Mr. Babcock was correct as to southern Utah, and incorrect as to northern Utah and Nevada. Q. That is, he was correct as to competition where the Southern Pacific and the Oregon Short Line were not two competing lines? A. That is where he was correct, yes, sir." Boston is one of the great wool markets—the largest in the United States. St. Louis is a very large wool market. (4619) Wool taken up primarily by the Rio Grande in witness' country can move all rail, or boat and rail to Boston. In late years it ordinarily moves all rail. The same was true in 1900 or 1901. Counsel reads from the testimony of Mr. Babcock, relating to the period previous to 1901, to the effect that when the D. & R. G. secured wool shipments it was moved sometimes all rail but quite largely rail and ocean. When moved the latter way it was delivered

They were mistaken.

Wool markets.

to the ocean carrier at Galveston largely. WITNESS. "Well there was a time back about 1893, 1894 and 1895 when the price of wool was very low; when there was a great deal of wool moving ocean and rail out of that territory, by Galveston, and by other water lines. But later on, when its prompt movement became more important to the buyer it mostly moved all rail. I think along about 1893, 1894 and 1895 Mr. Babcock's statement would be correct; there was considerable movement rail and water."

Movement via Galveston.

All rail time shorter.

(4620) The time to New York and Boston by all rail in those days was shorter than by rail and water; because the sheep men or the buyers of wool were willing to pay more money to have it sent that way. He does not think they would have paid it if the time had not been shorter. There may be some wool movement that way (water and rail via the Gulf) but there is very little. Witness would not say that it had ceased in 1900 and 1901, but it was very much smaller. When the Rio Grande secured that business and sent it by rail and water, witness doesn't know whether they chiefly worked the Morgan Steamship Line from Galveston to New York,—possibly they did. They also worked Mallory, he thought. Some of the wool that was sheared along the line of the S. P. in western Utah and northeastern Nevada moved to the seaboard by the Sunset Route and some of it moved U. P. (4621) Witness does not know how it was divided. Some went both ways, but he cannot give the proportions. As far west as Elko on the S. P. there would be about 75 to 90 carloads of wool. The rate to Boston was about $2.00 a hundred or a little more than that. The all-rail rate to Boston is now $2.13. 2,000,000 pounds would afford a revenue of $40,000 for all lines.

Very little moves via Gulf.

Sunset route.

"Q. * * * Now do I understand from you that there were absolutely no sheep that were competitive—I mean the wool, the shear of the sheep, that was competitive in northern Nevada, southern Idaho and northern Utah, as between the Short Line on the one hand and the Southern Pacific on the other? I understood you to testify that there was absolutely none. Is that correct? A. You understand me so with the exception of about 3 cars of wool (I don't know just how many sheep that would represent) from sheep that Summer in the mountains back of Brigham, Utah." (4622) Up in Idaho witness was soliciting wool in competition with the D. & R. G. They reached up there in connection with the O. S. L. at the time witness solicited there. That gateway was opened in the Spring of 1897. It stayed open until about 1905. Previous to 1897 "that was our local territory at that time." Prior to 1897 witness did no solicitation of sheep men in that region; there was no occasion to. These three gentlemen who testified out there about the business being competitive are all three absolutely mistaken so far as that part of the country is concerned.

Only about 3 carloads of wool competitive.

(4623) Witness never heard of any sheep being driven over into Wyoming as referred to by Mr. Babcock, and does not think anybody else did. "Q. So you are not in position to dispute it—

No sheep driven into Wyoming.

because you never heard of it—or do you care to dispute it? A. I will dispute it in this way; that I have been in that territory for 21 years and never heard of that sort of thing being done, and I don't believe it could be done without my hearing of it." The amount of wool traffic in southern and eastern Utah was about 9,000,000 lbs. That includes wool local to the San Pedro, local to the Denver & Rio Grande and competitive between the two. The wool originating along the line of the San Pedro in southern Utah, mostly moved to the east all rail. Some was moved via Los Angeles last year. The San Pedro published the rate by which the wool can be hauled cheaper down to Los Angeles and then sent to Boston than it can go direct from Modena and witness has not heard of the rate being canceled. (4624) The rates on wool to Boston from points on the Southern Pacific in northern Nevada and northern Utah so far as witness knows are approximately the same as the rates by the Short Line and Union Pacific.

Amt. of wool from southern Utah.

Wool rates.

Witness does not think they agreed to a cent. There is a Sunset rate published from that territory which blankets all the sea-board points at one rate, as he recalls it, New York, Philadelphia, Boston, etc. "Our rates from Union Pacific and Oregon Short Line points are different; that is Boston is a slight differential higher than Philadelphia or New York, but the rates are nearly the same." The rates have not been absolutely identical but they have been substantially identical from that whole region.

(4624) JOHN A. REEVES.

Reeves.

Resides in Salt Lake City; general freight agent of the O. S. L. and the S. P. Salt Lake division lines, Sparks, Nevada, and east. (4625) He has held that position since October, 1905. Had been with the O. S. L. many years prior to that—since 1886. He is familiar with the wool traffic from O. S. L. territory including Utah, Nevada and Idaho. The matter has been carefully gone into by Mr. Plaisted in his testimony. The sheep do migrate from the Summer to the Winter range and back again, and there is competition while the sheep are in transit in southern Utah, between the San Pedro now, and the D. & R. G. in southern Utah. The sheep move east from the Nevada deserts to the mountains east of the D. & R. G. tracks. There is no possibility of the S. P. securing any of that wool traffic in southern Utah. It is too far south for them. He has never known of a time when there was a possibility of that company securing any wool traffic from that territory; he has never known of their soliciting wool traffic in southern Utah.

Salt Lake. Gen. Freight Agt. O. S. L.

Sheep migration.

S. P. cannot get wool from Southern Utah.

The sheep from Nevada that range in Idaho move north across the S. P. tracks to the summer ranges on the O. S. L. in eastern and northern Idaho. The sheep are shorn on the O. S. L. in northern Idaho and eastern Idaho; and the wool moves east by the O. S. L. In the Fall the sheep return to the Winter range in Nevada. The S. P. people are not able to secure any of the wool from the sheep crossing their tracks upon their migration from the Summer range

Migration from Nevada to Idaho.

Why S. P. cannot get the traffic.

in Idaho (4226); because they start to move north too early in the season. The sheep summer in Idaho and winter south of the S. P. tracks in Nevada and Utah. The sheep get to their lambing grounds in northern and eastern Idaho, witness thinks early in June, and it is a drive of probably 200 or 225 miles (it varies) and they do not make very many miles per day; they graze as they go along. They leave the Winter range very early in the Spring, perhaps in March; and that would be too early to shear. "Q. What wool are the Southern Pacific people able to secure and have they been, since 1900 along their line west of Salt Lake City? A. The sheep from which wool is shipped from points on the Southern Pacific range both in the winter and in the summer in Nevada either north or south of the Southern Pacific tracks."

Amt. of wool on S. P.

Witness thinks that the extent of that wool traffic for the preceding year was a little over 6,000,000 pounds from points on the S. P. east of Sparks. Sparks is about 300 miles west of Elko and is 550 miles west of Ogden. Witness thinks that the volume of that traffic east of Sparks along the line of the S. P. in 1900 and 1901 was about the same.

O. S. L. could not get wool from S. P. territory.

"Q. State whether or not it was ever possible for the Oregon Short Line to secure this traffic, that is to say, wool sheared from sheep along the line of the Southern Pacific west of Ogden. A. It was not possible in Nevada and not possible in northwestern Utah. It might have been possible around Corinne or Kelton;" because the sheep were shorn in the immediate vicinity of the S. P. tracks, and for the O. S. L. to have secured the wool it would have been necessary to have the wool teamed long distances to the O. S. L. The wool is bought by the dealer from the grower on the basis of so much per pound loaded on the cars; so that the grower has to stand the cost of teaming to the railroad. Therefore, naturally, the nearest railroad point governs him in his selection. The volume of the wool traffic which the O. S. L. might have secured in the neighborhood of Corinne and Kelton was very small, quite nominal; it probably did not amount to more than half as much as a hundred thousand pounds. It would depend on the location of the corral, whether they loaded it at Kelton (4627) or Corinne on the S. P. or at Brigham or Collinston on the O. S. L., just north of Ogden.

Corinne and Kelton wool.

Wool from north of Ogden.

The extent of the wool traffic originating along the line of the O. S. L. just north of Ogden varies from 20,000,000 to 25,000,000 pounds per year. That has been so, as far back as witness can remember. It has never been possible for the S. P. to secure any portion of that wool traffic originating along the line of the O. S. L. The wool is shorn adjacent to the O. S. L., and it would necessitate the teaming of the wool from Idaho across the line and it would be very expensive. In 1893 witness was chief clerk for S. W. Eccles, assistant general freight agent of the Union Pacific, and recalls the circumstances connected with a reduction in the rate on salt made to Idaho for the sheep men. There was "considerable depression that year in the wool and sheep industry and a delegation of the

Salt rate.

Idaho sheep growers came to Salt Lake City and called upon Mr. Eccles asking him for some relief. A reduction was made on stock salt at that time, and other concessions were made. I think there was a heavy reduction granted in the rate on wool to the east, and some other matters." These changes in the rates on salt were not made with the idea of drawing bands of sheep or wool from the S. P. to the O. S. L. Witness never heard that feature of it discussed.

McCarthy not familiar with wool traffic.

Witness is acquainted with Mr. McCarthy of Salt Lake who testified in this case. His duties did not bring him in close touch with the wool business. He was city man in Salt Lake City for the U. P. (4628) The S. P. never met the reduction in the rate on salt to their Nevada points. Their rates on salt to Nevada to-day as witness recalls them are higher than U. P. rates to all points in Idaho. "I understand that not so much salt is required by the sheep when they are on the winter range, on the desert, on account of some peculiar property in the sage brush or weeds on which they live, but in the summer ranges, in the mountains, they require a great deal of salt. The movement of stock salt to Nevada has not been heavy, while to Idaho is has always been."

Southern Utah wool.

Before the merger of the U. P. and the S. P. they were separately represented in Salt Lake, and witness was in the general office of the U. P. there. The S. P. also had a regular soliciting agency there. The S. P. worked neutrally between the D. & R. G. and the U. P. west of Denver. Referring to the wool business originating in southern Utah this question was propounded: "Q. The business that was solicited as was stated by Mr. Plaisted, was subject to competition between the Rio Grande and the Short Line which at that time owned the lines in Southern Utah which are now owned by the San Pedro. I say don't you recall that the Southern Pacific agency in Salt Lake worked with the Denver & Rio Grande in securing that business by way of Galveston? A. I think they did."

NEW YORK CITY, THURSDAY, MARCH 3, 1910.

(4629) ERNEST O. McCORMICK (2)

McCormick.

Asst. Director of Traffic—Harriman lines.

I am, and have been, Assistant Director of Traffic, U. P. and S. P., since 1904. As to my railroad experience: "Beginning with 1877: First, for a short time in the engineering department; then car accountant; then in the freight department, from the making of notices and delivering them, through stationwork up to general agency, general freight office; then general agent of the Fast Freight Line, Great Eastern Fast Freight Line, Louisville, Kentucky; then passenger department Monon Route to general passenger agent of that line; then general passenger agent Cincinnati, Hamilton & Dayton road, Cincinnati; and in 1893 to the Big Four as passenger traffic manager; and in 1899 to the Southern Pacific as passenger traffic manager, headquarters San Francisco; and in 1904 to Chicago as assistant traffic director. * * *

Sunset service in 1900.

"In 1900 the Sunset Route had one daily through train leaving New Orleans in the morning. That train consisted of ordinary equipment, and made the through trip to Los Angeles in very good time considering the features that control traffic along that particular line, which are an arbitrary at New Orleans on account of connections, and at that time an arbitrary at San Antonio on account of deliveries and connections from the north (and which still prevail to a (4630) large extent), on account of El Paso deliveries to the Mexican lines and connections with the necessary arriving at Los Angeles at a reasonable hour of the day and as was then thought a good idea to break the journey and permit a man a few hours at Los Angeles before continuing on to San Francisco. It was considered that that might be possibly a feature of attraction. * * * The train could not leave New Orleans in those days at any other hour and be served by the connections from the east and north; and the arbitraries beyond that I have explained by reason of the connections; and, as they had only the one through train a day it was all-important to those points and to connecting lines that those connections be made. * * *

No 9.

"That was called No. 9. It left New Orleans at 8:15 a. m. (and for convenience I might use the days of the week) say Monday, arrived at San Antonio at 8:45 a. m. Tuesday; left San Antonio 9:15 a. m. Tuesday, arrived at El Paso 8:40 a. m. Central time Wednesday; left El Paso 7:20 a. m. Pacific time Wednesday, arrived at Los Angeles 11 a. m. Thursday; leaving Los Angeles at 11:40 a. m. Thursday, arriving at San Francisco at 7:45 a. m. Friday. That train ran by the San Joaquin valley with arrival at Oakland Pier." The train had the usual head-end cars, coaches, tourist cars, and sleepers, no diner or observation car, meals being taken at stations en route.

Sunset Limited a seasonable train.

The Sunset Limited train was inaugurated in November, 1894, a seasonable train, so styled because it ran for four months of the winter season, leaving New Orleans 10:45, say Monday morning after the eastern and northern connections arrived, reaching Los Angeles 7:45 p. m. Wednesday, and San Francisco 10:45 a. m. Thursday, running at that time through the San Joaquin Valley.

Consist.

(4631) It consisted of one combination baggage, buffet and library car, containing also a bath-tub, and carrying a barber, the car being located next to the engine. The next car was the diner, next a sleeper containing six sections, one stateroom and one drawing-room, next a 14-section drawing-room sleeper, next an observation sleeper with seven compartments, and an observation end, having a lounging room and parlor—for the purpose of economy the forward end of that car contained drawing-rooms or compartments for sleeping. The train was lighted by Pintsch gas.

Schedule of 9 and 10.

(4632) Westbound the train was No. 9, eastbound it was No. 10. "It left San Francisco at 5 p. m. (We will use the same days to designate) say Monday, via Oakland Pier; arrived Los Angeles 1:30 p. m. Tuesday; left Los Angeles 2 p. m. Tuesday, arrived at El Paso 6 p. m. Pacific time Wednesday, leaving at 8:20 Central time Wed-

nesday, arriving San Antonio 7:30 p. m. Thursday, leaving San Antonio 8 p. m. Thursday, arriving New Orleans 6:30 p. m. Friday, in time for eastern connections. The consist of that train was a return of the so-called No. 9. The Sunset Limited left San Francisco at 5 o'clock p. m., say Monday, just preceding No. 10. It was scheduled out at the same time, but the Sunset Limited ran out first and ran away from it. Then the Sunset Limited was the limited train eastbound; but I made that explanation because they were both scheduled out at 5 o'clock. They used the same boat. The Sunset Limited went down ahead of the other train. It went by Oakland Pier and arrived at Los Angeles at 7:30 a. m., Tuesday (whereas you will notice that the other train did not get there until 1:30 p. m.); left Los Angeles 8 a. m. Tuesday; arrived New Orleans 7:20 p. m. Thursday; running the same equipment." On the first train No. 9 they had no observation cars.

Schedule of Sunset Limited.

The Sunset Limited that followed had an observation car. (4633) This is the observation sleeper containing seven compartments. It had no observation car beyond that. "It had a cafe car at the head-end that contained the library, barbers, etc. Now (if I misconstrue your question) we have to-day what we call an observation car which is an entirely different car; it contains no space other than that for the comfortable occupancy of loungers and men who want to play cards and drink. That car is divided into two compartments. Now, this train has no such car as that; that is what I want you to know." The Sunset Limited train ran weekly, November 1, 1894, to April 11, 1895, 74 hours westbound, and 72 hours 20 minutes eastbound; November 5, 1895, to March 16, 1896, semi-weekly; and March 17 to April 16, 1896, weekly, 78 hours 55 minutes eastbound, 77 hours 45 minutes westbound. "The third season, westbound, November 7, 1896, to April 1, 1897 (semi-weekly from November 7 to March 22, and weekly from March 23 to April 1), 76 hours and 45 minutes; eastbound time, 78 hours and 50 minutes. The fourth season, October 18, 1897, to April 28, 1898, semi-weekly. Then an arrangement was made to run the train that season out of Chicago by the Chicago & Alton road, in connection with the Iron Mountain and the Texas & Pacific, and over the Southern Pacific from El Paso, but they had (4634) a quarantine at New Orleans and could not run it via New Orleans. But the time was approximately the same—76 to 77 hours. * * * It ran Chicago & Alton, Iron Mountain and Texas & Pacific via El Paso. The time was approximately the same. That season we could not run it by New Orleans, on account of the yellow fever, as I say."

Sunset Limited ran weekly and semi-weekly.

Quarantine.

The quarantine was raised "December 30th, say, 1897. After the raise in the quarantine, we put on one car and ran it eastbound in connection with this train; that was from a train that we called 19 on the Southern Pacific; running into this train at El Paso. And we carried that through to New Orleans. And westbound we ran it into that train and carried that one car to San Francisco, on

train No. 20. That provided, after the quarantine, the service east of El Paso in this train, which proceeded on to Chicago. Now the fifth season? * * * November 29, 1898, to April 29, 1899, semi-weekly, via the old route. The westbound time, again, was 76 hours, say, and 45 minutes. That is, it was re-established via New Orleans. And eastbound it made a little longer time—79 hours, say, and 30 minutes. In addition, we ran a train that was called the Pacific Coast Limited, out of Chicago.

Pacific Coast Limited.

"That train ran by the route of the Sunset Limited the year previous; that is, the Chicago & Alton, Iron Mountain, Texas and Pacific, and S. P., continued to operate a train out of Chicago by that other route, although the Sunset was on the other way, and the train was of the same character and had about the same running time as the Sunset Limited over that previous route for that previous season. * * * That was discontinued after the first of the year, on notice from the Iron Mountain road and Texas & Pacific that they could no longer run it, could not operate it another season, they having just about made arrangements to rehabilitate their lines and to do a great deal of work building up their lines. That was the reason they gave to us, and we could not go behind that reason, of course."

The Pacific Coast Limited ran just that one season, semi-weekly.

Sunset Limited —better time.

(4635) "The sixth season, December 15, 1899, to April 19, 1900, Sunset Limited, over the old route semi-weekly. That year we tried a little better time. 74 hours. 74 hours westbound, and 72 hours 20 minutes eastbound. The seventh season we put it on earlier—

Tri-weekly.

November 7, 1900, and we ran it to April 25, 1901; tri-weekly from November 7 to April 1, on a 74-hour schedule westbound, and weekly from April 2 to April 25; 72 hours and 20 minutes eastbound schedule. We began operating this train via the Coast Line April 1, 1901. The eighth season, December 2, 1901, to April 21, 1902, we ran it tri-weekly again, changing the date from December 2 to March 31; and weekly from April 1 to April 21. * * * 73 hours and 45 minutes westbound and 72 hours and 20 eastbound.***

"We discontinued that train after the dates given. The eighth season was December 2, 1901, to April 21, 1902, tri-weekly December 2 to March 31 and weekly April 1 to April 21. We began op-

Service not adequate.

erating it via the Coast Line April 1, 1901. After the season was over in 1902, we met as usual to make our arrangements for the fall campaign the next year; and in convention, after intercommunication by wire, letter, etc., of the men best posted in the Southern Pacific and of connecting lines serving this route, it was concluded that the service was not adequate to the needs of the route, and suggestions were made for the improvement of the service via that line, taking into consideration all of the necessities of that line, which were peculiar; arbitrary leaving time at New Orleans, with the subsequent connections, etc., as I have given them to you, westbound, and the disadvantages that we have labored under in having to coax a passenger in the east to arrange his leaving time

from home at a time that would just get him to New Orleans in time to serve our convenience out of New Orleans with this train—we met that particular obstacle up in New England, where people did not want to ride on Sunday, and they would not ride on Sunday, but would leave home on a day that would let them make the journey from the east to the west and not take in Sunday.

"The class of people in New England and the east from which we drew a considerable patronage, were advised that there were other sleepers on other trains via other routes that were cheaper per berth than the sleepers, and afforded good accommodations,—like the tourist sleeper; the difference in rate from New Orleans in that character of car being, I believe, $5.75 for a berth as against $11.50 the other way. So, taking all these things into consideration, recommendation was made that we have daily (4636) service out of New Orleans to the coast, and that that daily service consist of equipment that would serve the needs of the people. I was one of the strong advocates of that daily service and of a little different character from what we had had before, having been located in competitive territory and believing it was necessary to have something of the sort. Again, the train was, to our mind an unpaying train, and its time did not approximate nearly enough that of its competitor—the Santa Fe, which has been strengthening itself since 1894 and 1895. And we believed that by the daily train we could secure more business and make more money, particularly on account of the peculiar class of people that we handled via that route.

Recommended daily service.

"It was the course of least resistance so far as anyone was concerned who was afflicted with organic heart trouble, or heart trouble, or pulmonary complaint, or was weakened to a great degree, it being the line of the lowest altitude. So recommendation was made that a new service be inaugurated and that the attractions of that line be exploited by the expenditure of money in advertising, etc., using New Orleans attractions to secure business that way, and San Antonio, Juarez, Paso del Norte, the old Mexican town at El Paso, and it was possible to stop over at Los Angeles for a few hours, or as long as the passengers wanted on the limit of their tickets, etc."

New service well advertised.

The Santa Fe Route did not "reach New Orleans, San Antonio and El Paso; nor did any other line. That is the reason why we thought it was profitable or would be profitable to run that other train from Chicago—continue that other train down that way, because it did not draw from this particular territory where we drew our business to a great extent, although the Santa Fe did draw some from the eastern territory. So in the fall of 1902 we put on another daily through train. * * * This train ran from November 15, 1902, to July 26, 1903. * * * This is the second train; this is the new train that I was about to describe. * * * In the fall of 1902, I was going to tell you about the new train we were going to put on. * * * The number was 9. We styled it 'Sunset Limited.' It was made up of the usual head-end cars, chair car from New Orleans

New daily Sunset Limited.

to Los Angeles, diner New Orleans to Los Angeles, tourist sleeper New Orleans to San Francisco, compartment sleeper New Orleans to Los Angeles, observation sleeper, New Orleans to San Francisco."

Tourist sleepers.

The tourist sleeper "was carried from the east, as far as Washington, D. C. It ran one day a week from there, on this train; and another day a week one car, similar in construction and design, etc., ran from Cincinnati; and another day in the week that car went from Chicago (4637) via the Illinois Central to New Orleans. Another day we ran one by the M. K. & T., say, from St. Louis, connecting via San Antonio. In other words, we gave the train a maximum service and such equipment as it could carry."

Schedule of new train.

No. 9 left "New Orleans at 11:45 a. m. say Monday; left San Antonio 8:30 a. m. Tuesday; arrived at El Paso at 7 a. m. Wednesday, Central time; left El Paso 5:15 a. m. Wednesday, Pacific time; arrived Los Angeles 7:30 a. m. Thursday; and we left Los Angeles at 12 o'clock noon on Thursday and arrived at San Francisco Friday, consuming 94 hours and 40 minutes approximately." We arrived at 8:25 a. m.

Schedule of return train.

As to the return train, No. 10: "It ran as follows: leave San Francisco 7 o'clock p. m. Monday; arrived at Los Angeles at 12:30 noon on Tuesday; left 2:40 p. m. on Tuesday; arrived El Paso 6 p. m. Wednesday, Pacific time; left El Paso 8:20 Wednesday; Central time; left San Antonio 7:50 p. m. Thursday; arrived New Orleans 6:45 p. m. Friday; 93 hours and 45 minutes. * * * Up to that time we had been serving only the morning connections into New Orleans, either by the old inferior train or by the Sunset Limited, and there was demand on the part of these same men,

Double daily service.

in the same convention that I spoke of, for an attempted double daily service; and we put on double daily service by means of a train called No. 7, leaving New Orleans at night, after the arrival

Pacific Express No. 7.

of the connections. * * * We called that No. 7 * * * the 'Pacific Express.' * * * It left New Orleans 9 p. m., say Monday; arrived San Antonio 5:30 p. m. Tuesday; left San Antonio 5:45 p. m. Tuesday; arrived El Paso 3:50 p. m. Wednesday, Central time; left El Paso 2:10 p. m. Wednesday, Pacific time; arrived at Los Angeles 4:45 p. m. Thursday; left Los Angeles 5:30 p. m. Thursday; arrived at San Francisco 11:35 a. m. Friday. * * * Time 88 hours and 35 minutes. * * *

(4638) "You will note the difference between the former schedule of the train that left in the morning, 93 or 94 hours, and this train was 88 hours. The former train being the higher grade train,

Schedule fitted to the route.

you naturally would think we would run the higher grade train faster than this; but, as I explained to you, the schedule of the higher grade train was fixed in accordance with what we considered the desirabilities, or the exigencies, or the features of the route more nearly. We did not run it any slower than we had to, but we tried to fit it to the route over which it ran. This train, leaving at night, we operated in 88 hours and 35 minutes, and we ran this

train via the San Joaquin Valley from Los Angeles to San Francisco, returning as No. 8, left San Francisco 9 o'clock in the morning, say Monday; arrived at Los Angeles at 6:45 a. m. Tuesday; left Los Angeles 7:30 a. m. Tuesday; arrived El Paso 11:50 a. m. Wednesday, Pacific time; left El Paso 2:10 Wednesday, Central time; arrived at San Antonio 11:50 a. m. Thursday; left San Antonio 12:15 p. m. Thursday; arrived at New Orleans 8:35 a. m. Friday,—consuming 93 hours and 35 minutes. This train also ran down the San Joaquin Valley."

Period of operation—Nos. 7 and 8.

This train ran from "November 15, 1902, to July 26, 1903. * * * 7 and 8. And again from December 16, 1906, to September 1, 1907. * * * I might be permitted to explain that it was with considerable difficulty we got the old schedules, owing to the San Francisco end of it being burned up, and these things not being get-at-able. This train ran from November 15, 1902, to July 26, 1903, and again from December 16, 1906, to September 1, 1907." It was not operated as a through daily train after July, 1903, because of enforced economy in the panic, etc., and it did not go on again as a through daily train until December, 1906. "Beginning with August, 1903, and until December, 1906, it was operated only between New Orleans and San Antonio and between El Paso and San Francisco, with the exception of four months in 1905, when it was cut off between El Paso and Los Angeles; but it was operated during those four months between Los Angeles and San Francisco, as 7 and 8. That is for those four months it was lopped off between El Paso and Los Angeles. * * *

(4639) "From December, 1906, (if you will permit me to go back) until September, 1907, this train was operated as a daily through train between New Orleans and San Francisco, in both directions. It was taken off between San Antonio and El Paso (that big gap in there) after September, 1907—again, account of the panic, and there not being enough through business to warrant it being operated between New Orleans and San Francisco nor enough through business to warrant it being operated over that gap between San Antonio and El Paso, which was absolutely an unproductive country. * * * There is nothing contributing to it at all. It is like a bridge—a steel arch over the dry bed of a river—the desert. There is nothing in it. You have got to lift everything over it. And it always affects the service that way. * * * The present train, 9 and 10, better serves the traveling public, although the time is longer than that of what we call the seasonal Sunset Limited. It is necessarily slower on account of the ampler accommodations and the excess of the connections as compared with that other train, which was extreme in limitations in regard to both of those. * * *

No business contributed between San Antonio and El Paso.

"Westbound, all of No. 9's connections arrive at New Orleans in the morning from 7:50 a. m. until 10:55 a. m. It leaves New Orleans at 11:55 a. m. It is also governed by connections, as I have said before, with other lines en route. * * * At San Antonio with the M. K. & T., from which it takes a through sleeper weekly

Connections of No. 9.

from St. Louis to San Francisco. MR. SEVERANCE. Tourist? WITNESS. Yes, at Spofford, for Mexico and south via Eagle Pass. Q. You mean Old Mexico. A. Old Mexico. And at El Paso again with the Mexican Lines, with the Santa Fe, with the El Paso & Southwestern, and all that mining territory tributary, to which there is now a good travel; at Lordsburg with the Arizona & New Mexico, up to Clifton and Morenci, and all that mining territory; at Bowie with the Gila Valley, Globe & Northern; at Maricopa for Phoenix. It carries a standard sleeper from Tucson to Phoenix and periodically from Phoenix to Los Angeles. By that I mean it is not a daily."

Connection with No. 17 at Los Angeles.

(4640) At Los Angeles it connects with the Santa Fe for San Diego and all branch lines for southern California points. "It arrives at Los Angeles at 1:30 p. m. and connects with train No. 17, leaving there via the Coast Line at 2:35 p. m., which train arrives at San Francisco the following morning at 8:30; thereby reducing No. 9's time, as you will see later on, 3 hours and 10 minutes." If passengers "did not want to stop at Los Angeles, they are privileged to take this immediate train No. 17 via the Coast Line, or we permit them to take the 'Owl' leaving Los Angeles a little later." We arrange their sleeping-car accommodations for them at request, before they get into Los Angeles. "They may take the Owl, for the San Joaquin Valley, which leaves Los Angeles at 6 o'clock p. m., and arrives at San Francisco at 8 o'clock the following morning;—thereby reducing its own time again 3 hours and 40 minutes. Or they can continue in their sleepers (that is, with the same accommodations) at Los Angeles until 7:30 p. m. and go via the Coast Line and arrive at San Francisco at 11:40 in the morning."

Choice of trains at Los Angeles.

The "Owl."

They can stay right in their sleepers, or get out and run around Los Angeles. The sleeper goes through. "The Owl is the train in California like the 18-hour trains between Chicago and New York. * * * Between Los Angeles and San Francisco. It has been operated for a good many years, and although that territory was strictly local they put on a train which they called the Owl, and offered the best service that money could obtain, and they did it for the convenience of the people locally between San Francsico and Los Angeles, 482 miles; and the time varied, according to the re-building of the road, or wash-outs, or anything like that, from 14 to 15 hours. But it nearly always is run from Los Angeles to San Francisco, say (4641) at 5 o'clock at night out of Los Angeles, arriving at San Francisco at 8 o'clock in the morning." These transcontinental passengers are privileged "to use the Coast Line, and that train goes through Santa Barbara, San Luis Obispo, Paso Robles, the location of the famous hot springs, and Del Monte—the show places, San Jose, and up through the Santa Clara Valley into San Francisco." The service continued concurrently, and continuously on the Owl, never taken off.

Service on New Orleans train between Los Angeles and San Francisco.

In respect to the New Orleans train at Los Angeles, most "of the passengers leave it at Los Angeles or points east of there, or else

they are destined to local points on the locals. From Los Angeles we deem it largely a local train, providing service Los Angeles to San Francisco; the few passengers who stick to this train for the through trip to San Francisco are these who do not want to be annoyed by changing their baggage and who are enjoying or did enjoy the lay-over at Los Angeles for the afternoon, breaking the journey, running around. It is a privilege that has been advertised very strongly and it has proven a great attraction to that route." No. 10 eastbound leaves San Francisco at 4 in the afternoon by the Coast Line, arriving at Los Angeles at 8:30 in the morning. (4642) There is additional service by the Owl, which passengers can take leaving San Francisco at 6 o'clock, going through the San Joaquin Valley and reaching Los Angeles at 8 o'clock in the morning. No. 10 leaves San Francisco at 4 o'clock, arriving at Los Angeles at 8:30 with a "lay-over," leaving Los Angeles at 12 o'clock M.

No. 10—eastbound.

"In either case they have the morning at Los Angeles, and then they can leave at 12 o'clock noon, taking the sleeping accommodations that they have engaged at San Francisco, and continue the journey on to the east of Los Angeles. This lay-over at Los Angeles has also proved an attraction to the route. * * * It gets in there at 8:30 a. m. No. 10's hour of departure from Los Angeles is largely governed by the branch line connections in Southern California. * * * It connects at Maricopa with the Maricopa & Phoenix, delivering that line the standard sleeper from Los Angeles. It has a connection from Bowie over the Gila Valley, Globe & Northern; at El Paso with the Texas & Pacific, and the National Lines of Mexico as well as the El Paso & Southwestern; at San Antonio it delivers the San Francisco weekly tourist sleeper to the M. K. & T. for St. Louis; at Houston it makes connections for Galveston and with the Houston & Texas Central for Dallas. Its New Orleans arriving time, 6:45 p. m., is governed by its eastern connections, which leave there at 7:10 p. m. to 8 p. m."

Lay-over at Los Angeles.

Connections.

Trains 9 and 10 "have been improved from year to year until they now embody about all the features of the so-called high-class limited trains like the North Coast train of the Northern Pacific, like the Los Angeles Limited over the Union Pacific and San Pedro, like the Golden State Limited over the Rock Island and Southern Pacific. They carry every sort and character of car that those trains carry—diners, sleepers, observation cars, all classes of first-class equipment, (4643) and in addition they carry tourist sleeping cars which afford passengers of limited means comfortable quarters, in perfectly good sleepers, as I said before, between California and New Orleans, at $5.75 per berth as against $11.50 in so-called standard cars, the passenger in both cases receiving the same carrying service from the railroad." These cars are electric lighted now, and supplied with fans.

Nos. 9 and 10, high-class trains.

The observation cars are an "entirely different class of car from the other described car—what we call a composite cafe car, the inclusion of which makes us run an additional car on the train. We

New style observation car.

used to carry baggage in that car, but as we considered it extremely hazardous to put first-class travel up next to the engine, we provided a car with accommodations for smoking and drinking, and so forth, at the rear of the train, with big lounging space in the observation end, rotunda, etc. * * * The only through cars between the so-called trunk line territory and California are operated via New Orleans in connection with these trains. The trunk line territory is not invaded by any other through cars, by any other means. These cars run from Washington, D. C., to San Francisco. * * * It is now 4 cars a week, and they run over the Southern Railway, Atlanta & West Point, Louisville & Nashville, and the Sunset Route. They began with a weekly car, and got up to four cars a week. On other days in the week this same train carries a car from Chicago to San Francisco via the Illinois Central to New Orleans and Sunset Route west; another day it carries a car from Cincinnati to San Francisco by the Baltimore & Ohio Southwestern to Louisville, Illinois Central to New Orleans, and Sunset Route west; another day a car from St. Louis to San Francisco via the Missouri, Kansas & Texas to San Antonio, and Sunset Route west. * * * In addition to the service between New Orleans and California already described, the so-called Sunset route west of El Paso had through service since 1902 between Chicago and Los Angeles and San Francisco by the Rock Island Route."

Through cars.

Golden State Limited.

(4644) The Rock Island train was inaugurated November 2, 1902, and was a "very high class electric lighted train, called the Golden State Limited, with dining car, tourist sleeper, buffet smoker, standard sleeper, Chicago to San Francisco, standard sleeper Chicago to Los Angeles, and observation sleeper Chicago to Santa Barbara. * * * It was operated daily from November 2, 1902, to March 28, 1903; semi-weekly from March 28, 1903, to April 30, 1903; it was resumed December 20, 1903, with the same equipment, and ran daily until April 15, 1904; resumed December 25, 1904, and has run daily until the present time. * * * The only change up to January 2, 1910, being, in the summer, a chair car was added, and the train during the summer months was called the California Express. * * * And then during the summer months we called it the California Express. Now, on January 2, 1910, the tourist sleeper was taken off this train, and after that only first class equipment was left. I want to make a point of that—I want to emphasize it. On January 2, 1910, the tourist sleeper was taken off of this train and only first class equipment was left."

Called "California Express" in summer.

"Californian" started Jan. 2, 1910.

On January 2, 1910, another train was inaugurated over the Sunset Route, from El Paso to Los Angeles, called the "Californian," which train "carries a chair car, diner, one 14-section tourist sleeping car, Chicago to Los Angeles; one 16-section tourist sleeping car St. Louis to Los Angeles; one 12-section drawing-room sleeper Chicago to Los Angeles; one 10-section observation car St. Louis to Los Angeles. The cars from St. Louis run over the Missouri Pacific Road to Kansas City, thence via Rock Island." (4645)

Its consist and schedules.

Westbound this train leaves Kansas City at 10 p. m. On the Southern Pacific it is No. 1 and 2 between El Paso and Los Angeles; eastbound it would be No. 2 Californian. "Eastbound this train leaves Los Angeles at 3 o'clock in the afternoon, and is known as No 2. and styled 'Californian.' Eastbound, Monday at 3 o'clock p. m.; arrive El Paso Tuesday, 5 p. m. (Pacific time); leave El Paso 6:30 p. m. (Mountain time); arrive at Kansas City Thursday, 2:45 a. m.; arrive St. Louis Thursday night, 7:05; arrive Chicago Thursday evening, 5 o'clock. The apparent dead time is at Kansas City from 2:45 a. m. Thursday morning; they lie there until the morning connections eastbound for St. Louis on the Missouri Pacific, and take the 8 or 9 o'clock train out of Kansas City in the morning, with that through car, and get into St. Louis at 7:05 p. m. * * *

"The train continues on to Chicago. Westbound this train leaves Kansas City Monday, at 10 p. m., arriving at El Paso Wednesday, at 5:50 a. m. (Mountain time); leave El Paso Wednesday at 5:20 a. m. (Pacific time); arriving at Los Angeles Thursday, 7:35 a. m. The Chicago connection of this train westbound is a slower train and a very heavy pick-up train on the Rock Island Road, coming through from Chicago, through Kansas, performing all the local service, having through cars to be delivered to the Southern Pacific at El Paso, getting in there in the evening, and those through cars lie over there until the arrival of the main train from Kansas City, and all going on together the next morning, leaving El Paso, as I have stated, on Wednesday, at 5:20 a. m. In other words, while this is a quick limited train from Kansas City, it is a pick-up train from Chicago through to El Paso via the Rock Island and the El Paso & Southwestern, consolidating the two trains at El Paso, and forming one train from El Paso west. * * * The Southern Pacific lately put on another train, or, rather arranged this service. Another train leaving El Paso say Monday at 9:55 p. m., arriving at Los Angeles Wednesday morning at 6:30; leaving Los Angeles say Monday night at 8 o'clock, and arriving at (4646) El Paso at 3 o'clock Wednesday morning—apparently an unseasonable hour for arrival at El Paso. * * *

Train between El Paso and Los Angeles.

"In the reverse direction, it leaves Los Angeles Monday night at 8 o'clock, and arrives at El Paso Wednesday morning at 3 o'clock. The reason for that inconvenient hour is that it serves thoroughly the needs of the line between El Paso and Los Angeles. If they ran it into El Paso say at 7:30 or 8 the next morning, it would be so very slow that the freight trains might be inconvenienced by it, and there is no particular inconvenience to the passengers at that end of the route because it has chair cars and tourist sleepers, and they can stay in the car on arrival at El Paso until the next morning. I will give you the equipment of that train. It carries diner, chair car, tourist sleeper, westbound El Paso to Los Angeles, and standard sleeper from the Texas & Pacific, operating between St. Louis and Los Angeles. That standard sleeper, as they term it, is a broiler

cafe car, which they use on their line in lieu of a diner." The number of that last train was 7 and 8.

Time of Golden State Limited shortened.

On January 17, the time of the Golden State Limited was shortened, leaving time from Chicago being the same, but arrival at Los Angeles being at 3:30 in the afternoon as against 7 p. m. "The quadrennial weighing of mails begins about this season, and the Golden State Limited has carried the mail out of Kansas City in the morning to Los Angeles ever since the discontinuance of the daily service of the Santa Fe train before the previous quadrennial weighing, and that mail which the Golden State Limited carries is the big heavy mail out of New York that the Pennsylvania Railroad runs a special train for from New York to St. Louis and the Missouri Pacific from St. Louis to Kansas (4647) City, arriving at Kansas City just previous to the departure of our Golden State Limited, which leaves Chicago say at 8 o'clock at night."

U. S. mail.

Mail delivery at Los Angeles.

The Missouri Pacific and the Pennsylvania from New York to St. Louis take it to Kansas City. "That mail previously got into Los Angeles at 7 p. m.—too late for delivery, and the post-office department wanted to expedite the mail to Los Angeles, say, a day. That could be done if we would get our Golden State Limited into Los Angeles in the afternoon in time for an afternoon delivery, they working up the mail before it got into Los Angeles. And we did that. Now, the Santa Fe California Limited carries another large mail, and they expedited their California Limited in order to get into Los Angeles at 3 o'clock in the afternoon. By both of those lines the mail now arrives at Los Angeles at 3 o'clock by the Santa Fe and at 3:30 by the Southern Pacific, working it up before it gets into Los Angeles, and delivery is immediately made, and mail may go back east at 8 o'clock that night. That whole scheme started by an expedition of the mails between the Twin Cities and Seattle by the Great Northern Road. The mail formerly handled between Chicago and the Twin Cities and the mail formerly handled betwen Chicago and Seattle—say, for the sake of illustration, that it would leave Chicago 10 o'clock Monday night; it would arrive at Seattle Thursday evening at 7 o'clock.

Mail between Twin Cities and Seattle.

"The Great Northern put on a train from the Twin Cities that took that mail into Seattle Thursday morning at 5:45 a. m. Leaving Chicago at the same moment the same evening, the mail to Portland, which went by Omaha and the Union Pacific Road and the Oregon Short Line and the O. R. & N., arrived in Portland formerly in the evening; it was then expedited into Portland, arriving there at 8 o'clock in the morning, and that Portland mail was carried out of Omaha westbound, in Union Pacific big trans-continental mail train No. 9, which left Omaha say at 9 o'clock in the morning or thereabouts, and arrived in San Francisco at 1:08 p. m. So that it left this situation: The mail leaving Chicago at 8 o'clock at night and, for illustration, arriving at Seattle at 5:45 in the morning, arrived at Portland at 8 o'clock in the morning, arrived at San Francisco at

Arrival of mail at Seattle, Portland and San Francisco.

1:08 in the afternoon, arrived in Los Angeles at 6 p. m. over the Santa Fe, and 7 p. m. over the Golden State Limited.

"Then came on this stress of weather, trains being late, and so forth, 8 o'clock arrival at Portland, Oregon; if the train were 2 or 3 hours late may be the man would be at his club or lunch before he got his mail. The time was fairly made to San Francisco, 1:08 in the afternoon, and well made to Los Angeles; but no delivery. So we arranged to split the big Overland Mail by the Union Pacific, put on additional service and run the Portland mail separate to Green River and on to Portland, and arrive at Portland at 7 o'clock in the morning. That enabled us to make better time to San Francisco because we had a lighter train Omaha to Green River. And then we arranged to run from Omaha to San Francisco and arrive at San Francisco at 10 o'clock in the morning, the mail being worked up in that way."

Split mail train.

Better time to San Francisco.

(4648) It left Omaha about "9 or 9:15. The leaving time was not changed, because its leaving time is dependent upon the receipt of the mail from the east. Now that left a peculiar situation. Leaving Chicago the same hour, the same night, and so forth, the man got his mail at 5:45 at Seattle, 7 o'clock at Portland, and 10 o'clock at San Francisco. That was not fair to Los Angeles. The man at Los Angeles did not care particularly if he got his mail at 10 or 11, but he wanted it some time during the day when he could get his answer back. So we arranged with the Department to get into Los Angeles at 3:30 in the afternoon. And that was the reason for the expedition of the Golden State Limited. There are some other details which it might be necessary to explain. * * * With this mail arriving at San Francisco at 10 o'clock in the morning, if the mail were expedited from the east into Los Angeles, arriving at Los Angeles at 3:30 in the afternoon, a great portion of the mail which the Union Pacific and Southern Pacific had been handling by Omaha might go via Los Angeles, arriving at Los Angeles at 3:30 in the afternoon, immediately take the 'Owl' and go to San Francisco at 8 o'clock in the morning, beating the mail via Omaha at 10 o'clock, and we would lose the haul. * * * The Southern Pacific, and then Union Pacific for a greater distance. The carrying lines, in other words, would lose the haul, and just before the quadrennial weighing that is pretty serious, because the mail is weighed only for 105 days, and then you carry it for four years on that basis."

Golden State Limited expedited, account mail delivery.

This new schedule, Omaha to San Francisco, 9 a. m. out of Omaha, and 10 a. m. into San Francisco, would be the expedition of the present train from 1:08 noon to 10 o'clock in the morning. "With this mail into Los Angeles at 3:30 in the afternoon and catching the 'Owl,' the carrying lines would lose the haul of that mail via Omaha, and so forth, and they could not afford to get to San Francisco at 10 o'clock in the morning. That question was gone over very carefully with the post office department, and they do not make agreements with railroads very readily to lengthen things out. But it was shown to the post office department that all

Light and heavy mail.

the light letter (4649) mail, circulars, special delivery, and stuff like that, would have this additional expedition to San Francisco, 8 o'clock in the morning by the 'Owl,' and that the big, heavy magazines, newspapers and all that, for which they receive a cent a pound for transportation, would still get into San Francisco at 10 o'clock in the morning, and if that mail were sent around by Los Angeles the Government would have to pay on that mail the rate of 1 cent—I mean would have to carry that mail for which they got 1 cent per pound 412 miles, say, farther for the sake of expediting it 2 hours, and they leave that mail on its old route. So that all I have been saying means that mail was expedited, or will be, to San Francisco and to Portland and all that, now the weighing is on, and it will be carried during that weighing, and however it is carried during that 105 days it will continue for four years."

Expedited mail to San Francisco.

Mail routes.

The mail that I speak of does not go via Chicago on the Golden State Limited. The New York mail goes by the Pennsylvania to St. Louis, and by the Missouri Pacific from St. Louis to Kansas City, where it is delivered to the Golden State. The U. P.-S. P. mail by Ogden is taken by the New York Central and Lake Shore to Chicago, there collected by the Burlington and Northwestern, arriving in Omaha in the morning, and leaving on the big overland mail at 9 o'clock. (4650) In giving publicity to the Sunset Route service prior to 1901, about $25,000 was spent to advertise westbound service in 1894; that increased in 1900 to about $31,000; 1901 to $41,000; 1902, $40,000; 1903, $83,000; 1905, $70,000; 1906, $95,000; 1907, on account of the panicky conditions, etc., it dropped down to $54,000; 1908 was a little better, $67,000, and 1909, as near as I can get it, about $92,000. In 1901-2 about $5,000 was spent to advertise the eastbound service, and since 1905 about $10,000 annually. For the fiscal year 1909-10, for all advertising, publicity, and development work for the territory served by the Sunset Route, there was about $225,000 appropriated.

Expenditures to advertise Sunset route

Tourist car service.

In respect to the tourist car service on the Washington Sunset Route, "the route is, say, by the Pennsylvania road, New York to Washington; Southern Railway, Washington to Atlanta; Atlanta & West Point, Atlanta to Montgomery; Louisville & Nashville, Montgomery to New Orleans; Sunset route, New Orleans to San Francisco." The line was established in 1896, when we had one tourist car per week; we added a second in November, 1898, a third in 1899, and a fourth car per week in 1909. (4651) These cars run from Washington and are served by the lines from Boston and New York, taking the service at Washington, where the car starts. The westbound traffic originates principally in "New York and New York territory and up in New England. A great deal of the traffic is composed of people who have permanent homes in California, and the balance is the sightseer and tourist, the cars being personally conducted, and the rate being lower (as I have previously explained) than for the standard car." As to the fourth tourist sleeping car, put on in 1909, we expect to enlarge that equipment. "We have

done it gradually, but as far as we could. Otherwise it is a seasonal car. We want a car every day, and now we are contemplating putting on a fifth car, and when we can fill that we will put on a sixth car, ultimately hoping to have a car a day."

Volume of passenger traffic.

I have figures for 1897 and again for 1909, for the westbound and eastbound passenger traffic on that route—westbound 1897, 981 passengers; 1909, 1,835; eastbound for 1897, 915 passengers; 1909, 1,508. I have passenger figures for 1906, 1907, 1908, by the New Orleans Steamship Line. "I will give it to you segregated. Local to New Orleans, 2,728; to Texas, 527; to California, 1,403—total, 4,658. Year 1907, New Orleans local, 3,835; Texas, 1,018; California, 1,988—total 6,841. Year 1908, New Orleans local, 4,646; Texas, 2,055; California, 1,637—total 8,338." (4652)

Comparison as to passengers via Ogden and El Paso.

I have a memorandum from 1901 to 1910, showing the comparison of the number of passengers via Ogden to and from the U. P. and the number of passengers via El Paso to and from the G. H. & S. A., which would be the Sunset Central Line, leading towards New Orleans. "I will give you the heading of the statement and you will understand it. The statement I am going to read to you now is headed this way: 'Comparison of number of passengers via Ogden to and from the Union Pacific'—not the Denver & Rio Grande, just the Union Pacific—'with those by El Paso to and from the G. H. & S. A.'—and no other connection. * * * 1901, 5 months only, by Ogden-Union Pacific, 24,600; under the column headed 'G. H. & S. A.' 14,863. * * *

"The data I have compiled both for time-card and earnings and statistics were not made for fun; it was done with the desire to afford to Mr. Severance just as much information as to you or to any one else. It was done to make a good, clean expose of the situation, and when I started in to get 1901 or any other year—and I hadn't much time to get it—they said to me, 'I can only give it to you for 2 or 3 months.' I said 'give it to me for what you can.' Now that is all I could get for 1901. * * * (4653) 1902, 62,737 under Union Pacific; 37,261 under the heading G. H. & S. A. 1903, Union Pacific 82,128; G. H. & S. A. 44,950. * * * Unfortunately I could not obtain them for 1904, 1905, or 1906. But if they can be obtained later, and you want them, I will have them put in this record, but I am afraid they cannot be obtained. * * * 1907, under Union Pacific, 114,520; G. H. & S. A., 73,732. 1908, Union Pacific, 90,297; G. H. & S. A., 60,786. MR. SEVERANCE. That falling off was on account of the panic? * * * (4654) WITNESS. Yes. 1909, Union Pacific 89,409; G. H. & S. A. 70,420. 1910, for the month of January only, Union Pacific 6,196, G. H. & S. A., 7,817."

U. S. reclamation work.

The Sunset Route passes through New Mexico and Arizona as well as California. Reclamation work has been done by the United States Government, also work has been done on the Roosevelt Dam and Laguna Dam above Yuma, and that development work has a relation to passenger traffic. "Laborers going to work on it, men

going to view the construction, men going to sell all sorts of commodities to the contractors, and so forth; the building up of that important territory; horses, men, mules, sustenance, etc., and the general development in that territory." With reference to the $225,000 appropriated for advertising and development work for the fiscal year 1909-1910, he would use the term "development work," if it "was the development even of a negative up to the development of a territory. It is anything that pertains to the upbuilding of the community, the increase in the passenger business, and so forth and so on. But in this particular case it was the development of a territory, in other words making productive a territory that before was absolutely barren."

Imperial Valley.

Imperial Valley is situated in Southern California between Los Angeles and the State Line. This "development work" is carried on "by every means that the mind of the most alert men in the United States can conceive of. * * * Let us start with the man who saw something in the Imperial Valley. There has been thousands upon thousands of men cross there on horseback and wagon and train, and so forth, and one day (4655) a fellow went who saw more than any other man. He believed it could be developed. How? By waste water. From where? The river. How will you get it over on these lands? Took borings, found that silt from the river had gone into an old sea, and he got down as far as 700 feet and found that it was the same kind of silt that was on top, and then they found the silt had filled in that old sea. Then he started a company for the purpose of bringing the water over on to this very rich soil, and finally had to take it around through Mexico to get it up there; and when they got the water on that land, they found it was more productive than any other land, and from the observation of that man who saw more than any other man (and probably a chemist and so forth) came the Imperial Valley, which contributes so enormously to-day to the revenue of the Southern Pacific, to the revenue of the State of California, and to the home-making of hundreds of people."

Publicity to public improvements.

We give publicity to these things, like the Roosevelt Dam, for instance, or the Imperial Valley development. We make enormous efforts to focus public attention upon them "by means of photographs, newspaper publication descriptive of the great work, and lecturers hired, who have moving pictures of the teamwork, the piling up of the rock; what the Government says will be done there in the future, or what will be possible when it is accomplished; the fact that from 200 to 300 thousand acres of barren land will be made productive; the influx of the men who want to get there and get hold of a piece of it before the price gets too high. All this gives to the G. H. & S. A. road some revenue." Nearly a quarter of a million dollars has been, for this past season, set aside for just such work. "That is one kind of development work. Now, there is another development work. The waters rose and covered that territory down there, and the whole United States Government said

it could not be stopped. The Southern Pacific had a man who said it could be stopped, and he stopped it. If he had not stopped it, there would not have been anything left there, and development would have ceased in that territory. First we started it and built it up, then the floods came, and then we started it again."

Reduction in train mileage at time of panic.

(4656) I have a memorandum as to the time cards effective November 10, 1907, and the reduction in train mileage spoken of in the record at the time of and shortly after the panic. "I had a copy of a telegram from assistant general manager Scott. Naturally, when the slump came, everybody was asked to reduce. Assistant General Manager Scott of the Southern Pacific wired Mr. Kruttschnitt, March 28, 1908, that with the time cards effective November 10, 1907, the Southern Pacific saved 63,321 miles of train mileage. * * * December 8, 1907, 9,276 miles; December 29, 1907, 88 miles; January 5, 1908, 7,818 miles; February 9, 1908, 20,058 miles; March 22, 1908, 13,396 miles." The reduction of train mileage "practically covers passenger train service, but it does not include a great deal of train mileage saved on freight trains, etc., running them alternate days instead of daily. And the figures themselves mean that time cards had to be so readjusted to take care of the necessities of the travel, with regard to the due economy made necessary by the serious time; and everywhere where mileage could be saved, it was saved. Where two sections of trains had been run before, they were doubled up, and one section was run, even though it took a considerably longer time to get a train over the road. Where branch lines had service galore (because service encourages travel) it was cut down to the necessities of the people, and maybe one train made to do what two trains did before. In fact, aside from some of the trains which you have seen by statistics, or will later on (that have not been changed for a long time) all mileage put on before with the hope of building up future traffic was taken down and the mileage was cut down to the serviceable traffic—simply the mileage left that met the necessities of the people. * * *

"This refers to the passenger business. Now, those figures show that west of El Paso a large reduction in mileage was made, and therefore the cancellation of Nos. 7 and 8 between El Paso and San Antonio was not to be wondered at." The train mileage reduction at the time of the panic of 1907 bears upon the northern trains. "Train No. 6, San Francisco to Ogden, formerly ran in two sections. It was reduced to one section, and we did the best we could with it. Train No. 16, San Francisco to Portland, two sections, was reduced to one section, and trains 11 and 12, San Francisco to Portland, 772 miles in each direction, were discontinued entirely." There was resumption of service in respect to that train. "The other service becoming crowded, and there being a great and growing need for an increased and better service there, and (4657) the people calling attention to the fact that there was a train like the Owl running from San Francisco to Los Angeles (a commercial train)

New 27 hour train between San Francisco and Portland.

and asking 'What is the matter with the business between San Francisco and Portland, and San Francisco and Tacoma and Seattle and this northern territory—why can't we have a train?'—out of that grew the 27-hour train between San Francisco and Portland, which has lately been extended to Seattle," which was a new train put on in June, 1909. From New Orleans the old second-class train, so-called, did not continue to run. There are three trains a day. . I don't count 11 and 12 as ever being resumed; it was a train of different character, the third train put on. The new train was put on as a commercial proposition. "For a distance there was a gap. I can not quite recollect the card in there, but my recollection is that there were two daily trains, and that a third train ran up part of the way and then there was a gap as there is between San Antonio and El Paso, and another train from Ashland into Portland. But I would have to consult the card to be certain about that." The Golden Gate Special on the U. P., often referred to as the first of all the high-grade trains, rather a misnomer, was inaugurated December 5, 1888, leaving Council Bluffs every Wednesday, and San Francisco every Saturday, until May 14, 1889. It consisted of a (4658) "combination of baggage car, library-buffet car, dining car, two double drawing room Pullman palace sleepers, and one 8-section observation sleeping car. It was steam-heated, and electric-lighted (so far as you could say they could do it in those days—not very satisfactorily)—and carried dining car all the way through. * * *

Sunset service.

Golden Gate Special—U. P.

Schedule of Golden Gate Special.

"It left Council Bluffs at 7:45 in the morning; arrived in San Francisco at 9:45 p. m.; left San Francisco at 3 p. m.; arrived at Council Bluffs 9 o'clock in the morning. It was a 64-hour train east and westbound. Then, westbound, when the change came in March, the train left Council Bluffs at 9:45 in the morning and arrived at San Francisco at 7:45 in the evening. * * * 60 hours instead of 64. Made a little better time. Eastbound the time was lengthened out. It left San Francisco at 8 p. m. and arrived at Council Bluffs at 3:45 p. m. The time was 65 hours and 45 minutes, while westbound it was 60 hours (60:45) * * * Showing that as far back as December 5, 1888, the Union Pacific road did pretty nearly as well as it does to-day, or ever has done, with the Overland Limited; and showing clearly what could be done in those days over a railroad where there was no density of traffic and things could move along. * * * About 25 years ago the Lake Shore had a 25-hour train called 'The Limited,' a little later reduced to 24 hours and called 'New York-Chicago Limited,' and a little later 'Lake Shore Limited;' 24-hour schedule. * * * May 18, 1890 (20 years ago) the 'North Shore Limited' was put on by the Michigan Central, making the distance in 24 hours. It made its last trip sometime in 1898. Then came the 'Southwestern Limited,' inaugurated October 6, 1899, and operated on a schedule of 30 hours and three-quarters from St. Louis to New York. Then I have 'Michigan Central 'Wolverine',' inaugurated May 14, 1905. * * * (4659)

Limited trains on other roads.

That was a 24-hour train, too. During the World's Fair a 20-hour train, called 'Exposition Flyer,' was run over the Lake Shore road, as a starter, but the '20th Century' inaugurated on a 20-hour schedule June 15, 1902—I think I will take that up later. Anyway, during the World's Fair, in 1893, a 20-hour train was started, called the 'Exposition Flyer,' over the Lake Shore and New York Central. * * * The '20th Century' was inaugurated on a 20-hour schedule on June 15, 1902, and on an 18-hour schedule June 18, 1905. * * * The 'Florida Special' was the first attempt at electric lighting, and it was in 1887, by the Florida Coast Line, started by the Pennsylvania Company. These preliminary electric lightings were axle devices and were comparatively failures. In 1897 the first successful lighting that we have been able to learn about from time to time was used on the Lake Shore Limited." The St. Paul put on the Pioneer Limited in 1897 or 1898, which was electric-lighted, the electric light being made in a car carried next to the engine—an enormously expensive train.

(4660) In 1897 the Pennsylvania ran the Florida Special down the Atlantic Coast Line, in connection with the Savannah, Florida & Western. The present time by the Lake Shore Limited is 23½ hours. The Southwestern Limited is the New York Central, Lake Shore and Big Four train between New York and St. Louis, put on at 30 hours, now running in about 24 hours. The Montezuma Special was put on in 1889. "I had to do with it because we hauled it from Chicago to Louisville over the Monon—with which I was connected, and then south over the Louisville & Nashville, delivering it to New Orleans to the line operating from there. The train operated between New Orleans and the city of Mexico, commencing from New Orleans February 7, 1889. Then, in order to attempt to do better with it, they carried it farther north, and, on March 4, 1889, they ran it from Cincinnati to the city of Mexico. It was discontinued April 30, 1889." It ran between New Orleans and the City of Mexico from November 10, 1889, to February 28, 1890, when it was discontinued finally. It was a high-grade train and a light train, consisting of a straight sleeping car, a drawing-room car, a combined baggage and library car, and a dining car. The route was S. P., Mexican International, and Mexican Central.

Santa Fe's California Limited.

(4661) The Santa Fe's California Limited, semi-weekly, inaugurated in November, 1895, left Chicago at 6 p. m. on a schedule of 68 hours to Los Angeles. It was discontinued in the spring of 1896. They had similar service in 1896 and 1897. It was a seasonal train. For 1897-8 it was inaugurated October 20, leaving Chicago at 6 p. m. Wednesdays and Saturdays, arriving at Los Angeles 5:50 p. m. Saturdays and Tuesdays; and leaving Los Angeles 8 a. m. Mondays and Tuesdays, arriving Chicago 9:43 a. m. Fridays and Mondays—about 68 hours. On January 17 it was made tri-weekly, the equipment then being three sleepers, a diner and buffet smoker. It was discontinued in the spring of 1898. For the season 1898-9 it left Chicago 8 p. m. Monday, Wednesday and

Saturday, arriving Los Angeles 1:50 p. m Thursday, Saturday and Tuesday. Left Los Angeles 1:20 p. m. Monday, Wednesday and Saturday, arriving Chicago 9:52 a. m. Thursday, Saturday, Tuesday—66½ hours; three 10-section, double drawing-room sleepers, one observation sleeper, one diner, one buffet smoker. It was discontinued late in the spring. "For the season 1899-1900: left Chicago 8 p. m. Tuesday, Wednesday, Thursday, Saturday; arrived Los Angeles 1:50 p. m. Friday, Saturday, Sunday, Tuesday. Left Los Angeles 6 p. m. Saturday, Sunday, Tuesday, Thursday; arrived Chicago 2:15 p. m. Tuesday, Wednesday, Friday, Sunday. The time was 67 hours and 50 minutes westbound and 66 hours and 15 minutes eastbound. * * * Three 10-section double drawing-room sleepers, one observation sleeper, one diner, one buffet smoker. In the spring the service was reduced to semi-weekly and was maintained, I think, for the first time then throughout the summer."

They began daily service some time in 1901, again reduced to semi-weekly service, resumed again daily November 3, 1901. (4662) "Left Chicago at 8 o'clock p. m., arrived Los Angeles 2:40 p. m.; left Los Angeles 6:10 p. m., arrived Chicago 2:15 p. m. * * * Two 10-section double drawing-room sleepers, one 10-section observation sleeper, one 6-drawing-room compartment sleeper, one diner, one buffet smoker. The equipment was changed from time to time, the six-drawing-room sleeper being replaced by a two-drawing-room 7-compartment car. It developed, on nearly all lines, that for the long travel the drawing-room compartment car was not always just the thing. * * * It developed on most of the lines, that the equipment in those days provided for the long journeys, by the Pullman, was not the most desirable car; and I believe nearly all have determined now that probably the best combination sleeper is a car that has, say, one drawing-room, two compartments, and a certain number of sections. That is just an aside. But on these limited trains we have to have a certain number of drawing-rooms and compartments, and so forth. Those are for long pourneys."

The time westbound would be 68 hours and 40 minutes. When it left Chicago at 8 o'clock and got there at 1:50, it was 67 hours 50 minutes running time. Eastbound, leaving Los Angeles at 6:10, getting to Chicago at 2:15, it would be 66 hours 5 minutes. The train was electric lighted for the first time in the season of 1898-9. During this time of the seasonal train, the Santa Fe had a daily train. The Canadian Pacific's limited train was the Imperial Limited, put on in June, 1899, running weekly. (4663) Equipment, first-class sleepers, tourist sleepers, diner, coach and baggage. For 1903, tri-weekly train added same equipment. In 1904 two daily trains, and in 1909 they began to use observation cars. This last season the Imperial Limited was discontinued during the winter months, because of the character of the country they go through, but it will be resumed about June 1st. The N. P.'s North Coast Limited "was inaugurated April 28, 1900; discontinued November 1, 1900. May 5, 1901, until May 22, 1909, equipment:

Imperial Limited.

North Coast Limited.

coaches, tourist and standard sleepers and observation car. May 23, 1909, until middle of August, 1909, standard sleepers, section and drawing-rooms, observation car. Middle of August, 1909, two compartments, one drawing-room, 10-sectioned sleeping car added —The car I referred to a little while ago as a compartment car; that was run until November 30th. December 1 until February 27 the consist of the train was: coaches, tourist and standard sleeping cars, and observation car. February 27, 1910, standard sleepers, observation car, drawing-room, compartment section sleepers."

They have an observation car and dining car, and buffet smoker up ahead. "As I understand their train, that is the only thing I object to much about it. They have a buffet smoker, unless they have changed it. They used to have, when they ran it next to the engine. I don't know how they are running it now; I think they run their car at the rear of the train now. * * * Commencing May 23, 1909, the Northern Pacific commenced service from Chicago with their number 3, and eastbound part of the North Coast Limited equipment went through to Chicago. Since October 31, 1909, the service is through from Chicago to the coast, in both directions, by their train No. 3 and 4." (4664) The Great Northern "Oriental Limited" was established "November 19, 1905. All classes of equipment, including compartment and observation car. * * * Commencing May 23, 1909, the service extended to and from Chicago. This train, as I understand, has tourist sleeper, first-class sleepers, etc. I haven't it just exactly." The "North Coast Limited" from Chicago to Portland " is 72 hours to Portland, and must therefore be, say, 72 hours to the coast from Chicago."

Oriental Limited.

In respect to the Washington Sunset Route since 1900, in the way of increasing traffic, "efforts have been made in every possible way; watching to secure new and good equipment; getting the best conductors to personally take care of people traveling; extensive machinery to make the people in the east acquainted with the fact that they could send a child or a woman alone to California in the direct care of a certain responsible party all the way through. * * * I was getting back to my old transportation days. I mean that we have a big office in Washington, say, and that office has its agents, and all through the season they endeavor to get to the people there the information that at any time of the year they have persons unattended, young girls, women and children—or if a man and wife want to go and be relieved of a good portion of their responsibilities of travel, that this Washington agency and the force of employees will do the work for them."

Washington Sunset Route.

Service of Washington office.

The Raymond & Whitcomb excursion business "is a big separate agency of another kind and character entirely. But for many years the Raymond & Whitcomb agency operated in a very unfriendly way to the Sunset Line. Their business went out by the Santa Fe and went back by the Rock Island. When I use the term 'unfriendly' I mean the Sunset line did not get any of their business. * * * The other line was the preferred line. * * * And later an endeavor was

Raymond and Whitcomb.

used and Raymond & Whitcomb began to send some of their business by Sunset line; and finding that it was a good line and that the climatic conditions were in favor of that Southern route, even during the summer months, at times they sent business to that line and helped increase its importance and earning power." (4665) Some of the Raymond & Whitcomb business has gone over the Sunset since 1900. The S. P. has advertised in support of the Washington Sunset Route "by means of circulars, newspaper advertising, lecturers, printed matter—pictorial and otherwise. And the success which I think we have shown in the line was brought about by such effort, in spite of the fact that the general public had the impression, for a long time, that the line traversed by the Sunset Route was a line of great resistance as regards personal comfort, etc.; hence, it was desperately hard to work business that way."

Oiled Sunset line.

Desirable line in summer.

Since 1900 we have taken steps to bring the physical and climatic conditions or advantages of the Sunset Route to the attention of the public "by means of advertising, etc., and constantly improving the line It was a dusty line at one time; then they oiled it, and it became pleasanter. It was built well in the first place, and a good deal of money has been spent on it since. Then we called the attention of people to the fact that the United States Government itself said that it was a very desirable line to use in the summer; in fact, the weather bureau statistics show that it is. Tables will prove that to you." On the Southern route via El Paso into California, expense has been incurred in reference to a water system. "If you will notice the time cards, the time varies from time to time from the figures I give you. It all shows work being done on the various lines over which these trains run. Over the El Paso & Southwestern in connection with the Rock Island service via El Paso, great trouble was had on account of snow in the winter and lack of water for their engines. Those people started to provide for their engines the best possible water supply that could be afforded. At an expense of over a million dollars they brought water from the mountains to the engines—water that is good for the boilers and for steam-making, etc. That increased the efficiency of that route very much indeed, so far as that link is concerned. * * * Between the termination of the Rock Island road (Santa Rosa, say) and El Paso, over the E. P. & S. W."

Water supply.

Rock Island line.

(4666) The Rock Island runs from Chicago to Santa Rosa, and the trains go through solid from Santa Rosa over the line of the Dodge-Phelps people, El Paso & Southwestern, sometimes called El Paso & Northeastern, right up to El Paso. In respect to water supply, and these expenditures,—"they just finished that, I think, this last season—in the last two years. Now, the Southern Pacific west of El Paso naturally hailed all these improvements with delight, because that line west of El Paso to California was greatly in need of more service than it could get, in connection with the line from New Orleans up to El Paso. The line up to San Antonio had been operated with double daily service profitably, but between San

Antonio and El Paso they could not, and just as soon as the Rock Island got to El Paso the Southern Pacific seized on that connection and their tender of a through train with great avidity, and they have encouraged the Rock Island ever since to do the pick-up work for them and bring the business to them at El Paso. While you might say it short hauls the Sunset route, they do get 816 miles of haul from El Paso to Los Angeles, and on to San Francisco quite a little. * * *

Encouraged Rock Island.

"The Union Pacific and Southern Pacific operating from Omaha to San Francisco, say—take one train, take the Overland Limited train for instance, which leaves Chicago about 7 o'clock at night and gets into San Francisco I think at 7:28. Now for a long time the Northwestern and the Milwaukee & St. Paul Road afforded the Union Pacific Road a 12 hour schedule to Omaha, and (4667) that is a very fast run up to Omaha. That allowed more time west of the river, and that time was pro-rated or arranged between the Union Pacific and the Southern Pacific at various times in different ways according to the work being done on the Union Pacific or on the Southern Pacific, or whether the excess of stress was on the Union Pacific or the Southern Pacific. Take last season, for instance. We had to give the lines east of the river more time, and we did give them more time. * * * And we allowed them more time on this last change of card. * * * Well, they were all shot to pieces, they could not make any time—they could not make anything like their time, and we gave them about an hour, I think, more on the last card between Chicago and Omaha, and that time had to be taken up by the Southern Pacific and the Union Pacific."

Time pro-rated west of river on Ogden route.

We did this without lengthening out the through time, which remained the same, 7 p. m. from Chicago, and 7:28 into San Francisco. The U. P. and the S. P. maintained the integrity of the total schedule; "and at a time when the Union Pacific is operated with snow and ice and rain they put the running on the Southern Pacific, which is a dry line from Ogden to Sparks, making it run faster." As to the roads between Chicago and Omaha being shot to pieces, "I will use the language of the president of the almost perfect road of America—the Chicago & Northwestern, who for 37 years had operated the road, and who told me personally that in all his experience he had never seen anything like that 6 weeks. The Chicago & Northwestern Road, having double-tracked its line from Chicago to Omaha, had a great deal of soft track. In October the rains came, and in November and December the snows and ice came, and the soft track froze up, and any operating man knows what that means. It is humped and it is in awful condition. Now, the Northwestern Road was not in condition to go into the winter as it was ordinarily, and the subsequent operation of it proved that. And that (4668) same thing affected the Milwaukee & St. Paul from the river to Chicago."

Bad track between Chicago and Omaha.

Bearing on the passenger schedule of the Overland Limited the conditions of construction arising out of the physical properties

Effect of rebuilding was upon schedule of Overland Limited.

of the U. P. since 1901 were stupendous. "The double-track, the rebuilding, the rehabilitation of the line; the delays incident to the movement of material, the consequent congestion; better described by the fact that you can not double-track a line for much less than you can build a new line. If a line costs you $30,000 a mile to build, it will cost you $30,000 a mile, or approximately so, to put another track right alongside of it. That means delay. The Union Pacific built the Lane cut-off, and that meant delay. They double-tracked 13 or 14 miles west of the Watson Ranch, and that caused delay. They built pieces of double track that later on will be hooked up to make the double track through 50 or 60 miles long, and all of that caused delay. Then, the Union Pacific, to my mind, is subject to more serious congestion than any road in the West.

Lines converging at Omaha.

"You might liken it to the small part of a funnel, only it has a funnel at both ends. Here are 6 or 7 lines, one of them a double-track line, from Chicago, with foreign business for the Union Pacific at Omaha, and the Union Pacific, having a single track line, expected to carry that traffic to Granger, where there is another funnel, and there comes the Oregon Short Line, and the Southern Pacific is at Ogden and the San Pedro at Ogden, throwing it in that way again. So that the Union Pacific, with a single track, is the recipient of business from six or seven tracks at Omaha and four tracks at Ogden, and it is a problem to move it all over that single track line. * * * Not satisfied with giving it all it can do at Omaha, they put it in at Cheyenne, at a most embarrasing point. And also at Julesburg from Denver. If it all came in at the terminals they could better arrange for it, but it does not. It is a one-track road trying to do a twelve-track business." They have been double-tracking as "fast as they can get men and weather conditions. The Union Pacific was laying double-track at a very rapid rate when on came the early winter. They have the iron and everything of that kind there, and if they have luck they will probably be double-tracked to Julesburg by late in the fall. That will help out."

One track road trying to do a twelve track business.

Betterments on Santa Fe.

The Santa Fe has done work west of Kansas City, eliminating grades and curves and all that. (4669) It has been going on for four or five years, with the same trouble in the West that we encountered. It has affected their passenger time, the schedule changing from time to time. They went from 66½ hours to 72 hours to Los Angeles. I doubt whether they would have cut their time down the other day so as to arrive at Los Angeles at 3 p. m. if they had not about finished their work; in fact, they are using some of their reconstructed work. They are double-tracking between Chicago and Kansas City, to be finished early next year.

Effect upon their passenger time.

Train service between Ogden and San Francisco in 1900.

The train service in 1900 between Ogden and San Francisco was three passenger trains. I have a statement covering 1900—September, 1909—and February, 1910. (4670) I have taken the month of January, 1900, September, 1909, and February, 1910, not for any significance in those months, but as illustrative. If you will take the year 1900 you will probably find that the Overland

Limited time differed—it might leave San Francisco in January at 8:30 in the morning, getting to Chicago at 9:30; and in May it might leave San Francisco at 11 in the morning, getting to Chicago at some other time, because the controlling feature would be its connections. We aim to leave San Francisco nowadays as late as we can for the convenience of people who have to go out into the country. Since the San Francisco fire more people live out of town. My showing of train service via Ogden Route is shown by Defendants' Exhibit *232*, at pages 4671-4678 of the record.

(TESTIMONY RESUMED, NEW YORK CITY, FRIDAY, MARCH 4, 1910.)

(4678) As to the running time of the Ogden Route for 1900—Chicago to San Francisco, as compared with later years: "This is for January, 1900, train 1 (the Overland Limited), westbound from Chicago; time, 73 hours and 45 minutes. That same train, September, 1909, consumed 74 hours and 28 minutes; February 10, 74 hours and 28 minutes. The opposing train (No. 2) eastbound from San Francisco, January, 1900, 71 hours; September, 1909, 72 hours and 5 minutes; February, 1910, 72 hours and 20 minutes; with the explanation that the train in 1900 was not as heavy a train as in 1909 and 1910, so far as car equipment is concerned." The average time is about 72 or 73 hours on those trains. Now, No. 3, via Chicago & Northwestern westbound, 85 hours and 15 minutes through. "That is in 1900. That is a very heavy train; carries all classes of equipment, and, if necessary, carries empty equipment westbound for return of eastbound passengers; that is, to-day. That train, in September, 1909, 90 hours and 3 minutes by the Chicago & Northwestern, U. P., S. P., and 90 hours and 38 minutes by the Chicago, Milwaukee & St. Paul-S. P. In February, 1910, that train, 90 hours and 3 minutes with the Northwestern connection; 90 hours and 38 minutes with the Milwaukee & St. Paul. Again, the same (4679) explanation: that that train was a much heavier train in 1909-10 than it was in 1900, when it had only the Northwestern through equipment.

Running time of Ogden route.

Overland Limited, west and east bound.

No. 3, via Northwestern.

"No. 4 (the opposing train) eastbound, San Francisco to Chicago: in 1900 (delivery being made at Omaha to the Chicago & Northwestern) 81 hours and 15 minutes; September, 1909, 91 hours and 45 minutes; February, 1910, 81 hours and 50 minutes. No. 5, westbound, Chicago to San Francisco (being practically the train that the Southern Pacific operates for the Denver & Rio Grande and its connections—cars coming to the Southern Pacific at Ogden, for instance C. B. & Q. out of Chicago via D. & R. G. and then S. P.) in January, 1900, 96 hours and 20 minutes; in September, 1909, (taking that same line, C. B. & Q. and D. & R. G., although this train is served by other connections of the D. & R. G.) 95 hours and 28 minutes; February, 1910, 95 hours and 28 minutes. Explanation: that the route from San Francisco to Chicago via the D. & R. G.

No. 4.

No. 5.

No. 6.

and its connections is some 200 miles longer than the route via the Union Pacific direct. The opposing train (No. 6) D. & R. G., 95 hours and 40 minutes, in 1900; by the U. P. 83 hours and 15 minutes. * * * Well, that train, say in 1900, out of San Francisco ran to a connection of both the Union Pacific and the Rio Grande, and if the cars were delivered to the Union Pacific they made better time than down around the Rio Grande. * * *

"I will give you the U. P time first. That No. 6, eastbound, in January, 1900, 83 hours and 15 minutes from San Francisco to Chicago. Denver & Rio Grande, 95 hours and 40 minutes. That train, in September, 1909, served only the Denver & Rio Grande and its connections, and its time was 96 hours and 5 minutes. Again, in February, 1910, serving D. & R. G. and its connections, only, 96 hours and 5 minutes. In addition to that service eastbound from San Francisco (which apparently makes the Southern Pacific run what we call a one-legged service between Ogden and San Francisco) we have another passenger train (No. 10) leaving San Francisco somewhat later." It is a train that goes one way—one-legged trips. "It comes back as the big Overland Mail, which carries no passenger cars with the exception that when it gets over the mountain they may put on something any time they want to when it is going down grade there; so that train, in 1900, as you will notice, had to carry both the Union Pacific connection and the Denver & Rio Grande; but latterly they have been (4680) split up and the Union Pacific goes out on this No. 10—whatever there is for it. Eastbound that train makes 81 hours and 30 minutes, with the Union Pacific and Northwestern; and it makes 81 hours if it goes over the St. Paul road,—in September, 1909; and in February, 1910, eastbound, via the Northwestern, 81 hours and 30 minutes, and via the St. Paul, 81 hours."

No. 10 "One legged" service.

I was Passenger Traffic Manager of the S. P. from 1899, May, until 1904, during which time we were operating train service between San Francisco and Portland. As to the effect upon the conduct of the rail business between those points, so far as passenger traffic is concerned, of the steamship line between San Francisco and Portland, "the effect was so little that, finding abnormally low rates in effect at that time (the rail rate including sleeping car which was a most unusual thing) I finally had those rail rates raised considerably, and without any care as to what the steamship did, or without any let or hindrance on their part. * * * I mean I felt that the bulk of the business came from the tourist and the scenery-loving people of the country (we got most of our travel from them at that time), as we afforded the scenic attractions (and we would not let them run the boats up our railroad) that we ought to get more money for it. It was very expensive service. The rates that I found in there at the time (to be perfectly fair) had been advanced from the time of the war that has been referred to in the testimony of others, but they had not been advanced to a consistent figure. * * *

Effect of steamship line upon passenger business between San Francisco and Portland.

(4681) "The steamship line certainly carried business—a considerable business. The rail lines carried a good big business. And I paid no attention, as in charge of the affairs of the rail line, to the steamship line; that is, I did not pay sufficient attention to it to enable me to testify at this time just what they did do. I know they did a business, and I know they did a considerable business for steamship lines." The passenger business of the steamship line was very little as compared with the passenger business of the railroad line. The sailings were infrequent; the boats, to my mind, being taken by people who wanted the ocean trips. In point of volume, the steamship passenger traffic as compared with the rail passenger traffic was very inconsiderable. When I used the term "a considerable business" by the steamship, I was speaking absolutely, not relatively.

Business of steamship line.

"If I said I paid no attention to the steamship business, I did not intend to convey that impression; because I was not careless of even the business that chose that route up there on horseback. I watched all business that could possibly be contracted. To be perfectly candid with you—not 'with you' because I am always with you—but to get to you what was in my mind, I was very glad there was a steamship line there; because I think it in some way might have been attractive to people over there, and everything and anything that would attract people over there we were glad of. If there was any tourist that could be attracted by that steamship line I knew very well he would not go that way both ways, and I do not think he would ever go that way again—and we would get him back. If he was going down from Seattle to Los Angeles and back, and took a boat-line down, we would be sure to get the money going the other way." Taking the character and quality of our service, the accommodations to the public, and those various concrete aspects of the situation, we conducted our business on the rails with no relation whatever to the steamship company. As to the passenger, unless "he had taken the trip from Australia to New Zealand, which they say is the worst trip you can get on water next to the trip from Havana to New Orleans during the Equinox, he would be afraid ordinarily to go back."

He would never go via steamship line again.

Conducted rail business with no regard to steamship company.

(4682) In 1900 the D. & R. G. eastbound had one car daily from the S. P., a tourist car between San Francisco and Denver, but no car San Francisco to Chicago. I have the D. & R. G. data for the through sleeping cars east and west bound in 1910. "I have it here, January 3, 1910. Eastbound: standard sleeper; Oakland to Chicago, D. & R. G., C. R. I. & P., train No. 2, daily, one car. Oakland to Chicago, D. & R. G., C. B. & Q., No. 6, daily. Oakland to St. Louis, D. & R. G., Missouri Pacific, No. 6—— * * * I am giving you a standard sleeper on each one of these trains. The second was the car Oakland to Chicago by D. & R. G. and C. B. & Q., out of San Francisco on No. 6 daily. The next car, Oakland to St. Louis, D. & R. G., Missouri Pacific, daily; with the explanation that while ordinarily only one car would be operated

Through car service on D. & R. G.

on that train out of San Francisco via Ogden and the D. & R. G. daily, for the last two roads on No. 6, if they had more business they could have more cars, while on the first train, No. 2, operated in connection with the Rock Island, it being the Overland Limited, they would ordinarily be confined to one car.

Through car service from Los Angeles via Ogden.

"Continuing eastbound, under the head of 'tourist,' starting with Los Angeles, these cars coming up via Oakland or Sacramento, etc., and going east to Ogden and then over the D. & R. G. road and its connections: first car, Los Angeles to Chicago, D. & R. G., C. R. I. & P., on train No. 4, semi-weekly; Los Angeles to Chicago, D. & R. G., Colorado Midland, C. (4683) R. I. & P., No. 4, weekly; Los Angeles to Chicago, D. & R. G., Missouri Pacific, Chicago, Milwaukee & St. Paul, train 4, semi-weekly. * * * Next: Los Angeles to Chicago, D. & R. G., Burlington, train 6, weekly. Next: Los Angeles to Chicago, D. & R. G., Burlington, train 6, semi-weekly. * * * Over the same route. And again with the explanation that they demanded one every day on these trains because they carry more cars. Next: Oakland to Denver, D. & R. G., one car semi-weekly. Next: Oakland to Denver, D. & R. G., train 4, weekly. Next: Oakland to St. Louis, D. & R. G., Rock Island, train 4, weekly. Next: Los Angeles to St. Louis, D. & R. G., Burlington, train 6, weekly. Next: Los Angeles to St. Louis, D. & R. G., Missouri Pacific, train 6, weekly. This made a total delivery, east-bound, from the Southern Pacific to the D. & R. G. at Ogden, of three standard sleepers daily, and fourteen tourists each week.

"Under the heading 'Westbound': Standard sleepers: Chicago to Oakland, Rock Island, D. & R. G., No. 1 (Overland Limited) daily; Chicago to Oakland, C. B. & Q., D. & R. G., train 5, daily; St. Louis to Oakland, Missouri Pacific, D. & R. G., train 5, daily. Under the heading 'Tourist': Chicago to Los Angeles, C. R. I. & P., D. & R. G., train 5, semi-weekly; Chicago to Los Angeles, C. R. I. & P., Colorado Midland, D. & R. G., train 5, weekly; Chicago to Los Angeles, Chicago, Milwaukee & St. Paul, Missouri Pacific, D. & R. G., train 3, semi-weekly; Chicago to Los Angeles, Burlington, Colorado Midland, D. & R. G., train 5, weekly; Chicago to Los Angeles, Burlington, D. & R. G., train 5, semi-weekly; Denver to Oakland, D. & R. G., train 5, daily; St. Louis to Oakland, C. R. I. & P., D. & R. G., train 5, weekly; St. Louis to Los Angeles, Burlington, D. & R. G., train 5, weekly; St. Louis to Los Angeles, Missouri Pacific, D. & R. G., train 5, weekly. This made a total of three standards daily, and eighteen tourists each week." As suggested here by Mr. Horsburgh, the D. & R. G. service in 1900, instead of being a tourist San Francisco to Denver, was a standard car San Francisco to Denver. In addition to that there was a weekly tourist, San Francisco to Chicago.

Personally conducted tourist car business.

(4684) In the so-called "personally conducted" tourist car business to the Pacific Coast, the U. P. "do participate but not as extensively in that business as the D. & R. G. and its connections, simply because they cannot. It is not from lack of desire, but they

cannot accommodate the cars that are tendered them nor the cars that they would like to have. * * * It is on account of arbitrary limitations placed on the Union Pacific road. First, the Union Pacific, as I have explained before, is a single track line. It is trying to do a 4-track business. * * * It is trying to do an 8-line business; I am going west now. Coming east I will add 4 lines to it—and then we have a 12-track business. * * * Going westbound they are fed by all the lines into Omaha. I won't relate that. But they have got just as many passenger trains on the Union Pacific to-day as they can possibly run and take care of the freight they are running. This has operated to such an extent that the Union Pacific masses its passenger trains; and that is not a good thing, ordinarily, for a railroad trying to serve locally, as you have to in that country, with through trains. But if you do mass your trains, you get your road back. For instance, if you had six trains going west and you could put them all in 120 minutes—2 hours—and you could do that on the Union Pacific road if you had to, because, by the expenditure of money, etc., they have provided a block system that enables you to do that—you would have your road back in 2 hours.

U. P. has as many passenger trains as it can run.

Massing of trains.

"Now, that is impracticable. But they operate as well as they can, and make a decent spread in order to afford safe meets and passes. If you spread passenger trains 40 minutes apart on a single track railroad, you can't operate your railroad; you can't get trainmen to go out of sidings, that is, with cuts of freight, against opposing fast passenger trains. * * * I am speaking of ever since the Union Pacific began this new construction work, rebuilding, improvement by the electric signaling and the double tracking, and the Lane cut-off, and the fills over there. * * * I am only speaking since 1900, because I am referring now to the excess of passenger trains." (4685) The U. P. has been compelled to refuse cars from almost all of its connections, even going so far as to refuse to receive through cars, both standard and tourist sleepers, at Omaha, from the Rock Island, which line could serve the territory between Chicago and Omaha, and other territory there. They have refused the Illinois Central, standard and tourist both, not only to California but to Denver via Julesburg. The U. P. couldn't take it. And I could go on and explain if you wanted me to. The Chicago Great Western road have asked for the same thing. The U. P. can't do it. But when they finish these improvements they can, and I presume will do it.

U. P. has been compelled to refuse cars.

As to the reference made on the examination of one of the witnesses to the schedule time having been changed since the taking of the testimony began: "As I understood the point (I think I was in the room at the time) some reference was made to the schedule having been changed, and to a shortening of the Overland Limited time, since Mr. Kruttschnitt took the stand. For the purpose of being correct, I looked it up. No change was made since he took the stand, for any other reason than that explained yesterday, to Portland, which was brought about by mail conditions; and no

Recent changes in schedules.

change between Chicago and San Francisco for the whole haul; but the time was changed and the Southern Pacific road west of Ogden did shorten its schedule between Ogden and San Francisco. That was caused by a longer time being given to the lines between Omaha and Chicago—the Northwestern and Milwaukee roads. They had to have longer time between Chicago and Omaha, on account of the stress of weather, the condition of their tracks, etc. That number of hours taken out of Chicago to Omaha, the balance of the time was divided between the Union Pacific and the Southern Pacific, and that is never set. You can change it one day or the other. If the conditions are better for the Southern Pacific to make the time, they make it a little faster; or the Union Pacific: just as they do the Northwestern. In this case the through train time from Chicago to San Francisco is the same, but the Southern Pacific expedited west of Ogden."

Passenger train schedules.

(4686) In January, 1900, Overland No. 1 left Omaha 8:50 a. m. Tuesday, arriving at San Francisco 5:15 p. m. Thursday, 56 hours 25 minutes. In September, 1909, the time was 60 hours and 8 minutes. The time of No. 2, in January, 1900, Overland Limited Eastbound, San Francisco-Omaha, was 58 hours and 50 minutes, and in September, 1909, 61 hours and 19 minutes (4687); of No. 3, in 1900, Omaha to San Francisco, 65 hours 20 minutes, and in September, 1909, 70 hours 48 minutes; and the eastbound train, No. 4, in January, 1900, 69 hours 35 minutes, and in September, 1909, 70 hours 30 minutes. The S. P.-U. P. line, San Francisco to Omaha, was about 90 miles shorter in September, 1909, than in January, 1900; grades had been greatly reduced, and curvatures eliminated to a large extent.

Condition of track.

(4688) The train equipment and engines are heavier now than years ago. Part of the time, and part of the way, the track is in much better condition; part of the time not anything like as good condition, on account of construction, but that varies with the slow orders. It is not in as good condition for running. The track where completed is very much better than in 1900. When I went to the S. P. it was absorbing the sleeping car charge between San Francisco and Portland, a most peculiar arrangement. "The first class ticket included a sleeping car berth, and the second class ticket included a sleeping car berth, and according to my recollection the man bought one with the other—the one charge included both. In other words, the railroad settled with the sleeping car company."

Rate war between San Francisco and Portland.

(4689) During the war between the steamship line and the railroad the railroad threw in the sleeping-car tickets, and they did it afterwards too. As to whether the boat line threw in meals and berths and everything else in that war, I would not want any man to suspect me of ever having taken that boat trip. I have not taken it. I understand that at certain times of the year it is a very delightful trip, and at other times it is a very naughty one. We have some scenery on the Shasta Route, very thoroughly advertised, as an inducement for people to travel by that route. The boat line

has some scenery down the Columbia River, and they have some sea weather outside. While I was in charge of the S. P. passenger business, beginning in 1899, the rail line did most of this passenger business. As to the shortening of time of the through train to accommodate the Northwestern and the Milwaukee: "Taking the time from 1900 to 1910, you will see that while there is very little variation between the through time, that the time was varied considerably between Omaha and Ogden. I may state that one period, and not very long ago, the lines between Chicago and Omaha demanded 14 hours and 30 minutes on those through trains, and that made us expedite considerably. It may be that during the period you speak of the Northwestern and the Milwaukee were getting this so-called arbitrary between Chicago and Omaha. Latterly they ran those trains in 12 hours for us. At that (4690) time we had 2 hours and 30 minutes more in the card from Omaha to San Francisco, but the through time remained the same."

The rail line did most of the business.

Time between Omaha and Ogden.

I think in 1899 we were under agreement with the lines between Chicago and Omaha to allow them 14 hours and 30 minutes. When the Northwestern and the Milwaukee were shot to pieces and applied to us for longer time we extended their time an hour, taking that out of our time, shortening up the time between Omaha and San Francisco one hour from what it was last September; but now they have not as much time allowed them as they had previously, because then they had 14 hours and 30 minutes, instead of 13 hours, and then 12.

Time between Chicago and Omaha.

(4690) CHARLES S. FEE.

Fee.

I am Passenger Traffic Manager of the S. P., Pacific System, and have been since April 1, 1904. I was in the railroad service from "1874 to 1875 as a stenographer in the office of the general superintendent of the Michigan Central; from 1875 to 1877 as stenographer and clerk in the office of the superintendent and general superintendent of the Hannibal & St. Joseph Railroad, Hannibal, Missouri; from 1877 to about August 1, 1883, I was chief clerk in the office of the general manager of the Northern Pacific Railway at St. Paul, Minnesota; from August 1, 1883, to April 1, 1904, I was (4691) general passenger agent of that line; and from 1904 to the present time, with the Southern Pacific."

San Francisco Passenger Traffic Manager S. P.

The S. P. Shasta Route, rail line Portland and San Francisco, the greater bulk of the passenger traffic being local traffic between California points and Portland, Oregon, and points in Washington and British Columbia, and the through traffic being very largely made up of excursion business, was opened December 18, 1887. The prevailing rail rates between Portland and San Francisco are $25 stop-over, first-class, $20 limited first-class, $15 second-class. The ocean rates between the same points are, first cabin, $15, second cabin $10, steerage $5, applying also by the North Pacific Coast Steamship Company. These rates include, I think, meals. The steam schooner rate is nominally $12 first-class, where they

Rates between San Francisco and Portland.

have any first-class accommodations, and $8 second-class, but the rates vary constantly. I use the word "nominally" as I think they make almost any rate that is necessary to take a little of the business.

Water and rail service between San Francisco and Portland.

Steamers sail between San Francisco and Portland once a week The trip is from 50 to 60 hours. (4692) We have three daily through trains between San Francisco and Portland, each way, running time from 27 to 36 hours. During my administration of the passenger traffic, in conducting our own passenger traffic between Portland and San Francisco, I have not taken into consideration the steamship passenger business at all. "My own judgment was that the business which might seek the ocean route, the longer time, had reasons of its own, and that it would go that way almost regardless of the rate. In the summer season it is a somewhat pleasant journey for some people. Our business was large and satisfactory, and we never in any way recognized the ocean line."

Witness does not take steamer business into consideration.

Very little transcontinental business seeks the ocean line.

The steamship lines have occasionally handled some of the transcontinental round-trip business, but not of any moment. In respect to the through one-way first or second class business, very little transcontinental business seeks the ocean lines. While I was General Passenger Agent of the N. P., we made an effort on the opening of the N. P. in 1883 to secure via Portland a share of the California passenger business to and from Chicago, St. Louis and the East, via the steamer line, but as against the direct rail route through Omaha and Ogden, we didn't do any business—very little. After the completion of the Shasta rail route there was a meeting of the S. P. and N. P. rails at Portland, giving us a rail route to San Francisco via Portland, in contradistinction to the former mixed service. (4693) In that case we were somewhat more successful in securing a small portion of the transcontinental round-trip excursion traffic, and also some of the one-way business between the Twin Cities, the head of the Lakes, and California points, but the volume of that business compared with what was going through the Missouri River was very small, maybe one or two per cent., it was very small indeed. The $5 rate by the Shasta Route, about the middle of the 90's between Portland and San Francisco, did not affect the through business.

Volume of San Francisco business via N. P. all rail route, one or two per cent.

San Francisco route via Portland, not a factor.

In my experience as General Passenger Agent of the N. P., between 1883 and 1904, our line via Portland, or the line of the U. P. and O. S. L. via Huntington, Portland and the ocean, was not considered a factor of any importance in connection with the California passenger traffic. The amount of traffic we were able to secure by the longer line was so trifling that I do not think the direct lines between the Missouri River and California points ever took our line into consideration in any shape or form. Transcontinental fares from Chicago and the East to California via St. Paul, Portland, via the U. P., Huntington, Portland and the ocean, and the Shasta Route, are practically the same as via Omaha, Ogden and the S. P. direct, with the exception that the 30-day one-way rate,

Rates via Portland same as via direct lines.

stop-over ticket, and the round trip transcontinental excursion rate, were somewhat higher than the direct line rate; and this has been so since 1887. About 4 per cent., I think, of through passenger business between the East and California is carried via Huntington and Portland over the U. P. As to the D. & R. G., possibly one-third or one-half as much as the U. P. and O. S. L.

U. P. gets about 4 per cent of through business via Portland.

(4694) These percentages refer to the passenger business from the Missouri River and east to California, and are deductions from the exhibits in evidence. The Salt Lake Route was opened in 1905. The route via the Salt Lake line, Daggett and the Santa Fe, as a passenger route, was an undesirable one between Salt Lake and San Francisco, because of the greater distance and longer time—some 261 miles longer, and with the closest connections about 9 hours additional travel—no compensation for it, simply carrying the passenger around two sides of a triangle. (4695) The route from Salt Lake to San Francisco via Daggett, Los Angeles, and then S. P. to San Francisco, would be somewhat more attractive, but it is 433 miles longer than the short line, and would require about 15 hours additional time. The rate Salt Lake to Los Angeles, first-class 30-day rate, is $35, first-class limited rate is $30—Salt Lake Line. Salt Lake to San Francisco by Ogden, first-class 30-day rate is $36.10, first-class limited rate $31.10—Ogden and S. P. Salt Lake via Daggett and the Santa Fe, and via Los Angeles and the S. P., is in either case $39.25. While I have been Passenger Traffic Manager of the S. P. the rail line between San Francisco and Portland has not met the rates advertised by the steamer lines, and that is true also with reference to Seattle.

Route to San Francisco via San Pedro line, undesirable.

Rail line between San Francisco and Portland has not met rates of water line.

The chief passenger traffic of the N. P. while I was General Passenger Agent was between St. Paul and North Pacific Coast points, or intermediate points. After the G. N. got through, the two lines ran parallel, and we were competitive a good deal of the way on the through business. (4696) In securing competitive business, the efforts "of the passenger department are devoted to the building up of the business by advertising and setting forth the attractions of the line and the advantages of the country through which they run, not only appealing to the tourist but to the farmer." The same class of work was performed by the G. N., which had a large country to develop. In magazines, newspapers, circulars, folders, and every conceivable way almost, railroads put out descriptions of scenery, places, quality of equipment, things of that kind, to get travel over their lines—in every reasonable way. (4697) The difference in mileage between Salt Lake and the Missouri River by the U. P. and Short Line in comparison with the D. & R. G. and the Rock Island, is several hundred miles in favor of the U. P. But the D. & R. G. does a very large business, I understand a considerable business moves by that route. It is largely a scenic route, including the Royal Gorge. They have advertised its scenic features for many years, and the business has

Efforts to secure competitive business.

Advertising matter.

D. & R. G. does a large passenger business.

been built up practically on the scenic features of the line. The Daggett Route is practically a desert. It includes the Meadow Valley Wash, on the line of the Salt Lake.

Agreement of Aug. 2, 1905, betweer San Pedro and S. P.

Referring to the agreement of August 2, 1905, with amendment of January 27, 1906, between the Salt Lake and the S. P., in evidence on the examination of Mr. Munroe, and containing this clause: "Except upon basis of added locals, San Pedro Company will not join in rates to or from points north of Mojave and Santa Barbara, on any traffic to or from Utah common points, and east thereof, provided Southern Pacific give them the benefit of a switching rate of $2.50 per car on Los Angeles freight, within yard limits, to or from points in Colorado, Wyoming, Utah, Idaho, or Montana, west and inclusive of Colorado common points and Cheyenne"—we have no such agreement on passenger business with the Salt Lake, by which they preclude (4698) themselves from joining in any rates with the Santa Fe into San Francisco or points north of Mojave and Santa Barbara. They join with the Santa Fe in making rates from Salt Lake via Daggett to San Francisco, but the difference is between $31.10 Salt Lake to San Francisco via Ogden, and $39.25 by the San Pedro-Santa Fe combination. They have never met the Short Line rate, I don't know why, there is no obstacle. From Utah common points the Salt Lake has not applied the Short Line rate, but there is no agreement that they may not so apply it if they see fit. I have no statistics for the passenger movement by boat between Portland and San Francisco.

No such agreement on passenger business.

Lomax.

(4698) E. L. LOMAX.

Omaha Gen. Pass. Agent, U. P.

Resides in Omaha, Nebraska; general passenger agent of the U. P. Has been in the railroad business about forty years. Has been connected with the U. P. since September 1, 1887. (4699) Witness produces statement, Defendants' Exhibit 233, prepared by him showing the time of through passenger trains over the U. P. westbound as of February 1, 1901. He prepared a corresponding statement as of February 1, 1910, which is marked Defendants' Exhibit 234, and is set out on page 4700. (4700-2) Witness also prepared a statement, Defendants' Exhibit 235, showing equipment of U. P. through passenger trains as of February 1, 1901. (4702-4) Witness prepared a corresponding statement, Defendants' Exhibit 236, of the equipment of through U. P. passenger trains as of February 1, 1910. (4704-5) Witness prepared a statement, Defendants' Exhibit 237, showing a comparison of through time of U. P. through passenger trains as of February 1, 1901 and 1910.

Equipment of through U. P. trains.

Comparison of through time —1901 and 1910.

Service, 1901-1910.

(4705) The through passenger service on the U. P. as of February 1, 1910, compares very favorably with the through passenger service as of February 1, 1901. (4706) "In this way: that in February, 1910, we had more passenger trains, bigger and larger engines, more heavy rail, more steel bridges, more safety appliances; in fact our line was equipped with block signals and interlocking switches. As regards

Better service in 1910.

equipment, it consisted of steel cars, steel day coaches, chair cars, dining cars, baggage cars, observation cars, and the improvements in the equipment were of this character. Take the standard Pullman sleeper in use February 1, 1910, as compared with the character of sleeper in use in 1901, and we had added to it electric berth-lights; we had also added to it the very latest up-to-date sanitary conveniences in the toilet rooms. Take the dining cars. In 1910 they were equipped with the very best of modern up-to-date kitchens, cold-storage closets, and were larger cars. Our chair cars in 1910 were larger than those in 1901 and had a smoking compartment in them for the convenience of the traveling public. In those respects the service of itself was very much better. Compared with the number of passenger trains, I will take the electric lighted service for instance. In 1901 we had in the San Francisco service two electric lighted trains, one in each direction. February 1st, 1910, in addition to those two trains in the San Francisco service we had two electric lighted trains to Portland, one in each direction. We had two electric lighted trains for Los Angeles, although they were temporarily suspended on account of the wash-out on the San Pedro road. * * * I think the wash-out occurred about January 3rd or 4th; I am not sure as to the date, but it was in the early part of January. That train will go back into service as soon as the connections are again made. With regard to the Denver service, we had four electric lighted trains from Council Bluffs (starting at Chicago) to Denver, one train in each direction—two over the Northwestern and two over the Milwaukee & St. Paul. * * * Two in each direction; that is, one for the Northwestern in each direction and one for the Chicago, Milwaukee & St. Paul in each direction. From St. Louis, two electric lighted trains via Kansas City to Denver, one in each direction."

San Pedro washout.

Denver service.

(4707) The time on some of the through passenger trains was not as good on February 1, 1910, as on February 1, 1901; because "the conditions in 1910 were such that we had to wait for connections, which we did not do in 1901. For instance, with our through train to the coast, that is, both to Portland and to San Francisco now, we would wait for the Northwestern Railroad and for the Chicago, Milwaukee & St. Paul, and it was a regular thing that five out of every seven days one of those two roads was late—late from 15 minutes to two hours and frequently 7 to 8 hours. So that the starting of these trains from Council Bluffs depended upon the arrival of those connections which was not the case in 1901." They tried to make up as much of that time as possible on the U. P. And that was the reason why they lengthened out the schedule. Having these various delays from connections, it was very desirable to have such leeway or elasticity in the passenger schedules of these trains that they could make up the lost time—the time which (4708) was lost waiting for connections. And they had another source of delay; slow orders, on account of construction that was still going on along

Conditions as to time in 1910.

the line—double-track now mainly; there is some little reconstruction. The weather also bothers them sometimes. The traffic is much heavier in 1910 than it was in 1901; he would say the traffic is almost half as much again.

Effort to use Portland route, a failure.

"When I first went to Omaha, I think it was in 1887 or 1888, we tried to send passenger business by way of the Short Line and Huntington to Portland, and then from Portland to San Francisco by boat. But the route was so much longer, the boats were so irregular, I think about one sailing in four or five days, and the capacity of the boats so small, that the traveling public simply would not have it, and we stopped the effort, and made no further attempt. Three or four months was the period we tried to send business that way. Q. Can you state about what proportion of the passenger traffic going to San Francisco via Huntington and Portland, goes via the rail lines, and what proportion goes via the rail and water line? A. I should say that 99 per cent. of our passenger business over the Union Pacific goes to California by rail—almost all of it." The amount is small. The other 1 per cent. goes down via boat.

99 per cent of U. P. passenger business goes to California by rail.

Portland train No. 5.

Referring to exhibit 237, train No. 5 to Portland is not 10 hours longer now than it was in 1901. No. 17, which is the new 1910 train, for Portland, is making the run in 58 hours and 15 minutes. (4709) The No. 5 shown in that statement under 1910 is known as 3-5; it does not correspond with No. 5 as shown in 1901. The corresponding train No. 5 in 1901 is now No. 17. The numbers appeared the same on the statement, but the character of the train does not correspond. No train in 1901 corresponded to train No. 5 in 1910. The line to Portland is 18 or 20 miles shorter now than in 1901. It is in very much better physical condition now. The time is not shortened up, though the line has been, on account of waiting for connections, slow orders, and construction that is still going on.

Shortening of line.

The time was shortened January 16th last, about an hour and a half or two hours. Extending the time of the Overland 43 minutes longer than it was in 1901, is a small matter on a long run. The run is not as long by 90 miles as it was in 1901. (4710) Witness would not regard shortening the line 90 miles a matter of any importance in the length of time it would take to make the run—

Difficulties of operation.

not in view of the difficulties under which they are still laboring with that train; delay on account of connections, lost time on that account, and for the construction work that is still going on. Everybody knows that when you have construction of any kind, whether laying double track or tearing the track up, or building a cut-off, that your

Construction work, slow orders.

slow orders will prevent you making any fast time over the track. The shortening up made on January 16th was simply an experiment.

NEW YORK CITY, MONDAY, MARCH 7, 1910.

(4711) OTTO H. KAHN (2)

Kahn,

I reside in Morristown, New Jersey, and am and have been since 1897 a member of the banking firm of Kuhn, Loeb & Co. On the reorganization of the U. P. in 1898 I was a member of its board of directors and executive committee, and so continued until late in 1905, or early in 1906. (4712) I am familiar with the resolution in evidence here, of February 20, 1901, by the U. P. board of directors for the issue of $100,000,000 of convertible bonds. The first $40,000,000 of them were offered to the stockholders, and I should say, roughly, 75 per cent. taken by the public; the second $60,000,000, which were not offered to the stockholders for subscription, were bought by my firm direct.

Partner in firm of Kuhn, Loeb & Co.

U. P. convertible bonds.

After the death of Mr. C. P. Huntington in August, 1900, we were apprehensive of a movement by interests other than the U. P. in the direction of acquiring S. P. stock. "As I say, the members of the executive committee realized some time before Mr. Huntington's death the vital importance to the Union Pacific of a continuation of its old established relations with the Southern Pacific. The entering of a hostile influence into the Southern Pacific, to the extent of controlling it, might have brought with it (in all likelihood would have brought with it) very dangerous consequences to the Union Pacific inasmuch as it related to the Union Pacific's free access to San Francisco, for which it had used the Central Pacific for many years. So much so that Mr. Harriman, in the last year or two of Mr. Huntington's life, made every endeavor to arrange definite relations with Mr. Huntington (4713) so as to assure for all times the permanence and the unaltered relation between the Union Pacific and the Southern Pacific as far as the use of the Central Pacific line was concerned, and in fact he offered to Mr. Huntington, on behalf of the Union Pacific to buy the Central Pacific alone, if a way could be found to separate it from the rest of the Southern Pacific system. That was declined. And there were also declined all other overtures on the part of Mr. Harriman looking to a permanent and definite and unalterable relationship between the Union Pacific and the Central Pacific. When Mr. Huntington died the situation became even more threatening, in that we were advised that there were other influences attempting to purchase the Southern Pacific. Therefore, when opportunity presented itself to acquire control, or something approximating control, of the Southern Pacific, the Union Pacific people gladly availed themselves of the opportunity. And they did that because of the vital importance of the connecting feature of the Southern Pacific as represented by the Central Pacific, which gave to the Union Pacific access to the coast at San Francisco, and also the valuable element of the feeding lines in California, north and south."

Apprehension of a move by adverse interests to secure S. P.

Importance of continuing established relations with S. P.

Efforts of Mr. Harriman to arrange definite relations with Mr. Huntington.

Offered to buy Central Pacific alone.

Other influences attempted to buy S. P.

Vital importance of S. P. as a connecting line.

In the purchase of the S. P. stock under these circum-

Business of S. P. in the northwest was not considered in connection with purchase.

stances, the circumstance that the S. P. was engaged in some local business—using local in respect to the Pacific Coast, and more particularly the Northwest—some local business to Oregon points, or neighboring points in Washington, Idaho and Montana—was so negligible an influence that I did not even know of it. "That thing was never mentioned, as far as my knowledge as a member of the executive committe went, of the relations between the Southern Pacific and the Union Pacific. It was almost exclusively the element—in fact I can say exclusively the element—of the connection to the coast which entered our minds; and the existence of the Sunset-Route not only was no inducement to us to buy the Southern Pacific, but it was by us considered an obstacle and a deterring feature, because we did not care for the Sunset Route, we would have been glad to be relieved from it. If a way could have been found to secure the Central Pacific alone, we all would have preferred it at that time. As a local feature the competition was considered so negligible that, so far as my knowledge goes, it was not even considered at any of the executive committee meetings at which the subject was brought up."

Existence of Sunset route, no inducement.

Would have preferred Central Pacific, alone.

Oriental business was not considered.

(4714) As to the Asiatic or Oriental business through the port of Portland, the S. P. engaging in Oriental business through the port of San Francisco, that subject matter was never considered, discussed or mentioned. And as to the Morgan line of steamships from New York to New Orleans, in connection with the rail lines, carrying some business to Utah and Colorado points, the U. P. also engaging in some business to Colorado and Utah points—the existence of any business by either company in respect to Colorado and Utah points was of no influence whatever in our minds in this stock transaction; it was never considered, discussed or even mentioned. The circumstance that $40,000,000 of the $100,000,000 convertible bond issue were specifically appropriated to the purchase of S. P. stock, while the application of the remaining $60,000,000 was left undesignated, I am familiar with: "I had a large part in discussing and determining upon that issue, and I know exactly what was in our minds in concluding that that issue should be made $100,000,000; although at that time only $40,000,000 were needed to pay for Southern Pacific stock, and I am quite willing to disclose it, if I may. * * * That was early in February.

Existence of seaboard business to Colorado and Utah, of no influence.

"The authorized issue was made $100,000,000 notwithstanding the fact that for immediate purposes only $40,000,000 were required. There were a number of reasons for making that issue $100,000,000. The first reason, the general reason, which was particularly a reason inherent in Mr. Harriman's manner of conducting the financial affairs of the company, was that he invariably asked for authority for a larger issue of securities than were immediately needed. That was so in the case of the Oregon Short Line Participating Bonds, where $82,000,000 were authorized and

Reasons for making issue of convertible bonds, $100,000,000.

Invariable practice to ask for more than immediately needed.

only $31,000,000 were immediately needed; in the case of the Oregon Short Line Refunding 4's, where $100,000,000 were authorized and only $4,000,000 were immediately needed. In the case of the Southern Pacific preferred stock there were $100,000,000 authorized and only $40,000,000 immediately needed. And it has been similarly done very frequently in the case of other railroads, such as the Norfolk & Western, the Pennsylvania, (4715) the Atchison, all of whom, as a measure of convenience and as a measure of precaution, when going to their stockholders and asking for authority for a new issue, ask for a great deal more than was immediately needed. That was the first reason. The second was that at that time there were reports—very definite reports—that the Hill interests were going to acquire the Burlington.

Reports that Hill interests were to acquire the Burlington.

"Mr. Harriman was quite clear in his mind, and so were we all quite clear in our minds—that if the Burlington were acquired by interests antagonistic to the Union Pacific, one of two things would happen: the Union Pacific would go and ask for representation for a share in that purchase, so as to leave the existing situation as between the Burlington and the Union Pacific undisturbed. If it got it, well and good. If it did not get it, it would fight—it would protect itself as best it could against what it considered a danger. And for that purpose money was required to face a situation which, in Mr. Harriman's mind, was quite clear would lead to one of two things: either he would be given a share in the Burlington, in which case he would need money to pay for his share: or he would not be given a share in the Burlington, in which case he would fight, and for fighting he would not know in exactly what way and where the fight would take place, how he would use his money, but he knew he would use his money for attack and defense, and when a man prepares for such a fight, or makes such a fight, what he needs is brains and courage and money. Mr. Harriman did not need to provide himself with brains and courage, for he always had those at his disposal, but he did need to provide himself with money in anticipation of a possible use for it, in a situation created not by his own volition, but created by others, and which he felt threatened and endangered the interest of the Union Pacific and must be guarded against. * * *

Attitude of U. P. in the event Burlington was purchased.

"In 1900, for the first time Mr. Harriman conferred with us as to the great importance of maintaining the existing relations—existing relations of competition and existing relations of feeding, I might say—between the Burlington and the Union Pacific, and as to the danger to the Union Pacific if a hostile interest acquired control of the Burlington. The Burlington in many ways was a very valuable business customer to the Union Pacific; in some ways it was a competitor but in many important ways it gave business to the Union Pacific. Mr. Harriman and we felt that that relationship should be continued. The Burlington, whilst an active competitor, was a fair competitor, with conservative management, and we had

Importance of maintaining existing relations with the Burlington.

The Burlington a fair competitor.

been able for many years to get along with it and live with it as active competitors but as fair competitors. Mr. Harriman and we received information that the people who were then in active control of the Burlington, (4716) mainly New England people, were thinking of retiring from the active management. Mr. Harriman, with our knowledge, entered into negotiations with them for the purchase of their holdings, which, if I remember rightly, amounted to something like 10 or 15 per cent. of the total of the Burlington stock. They asked too high a price to suit Mr. Harriman, and nothing came of his negotiations at the time. But the subject of preserving the Burlington independent, as it then was, was a matter of anxious thought and of anxious consideration as early as the beginning of 1900."

These early negotiations looking to the acquisition of an interest in the Burlington were made and continued throughout 1900, off and on, from the beginning of 1900. "The Burlington in some respects was competitive with the Union Pacific and in other respects it was a feeder to the Union Pacific. The relations, so far as they were competitive, were actively competitive but they were fairly competitive. * * * Mr. Harriman had great respect and liking for the management of the Burlington, for Mr. Perkins, of Boston, and the other gentlemen who for years had managed the Burlington. He understood them and he felt that they understood him. In the competition between them there was a spirit of 'Live and let live.'" In respect to the contemplated acquisition of 10 or 15 per cent. of the Burlington stock, there was no intent or purpose whatever in the contemplation of that transaction, or in its possible consummation, to extinguish the competitive factor of the Burlington, "and it could not have been done of course with the amount of holdings which were then contemplated; but it was in Mr. Harriman's mind and in our minds to have an interest sufficiently large to preserve the independence of the Burlington from outside control and to preserve the status quo which had existed for many years."

An interest sufficient to preserve the independence of the Burlington.

(4717) These negotiations having failed, I will now state what led up to the purchase of N. P. stock in 1901 by the U. P. "Towards the end of 1900 and early in 1901, reports came to us that Mr. Hill and his friends were negotiating for the control of the Burlington and were willing to pay the price which Mr. Harriman had declined to pay, and were willing to pay it for all of the stock. To express it very mildly, the relations then existing between Mr. Hill and Mr. Harriman were not exactly friendly. Mr. Harriman was a newcomer; he was a very aggressive man; he had, naturally, in the course of his rapid rise and in the course of his fight for the greater power and the greater recognition of the Union Pacific, to run up against the susceptibilities of many people, and the feelings between him and Mr. Harriman were, I should say, of mutual suspicion. Later on, I am happy to say, those men came to know each other better, and to appreciate and admire and

Events which led to purchase of N. P. stock.

Mutual suspicion.

respect each other, but at that time the feeling was anything but friendly. Mr. Harriman felt that, with Mr. Hill the controlling factor in the Burlington, the situation would be changed very much, to the detriment of the Union Pacific. He knew that there was competition between the Union Pacific and the Burlington; he might have preferred if there had not been any at all, but he knew that could not be, and he preferred to 'bear the ills he had rather than fly to others that he knew not of,' especially when the dispenser of those 'ills' was a man at that time a man so little friendly to him as Mr. Hill. And it was perfectly clear that that could not be permitted to happen—that control of the Burlington by Mr. Hill and his interests; that deflection of the Burlington's entire relations from the Union Pacific to the Northern Pacific, and the consequent shutting out of the Union Pacific from that immediate territory, could not be permitted without the most strenuous kind of an effort on the part of the Union Pacific to prevent it.

Control of the Burlington by Mr. Hill would be detrimental to the U. P.

"In March, 1901, if I remember the date rightly, the acquisition by the Northern Pacific and Great Northern of the Burlington was definitely announced. Prior to that time there had been repeated approaches made by the Union Pacific interests to obtain from the new owners of the Burlington some kind of recognition in the way of binding arrangements which would protect the Union Pacific against the dangers which it foresaw from hostile control of the Burlington. These approaches and efforts on the part of the Union Pacific finally came down to a request for a third or a half interest in that purchase, so that the Union Pacific interests could be in a position to watch and see that their interests were not sacrificed, and this request on the part of the Union Pacific was finally flatly and definitely refused, and they were told that no kind of a participation in the purchase could be given to them. Thereupon the Union Pacific interests served notice that they considered that a hostile act, and that they would have to take such measures as seemed to them best to protect their interests.

Purchase of Burlington announced.

Union Pacific refused an interest.

"I would like to mention in this connection, as bearing upon the connection which you have asked me as to the purpose of that $100,000,000 issue, that when that $100,000,000 was authorized, in the last days of January or the first days of February, (4718) we had not the remotest idea that we were going to buy the Northern Pacific. If we had had that idea it is natural that, having some experience in financial matters, we would have made that issue sufficiently large to take care of the amount which would be required to acquire control of the Northern Pacific. In other words, if it then had been in our minds to acquire a majority of Northern Pacific stock, as we afterwards did under compulsion, we should have made that issue $125,000,000 instead of $100,000,000 because acquisition of a majority of the Northern Pacific called not for $60,000,000 but for $85,000,000, and if it had been in our minds to do what we later on did do with the use of those convertible bonds, we would have

No intention of buying N. P. stock when $100,000,000 of bonds were authorized.

First time purchase of N. P. stock was mentioned.

made the issue sufficiently large to cover our needs and not sufficiently small to fall short by $25,000,000 of covering our needs. The first time that the acquisition of the Northern Pacific was ever mentioned between the Union Pacific interests was late in February, 1901, after the acquisition of the Burlington had come to our knowledge as a definite fact and after our efforts to obtain a peaceable solution of the situation thereby created had failed.

"I remember the date so distinctly because after the carrying through of the Southern Pacific negotiations, I went to Hot Springs, about the middle of February, 1901, and towards the end of February, 1901, I received a letter from my partner, Mr. Jacob Schiff, telling me that he had exhausted all efforts to bring about the recognition of the legitimate claims * * * of the Union Pacific to be considered in the purchase of the Burlington, or to be allotted a share in that purchase either for itself or for interests allied with it, and that therefore there was nothing to do but to bring about by indi- (4719) rection that which we had failed to bring about directly; that is, protection of the Union Pacific as far as the disruption of its relation to the Burlington was concerned, and that protection as far as he could see could only be brought about by our purchasing a control of the Northern Pacific which owned one half of the Burlington stock. Prior to that the idea of buying Northern Pacific had never been in our minds and had never been mentioned between us, and the purchasing of Northern Pacific was the direct consequence of the purchase by the Northern Pacific of the Burlington, and otherwise would never have taken place."

The purchase of the Northern Pacific stock "never came into our minds until the Great Northern and Northern Pacific absorbed the Burlington, and it was a consequence of their doing so. * * * Our attitude was a purely defensive one, with the purpose of maintaining the *status quo* in the relations of the Burlington and the Union Pacific." There was no relation or connection whatsoever between the S. P. stock purchase and our attitude and transactions in respect to the Burlington or the N. P. "At the time we bought the Southern Pacific, as I have already stated, the idea of acquiring Northern Pacific was in no way in the minds of any of us and we should not have acquired Northern Pacific unless and until the Hill interests acquired the Burlington, and thereby vitally (as it then seemed) interfered with the relations that had for many years existed between the Burlington and the Union Pacific."

Attitude of U. P. purely defensive.

The Rock Island and the Atchison roads were engaged in transcontinental business as railroad carriers in 1900 and prior thereto. At that time the position taken by the U. P. in respect to the acquisition of those properties or either of them bears, I suppose, upon the general subject of conspiracy, of which we are accused. "It is of course inherently wildly improbable that we should have attempted to monopolize all of the lines leading to the Pacific; and apart from its inherent improba- (4720) bility, I know

No basis for charge that they intended to monopolize lines leading to the Pacific.

of my own knowledge, and I swear most positively, that there is not the remotest basis of fact in that charge. And bearing upon your question, and as witnessing that, I wish to say that if we had had any such purpose, the way to do it would have been to follow the line of least resistance; that is, we should first have acquired those lines to the west, to the Pacific coast, which were easy of acquisition, and we should have finished up, if we had wanted to, by at last acquiring that line which was most difficult of acquisition, and where we knew we would be running up against the very strongest interests in the land—and that is the Northern Pacific.

Opportunity to acquire the Atchison.

"The Atchison reorganization was offered to us a few years prior to 1900, and if any such object had been in our mind we would have undertaken that reorganization, and with that reorganization would have gone (as there does always go) a very large measure of future control. But we preferred not to undertake such reorganization, and we did not undertake it. For years after the Atchison control could very easily have been bought in the market without bringing about a contest with any partizan interests, because the Atchison holdings were very largely divided and no very great compact holdings were held by any great banking interests. The other road which, if we had in mind the acquisition of all the lines to the west—the other road which naturally would have lent itself to easy acquisition was the Chicago, Rock Island & Pacific. That road was actually offered to Mr. Harriman in 1901, and Mr. Harriman came to us and told us that the gentlemen in control of the Rock Island * * * were thinking of laying down the burden and that the control of the property was in the market that it was a very excellent property and well worth the price at which it could be had.

Opportunity to acquire the Rock Island.

The U. P. and S. P. enough of a burden.

"We told him that he was in charge of the Union Pacific and the Southern Pacific, that that was as much as any man could properly attend to, and that even though he was a genius the burden of administering so enormous a system was, in our opinion, more than enough for any one man to bear, and that even if it were legally permissible to acquire the Chicago, Rock Island & Pacific, we thought there was a limit to the economic advantages of consolidation, of economy of operation, and that limit consisted in the size of the aggregation; that when the aggregation, at the head of which any one man is put, exceeds a certain volume, so as to exceed the human limitations of any one man to give personal and proper attention and direction, that then in our opinion there was no longer any advantage, from the economic point of view, in co-operation, in amalgamation, and that we strongly advised him not to think of that proposition for one minute. He agreed with us, the proposition was laid aside, turned down. If we had wanted to pur- (4721) chase all the lines leading to the west, or any substantial part of them, we would have bought, first, the Atchison and the Rock Island, which were easy to buy; and then possibly at the last, the very last, the

A limit to economic advantages of consolidation.

Northern Pacific, which we knew was very strongly held, by the strongest interests in the land."

Purchase of Atchison preferred.

I am using the term "Union Pacific" for "Union Pacific System." In the latter part of July, 1906, the U. P. acquired $10,000,000 of Atchison preferred stock; we sold it to the U. P. "The Union Pacific had on hand, as is generally known, a very large amount of Northern Pacific and Great Northern. The price of Northern Pacific and Great Northern had gone at that time to something like $320 for Great Northern and something like $250 or more for Northern Pacific, and the Union Pacific felt that at these extraordinary high prices, which made the interest on the investment barely 3 per cent. it would be very wise for them to sell, take their profit, and re-invest in other ways. * * * They could have reinvested—and the matter was fully discussed—in several ways. They could have kept the enormous amount of money which they realized from sales of Great Northern and Northern Pacific—they could have kept that enormous amount of money in the bank, where they would have had from 2 to 2½ per cent. on it, or they could have loaned it out on collateral loans. It would have meant that there would have been a fund at the disposal of the Union Pacific, in cash, of from $100,000,000 to $150,000,000, and we all felt that if that were done, that there would be, with the feeling which then existed against Mr. Harriman and those associated with him, a general outcry that the Union Pacific was trying to get control not only of all the railroads in the land, but of the money market, too, and that it was manipulating the money market with that enormous cash fund at its disposal. Therefore, the idea of leaving that money uninvested was discarded. The next alternative was for the Union Pacific to buy investment bonds with the proceeds of the sales from Great Northern and Northern Pacific.

"That would have given them an interest return of barely 4 per cent., and a somewhat inactive investment. Or the Union Pacific could have used part of that great cash fund to call in some of its bonds which could have been called, but the policy of calling in bonds was one which did not recommend itself to the (4722) judgment of Mr. Harriman or of his executive committee, for reasons of principle which would take too long to go into here. So there was the only alternative left for the investment of that enormous fund—of buying high-class stocks, bringing from 4½ to 5 per cent., and having at the same time the collateral advantage of giving to the Union Pacific some kind of a voice—simply as the voice of a considerable stockholder—in the councils of those principal lines from which the Union Pacific through its connection derived a great deal of valuable traffic, and that was the policy which was finally decided upon, and that was the policy which explained the purchase of the Atchison Preferred stock and of most of the other purchases in 1906." As to the $30,000,000 of Atchison stock, referred to in the testimony as having been purchased by Mr. Harri-

Proceeds of N. P. and G. N. stock invested in securities of other roads

man and certain associates, that was common stock. "That stockholding had been sold before the $10,000,000 of Atchison preferred were purchased by the Union Pacific. That stockholding, as far as the $30,000,000 of common stock goes, was a purely personal investment on the part of ourselves and some friends, and it was made because we considered Atchison stock at the prices at which we bought it a very attractive investment, and when we had enough profit on it we sold it out." The U. P. sold its $10,000,000 of Atchison preferred last year.

Sale of Atchison preferred.

The $75,000,000 par value of S. P. stock was bought from Kuhn, Loeb & Co.; "I think if you will look up the testimony which I had the pleasure of giving three years ago, * * * you will find that that stock was bought by Kuhn, Loeb & Company on their own responsibility and at their own risk, with the sole understanding that they took upon themselves the obligation of offering it to the Union Pacific, and that the Union Pacific would take it or not as it saw fit." (4723) The reasons for the purchase had been discussed by the U. P. executive committee at various times prior to the time that Kuhn, Loeb & Co. acquired the stock. I would hardly say that Kuhn, Loeb & Co. acquired it in view of the fact that they knew it was the purpose of the U. P. to take the stock over. "At that time there was, as I also explained three years ago, quite a grave legal question as to whether the Union Pacific could acquire Southern Pacific stock; the legal question being that under the laws of Utah it was somewhat doubtful whether either the Union Pacific or the Oregon Short Line could hold the stock of a holding company. The Southern Pacific at that time was a holding company and not a railroad company. Later on, that defect in the law was cured by legislation, but at the time we bought the Southern Pacific stock it was quite doubtful whether the Union Pacific would be able to take it off our hands, and we were quite prepared, if it could not, to hold it ourselves, and naturally with our interests in the Union Pacific we would have held it so as to cooperate with the Union Pacific."

S. P. stock purchased from Kuhn, Loeb & Co.

Question as to whether U. P. could acquire S. P. stock.

S. P. a holding Co.

The Utah law was amended giving additional authority to the U. P. or O. S. L., both Utah corporations. Kuhn, Loeb & Co. acquired most of this stock from the Huntington estate; a good deal of it was bought in the market. (4724) A year or so later Kuhn, Loeb & Co. bought $15,000,000 of this stock in the market, which was also bought by the U. P. or O. S. L. As to the purpose of this: "A contest was threatened with the view chiefly of forcing the Southern Pacific to pay dividends at a date earlier than the Union Pacific people in the board thought its physical condition justified it in devoting any part of its funds to dividends. The money, in the judgment of the Union Pacific directors on the Southern Pacific board, should have gone towards improving and maintaining and strengthening the property. The Union Pacific had spent many millions on making its line better, and the Southern

Most of the stock acquired from Huntington estate.

Reasons for purchase of additional S. P. stock.

Pacific, when the Union Pacific took hold of it, was in a physical condition very much inferior to that of the Union Pacific; and neither the Union Pacific itself, nor its shippers, nor its passengers could derive the full advantage of the improvements which the Union Pacific had made on its property until a corresponding improvement had taken place in the property of the Southern Pacific, which required an outlay of a very large amount of money. Therefore, the Union Pacific people thought that the payment of dividends on the Southern Pacific should be postponed until those necessary funds to put the property in first-class shape had been provided, mainly out of earnings.

"A great many stockholders disagreed with that point of view, and formed a combination to force the payment of dividends and to start a contest to take the dominating influence in Southern Pacific councils away from the Union Pacific into their own hands. It was in order to more firmly strengthen the Union Pacific's position in standing for its policy for the improvement of the Southern Pacific and for the better service which the Southern Pacific could (4725) give to shippers and the public, and in the opinion of the Union Pacific even vastly better returns, which would ultimately accrue to the stockholders from that far-sighted policy, that the Union Pacific people thought it was incumbent on them to increase their holdings in Southern Pacific to the point where their dominating interest could not be threatened by any combination of disgruntled stockholders. That was the reason why they bought $15,000,000 more." That was in 1902 or 1903. I had not been on the U. P. board since 1906 until I was re-elected to the board and to the executive committee about three months ago. The $90,000,000 of S. P. stock is owned by the O. S. L. at the present time. Neither the O. S. L. nor the U. P. since the acquisition of the $15,000,000 of stock has purchased any additional S. P. stock, to the best of my recollection; they acquired a proportionate amount of S. P. preferred. I do not think they acquired any S. P. stock since I last went on the board.

S. P. stock now owned by O. S. L.

(4726) My partner, Mortimer L. Schiff, is a member of the S. P. board and executive committee. Mr. Jacob H. Schiff, who went on the U. P. and S. P. board after Mr. Harriman's death, has resigned from both boards. (4727) About 75 per cent., as I recollect it, of the first $40,000,000 of convertible bonds were taken by the stockholders. The other $60,000,000 were sold to Kuhn, Loeb & Co. at the time the U. P. was making payment for the N. P. stock. We were apprehensive, in respect to the S. P. stock purchase, that other interests would purchase the stock of the S. P. and either give control to some one else—either that or with the death of Mr. Huntington other interests would naturally be coming into the S. P., who might be antagonistic to the U. P. It was reported to us that such other interests were negotiating for that stock. Those reports

Apprehensive that other interests would buy S. P. stock.

came to us throughout 1900, both before and after the death of Mr. Huntington; a number of varied interests was mentioned, Mr. Gould among others. I would not like to state, unless compelled, who these interests were.

(4728) These reports were naturally of a confidential character. Prior to Mr. Huntington's death Mr. Harriman had conducted negotiations during 1900 with Mr. Huntington—during 1899 and 1900—for the purchase of the Central Pacific lines. "It is pretty hard to remember such details ten years back, and I really could not say under oath whether I was or was not present. There were running conferences. Mr. Harriman would meet Mr. Huntington frequently. I might come across Mr. Huntington in his office, and might come at a time when this matter was under discussion, and I might not. I could not swear (it is a matter of ten years back) whether I had any particular conference or not. I know that such conferences were held. * * * (4729) What the Union Pacific wanted from Mr. Huntington and the Southern Pacific was some way (they did not care which) in which the existing relations between the Union Pacific and the Central Pacific could be put in definite, permanent and unalterable form, so that nothing could happen to the Southern Pacific (Mr. Huntington was an old man) which would affect the possibility of access under existing arrangements of the Union Pacific to San Francisco by the use of the Central Pacific. The Union Pacific was prepared to accept any reasonable arrangement which would have accomplished that purpose and which would suit Mr. Huntington, and among the ways thought of to accomplish it was the offer to purchase outright the Central Pacific and leave the rest of the system alone. * * *

Negotiations with Mr. Huntington.

Wanted existing relations made permanent.

"Mr. Harriman made that offer, and he made it more than once. * * * I was in daily contact with Mr. Harriman. I saw him after every important conference, and I saw him in conferences. Whether or not I was at the conference at which that particular proposition was made I could not swear." I stated that the Sunset Route of the S. P. was a deterrent feature. In my former testimony I said, in substance, that I was not very familiar with railroad questions, and had more to do with the financial part of the matter; Mr. Harriman was the railroad man. I knew in a general way of the Sunset Route, and that the S. P. had steamers from New York to the Gulf in connection with the rail line. (4730) I knew traffic went by that route, New York to California, but whether large or small, or how precariously they were doing business, I did not know. Before closing this proposition of the S. P. stock, we did not investigate very much into the property and business of the S. P. "We were pretty familiar through many years of observation, with the value of Southern Pacific stock and with the value of Southern Pacific property, as we are with the value of any other existing important railroad stock, and it does not need very

Sunset route a deterrent feature.

Did not investigate much into property and business of S. P.

Knew the value of stock.

much observation or very much investigation to enable us to judge whether at a given price a certain stock is worth buying or not. * * *

Knew intrinsic value of property.

Knew its earnings.

"We knew the property as far as its intrinsic value was concerned. As far as the details of its operation were concerned, that was a matter that did not concern us in the slightest in buying the stock. We knew its earnings and we knew that for many years it had accomplished such and such results, and we were confident that with the development of the country and with good management and with a good deal of money spent on it, to put it in first-class shape, it could be developed even into a more prosperous and more profitable proposition than it was at that time." We felt that the whole of the United States would develop, particularly the West. I knew, leaving out the boats, that the Ogden-San Francisco line was something like a tenth of the entire S. P. mileage. (4731) We knew that the S. P. owned a majority of the stock of the Pacific Mail Steamship Company. "We knew that had been bought, I believe, the year before we acquired the stock, and it was considerably criticized at the time. It was in no way an inducement to buying it, but rather the opposite. * * * I would not say a deterrent; it certainly was not an inducement. I know in a general way that at the time the Pacific Mail was bought the general opinion was that it had been paid for at too high a price, and that it was not a very advantageous investment to the Southern Pacific. It certainly did not in the slightest degree influence us in favor of buying the Southern Pacific, and it was not sufficiently important to deter us from buying it. * * * To be quite frank, we did not give it any consideration either way. It did not cut any figure either way."

Expected the country to develop.

Ownership of Pacific Mail stock no inducement.

Sunset route.

In respect to the Sunset Route: " 'Positive disadvantage' is putting it rather strong. In my first examination three years ago I called it a 'nuisance,' and I think that is still the best expression to designate the state of mind with which we then considered that Sunset Route. We knew it would require a great deal of money to be spent on it; we knew that it added thousands of miles to the burden of administration and of management. We were very anxious that the Union Pacific should receive as much of the administrative ability and of the railroad genius of Mr. Harriman as it was possible for him to give it, and we were rather disinclined to put upon him any more burden than was necessary to the best development of the Union Pacific; and therefore we, individually, felt that if the Southern Pacific could be separated, keeping only the Central Pacific and the North and South lines in California, and getting rid of the southern part of the Southern Pacific, we would be getting rid of a nuisance.

Would have preferred the S. P. apart from the Sunset line.

"Q. That is, if you could have gotten rid of the competitive line by the Sunset Route it would have been a distinct advantage to the Union Pacific? MR. DUNNE. I object to the question because

it assumes that the Sunset line was a competitive line of the Union Pacific. That is a (4732) question that will be passed upon by the Court, and I do not think it should be assumed in questions put to the witness. WITNESS. Not because of its competitive feature, as you call it. It did not strike us at the time, and I am not clear in my mind at this day, until there is a judicial determination of the question, whether or not the Sunset Route was a competitive line or is a competitive line. To demonstrate, that competitive feature in no way influenced us one way or the other at the time. Before we bought the Southern Pacific, we asked, as we always do, that the legal aspect of the transaction be reported upon by our counsel, as to whether it was an entirely safe transaction for us (my firm, I mean) to undertake, or whether there were any legal obstacles of any kind, and we were informed that the only possible legal obstacle to our acquiring that stock, and the possible acquisition of it by the Union Pacific, if it should so determine, was the question of the Southern Pacific being a holding company and not a railroad company, as otherwise there was not any possible question of any legal obstacle in the way. So the competitive feature never entered our minds.

Legal advice.

Competitive feature of Sunset not considered.

* * *

"Q. But as I understand you, then, the sole thing that you had in mind, as far as you yourself were concerned, in connection with the acquisition of that Southern Pacific stock, was, first, to secure sufficient of the stock to give the Union Pacific control; and, second, through that control, to keep possession of the management of the line from Ogden to San Francisco. Is that a fair statement of what you said? A. Of the line from Ogden to San Francisco, and of the north coast lines in California which were considered valuable feeders in bringing business to and taking business from the transcontinental line, from Omaha to the coast. The southern part we did not care for at that time. Meanwhile, I believe, through Mr. Harriman's genius and Mr. Harriman's admirable management, and the management of those who were associated with him, those southern lines have become valuable parts of the Southern Pacific, but that situation, as far as my knowledge goes, did not exist at the time we bought the Southern Pacific." (4733) I was in Europe when Mr. Harriman died, not returning until October, and did not resume my position on the U. P. board and executive committee, succeeding Mr. Schiff, until about two months ago.

The Sunset line, by excellent management, has become a valuable part of the S. P.

(4734) The only additional stock purchased since the date of the purchase of the preferred stock, was in January of this year, 74,000 shares. "These 74,000 shares were bought for the following reason: A bill (so we were informed) was introduced in Congress, or contemplated to be introduced in Congress, which would give to those railroads that had 50 per cent. of the holdings of another railroad (competing or otherwise) the right not only to retain that 50 per cent., but, if they so chose, to purchase the balance, in addi-

Additional S. P. stock purchased in January, 1910.

tion to the 50 per cent., whilst railroads that had less than 50 per cent. had no such assurance. Thereupon, upon the advice of Judge Lovett, it was deemed in the best interests of the Union Pacific that its holdings of Southern Pacific stock should be increased to a total of 50 per cent. of the entire outstanding amount of the Southern Pacific stock. A few weeks afterwards Judge Lovett advised the executive committee that the terms of the bill, as he had understood them, had been changed, or were going to be changed, and that the provision to which he referred and which was the reason for the purchase of additional Southern Pacific stock, would not go into the bill, and Judge Lovett advised in consequence that the purchase of additional Southern Pacific stock be stopped at once, and it was stopped on the same day, and no more stock has since been acquired.

"With these 74,000 shares which have been acquired under the circumstances I have related, and which are more fully set forth in a resolution adopted by the executive committee, and which is of course at your disposal, and deducting 50,000 shares which, upon the order of Mr. Harriman, were sold last summer, because Mr. Harriman thought it did not make any difference whether the Union Pacific (4735) had 50,000 shares less, and he thought the company had good use for the money,—I say with those additional 74,000, and deducting 50,000 sold, the Union Pacific or Oregon Short Line's total holdings of Southern Pacific stock has been increased by 24,000 shares over and above what they were, and that gives the Union Pacific or Oregon Short Line a total holding of Southern Pacific stock amounting to 46 per cent. of the outstanding capital stock of the Southern Pacific." We would have required, roughly speaking, 154,000 additional shares in order to accomplish the acquisition of 50 per cent. of the stock at the time that purchase was undertaken in January. That is more than twice the quantity that we actually bought.

Total holding of S. P. stock 46 per cent.

The stock was purchased by Kuhn, Loeb & Co. in the market through brokers, the purchasing being stopped about January 10. The provision from pages 26 and 27 of Bill 21,232, an amended bill, pending in the House of Representatives, is "not the provision which, becoming known, induced Judge Lovett to stop buying. The provision to which he referred (4736) was a provision which he understood the law contained or was to contain, that a railroad owning 50 per cent. of the stock of another railroad would be allowed to remain in possession of that 50 per cent.; that its possession of that 50 per cent. would not be contested, and that it was at liberty to buy additional stock beyond that 50 per cent., and that, without any restriction or any 'ifs' or 'buts,' was his understanding of what the law would contain. He found out later that the law was not going to be such as he had understood it was going to be, and when he found that out he stopped further purchases. * * * Q. Now, the

Bill pending in congress.

Union Pacific had complete control of the management of the Southern Pacific, with power to elect the board of directors, and had done so from 1901 down, hadn't it? A. Yes. Q. Previous to this purchase? A. Yes. Q. It was not in any sense necessary to purchase this additional stock to give the Union Pacific control of the Southern Pacific, was it? A. Absolute control, yes. It is always possible—I know a case in point—it is always possible, even if you own 45 or 46 per cent. of the stock of a railroad, for the remaining 55 or 54 per cent., if it is worth their while and there is sufficient reason for it, to combine and make an active canvass against you and turn you out. It has happened.

Always possible for remaining 54 per cent to organize and control.

"Q. But you were not impelled to make that additional purchase on that ground, because you had had the control from 1901 down? A. The Union Pacific have been able to keep control, but there was always a possibility that the control might be disturbed, and inasmuch as Judge Lovett felt that the law was going to authorize us to hold up to 50 per cent., it was in every way better to acquire up to 50 per cent.; and moreover, if we had held 50 per cent. we could have gone on and bought the entire capital stock if we thought it was the wise thing to do. But Judge Lovett is better able to give you his reasons than I am." (4737) As to whether the Union Pacific started in to purchase this additional stock, which, if it purchased, would have made up 50 per cent., with the expectation that an Act of Congress would be passed validating the ownership of 50 per cent. of the stock of a competing line by a railroad corporation, "I think the answer could be much better given by Judge Lovett, who advised the purchase, and the answer is embodied in a resolution of the Executive Committee which was passed at a time when I was not a member, and I should think that others are much more competent to answer that question than I am." The O. S. L. having disposed of 50,000 shares last summer—Mr. Harriman gave the order to sell, not through Kuhn, Loeb & Co., I don't know how he sold them—the 74,000 purchase made a net increase of 24,000 shares.

Mr. Gould a party who tried to buy S. P. stock.

I mention Mr. Gould as one of the parties reported to us as endeavoring to buy S. P.—that was in the end of 1900, or the beginning of 1901, after Mr. Huntington's death. As to efforts being made in this direction by other interests, "I could not so exactly divide it, whether it came to us just exactly before August, 1900, or after August, 1900; I don't know. In a general way, the impression in our mind—it was more than an impression, because in some cases it amounted to knowledge—was (4738) that first, in at least one instance, we know of a positive effort that was being made; in at least one other instance that I can remember it was reported credibly that an effort was being made; and, secondly, after the death of Mr. Huntington, there was a continual position of latent possibility of the sale of the Southern Pacific, inasmuch as it was

Mr. Huntington's stock known to be in the market.

known to be in the market. Mr. Huntington's stock was known to be in the market, and there was other stock which was known to be in the market. Therefore there was at that time, when Mr. Huntington died, both the opportunity and the danger of the Union Pacific. It was then its time either to get the Southern Pacific or lose it irrevocably."

Negotiations with the executors.

We were informed that Mr. Gould was desirous of buying the Huntington stock. The Huntington executors were H. E. Huntington, I think, and Mr. Tweed and Mrs. Huntington, as far as I can remember. The negotiations with the executors on behalf of our firm for the purchase of the stock were conducted largely by ourselves, Mr. Schiff and myself, with the co-operation of Mr. Harriman. The negotiations were conducted by Mr. Jacob H. Schiff, Mr. E. H. Harriman, and myself. The negotiations for the actual acquisition materialized very rapidly, I should say in not more than two weeks, coming to a head at the end of January, 1901. It was not within a very few days after Kuhn, Loeb & Co. took over the Huntington stock that it was turned over to the Union Pacific. (4739) "There was first of all the time when an agreement was made—a verbal agreement—that the purchase would be concluded, and when a contract was made. That, as far as I remember, was the first half of January. Then came the actual execution and the payment and actual delivery. That, as far as I remember, was on the 5th of February, 1901, and it was between the date of the making of the contract and the date of the actual payment that our negotiations with the Union Pacific had been brought to a close."

Letter to Board.

In my communication to the board I said: "We have purchased 432,700 shares of the Southern Pacific stock of the Southern Pacific Company of Kentucky, to be paid for as follows: 144,233 shares on February 11; 268,467 shares on, or at our option before July 10, with interest at 4 per cent. per annum from February 11, all said shares to be deposited with a trust company until entire payment is completed. We have further purchased the following shares: 200,000 shares to be paid for on, or at our option before March 4th; 45,000 shares to be paid for, one-half on February 5th, and one-half on January 8th. The average price at which we have made the above purchases, exclusive of interest accruing, is $50.6146 per share." It was a very few days after sending that letter that the U. P. took over the stock, but that letter would be perhaps three weeks after the actual closing of the negotiations and the mutual taking over of the obligation by us. Nobody shares with us in that purchase. The $40,000,000 of convertible bonds were issued for the purpose of paying for the stock. These negotiations with Mr. Hill relative to an interest in the Burlington purchase were later. "Almost immediately after. The point of time, of course, was not determined by us but was determined by the acquisition of the Burlington by the Hill interests, and it so happened that that

Negotiations with Mr. Hill as to Burlington, were later.

point of time almost coincided with our acquisition of the Southern Pacific, and we immediately took it up."

(4740) I did not know that immediately following the purchase of the S. P. stock the contest arose over the construction of the San Pedro road. The executive committee had general knowledge of it, but Mr. Harriman had special charge of it. As to my stating that Mr. Gould was trying to buy control of the S. P., I said that Mr. Gould was reported to us to be desirous of acquiring the control. As to whether I learned that he was in negotiation with Mr. Huntington and Mr. Tweed and Mrs. Huntington, I do not remember the details of that. I know it was credibly reported to us that Mr. Gould was desirous of acquiring, or thinking of acquiring, or planning to acquire, the Huntington holdings in the S. P. How far he went in carrying out the intention I do not know. He was still a member of the U. P. board, I think. The other people that we understood were thinking of buying, or were being urged to buy rather—I understood were being more urged to buy than they were thinking of buying—were the Burlington people, Mr. Perkins and his associates, with whom Mr. Harriman had had negotiations in 1900 which were discussed with our board—for the purchase of the holdings of the people who were then controlling the Burlington, a New England element represented chiefly by Mr. Perkins of Boston, these hoidings, in so far as any compact holdings were there, amounting to from 10 to 15 per cent. of the stock.

Mr. Gould was desirous of acquiring control.

(4741) Mr. Perkins was President at that time. We were very far from assuming that if we bought the stock from Mr. Perkins and his associates we should acquire the control ourselves; it was not in the slightest degree the idea then in Mr Harriman's mind. He did not want any control of the Burlington, he wanted the situation with the Burlington to remain as it was. There were 85 per cent. of the stockholders left—all stockholders are unorganized, but it is not only the few men in the directorate who determine the future of the property. The 10 or 15 per cent. that we wanted happened to be a holding which was for sale, and we wanted sufficient influence in the Burlington to preserve the then existing situation. There is a very large difference between a negative and a positive influence. (4742) "I think 15 per cent. of compact holding in any property is sufficient to prevent stockholders being stampeded. It is sufficient to form a nucleus for opposition to any scheme which those 15 per cent. consider unwise and not in the interests of the property. It is a compact and therefore an influential minority holding, the value of which is mainly in the negative, mainly in the power to oppose infliction and to enforce publicity far more than in its positive value. 15 per cent. have no positive power to control; neither does 30 per cent. give positive power of control."

Wanted the Burlington to remain as it was.

15 per cent happened to be for sale.

15 per cent an influential minority.

As to assuming that 15 per cent., at least temporarily, in the absence of affirmative action by the 85 per cent., would give us control of the management, "I would not so assume unless there was a

separate and distinct understanding going with it that the 15 per cent. was purchased under an understanding that the management would be turned over to the purchasers of the 15 per cent.,—and such understanding was never made and was never contemplated."

Expected to be consulted.

We had nobody in mind to manage the property, but expected to be consulted as anybody with 15 per cent. would have a right to expect. I did not say that we would buy out Mr. Perkins and buy out the gentlemen associated with him who had been running the Burlington for many years. "I said the proposition was that Mr. Perkins was an old man and his main associates in part were willing to retire and sell out. The board of the Burlington did not consist entirely of old men; there was a good deal of young blood in it and they would not all retire with Mr. Perkins. It was not even said that Mr. Perkins would retire entirely from connection with the property. He might have remained as the advisory head, and certainly his opinion and the opinion of those who in the past had the management of the property, would go a very long way in determining the choice of their successor. * * *

(4743) "We expected, before Mr. Perkins retired and before his associates on the board retired, that they would see to it that the management of the property would be continued under a properly qualified head. We did not expect the men who had devoted their lives to building up the Burlington would retire precipitously and leave the thing in chaos and say 'Now, you with your 15 per cent., do as you like with the property; it does not concern us any more.' They naturally would have had a good voice in electing their successors, but we expected to be consulted to the extent that any important stockholder is consulted when a change takes place in a property. * * *

Did not want existing relations with Burlington endangered.

We expected to have no voice whatever in the management except to the extent we wanted to prevent anybody else from exerting an influence which would endanger the existing relationship between the Union Pacific and the Burlington. That was our whole object, and beyond that we were not interested in having any voice. * * * We expected to have sufficient of a voice in the selection of new officers to make it plain to us that those men would be men that were not under the influence of anybody whose purpose was to break up the relationship which had existed for many years between the Burlington and the Union Pacific. * * * The relationship was one of active competition, but of fair competition. In addition to fair competition, there was a good deal of business which the Burlington gave to the Union Pacific, and which, if it chose, it could give to others."

(4744) I could not mention offhand where the Burlington gave the U. P. business, not having looked at their connecting points for ten years; I took the word of our railroad advisers for that. "It is very hard to define words unless you have a Webster Dictionary right by your side. Fair competition is, I think, a term

Fair competition.

which is very generally understood, without my defining it any further. I do not believe I could add anything to the general understanding of the term 'fair competition.' It means no cut-throat competition, no underhanded methods. It means active but fair. I could not define it any better than that." I would consider it fair competition that the Burlington and U. P. had soliciting agents in the field, and were each trying by fair methods to secure competitive business. It was not in our minds that the Burlington might build more lines into U. P. territory, nor did we attach any particular importance to that. The U. P. was strong enough to hold its own, and if the Burlington built into U. P. territory the U. P. would have retaliated, and after some trouble both would probably have realized that they had been very foolish.

U. P. strong enough to hold its own.

(4745) Such a thing is foolish "unless there is sufficient business there to justify it, and I think it is foolish for mere spite or for mere lust or aggrandizement, to invade another fellow's territory when he is giving good service, and when there is not sufficient business there for two lines—either there or likely to be developed. * * * If the act of the Burlington was an act of aggression, not justified by economic reasons, the Union Pacific doubtless, without wasting its resources in a similar wanton aggression, would have protected itself in one way or another as would have seemed best to those in charge of the Union Pacific's railroad business." The U. P. board, executive committee and officers would have been very largely guided by the advice of Mr. Harriman in whom they had the utmost confidence. It was very far from what was in our thoughts to prevent any such thing as a wanton attack, or any attack, that we desired to have an influential voice in the Burlington, and to maintain the existing status. "I have said it repeatedly, and will say it again, but I cannot say it in any other terms than those I have already expressed. In our thoughts was the menace or the danger to the existing relationship between the Union Pacific and the Burlington, who had been competitors for many years, but who trusted each other, who considered each other fair, who obtained, so far as the Union Pacific is concerned, a good deal of business from the other; the thought in the minds of the Union Pacific people when they wanted an interest in the Burlington was to have some kind of a voice in it, was to maintain that status—not to have anybody come in there and disturb a relationship which had been satisfactory for many years to the two properties and to the shippers. * * *

Invading "another fellow's territory."

Wanted to maintain status.

(4746) "The competition we were entirely content with. It was there; we knew it could not be eliminated, and we knew it had to continue whether we wanted it or not, and we knew that any attempt to eliminate that competition would not be tolerated. * * * Would not be tolerated by the people and by the minority stockholders or the majority stockholders of the Burlington and by the Government, and that it was a thing utterly incapable of accomplishment if we should try to accomplish it, which we never did.

Knew that the competition could not be eliminated.

What we wanted to preserve was, first of all, competition with people whom we had learned to respect as fair competitors, and secondly, the maintenance of that business for the Union Pacific which the Union Pacific got from the Burlington and had been getting for many years." I suppose the Burlington interchanged business with the U. P., but the question would be how much the Burlington was dependent upon the U. P., how much the U. P. on the Burlington. "I know nothing about it except only at the time these negotiations were under consideration, with Mr. Harriman, whose advice we took unhesitatingly in all railroad matters, told us (4747) that the preservation of the Burlington business for the Union Pacific was of great value to the Union Pacific—and he generally knew what he was talking about."

The preservation of Burlington business, of great value.

Our purpose was to maintain the situation which had been mutually advantageous and satisfactory for many years, and which we did not wish to see disturbed. We did not go into the market to buy 15 per cent. of other Burlington stock, because "the conduct of negotiations at that time was going on and by the time those negotiations were off, the negotiations with Mr. Hill began and after the negotiation with Mr. Hill began we did not touch the market—we didn't want to." I was present at one or two meetings with Mr. Hill, but they were conducted by Mr. Harriman primarily, and Mr. Schiff also. Our proposition was for the U. P. to have a third or a half of the stock of this road, which I say was both a competitor and a connecting line—a competitor in the actual sense of the word, for local business to a certain extent; to what extent a competitor in the legal sense I do not know to this day. (4748) I use local business in distinction from business which is transcontinental. "I think when it comes to defining railroad terms and technical railroad matters you have me at such a disadvantage that I am not going to enter into the discussion, because I do not believe in matters which require technical knowledge of railroads you can get anything out of me which would be of the slightest advantage to you. I am a banker and a financier, and not a railroad man.

Meetings with Mr. Hill.

"Q. A very able one, Mr. Kahn, and you have been a frank witness, and it is a great pleasure to ask these questions, but when you use an expression it seems fair I should ask you what you mean by it. Now, you say they were competitors on local business? A. Yes. Q. Will you kindly tell what that local business is concerning which they are local competitors? A. I don't believe I could tell that because I am quite frank to admit that on all railroad questions we would take the opinion of Mr. Harriman, and Mr. Harriman would tell us that on such and such business, using the term 'local business,' they are competitors,—and on such and such other business they are not competitors, and we would take his word for it. We did not go behind the meaning of his terms, or re-examine and check whether his statements were correct. We would follow his

Took Mr. Harriman's opinion on all railroad questions.

conclusions so far as the railroad end of the proposition was concerned, without examining into it ourselves." Mr. Hill gave us a flat refusal. As to the original matter, "I said as far as I remembered it was from 10 to 15 per cent., and 10 to 15 per cent. would have been ample in the case of the situation (4749) as it existed before, through Mr. Hill's entrance into the situation, the compact and formidable holding of Burlington stock was concentrated in one hand. Therefore, the situation changed radically when Mr. Hill came in. The thing that we were after was not a third but a half. When a half was refused we went as low as a third. What we were after was a full half. * * *

"We had not the slightest objection to an enlargement of the competition, or to anything which was proper for the Burlington. We simply did not want the Burlington to be dominated exclusively by interests which were antagonistic to the Union Pacific, naturally and necessarily so, and which would, and doubtless did (although I have not followed it up) interfere with the relationship that hitherto had existed between the Burlington and the Union Pacific." As to the N. P. and G. N. being hostile to the U. P., "I have already explained it this morning: that Mr. Harriman came into the railroad situation as a new element and a disturbing element. When any strong man suddenly appears on a scene where there is a nicely adjusted balance of power, and asks to be considered, and asserts claims, he becomes a disturbing element and arouses animosity. The Union Pacific for many years has been a weak line and had been looked down upon by its more prosperous and more powerful neighbors. That the attempt to make the Union Pacific as strong a line as any other and as big a power as any other could meet with anything but antagonism and animosity, would be to have a faith in human nature which I do not possess, and the attempt on the part of the Union Pacific to grow up and become strong and aggressive certainly did meet with antagonism and animosity."

Did not want the Burlington dominated exclusively by antagonistic interests.

The attempt to make the U. P. a strong line aroused antagonism.

I don't know of any objection when the U. P. acquired control of the O. S. L. and O. R. & N. to Portland, where the N. P. had a through line, and tide water. That was merely re-establishing a situation which had always existed. (4750) The U. P. re-established itself not quite as it was before, but at least it got the O. S. L. and the O. R. & N. back. Mr. Harriman and Mr. Schiff—I may have been present—notified Mr. Hill that if the Burlington purchase was carried through without the U. P. obtaining proper protection, either in the way of joining in the purchase or otherwise, if it was otherwise possible, the U. P. would be compelled to protect itself as best it could. I think it was also told to Mr. Bacon of J. P. Morgan & Co. The response was that the U. P. could not be admitted, that they must leave us to do as the protection of the interests of the U. P. required us to do. It is not a fact that the U. P. undertook to buy the 74,000 shares of stock of S. P. because the U. P. manage-

U. P. would be compelled to protect itself.

ment determined that this would be the easiest way to defeat this pending suit—by getting 50 per cent. of the stock and having legislation authorizing the buying of the balance—no, the U. P., as far as I know, is entirely confident that it will defeat this suit on its own merits.

Reasons for wanting 50 per cent of U. P. stock, explained in resolution of executive committee.

(4751) As to why we wanted to buy enough stock to have 50 per cent. and come within the terms of this proposed Act of Congress, "the answer to that is contained in a resolution by the executive committee. It can be explained by Judge Lovett, who is the author of that resolution. I was not a member of the board or the executive committee at the time, so my explanation would be a great deal less lucid and authoritative than his." Recurring to the Burlington, "we set our heads to thinking how we could retrieve that situation, and we reached the conclusion that the simplest and the most effective way was to buy control of the Northern Pacific, for the purpose (through that control) of having 50 per cent. of the Burlington stock." It took us three months to buy it, getting a clear majority, most of it preferred stock. (4752) The stock was put in the Northern Securities Company, from which we received back certain G. N. and N. P. stock, which we have since sold.

Best way to retrieve situation was to buy control of N. P.

Investment in Santa Fe stock.

As to the acquisition of the $10,000,000 of Santa Fe stock: "I want to make it clear. I did not say I had invested or had any share in the investment, because I was not a director of the Union Pacific at that time. I simply explained, in answer to a question, what the situation was, as I understood it, with which Mr. Harriman and the Union Pacific then found themselves confronted in the reinvesting of an enormous amount of cash, which they had on hand. I did not express an opinion as to whether they acted wisely or unwisely. I had no share in it. I simply explained the situation."

Capitalization of U. P.

None of this money had been reinvested at the time I left the board. Most of it, not all, was reinvested through our house—in the summer of 1906. The present capitalization of the U. P. including the outstanding convertibles, is, roughly speaking, $240,000,000 in common stock, and $100,000,000 in preferred. (4753) I think very little stock has been issued since the $100,000,000 that took the place of the convertible bonds; I think all that has been issued since then has been $75,000,000 of convertibles, equivalent to 40,000,000 of stock. "We pay 6 per cent. from the railroad and you pay 4 per cent. on the separate capital which we have raised for the purposes of investment. So it does not encumber the road any. We are paying no more than 6 per cent. from the earnings of the railroad, and the remaining 4 per cent. are, free and clear, from the income from investment. So it doesn't burden the property any that I can see." We are paying 10 per cent. on $100,000,000 stock issued in exchange for the convertible bonds, $10,000,000 a year; we earn more than the whole of it from the income from investments. (4754) The 10,000,000 of Atch-

Paying 6 per cent from earnings of railroad, and 4 per cent from income from investments.

ison stock was sold at cost early in 1909. As to why we sold the Atchison stock instead of some of the others, it "is not always quite easy to give an answer which requires one to unravel the trend of thought in Mr. Harriman's brain. I am trying, in answer to your question, to find the particular reason why Mr. Harriman selected that particular parcel of stocks to sell. Perhaps, if you will give me time for thought, I may remember it. It is a year and a half ago now."

Bought N. P. to secure 50 per cent of Burlington.

In buying the N. P., our sole purpose—there was no primary or secondary purpose—was to have 50 per cent. of the Burlington stock, inasmuch as the G. N. had the other 50 per cent. The result of the transaction if it had been carried through would have been the control of the N. P., and a half interest in the Burlington, but we started to buy the stock because there was no other way of getting protection, so far as the Burlington is concerned, from the old trouble which I have repeatedly referred to heretofore—protection from a disruption of the existing relationship between the Burlington and the U. P. It was not a protection in the slightest degree against an extension of competition between them. (4755) I think very little about competition in these matters, "because I think it is folly for anybody to believe that he can control or check or materially diminish competition; and I have never believed in the possibility of doing away with competition. I have never believed in the desirability of doing away with competition. I think it is an utopian idea. Q. You simply believe in the control of competing systems by the same individual, feeling that he could not possibly eliminate competition even if he did control it? A. I do not believe even in that. I have no principles or theories or beliefs on that subject.

"Q. You were giving a theory a moment ago. You said any idea of eliminating or shrinking competition was utopian. A. I did not say 'shrinking;'—I said 'eliminate.' Q. What do you think about shrinking, then; is that utopian? A. Does not this call for an interposition on the part of my counsel? Must I give opinions? * * * When it comes to my expounding theories on railroad matters, it is really a waste of time—of yours, of mine, and of the Judge's, and it is loading up this record with stuff of no earthly weight or interest to anybody. If you want my opinion on banking and finance I am in a position to give it, but in railroad matters I am a layman and not an expert. * * * (4756) Q. Trade would be restrained in one way, by eliminating competition, wouldn't it? That would be one way of restraining trade? You meant that by your answer this morning, didn't you? A. No, my answer was not to an abstract question, but to a definite and concrete question. The question was, In anything you have done, was it your purpose or object to restrain trade or to conspire to monopolize, or whatever else may be charged against you in this formidable bill? and my

No purpose to restrain or monopolize commerce.

answer was a sweeping denial that any such thing entered our head. It was the concrete, and not the abstract."

Could not acquire the Central Pacific without buying S. P. stock.

As to the acquisition of the S. P. stock by the U. P., and the intention to place the two companies in one control, of course we could not help ourselves, we could not get what we wanted in any other way. If we could, we would have preferred it. We needed the Central Pacific, and we could not acquire it in any other way. We tried to and failed. We did not intend by what we did, by the acquisition of the S. P. stock, to place under one control the U. P. system and the S. P. system. "We bought at that time 40 per cent. of the S. P. stock. We did not change the management—Mr. Hays remained as general manager. We did not displace, as far as I know, a single one of the men in the conduct of the business until then; and whether that management was our management or anybody else's management was quite immaterial to us, as long as it protected our vital interests in the Central Pacific." We made Mr. Stubbs director of traffic, (4757) and Mr. Kruttschnitt head of maintenance and operation of both systems, Mr. Harriman becoming chairman of the boards, and later on president of both lines. I did not say that we did not make any common management, I said we did not care whether the management was common or not —doubtless it was economy to both properties. As to the details of the management in respect to consolidation of agents or offices, I am guessing at these things, I cannot answer as to details of the railroad management—whether in respect to agents or to Mr. Stubbs, or to the separate freight and passenger traffic managers of the systems.

Management of the properties.

Control of the Rock Island.

(4758) When Mr. Harriman came to me in 1901 with a proposition to buy control of the Rock Island, he proposed to buy a part of it in the market, and part of it from large holders of the stock. There would have been no earthly object in buying it, unless it had been our intention to try to restrain trade and control the avenues of trade to the Pacific Coast, in which case the Rock Island would have been important, but we had no such idea, and we turned it down. Mr. Harriman could have had other reasons, the reason that it was a cheap purchase—it was cheap, and the people that bought it afterwards made money out of it. "Q. You stated a moment ago that there could have been no reason for making that purchase except for the purpose of carrying out what you are charged with in this bill. Now, you mean by that, do you, that Mr. Harriman had the distinct idea of getting control of another competing road when he came to you with the proposition that you turned down? A. I said *if*. I said there would have been an object in doing that *if* the idea had been in our heads. As the idea was not in our heads, there was no object in buying that property except on the ground that it was cheap, as we advised Mr. Harriman. We admitted it was cheap at the time and admitted money could be made out of it, but we told him he had burden enough on his shoulders, that the Union

The U. P. and S. P. burden enough.

(4759) Pacific and the Southern Pacific claimed his time and energy, and we advised against putting any additional burden upon his overtaxed shoulders, and he at once agreed and said 'You are right; we had better leave it alone.' Q. But you bought an interest in other lines, and he went on their boards and participated in the management? A. But that was afterwards, when the Union Pacific and the Southern Pacific had been developed to such a degree and established in such splendid working order that his immediate and personal attention to every detail was not required any more; it was still required, but not to the extent that it was required in 1900 and 1901, which were the years of its greatest development."

The Rock Island matter was, I am pretty sure, during 1901, but after we had bought the S. P. stock, and after we had bought the N. P. stock. "Q. Now you spoke of one other line—the Atchison? A. Yes. Q. Did Mr. Harriman come to you with the proposition to buy that line? A. Let me say this first: If I say Mr. Harriman came to us with the proposition, that does not mean that Mr. Harriman was acting actively. I mean that he was passive. He came to us, and he brought us a proposition. He said, 'This proposition has been submitted to me. What do you think about it?' It was not that he came and said, 'I make you a proposition.' He said 'I bring to you a proposition submitted to me by'—somebody else. I want to make that plain. Q. I am asking you a question now about the Atchison. Did he come to you with a suggestion that you buy an interest in the Atchison? A. Never. Q. Who got up the syndicate that bought the $30,000,000 of Atchison stock which you have been talking about? A. I would hardly call it a 'syndicate'—a few business associates getting together to buy a stock which they considered cheap. It is done every day without the solemn name of 'syndicate.' Q. Well, you didn't buy $30,000,000 after all, did you? A. Yes; within a few thousand shares, more or less."

Mr. Harriman merely brought proposition submitted to him.

He did not suggest buying an interest in Atchison.

(4760) Shortly after buying the $30,000,000 Santa Fe stock in 1904, we applied for membership on the board; "we were entitled under the law to two directors, and having a large interest in that property we did not see any reason why (4761) we should not avail ourselves of our legal privilege of having two directors." Mr. Harriman may have desired to go on the board and executive committee of the Santa Fe, because he may have thought that he could do good to both properties. We never requested it; we never thought it should be done; we agreed with Mr. Morawetz about that. "We desired to have two gentlemen in whom we had every confidence, whose ability and wisdom had been thoroughly tested and who were thoroughly satisfactory to both sides, to go on the Atchison board. At the same time the fact that they were directors of the Union Pacific we did not consider a detriment." We were simply representing an investment of $30,000,000, and we thought we were entitled to have our own men on the board. We sold our interest

Representation on Atchison Board.

in 1906. The Atchison people knew that we had sold our stock. We did not suggest to them that our two directors resign, it was up to the Atchison people, not to us.

(4762) They stayed on by the will and by the annual election of the Atchison stockholders, and not any longer at our request. I presume at the annual election, I do not know. "Q. Isn't it a fact that after landing your two directors you sold your stock and the directors stayed there until Mr. Rogers died, and the other director is still there and his time is not yet up? A. We sold our stock in 1906, which was after the landing (as you so prettily express it) of our directors. I think it was about a year and a half after the 'landing' of our directors, that we sold our stock. We informed the Atchison people that the stock had been sold, and the slightest intimation on their part to men of the standing of Mr. Frick and Mr. Rogers that their presence was no longer welcome in their councils would have been sufficient for them to resign immediately." The $10,000,000 of Atchison stock bought by the U. P. and sold since the beginning of this action at cost, was preferred stock; the 30,000,000 was common.

The Atchison informed of sale of stock.

NEW YORK CITY, TUESDAY, MARCH 8, 1910.

Kelly.

(4763) W. R. KELLY

Los Angeles, Gen. Counsel, San Pedro.

"Question 1. I will ask you, Judge, to state what, if any, official relations you bore prior to 1901, towards the Union Pacific Railway Company, Union Pacific Railroad Company, the Oregon Short Line & Utah Northern Railway Company, and the Oregon Short Line Railroad Company. Answer. In 1888, I was General Attorney for the Union Pacific Railway Company for the States of Nebraska and Iowa. About 1889 I was made Assistant General Solicitor for the Union Pacific system, which embraced the Union Pacific Railway Company and the Oregon Short Line & Utah Northern Railway Company, and other lines, and continued to act as such until and during the receivership of both companies which will be hereafter mentioned. I was made General Solicitor for the Receivers of these lines on January 10th, 1896, and continued to act as such until the respective lines were taken over by purchasers at foreclosure sales. In July, 1898, I became Solicitor for the Union Pacific Railroad Company. About the early part of 1901, I was directed by the President or Vice-President of the Oregon Short Line Railroad Company to assist the Law Department of that road in those controversies which are hereafter mentioned, and either in that year or the next year I became General Solicitor for the Oregon Short Line Railroad Company, and continued to act for both as General Solicitor of that Company, until January 1st, 1905.

Gen. Solicitor U. P.

History of O. S. L. properties south of Salt Lake.

"Question 2. Will you give me a history of the ownership and of the title of the Oregon Short Line Railroad Company to its railroad lines and property existing and extending southerly from Salt Lake City to and into what is known as the Meadow Valley Wash, say

up to April, 1901. Answer: (1) The Nevada Pacific Railway Company was a corporation organized under the laws of the State of Nevada, under articles filed with the Secretary of that State on May 13th, 1889. It had (4764) corporate power, by Article 5, to build a railroad from a place called Summit on the eastern boundary of the State of Nevada, near the place where the old overland wagon road crosses said line on its way from Utah to Pioche, Nevada, the same being the terminal point of the Utah Central Railway; thence in a southwesterly course across the State of Nevada into and through the County of Lincoln to a point on the western line of said State of Nevada, about half way between the 35th and 36th degrees of North Latitude; also certain branches described therein. The place called Summit, fixed by the terminus of the Utah Central Railway, is substantially the point since known as Uvada. Nevada-Pacific.

"(2) The Oregon Short Line & Utah Northern Railway Company was a consolidated corporation organized on the 27th day of July, 1889. A copy of its Articles of Incorporation is found in Pacific Railroad Laws at page 213, and following. It was created by the consolidation agreement made between the: Oregon Short Line Railway Company, a corporation existing under the laws of the United States in the territories of Wyoming and Utah, and owning a line of railroad from Granger, Wyoming, to Huntington, Oregon, with branch lines in Idaho; also, The Utah & Northern Railway Company, a corporation of the territory of Utah, under an Act of Congress approved June 20th, 1878, making the same a corporation of Idaho, Utah and Montana. It owned a line of railroad extending from Ogden, in Utah, to a terminus at Garrison, Montana. O. S. L. & Utah Northern, a consolidated corporation. Its constituent companies.

"The Utah Central Railway Company, a corporation existing under the laws of the territory of Utah, owning a railroad extending from Ogden to Frisco, with franchises extending to the western line of the territory of Utah; Frisco is a point on what was commonly known as a branch line extending from Milford to Frisco, and the main line of the Utah Central was authorized to be extended from Milford to the Utah-Nevada State line. The Utah Central Railway Company was itself a consolidated corporation, consisting of what was formerly the Utah Central Railway and the Utah Southern Railway, and the Utah Southern Extensions Company; Also the Salt Lake & Western Railroad Company, a Utah corporation owning the railroad from Lehigh Junction on the Utah Central Railway to Tintic, in Utah, and certain branch lines; Also the Utah and Nevada Railway Company, a Utah corporation owning a railroad from a connection with the Utah Central Railway Company at Salt Lake City, westward into Tuele County, with a branch line; Also the Ogden & Syracuse Railway Company, a Utah corporation, owning a railroad connecting with the Utah Central at Syracuse Junction, a point about ten miles south of Ogden, and extending westward about 5.81 miles; Also the Idaho Northern Railway Company, a corporation under the laws of Wyoming Territory, owning a

railroad from a connection with the Oregon Short Line at Nampa, and extending to Boise City, a distance of 24.94 miles; and, (4765) finally, the Nevada-Pacific Railway Company, a Nevada corporation already referred to. This last named corporation is authorized among other corporate powers, to construct and connect its road with the Utah-Central Railway Company's road. It was proposed by this Company to build and operate a road from a point on the eastern boundary line of the State of Nevada near Pioche, in Lincoln County, and thence in a southwesterly course across the State of Nevada, to the western boundary of that State, with two branch lines.

Lines of constituent corporations.

"(3) It will thus be seen that of the constituent corporations, the Oregon Short Line was the original east and west line from Granger to Huntington, and the Utah & Northern Railway Company, the north line from Ogden to Garrison, while the Utah Central Railway Company was the south line from Ogden to Frisco, with a franchise extending to the western line of the territory of Utah, and the Nevada Pacific Railway Company was the line across the State of Nevada authorized to connect with this Utah Central Railway Company. The other roads were spurs out of the Utah-Central Railway Company, with the exception of the Idaho Northern Railway Company, which was a spur of the Oregon Short Line Railway Company from Nampa to Boise City.

"(4) The term of the consolidated corporation was fifty years. Its corporate name was the Oregon Short Line & Utah Northern Railway Company. Its capital stock was $24,789,039.33. By Article 10 of said Consolidation Agreement, the consolidated company had all the powers of each of the constituent companies, and one of the routes of the railroads constructed and to be constructed under the consolidation, was described in the Articles as a road from the terminus of the Utah Central Railway Company, through the State of Nevada. These Articles of Consolidation were filed in the office of the Secretary of State for Nevada, August 1st, 1889.

"(5) This consolidated company, the Oregon Short Line & Utah Northern Railway Company, made a consolidated first mortgage date August 1st, 1889, reference to which will be hereafter made in speaking of the foreclosure of that mortgage by the American Loan & Trust Company of Boston, which was the trustee named in the mortgage. On November 7th, 1889, the Oregon Short Line & Utah Northern Railway Company qualified itself under the Act of Congress of March 3rd, 1875, to obtain right of way through the public lands of the United States, by filing in the office of the Secretary of the Interior, in compliance with the regulations of the Land Department, approved January 13th, 1888, a certified copy of its Articles of Consolidation; also certified copies of the Incorporation Laws of the States of Nevada, Montana, Oregon and the territories of Wyoming, Utah and Idaho, those being the jurisdictions through which its franchise extended; also certificates from the Secretaries

O. S. L. & Utah Northern qualified to obtain right of way over public lands.

of those states and territories that the Articles of Consolidation had been filed according to law; also an official statement under the corporate seal that the consolidation had been completed, and that the Company was authorized to proceed with the (4766) construction of its road, and in this statement was included a list of the President and officers of the Company.

"(6) On November 1st, 1889, the Board of Directors of the Oregon Short Line & Utah Northern Railway Company, at a Board meeting, took up the proposed extension of the constituent Company, the Utah Central Railway Company, from Milford, a point in southwestern Utah, to Barstow, a point in the State of California on the line of the Santa Fe system. And the Board authorized the President to take the necessary steps to extend the present line of the Company's road from Milford southwesterly to Pioche, a distance of 120 miles. Pioche is a point in southeastern Nevada, in a mining region, and is reached by a short spur from Caliente in Nevada, north to Pioche. The main line construction, therefore, authorized was from Milford in southwestern Utah, to Caliente in Nevada. Caliente is in southeastern Nevada about forty miles from the Nevada-Utah line. Plans to extend road to Pioche.

"(7) On December 21st, 1889, the Board of Directors passed a resolution for the extension of the road from Frisco southwesterly, to the eastern boundary of Nevada, and thence to Pioche, Lincoln County, Nevada. Frisco is on a spur extending west from the main line at Milford and the relation, geographically, of Frisco to Milford is analogous to that of Pioche to Caliente, the one being in southwestern Utah, and the other in southeastern Nevada. And, for the purpose of extending the line to Pioche, the Board, as provided by its Articles of Consolidation, resolved to increase the capital stock from $24,789,039.33 to $27,000,000. At the board meeting on March 10th, 1890, the President submitted to the Board the approval as required by law, and said articles of the stockholders, to the increase of the capital stock. 205,132 shares united in the approval of the increase of capital stock. The Secretary of the Company was instructed by the Board to file the amendment to the Articles of Consolidation, thus increasing the capital stock under the seal of the Company, in the office of the Secretaries of the several jurisdictions through which the franchises of the road extended. Increase of Capital Stock.

"(8) At the same meeting of March 10th, 1890, the question of surveys was taken up, and a resolution was adopted reciting that by direction of the Company, its chief engineer had caused to be made, certain surveys of the line of route of the company's road, and the surveys are set out in the resolution, numbered from 29 to 34 inclusive, and covering two 20 mile sections, one section of 13.29 miles, one of 12 miles, and one of 8.56 miles, and the last one, No. 34, not expressed in terms of distance, but over a tract containing ten acres. Surveys 29 and 30 cover a distance of 20 miles each upon the line of road in Nevada and towards Caliente, and the said route Surveys adopted.

shown of said surveys 29 and 30, was adopted by the board as the definite location of the road of the Company, and the same were directed to be filed in the office of the Secretary of the Interior as required by the regulations of the Department and the statute. (4767) Surveys Nos. 31, 32, 33 and 34 do not relate to southern construction. At this same meeting, the board approved the surveys Nos. 29 and 30 covering 40 miles, and being the surveyed line from Uvada to Caliente, and said line from Uvada to Caliente as shown by the maps was adopted by the board as the definite location of the road, and it was voted that the maps be filed with the proper local land officers in Nevada, Utah and Idaho, and in the Department of the Interior.

Survey between Uvada Caliente adopted.

"(9) At a meeting of the Executive Committee of the board held on March 28th, 1890, there was approved a map and survey of the line of route of the Company shown on Map No. 35, for a distance of 20 miles, and Map No. 36, covering an additional 10.41 miles, being the line from Caliente to Pioche. And the same were adopted by the board as the line of definite location of the road, and the maps were directed to be filed for approval in the manner provided by law. This mileage, namely the 40 miles covered by Surveys 29 and 30, and the 30.41 miles covered by Surveys 35 and 36, being in all 70.41 miles from Uvada to Pioche, was actually graded, and it was the subject of a controversy between the Short Line Company and the San Pedro Company, which will be hereinafter described. It may be said here for clearness that at the time of this meeting of March 10th, 1890, the railroad construction south in Utah had extended as far as Milford. Milford was the most southern point of actual railroad construction and operation, for there was an operated railroad to Milford at this time. South of Milford the railroad construction had not been made, but was provided for as already shown, and the surveys we have last spoken of took care of the line from Uvada to Caliente, and from Caliente to Pioche. Uvada is a point on the Utah-Nevada State line; hence its name, and the construction by the aforesaid surveys from Uvada to Caliente, and thence to Pioche, was the Nevada construction. These surveys did not touch the proposed construction in Utah between Milford and Uvada.

Survey between Caliente and Pioche approved.

Line from Uvada to Pioche actually graded.

"(10) On May 24th, 1890, the Executive Committee of the Board of Directors of the Oregon Short Line & Utah Northern Railway Company, upon estimates appropriated for 'Construction of line from Milford to Pioche' the sum of $2,803,400. I have not mentioned the filing of surveys and maps specifically as between Milford and Uvada, because this portion of the line was never in controversy between the San Pedro Company and the Short Line, although such maps were in fact filed by the Oregon Short Line Railroad Company, and approved by the Department.

Appropriation for construction of line between Milford and Pioche.

"(11) During this period, quite a number of votes were taken by the Board of Directors of the Oregon Short Line & Utah Northern Railway Company, selecting for approval by the Department, station

Selection of station grounds.

grounds for various portions of the line between Milford and Pioche. (4768) On September 25th, 1890, the Executive Committee of the Board of Directors of the Oregon Short Line & Utah Northern Railway Company, considered further maps and surveys of the line of the route of the Company's railroad as follows: Map No. 54, 20 miles southwesterly from Caliente toward the California line; Map No. 55, an additional 20 miles southwesterly from Caliente, and extending from the 20 miles mentioned in Map No. 54; Map No. 56, covering the next 20 miles southwesterly across the California State line; Map No. 57, covering the next 20 miles, still in a southwesterly direction and towards the California State line; Map No. 58, the next 20 miles, a distance of 20 miles southwesterly from the map last above referred to; Map No. 59, covering a distance of 20 miles next southwesterly from the map last above mentioned; Map No. 60, covering a distance of 20 miles further still southwesterly extending from the end of the section last above named; Map No. 61, another map of 20 miles extending still southwesterly toward the California State line from the end of the section last above named.

Approval of surveys beyond Caliente.

"The above maps and profiles, 54 to 61, inclusive, cover all the territory upon which the Company proposed to build its line southwesterly from Caliente to the California State line, except 14.42 miles, which will be hereafter described, and the above maps and profiles were, at said meeting, by the board adopted as the line of definite location of the road and the maps were approved and were forwarded to the Secretary of the Interior for his approval, and for filing in the Department, in order that the Company might obtain in respect thereto, the benefits of the Act of Congress of March 3rd, 1875, and the said maps were afterwards approved by the Secretary of the Interior pursuant to the regulations of the Department in force at that time. On November 5th, 1890, the Executive Committee again considered maps and surveys, namely Map No. 62, extending southerly or westerly from the end of a grant described in Map No. 61 to the California State line, a distance of 14.42 miles, and took the same action in respect to said map, as to its approval and the filing of the same in the proper land offices, and the said map was afterwards approved by the Department of the Interior. The above facts show the adopted line from the Utah State line to the California State line, and the adopted line for the branch to Pioche, all of which were approved by the Department of the Interior.

Maps approved covered road as far as California state line.

"There is no record in local land office at Carson City of date of first filings of U. N. & C. maps of February 23, 1899, Uvada to Caliente, but the engineer affidavits thereon were executed April 12, 1899, and the register and receiver at Carson transmitted the maps to the general land office at Washington on April 27, 1899, so they must have been filed in local land office between these dates. Maps of O. S. L. and U. N. numbers 54 to 61 inclusive were filed in local land office at Eureka, Nevada, on October 25, 1890, and were each

Filing of maps in local land offices.

Maps approved by Sec'y of Interior.

marked approved by the Secretary of Interior in the following language: (4769) 'Department of the Interior, November 22, 1890, Approved subject to all valid existing rights, John W. Noble, Secretary.' Map number 62 same company filed in U. S. Land Office at Eureka, Nevada, November 17, 1890, and Approved by the Secretary of the Interior on December 29, 1890, in same language as above. There is no record endorsed on maps 54 to 62 inclusive of date they were relodged in local land office.

Construction of grade between Milford and Pioche via Caliente in 1890.

"(12) In the year 1890 the Oregon Short Line & Utah Northern Railway Company, commenced construction at Milford and graded its line as a roadbed, practically complete, from Milford to Caliente, and very largely completed from Caliente to Pioche, and it continued this construction until October 14, 1890, when, by reason of the financial embarrassment of that Company and of the Union Pacific Railway Company, it suspended operation. As shown in the injunction suit hereinafter referred to, by testimony, the amount expended by the Oregon Short Line in grade construction from Milford to Caliente and Pioche was $979,647.24, and the amount expended upon said work within the limits of the State of Nevada, namely, from Uvada to Caliente and Pioche was $675,264.13. This last named work, and the value thereof, was the subject of the controversy between the parties as hereinafter set forth. At the time of the suspension of this work, the Short Line Company had laid some few miles of rails beyond Milford, probably three or four, but the track not being completed, and the construction of the work suspended, the rails beyond Milford were taken out.

Financial embarrassment.

Am't expended on grade.

Indebtedness of O. S. L.

"(13) It was shown in the injunction suit hereinafter mentioned, that on December 31st, 1890, the Oregon Short Line had a funded debt of $49,606,000, and a floating debt of $1,791,733.99, exclusive of the amount due contractors for construction work on its line between Milford and Pioche. That on December 31st, 1891, it was indebted to the Union Pacific Railway Company on advances and back account, in the sum of $4,639,531.68, which was in addition to the amount of its funded debt as of that date. It was also shown, and is true, that the said Short Line Company had pledged and hypothecated with the Union Pacific Railway Company, all of the bonds and stocks then owned by the Short Line Company, so that after September, 1891, the Oregon Short Line Company was without resources to meet its funded or floating debt, except from its current earnings. It was also shown in said suit that the income of the said Short Line Company for each of the years 1890 and 1891 was insufficient to pay the fixed charges; the deficit for the year 1890 being $1,396,682.84, and that the amount of such deficit for the year 1891 was $409,107.46.

All its securities pledged.

Income insufficient to pay fixed charges.

"Question 3. What was the relation, the inter-corporate relation, of the Union Pacific and the Oregon Short Line & Utah Northern Railway Company in respect to stock ownership at this time? (4770) Answer: (1) There was outstanding about that time, the capital stock of the Oregon Short Line & Utah Northern

Ownership of its securities by the U. P.

Railway Company in the amount of $26,244,853.32, of which the Union Pacific Railway Company owned approximately $13,116,703.33. The Union Pacific Railway Company also owned large blocks of the bonds of the underlying companies embraced within the corporate organization of the Oregon Short Line & Utah Northern Railway Company. (2) In the month of September, 1891, the Union Pacific Railway Company was also financially embarrassed, and unable to pay its debts, and at that time it hypothecated practically all of the stocks and bonds belonging to it, and in some cases to its sub-ordinate companies under the three year trust obligation known as the Drexel-Morgan Trust, to raise funds with which to pay its floating indebtedness. The amount raised in this manner was approximately $20,000,000. The financial embarrassments of the Union Pacific and of the Short Line Railroad continued, and by reason thereof, certain suits were instituted by Oliver Ames and others in the Circuit Court of the United States, for the Eighth and Ninth Circuits, in the territory of Utah, and in other jurisdictions, and Receivers for the properties of both of said companies were appointed in said suit on October 13th, 1893, and took possession of all of said properties.

U. P. also financially embarrassed.

Receivers for U. P. and O. S. L.—Oct. 13, 1893.

"(3) On October 8, 1893, Oliver Ames, Second, and Samuel Carr, Executors of the last will and testament of Frederick L. Ames, deceased, and Peter B. Wyckoff and Edwin F. Atkins, as complainants, brought their suits in the Circuit Court of the United States, for the District of Nebraska, as the court of original jurisdiction, and in the Circuit Courts of the United States for the States of Iowa, Missouri, Wyoming, Kansas, Colorado, Idaho, Montana and Oregon, and in the Territory of Utah against the Union Pacific Railway Company, the Oregon Short Line & Utah Northern Railway Company, and all of the companies constituting and embraced within what was known as the Union Pacific system of railroads, stating the aggregate amount of the indebtedness of the said several roads and defendants, the capital stock, securities, the floating debts of each of them, the amount of indebtedness presently and from time to time maturing, and the indebtedness of the Union Pacific Railway Company to the United States of America, and prayed appropriate relief in respect of the several matters alleged in said bill, and amongst other things for the appointment of receivers in said several causes for all of the properties of the said defendants above named, and all of the defendants named in said suit. That on the 13th day of October, 1893, there was appointed in said several courts as receivers of the properties named and described in said bill Messrs. S. H. H. Clark, E. Ellery Anderson and Oliver W. Mink, and that on said day the said receivers took possession of all and singular all of the properties of all of the said defendants wherever situated.

Ames suit filed.

First three receivers.

(4771) "That on the 13th day of November, 1893, Richard Olney, Attorney General of the United States, in behalf of the United States, presented a petition in said courts for the appointment of

Two additional receivers.

additional receivers, and for other relief, as set forth in said petition, and that under the same such proceedings were had that on November 13, 1893, John W. Doane and Frederic R. Coudert were appointed additional receivers of said properties. On May 4, 1898, an order was entered in said several causes accepting the resignations of the receivers hereinbefore named as to the properties of a number of the said defendants named in said original bill including the properties of the Union Pacific Railway Company, the Oregon Short Line & Utah Northern Railway Company, and others, and the court by said order appointed Oliver W. Mink and Thomas P. Wilson, as successory receivers of the general properties of the Union Pacific Railway Company, the Oregon Short Line & Utah Northern Railway Company, and other of the defendants, and the said five receivers above named were discharged. Afterwards in said causes, on August 22, 1899, the said successory receivers were discharged as such as to all of the properties of the Oregon Short Line & Utah Northern Railway Company. At the time of the filing of the said Ames suit, the Oregon Short Line & Utah Northern Railway Company had outstanding capital stock in the amount of $26,244,853.32, of which the Union Pacific Railway Company had and owned $15,116,703.33, and it had outstanding securities issued by itself, or by its several constituent companies, the following mortgages:

Mink and Wilson appointed successory receivers.

Successory receivers discharged.

Mortgages of constituent companies.

"1. The Idaho Central Railway Company's first mortgage $131,000.00, of which the Oregon Short Line & Utah Northern Railway Company owned $1,000.00. 2. The Oregon Short Line Railway Company's first mortgage, embracing the line from Granger, Wyoming, to Huntington, Oregon, and the branch line from Shoshone, Idaho, to Ketchum, Idaho, in the amount of $14,931,000.00, all of which was outstanding. 3. The Oregon Short Line & Utah Northern Railway Company's consolidated mortgage, dated August 1, 1889, in the amount of $10,894,000.00, of which $161,000.00 was owned by the Union Pacific Railway Company, and its constituent companies. 4. The Utah & Northern Railway Company's consolidated mortgage, dated July 1st, 1886, embracing the line from Ogden, Utah, to Garrison, Montana, in the amount of $1,831,000. 5. The Utah & Northern Railway Company's Equipment Trust, Lawful Money Bonds, dated April 1st, 1887, in the amount of $36,000.00. 6. The Oregon Short Line & Utah Northern Railway Company's Collateral Trust, Currency Bonds, dated September 2, 1889, in the amount of $13,000,000.00, of which $17,000.00 were held in the sinking fund. 7. The Utah & Northern Railway Company's first mortgage, lawful money bonds, dated July 1st, 1878, in the amount of (4772) $4,993,000.00, of which $3,964,000.00 were held by the Union Pacific Railway Company and pledged by it. 8. The Utah Central Railroad Company's first mortgage Gold Bonds, dated January 1, 1870, in the amount of $1,000,000.00, of which $6,000.00 were outstanding, $1,000.00 were in the hands of the Treasurer of the Oregon Short Line & Utah Northern Railway Company, and $993,000.00 were held by the trustee under

the Oregon Short Line & Utah Northern Railway Company's consolidated mortgage. 9. The Utah Southern Railway Company's first mortgage, dated July 1, 1871, of which $424,000.00 were outstanding. 10. The Utah Southern Railroad Company's first (general) mortgage lawful money bonds, dated July 1, 1879, of which there were outstanding $1,526,000.00. 11. The Utah Southern Railroad (Company's) Extension first mortgage bonds, dated July 1, 1879, of which there were outstanding $1,950,000.00, $982,000.00 thereof being owned by the Union Pacific Railway Company.

"During the pendency of the above mentioned suit of Ames against the Union Pacific Railway Company, et al., from time to time, upon defaults occurring in the payment of interest upon certain mortgages of the said several defendants companies, or of underlying mortgages made by the constituent companies, or originally owning companies, and affecting separate portions of the said several properties, were from time to time brought in the courts of appropriate jurisdiction, and of said suits so brought against properties embraced in the railroads owned by the Oregon Short Line & Utah Northern Railway Company, were the following: (a) Joseph Richardson, Trustee, complainant, on August 30, 1894, filed his bill in the Circuit Court of the United States in and for the District of Utah, Idaho and Montana, against the Oregon Short Line & Utah Northern Railway Company, the Union Pacific Railway Company, the American Loan & Trust Company, and the Receivers above named, to foreclose upon $4,495,000.00 first mortgage bonds issued by the Utah & Northern Railway Company under its mortgage dated July 1, 1878, embracing the properties extending from Ogden, Utah, to Garrison, Montana, and in said suit on August 31, 1894, the said S. H. H. Clark, Oliver W. Mink, E. Ellery Anderson, Frederick R. Coudert and John W. Doane were duly appointed receivers under said mortgage, of the mortgage properties therein described, and said receivers thereupon took possession of all of the said mortgaged property and operated the same as receivers in said cause until the final discharge of the receivers acting therein upon the purchase of said property by the Oregon Short Line Railroad Company, hereinafter named.

Separate foreclosure suits.

Richardson vs. O. S. L. & Utah Northern, et al.

Separate receivership for O. S. L.

"(b) On August 28, 1894, John F. Dillon, Trustee, complainant, brought bills to foreclose, in the Circuit Courts of the United States for the District of Wyoming, Idaho and Oregon, against the Oregon Short Line & Utah Northern Railway Company, the Union Pacific (4773) Railway Company, and the above mentioned receivers. This bill was one to foreclose a certain mortgage given by the Oregon Short Line Railway Company to Frederick L. Ames and John F. Dillon, as Trustees, on the date of November 1st, 1881, which mortgage embraced the property belonging to the Oregon Short Line & Utah Northern Railway Company extending from Granger, in Wyoming, to Huntington, Oregon, with a branch line extending from Shoshone to Ketchum, in Idaho. In said cause on said date the Court appointed the same five persons above mentioned as

Dillon vs. O. S. L. & Utah Northern, et al.

receivers of the mortgaged property, and they continued to operate said mortgaged property from the date of their appointment until they surrendered said mortgaged property, about March 15, 1897, to the Oregon Short Line Railroad Company, the purchaser thereof under the proceedings hereinafter mentioned.

Ham vs. O. S. L. & Utah Northern, et al.

"(c) On September 4, 1894, James M. Ham, as Trustee, and complainant, brought his bill in the Third Judicial District Court of Utah Territory, against the Oregon Short Line & Utah Northern Railway Company, the Union Pacific Railway Company, the American Loan & Trust Company, and the receivers above mentioned. This bill was brought for the purpose of foreclosing a certain mortgage known as the Utah Southern Railroad Company's general mortgage, dated July 1st, 1879, to William H. Hooper, and James M. Ham, as Trustees. On September 4, 1894, the said Court appointed the same five persons as receivers of the mortgaged property described in the said bill of complaint and mortgage, which property is generally described as the railroad of said company commencing at Salt Lake City, and running thence in a southerly direction to Juab, in said State of Utah, and the said receivers in said cause operated the railroad properties mentioned and described in the said complainant's bill as receivers therein until about March 15, 1897, when in pursuance of the orders of the Court in that behalf duly made, they surrendered the possession of the same to the purchasers thereof under a sale of said property under decree in the above entitled cause, and to the purchasers under a decree entered in the case of the American Loan & Trust Company against the Oregon Short Line Railroad Company for the purpose of foreclosing the consolidated mortgage of the Oregon Short Line & Utah Northern Railway Company, as hereinafter recited.

Another suit of Ham vs. O. S. L. & Utah Northern, et al.

"(d) On September 4, 1894, James M. Ham, as Trustee, and complainant, brought his bill in the Third Judicial District Court of Utah territory, against the Oregon Short Line & Utah Northern Railway Company, the Union Pacific Railway Company, the American Loan & Trust Company, and the receivers above mentioned. This bill was brought for the purpose of foreclosing a certain mortgage known as the Utah Southern Railroad (Company's) Extension mortgage, dated July 1st, 1879, to William H. Hooper and James M. Ham, as Trustees. On September 4, 1894, the said Court appointed the same five persons as receivers of the mortgaged property described in the said bill of complaint and mortgage; which property is generally (4774) described as the railroad line of the said company extending from Juab, in the County of Juab, in a southerly direction through Juab, Millard and Beaver Counties, to Frisco, in the County of Beaver, in the Territory of Utah, a distance of 130 miles; and the said Receivers in said cause operated the railroad properties mentioned and described in the said complainant's bill as receivers therein until about March 15, 1897, when in pursuance of the orders of the Court in that behalf duly made, they surrendered the possession of the same to the purchasers thereof under a sale of said prop-

erty under decree in the above entitled cause, and to the purchasers under a decree entered in the case of the American Loan & Trust Company against the Oregon Short Line Railroad Company for the purpose of foreclosing the consolidated mortgage of the Oregon Short Line & Utah Northern Railway Company, as hereinafter recited.

American Loan & Trust Co. vs. O. S. L. & Utah Northern.

"(e) On December 24, 1894, the American Loan & Trust Company, Trustee, and as complainant, brought its certain bill in the Circuit Court of the United States for the District of Oregon, and in the Districts of Idaho and Montana, and the Third Judicial District of Utah, against the Oregon Short Line & Utah Northern Railway Company, which bill was brought for the purpose of foreclosing a certain mortgage made by the Oregon Short Line & Utah Northern Railway Company, under date of August 1st, 1889, and known as the consolidated mortgage of said company, to secure an issue of mortgage bonds therein described; that no receivers were appointed in said suit of the American Loan & Trust Company, but that upon final hearing of said cause, upon answers of the parties and proofs taken, a final decree of foreclosure and sale of the property mentioned in said bill was entered, directing the sale of said property under the terms and conditions in said decree recited, but the said property was to be sold subject to the prior lien upon the same as found and determined by said decree. In said proceeding, the decree was duly executed and the property sold pursuant to the terms thereof to Samuel Carr, et al., as purchasing committee to purchase the property for and on behalf of the Oregon Short Line Railroad Company, and said purchasers thereupon and thereafter filed in the said Courts in which the hereinbefore mentioned foreclosure suits were pending, and also in the Circuit Courts of the United States, wherein the said Ames suit above mentioned was pending, their petition requiring the receivers in said several causes to surrender and deliver the possession of the properties named in the said several suits, and also embraced in the decree in this cause, to said purchasers of said property. The Special Master who made the sale in said Oregon suit, made report of sale and the same were duly confirmed, and a deed was made, executed and delivered by him to Oregon Short Line Railroad Company conveying to it all of the said properties, and upon the petition of said purchasing committee of the Oregon Short Line Railroad Company, decrees were entered and made in all of the other suits hereinbefore mentioned, directing the said Receivers to surrender and deliver the properties of the Oregon (4775) Short Line & Utah Northern Railway Company, so purchased by the Oregon Short Line Railroad Company, to said last named company, and the said deliveries were made in pursuance to said decree on or about the 15th day of March, 1897. The deed made by the said Special Master to Oregon Short Line Railroad Company was dated February 23, 1897, and embraced all of the properties described in the bill to foreclose in said case, which embraced all the railroads of the said Oregon Short Line & Utah

Property sold under decree to committee acting for Oregon Short Line Railroad Co.

Delivery of possession to purchasing company.

Northern Railway Company as described in said consolidated mortgage and in the said several underlying mortgages, and the same recited that—

Recitation in deed.

" 'Said properties are situate in the States of Oregon, Idaho, Montana, Wyoming, Nevada and Utah, and elsewhere. The intention of the said decrees and sale, however, and of this deed and transfer being to convey, and hereby conveying all of the said railway properties, and other property, of the Oregon Short Line & Utah Northern Railway Company expressed to be conveyed by the said consolidated mortgage, wherever the same may be situated, free from any interest or claim therein or thereto whatsoever by the Oregon Short Line & Utah Northern Railway Company, and by any or all persons claiming by, through or under it.'

Organization of The Oregon Short Line Railroad Company.

"The Oregon Short Line Railroad Company was organized on the 1st day of February, 1897, under a statute of the State of Utah, approved January 22nd, 1897, for the purposes set forth in its Articles of Incorporation, a copy of which has been introduced in evidence and marked Complainant's Exhibit 206 (page 3433). It

Its powers.

was organized for the purpose of purchasing, owning, maintaining, operating and further extending the railroad, rights, property and franchises formerly owned by the Oregon Short Line & Utah Northern Railway Company, and to construct or acquire, by lease, purchase, consolidation, ownership of capital stock, or otherwise, branches, extensions and connecting lines within or without this State (Utah), as the Directors of the Corporation may from time to time deem expedient, and as may be authorized by law.

Utah & Pacific.

"The Utah & Pacific Railroad Company was a corporation of the State of Utah, organized on August 20th, 1898, for the purpose of constructing, equipping, acquiring, owning, maintaining and operating, by steam, electric or other motive power, a railroad by the most feasible route from Milford, Beaver County, in the State of Utah, southwesterly through the counties of Beaver and Iron, to the western boundary line of the State of Utah, a distance of about seventy-five miles." A certified copy of the articles of incorporation of said Company, is marked Defendants' Exhibit 238 and set out on pages 4776 to 4781.

Agreement between McCune, et al, and O. S. L.

(4781) "On the 16th day of August, 1898, the gentlemen who were interested therein, namely, Mr. A. W. McCune, David Eccles, Charles W. Nibley and William L. Hodge, made a certain agreement with the Oregon Short Line Railroad Company, providing for the organization by said last named parties of the Utah &

Option to purchase property of Utah & Pacific.

Pacific Railroad Company. This contract is the same one offered in evidence by the Complainant, and is to be found at page 2436 of the printed record. It reserves to the Oregon Short Line the right to purchase all the stock, securities and properties of said Utah and Pacific Railroad Company, at prices and upon terms and conditions

Exercise of option.

in said contract specified. During the month of May, 1900, the Short Line Company took from the said Utah and Pacific Railroad Company, of its first mortgage bonds, the amount of $279,000. In

the early part of April—April 9th, 1901, the Short Line Company took over the capital stock of the Utah & Pacific Railroad Company, in the amount of $825,000, and during that month they also took over the remainder of the first mortgage bonds of said Utah & Pacific Company, and took possession of and operated the properties thereof thereafter.

Maps of Utah & Pacific.

"Pursuant to said contract, the said Utah & Pacific Company made and filed its maps of definite location, locating its line of railroad upon and coincident with the line of adopted road of the Oregon Short Line & Utah Northern Railway Company, extending from Milford to Uvada. The Oregon Short Line Railroad Company became the successor by purchase at foreclosure sale, of the physical properties of the original consolidated company, the Oregon Short Line & Utah Northern Railway Company, as heretofore shown by copy of extract from the deed. It took also from the said Oregon Short Line Railroad Company and from the Oregon Short Line & Utah Northern Railway Company, the assignment of the rights of said companies in and to the graded roadbed formerly of the Oregon Short Line & Utah Northern Railway Company, and to the rights of said company and its successor, the Oregon Short Line Railroad Company, to its right of way secured under the profile maps made and filed in the Department of the Interior by said Company in the year 1890, and caused the same to be filed in the office of the Secretary of the Interior. This right of way was coincident in (4782) length with the graded roadbed extending from Milford to the Utah-Nevada state line.

Properties of "The Oregon Short Line Railroad Company."

Utah & California.

"About the year 1896 the Utah & California Railroad Company, a corporation of the State of Utah having power to build a railroad within said State only, also adopted a line of railroad, and filed the maps thereof, which line of adopted road and maps was coincident with the original right of way of the Oregon Short Line & Utah Northern Railway Company as defined in its maps filed in the Department of the Interior in 1890. The maps so filed by the Utah & California Company were never approved, but the Utah & California Company made an assignment of all its rights obtained by virtue of its said adoption of line and filing of maps, to the Utah & Pacific Railroad Company, after which the Department of the Interior approved the maps filed on behalf of said Utah & Pacific Company, and it became, therefore, vested with the rights thereto under the law of March 3rd, 1875, from Milford to the Nevada State line." A copy of said assignment is marked Defendants' Exhibit 239 and is set out on pages 4782 to 4787.

Assignment to Utah & Pacific.

Utah, Nevada & California, a a subsidiary company of O. S. L.

(4787) "The Utah, Nevada & California Railroad Company was a corporation of the State of Nevada, organized on the 2nd day of February, 1899. It was, in fact, a subsidiary company of the Oregon Short Line Railroad Company. Its Articles of Association were duly certified by the Secretary of State of the State of Nevada, and a list of its officers filed in said office and in Lincoln County, and said articles with all of the proof required by the

regulations of the Department of the Interior of the United States were filed in the proper land offices of the United States for the purpose of acquiring a right of way for its railroad in pursuance to the terms of the Act of March 3rd, 1875. These articles authorized said company to construct, own, maintain and operate a railroad from a point described in said articles, across the State of Nevada for a distance of about 215 miles, with a branch line extending from Caliente to Pioche, making a total distance of about 245 miles." These Articles of Incorporation are marked Defendants' Exhibit 240 and are set out on pages 4788 to 4790.

Adoption of survey between Uvada and Caliente.

(4790) "The Board of Directors of the Utah, Nevada & California Railroad Company, on February 23rd, 1899, had submitted to it a map of the survey of railway line from a point on the east boundary line of the State of Nevada, to a point in section 8, township 4 south, range 67 east, Mt. Diablo Meridian, in said State of Nevada, a total distance of 40 miles (being the survey of the line from Uvada to Caliente), and the said Board thereupon passed a resolution adopting the line of route for its railroad as surveyed and represented upon the maps returned and sworn to by T. M. Baird, a civil engineer, and extending from a point on the east boundary line of the State of Nevada, as described upon said map, to a point in section 8, township 4 south, range 67 east, Mt. Diablo Meridian, in said state, a distance of forty miles, and the same was then adopted as the definite location of the road between said points.

Maps returned for correction.

The maps so filed (4791) were returned by the Department to the Local Land Office for correction September 16, 1899, and on December 25, 1899, were forwarded by Register and Receiver of Local Land Office to Utah, Nevada & California Company.

Corrections made and maps refiled.

March 1, 1901, the corrections were made and the maps refiled in the proper land office in the State of Nevada.

"By reason of apparent conflict between the said maps so corrected and the original maps of the Oregon Short Line & Utah Northern Railway Company, with certain maps on file in said land office by the Utah & California Company, a contest arose in said office which was set for hearing on the 11th day of March, 1901.

Contest.

At a meeting of the Board of Directors of the Utah, Nevada & California Railroad Company held on April 29th, 1901, the said Board had submitted to it maps and profiles showing the line of its road beginning at the said point in section 8, township 4 south, range 67 east Mt. Diablo Meridian (namely Caliente), for the length of 20 miles extending in the direction of Pioche, and shown by Map No. 12, and on the same day Map No. 13 was submitted, showing the continuance of said line from the end thereof for a distance of 10.514 miles toward Pioche, which maps and profiles were approved and the line of route indicated thereon adopted as the line of route of the Railroad of said company.

Utah line towards Pioche approved.

Maps covering line beyond Caliente.

"On the same day, Map No. 3, covering a distance of 6.52 miles through the surveyed lands of the United States, southwesterly from Caliente, and also showing a further distance in the same

direction of 13.48 miles across the unsurveyed lands in Nevada, being a total of 20 miles upon said map, and the line of road thereupon delineated was, by the Board, adopted as the line of route of the railroad of said railroad company, and on the same day there was submitted to the Board Maps Nos. 4, 5, 6, 7, 8, 9, 10 and 11, each in sections of 20 miles, showing the line of location of the railroad southwesterly across the State of Nevada, separately showing where the same crossed surveyed and unsurveyed lands.

"And upon considering the same, it was resolved by the Board that the lines of route indicated upon said maps Nos. 4, 5, 6, 7, 8, 9, 10 and 11 were adopted as the line of railroad of said company. All of these maps were immediately filed in the proper land offices of the United States, and forwarded in due course to the Department of the Interior. On the 22nd day of April, 1901, the Oregon Short Line & Utah Northern Railway Company made an assignment of all its right, title and interest in and to the right of way for a railroad shown by its map of definite location on file in the United States land offices, extending from a point on the boundary line between the States of Utah and Nevada at Uvada, and extending thence in a southwesterly direction to a point known as Clover Valley Junction and beyond, with a branch line extending from said Clover Valley Junction (now known as Caliente) to the Town of Pioche, in Lincoln County, Nevada, and also assigned all of its right, title and interest in and to a grade for a railroad line, including tunnels, (4792) cuts and embankments from said Uvada between the States of Utah and Nevada to Clover Valley Junction, now known as Caliente, and thence to Pioche, which said assignment was made to the Utah, Nevada & California Railroad Company. The Oregon Short Line Railroad Company, as the purchaser under foreclosure of the physical properties of the Oregon Short Line & Utah Northern Railway Company, assigned all of its right, title and interest to the Utah, Nevada & California Railroad Company, to the railroad properties covered by the previous assignment, copies of these two documents being filed first in the office of the Secretary of the Interior.

Assignment by O. S. L. & Utah Northern to Utah, Nevada & California.

"The Utah & California Railroad Company above referred to, was a corporation organized in the State of Utah for the purpose of building a railroad in said State. It had, amongst other things, power to build from Milford to the Nevada State line, but it had no power by its original articles of incorporation, to build any railroad outside of the State of Utah. It did, however, file maps and profiles and adopt a line of railroad for its own purposes, coincident with the line of railroad and maps and profiles formerly filed by the Oregon Short Line & Utah Northern Railway Company, extending from Milford to Clover Valley Junction (Caliente), and thence to Pioche. It took no corporate steps to amend its articles of association giving it power to do any act in the State of Nevada until the month of December, 1900, or January, 1901, when it made an amendment of its charter. It did not file its charter, or in any

Powers of Utah, Nevada & California.

manner whatever comply with, or seek to comply with, the laws of the State of Nevada at any time earlier than the 9th day of April, 1901, and its maps and profiles and filings were in this condition at the time of the hearing in the Land Office at Carson City on March 11th, 1901.

Decision of local land office and of Sec'y. of Interior.

"The decision of the local Land Office was made soon after that date, and was immediately appealed from to the Secretary of the Interior, and the decisions of the local Land Office and of the Secretary of the Interior, are all stated in this record at pages 3267 and following, being copied into the statement of facts in the case of Utah, Nevada & California Railroad Company versus Utah & California Railway Company, and others. The contest in the Land Office was as to which set of maps should be approved, and briefly stated, the Land Office refused to give force to the old maps of the Oregon Short Line & Utah Northern Railway Company, rejected the maps of the Utah, Nevada & California Railroad Company, and approved the maps of the Utah & California Railroad Company. The Secretary of the Interior upon hearing, reversed this decision in whole or in part. It may be repetition of what has been said already, but at the time of this controversy in the Land Office, there was an operated railroad between Milford and Uvada, and it was operated by the Utah & Pacific Railroad Company, and it was in reference to this operated railroad that in April, 1901, the Oregon Short Line (4793) Railroad Company exercised its option of purchase. It was the graded work south of this operated railroad, namely from Uvada south to Caliente that was the subject matter of the controversy in the Land Office, and in the Interior Department.

San Pedro promoters gain control of Utah & California.

"The persons interested in the organization of what was afterwards the San Pedro, Los Angeles & Salt Lake Railroad Company in December, 1900, or early in 1901, made some sort of an arrangement with the Utah & California Railroad Company by which they controlled the same, and in its name sought to obtain rights which should afterwards be conveyed to the San Pedro, Los Angeles & Salt Lake Railroad Company. On April 19th, 1901, the Utah and

Assignment to San Pedro.

California Railway Company assigned, transferred, conveyed and quit-claimed to the San Pedro, Los Angeles & Salt Lake Railroad Company all of its rights, title and interest in and to the property it then had or might thereafter acquire by reason of the approval of its map by the Honorable Secretary of the Interior in and to the right of way and railroad grade in the State of Nevada, extending from a point on the state line between Utah and Nevada near Uvada station on the Utah and Pacific Railroad, in a southwesterly direction a distance of about forty miles, and thence in a northwesterly direction a distance of about thirty-five miles, to a point near Pioche, which right of way was particularly described and defined by the maps and surveys thereof filed in the United States Land Office at Carson City, Nevada, on April 27th, 1897. This action was taken in pursuance to a vote of the Board of Directors of the

Utah and California Railway Company, at a meeting of said Board held on April 19th, 1901.

Los Angeles Terminal.

"The Los Angeles Terminal Railway Company was a corporation existing under the laws of California, and owned a line of railroad extending from San Pedro to Los Angeles, with branch lines extending to Pasadena and Verdugo Canyon, in all about 45 miles of railroad. This property, during the year 1900, was acquired by Mr. W. A. Clark, David Keith, Thomas Kearns, and R. C. Kerens and his associates. During that year, or early in 1901, these gentlemen determined to construct or acquire a railroad connecting with the Los Angeles Terminal Railway, extending eastwardly through California, Nevada and Utah to Salt Lake City, Utah. On March 20th, 1901, the San Pedro, Los Angeles & Salt Lake Railroad Company was organized as a corporation of the State of Utah, and its articles of incorporation were filed in the office of the County Clerk of Salt Lake County, Utah, on March 21st, and in the office of the Secretary of State of the State of Utah on March 28th, 1901. The same articles were filed in the office of the Recorder of Deeds of Lincoln County, Nevada, on the 8th day of April, 1901, and the same together with certificates and the due proofs required by the regulations of the Department of the Interior, were filed in the office of the Secretary of the Interior on May 2nd, 1901, except that a certified copy of the laws of the State of Nevada with (4794) respect to the operation of railroads in said state, was not filed in said Department of the Interior until May 27th, 1901, and under date of June 4th, 1901, the Commissioner of the General Land Office advised that the papers relating to the incorporation of the San Pedro, Los Angeles & Salt Lake Railroad Company had been found to be prepared in due form and had on that day been submitted to the Secretary of the Interior to be accepted for filing under the provisions of the Act of March 3, 1875.

Conclusion to build to Salt Lake.

Organization of San Pedro.

Approval of San Pedro filings by Com's'r. Gen. Land Office.

"The organization of the San Pedro, Los Angeles & Salt Lake Railroad Company, by the election of its officers, was completed on the 21st day of March, 1901, at Salt Lake City, Utah. On May 22nd, 1901, the Board of Directors of said company, at a meeting held on that day, amongst other things, took the following action: 'The presiding Vice-President then announced that the next business in order was the consideration of certain maps of surveys made pursuant to a resolution of the Board of Directors adopted at its meeting on March 21, 1901, by First Assistant Engineer McCartney. First Assistant Engineer McCartney thereupon exhibited to the Board seven maps in duplicate, numbered one to seven inclusive, showing the surveyed and located line for a railroad as follows: Map No. 1—From the Utah Nevada line southwesterly to Clover Junction, 40 miles, located March 26 to April 2, 1901. Map No. 2—From Clover Junction northwesterly to vicinity of Panaca, 20 miles; located April 2-7, 1901. Map No. 3—From end of Map No. 2 northwesterly to head of Condor Canon, 1.913 miles; located April 7, 1901. Map No. 4—From Clover Junction southwesterly

down Meadow Valley, 20 miles; located April 8-16, 1901. Map No. 5—From end of Map No. 4 down Meadow Valley, 20 miles; located April 18-25, 1901. Map No. 6—From a point one mile southwest of Clover Junction and northwesterly to Pioche, 32 miles; located April 27 to May 6, 1901. Map No. 7—From end of Map No. 5 down Meadow Valley, 20 miles; located May 10 to 16, 1901.

Adoption of maps.

"'On motion of Mr. McCornick, seconded by Mr. Kearns, all of said maps were adopted and approved as showing the survey and location of a part of the line of railroad which it is proposed and provided for in the articles of incorporation shall be constructed through Lincoln County, Nevada, and said First Assistant Engineer was authorized and directed to cause said maps to be filed without delay in the United States Land Office at Carson City, Nevada, to be forwarded to the Honorable Secretary of the Interior at Washington, D. C., for approval by said Secretary.' That at the meeting of the Board of Directors, held on the 21st day of March, 1901, the following action was taken: 'Resolved, that the Chief Engineer of this corporation is hereby authorized, empowered and directed to enter upon and prosecute and complete with all practicable and convenient dispatch the survey and (4795) location of the main line of railroad proposed to be constructed by this corporation from the City of Salt Lake, in the County of Salt Lake, and State of Utah, to the City of Los Angeles, County of Los Angeles, and State of California, as the same is provided for in the articles of incorporation of this company; and, Resolved, that H. M. McCartney, First Assistant Engineer of this corporation, is hereby employed, appointed, authorized and instructed to at once enter upon, prosecute and complete the survey and location of that part of said main line of railroad, which it is proposed and provided for in the articles of incorporation shall be constructed through Lincoln County, Nevada.'

Construction of San Pedro authorized by its Board.

Identity of lines included in maps.

"The Lines of railroad referred to in maps Nos. 1, 2, 3 and 6, embraced what is heretofore mentioned in the maps of the Oregon Short Line & Utah Northern Railway Company, and the Utah, Nevada & California Railroad Company, as the line from Milford to Pioche. The other maps relate to the territory extending southwesterly from Caliente.

"TAX TITLES.

Right of way of O. S. L. sold for taxes.

"Certain taxes were levied in Lincoln County, Nevada, for the year 1893, against the Oregon Short Line & Utah Northern Railway Company, as to its possessory claim for a right of way and partially completed roadbed thereon situated, from Uvada to Pioche, and in course of time, claiming under authority of the revenue laws of the State of Nevada, said right of way was exposed for sale under a judgment and decree of the District Court of Lincoln County, Nevada, rendered in the year 1894, for delinquent taxes claimed to be due upon the assess-

ment of 1893, and sold to the County of Lincoln, but no certificate of sale was ever written out or made of said sale until about the month of February, 1901. That in February, 1901, a certain certificate of sale was prepared, signed by E. D. Turner, who, at the date of said sale, was the Sheriff of Lincoln County, Nevada, but who was not at the making and execution of said certificate the Sheriff of Lincoln County, Nevada, that office at that time being held by one Johnson; that on February 23rd, 1901, a deed purporting to be issued in said proceeding by E. D. Turner, as Sheriff of Lincoln County, Nevada, and purporting to convey said property to one W. J. Dooley, Treasurer of Lincoln County, Nevada, which deed bore date the 1st day of December, 1894, and was signed by E. D. Turner, as Sheriff of Lincoln County, Nevada, and the same was acknowledged by him on the 23rd day of February, 1901, under a Notary's certificate that he was the same person who was Sheriff of said County at the date of said deed; said deed, when so executed, was placed upon record in said Lincoln County, Nevada, and it embraced 'the possessory claim to surveyed right of way for railroad of sixty-five miles of railroad more or less, running from the state line on the east, southwest down Clover Valley Wash, thence north up Meadow Valley Wash to within three miles of Pioche, with sixty miles more or less of prepared road bed, consisting of cuts, fills, tunnels, etc., and known as (4796) the Milford and Pioche line of the Oregon Short Line and Utah Northern Railway, situated in Lincoln County, Nevada.'

No certificate of sale made.

Tax deed made by successor sheriff—7 years after sale.

"Thereafter, by an arrangement between the San Pedro, Los Angeles & Salt Lake Railroad Company and the County of Lincoln, the said County of Lincoln granted and quit-claimed to said San Pedro, Los Angeles & Salt Lake Railroad Company, all of the right, title and interest of said County in and to 'The railroad right of way extending from a point about three miles north of Pioche to Clover Valley Junction, built and formerly owned by the Oregon Short Line and Utah Northern Railroad Company, and sold for taxes and purchased and now owned by said County of Lincoln.' On March 4th, 1901, the Utah & California Railway Company made an arrangement with the County of Lincoln, Nevada, whereupon the following resolution was passed by the Board of County Commissioners of said County: 'Resolved, that if the said Utah & California Railway Company, or its assigns, shall within six months from this date, build and place in operation a broad gauge railroad from Uvada, Utah, to the Culverwell Ranch in Lincoln County, Nevada, and pay the County of Lincoln the sum of $5,083.00, then and in that event the County of Lincoln will convey and confirm unto said Utah & California Railway Company, or its assigns, all of the right, title and interest of said Lincoln County, in, to and concerning said Oregon Short Line and Utah Northern Railway Company's grade within the County of Lincoln.'

Quit claim from County to San Pedro.

Agreement between Utah & California, and Lincoln County, Nev.

Agreement between San Pedro and Lincoln County, Nev.

"Thereafter, on May 6th, 1901, an agreement was made between Lincoln County, Nevada, and the San Pedro, Los Angeles & Salt Lake Railroad Company, as follows: 'It is mutually agreed between the undersigned that the Check No. 183, for the sum of three thousand and eighty-three and 02-100 dollars ($3,083.02) drawn by the San Pedro, Los Angeles & Salt Lake Railroad Company, to James A. Nesbitt, Treasurer of Lincoln County, and hereto attached, shall be held by said Treasurer until the determination of the suit pending in the District Court of the Fourth Judicial District of Nevada, wherein the Utah, Nevada and California Railway Company is plaintiff; and John Simpson, et al, Commissioners, are defendants, and in the event of the County's title to the old O. S. L. & U. N. Ry. Co. grade and right of way in Lincoln County being adjudged valid, but that the sale thereof must be made at public auction, the said check and the amount mentioned therein shall be taken as a part of the sum of $5,083.02, to be bid by said S. P. L. A. & S. L. R. R. Co. for said right of way and grade, at the time the same shall be advertised for sale by said County. The said $2,000.00 already paid to said County for a portion of said right of way, shall constitute the balance of the amount to be bid by said S. P. L. A. & S. L. R. R. Co., as aforesaid, provided that said last named company become the purchasers of said property, and in case the said title of said County be held invalid, or (4797) that the S. P. L. A. & S. L. R. R. Co. does not become purchaser of said grade, the said check shall be returned to said S. P. L. A. & S. L. R. R. Co.

" 'It is further agreed that in the event said title is held to be valid, and that the same may be disposed of at private sale, then the said check shall be taken as the balance of the purchase price for the right of way from Clover Valley Junction to Uvada, and a conveyance thereof shall be made to said S. P. L. A. & S. L. R. R. Co., provided it is determined by the Board of County Commissioners to sell said property at private sale.'

Utah, Nevada & California vs. Utah & California, et al.

"On or about the 27th day of April, 1901, the Utah, Nevada and California Railroad Company brought its Bill in the Circuit Court of the United States for the District of Nevada against the Utah and California Railway Company, the San Pedro, Los Angeles & Salt Lake Railroad Company, and others, as defendants,

Allegations of Bill.

in which said Utah, Nevada & California Railroad Company set up its title to the railroad, right of way, roadbed, grade and improvements on said right of way as shown upon said maps and profiles approved by the Department of the Interior of the United States in favor of the Oregon Short Line and Utah Northern Railway Company, as to the line of railroad extending from Uvada in a southwesterly direction across the State of Nevada to the southwestern boundary thereof, and also as to the branch line of railroad right of way extending from a point on said line above described, known as Clover Valley Junction, and about 40 miles southwest from Uvada, and extending thence in a northerly direction to

the town of Pioche a distance of about thirty miles; it alleged the organization of the Nevada Pacific Railway Company and the Oregon Short Line & Utah Northern Railway Company, the resolve of the last named company to construct a railroad upon the line above described; the making, filing and approval of the maps in respect of the proposed line of railroad; the construction of a partially completed roadbed upon said right of way from Uvada to Caliente and towards Pioche; the filing of all the maps covering this entire line of right of way; the suspension of work thereon, by reason of financial embarrassment of the said Oregon Short Line and Utah Northern Railway Company, the receivership of said company as hereinbefore referred to; the foreclosure of the several mortgages; the sale of the property to the Oregon Short Line Railroad Company, and the possession thereof by said last named company about March, 1897.

"It futher alleged the organization of the Utah, Nevada and California Railroad Company as an auxiliary company to the Oregon Short Line Railroad Company; the making and filing by said company of its various maps in the United States Land Office; the organization of the Utah & California Railway Company, and the nature of its corporate powers, rights and privileges; the organization of the San Pedro, Los Angeles & Salt Lake Railroad Company, its entry upon and possession of said right of way, and the interference with said possession by the Utah & California Railway Company (4798) and the San Pedro, Los Angeles & Salt Lake Railroad Company; that it claimed its right to said right of way, roadbed and grade by virtue of assignments of the rights of the Oregon Short Line Railroad Company and of the Oregon Short Line and Utah Northern Railway Company, as well as by the maps, profiles, and proceedings which it had taken in the Department of the Interior to secure an approval of its said maps; the interference with said property and the attempted seizure thereof by the Utah and California Railway Company and the San Pedro, Los Angeles & Salt Lake Railroad Company. It prayed for appropriate relief, and for an injunction restraining the said defendants, their agents and servants from in any way hindering, delaying or impeding the complainant in the construction of its railroad upon said right of way, and for the quieting of title thereto in said complainant, and restraining the defendants from making or asserting any right, title or claim in or to said right of way, or any part thereof, and for other appropriate relief in that behalf. To this bill the several defendants filed their answers.

Amended Bill.

"Later, and on or about the 25th day of May, 1901, the Utah, Nevada and California Railroad Company filed its amended and supplemental bill, and alleged that since the filing of its original bill it had filed maps and profiles of its branch line of railroad extending from Clover Valley Junction to or near the town of Pioche in the State of Nevada, and that the same had been submitted to the Department of the Interior; that it had caused sur-

veys to be made of its said line of railroad, and caused maps and profiles to be prepared showing the line of right of way for its railroad from Clover Valley Junction southwesterly across the State of Nevada and through the County of Lincoln, Nevada, to the Western boundary thereof, and that it had caused to be filed maps and profiles in the Department of the Interior for approval; that it had duly adopted the line of right of way described and embraced in said maps and profiles, and that it owned the same; that it was prosecuting the work of constructing said line of railroad, and then had in operation 23 miles of railroad upon its main line from Uvada towards Clover Valley Junction, and had material for a large amount of further construction; that the defendants were interfering with its possession of said right of way southwesterly from Caliente; that it had notified the said defendants and their agents to desist from certain specified encroachments upon said right of way, and alleged the entry by said defendants upon various parts of said right of way for the purpose of dispossessing the complainant thereof.

"It also set up and alleged the taking of a certain deed by the San Pedro, Los Angeles & Salt Lake Railroad Company from one James A. Nesbitt, as above recited, the existence of a certain agreement between the San Pedro, Los Angeles & Salt Lake Railroad Company and the County of Lincoln in respect to certain tax title rights and interests; alleged the invalidity of said deed and the proceedings on the part of the County Commissioners of Lincoln (4799) County, and that said deed and proceeding were void for the reasons in said bill stated, it described that certain judgment entered in the District Court of Lincoln County, against the Oregon Short Line & Utah Northern Railway Company in respect to the taxes levied in 1893, and alleged the invalidity of said judgment, and that the same was void for the reasons therein stated. It prayed for an injunction restraining the defendants and each of them from any interference with said right of way and property described in said amended and supplemental bill, and that the said tax proceedings, tax deed and agreement with Lincoln County be declared void and of no effect, and for other and further relief.

Answer and Cross-Bill of San Pedro.

"The San Pedro, Los Angeles & Salt Lake Railroad Company filed its answer and cross-bill to said original and amended and supplemental bill, in which it set up the facts in relation to its claim to the right, title and possession of said properties. The other defendants also filed answers to said amended and supplemental bill, replications were made, and issues joined, and the same resulted in a hearing in said Circuit Court of the United States for the District of Nevada, on or about the 20th day of June, 1901, before the Honorable Thomas P. Hawley, Judge of said court, and in an order and decree made by said Judge on the 22nd day of July, 1901, copy of which may be found on page 3232 of record (see also page 3230).

Hearing.

Decree.

"That on or about the day of , 1901, the Utah, Nevada and California Railroad Company brought its certain suit in the Fourth Judicial District Court of the State of Nevada against John Simpson, E. D. Turner and Henry Matthews, County Commissioners of Lincoln County, Nevada, James W. Nesbitt, Treasurer of Lincoln County, and the State of Nevada as defendants, in which it alleged the facts relating to the assessment of taxes by Lincoln County, on the right of way of the Oregon Short Line & Utah Northern Railway Company for the year 1893; the commencement of suit by Lincoln County to recover the amount of said taxes under the revenue laws of the State of Nevada; the rendition of a pretended judgment in said proceeding, the issuance of an execution and an order of sale, the sale of the property, and a deed of conveyance thereof under said pretended proceedings, to one James W. Nesbitt, the Treasurer of Lincoln County, and alleged that all of said proceedings and judgment were void and of no effect and prayed for a cancelation of said deed, judgment, execution and sale in pretended pursuance thereof.

Utah, Nevada & California vs. County Com'rs. of Lincoln Co.

"On June 9th, 1903, upon a hearing of said cause, the Court found that the facts set forth in said petition were true; that said judgment was entered without authority of law and not in accordance with the provisions of the laws of Nevada, and it decreed that the summons, publication thereof, and judgment were contrary to law, and that no jurisdiction of the Oregon Short Line and Utah Northern Railway Company or its property was acquired thereby, and that the same and each of them were null and void; that the execution issued (4800) in said cause, and the pretended sale thereunder, and the certificate of the Sheriff based thereon, and the deed made in pursuance thereof, were illegal, null and void, and the Court held and adjudged that the plaintiff was the legal owner and holder, and in possession of all of said property described in said complaint, consisting of said railroad, right of way, roadbed and other structures and appurtenances thereto belonging, and its title thereto was thereby quieted and confirmed. The allegation in said cause in respect to said tax proceedings and sale were substantially the same as the allegations set forth in complainant's amended and supplemental bill filed in the Circuit Court of the United States. The pleadings in said case are all in evidence, and appear on pages 3238 and following, of the printed record. Various suits were instituted by the respective companies and their officers against each other in the District Court of Lincoln County for condemnation of right of way, for forcible entry and detention and other suits of like character.

Tax Proceedings declared void.

"The Circuit Court of the United States for the District of Nevada rendered its decree and judgment in the interlocutory proceedings of July 22nd, 1901, on the restraining order originally issued in said cause on April 27th, 1901, restraining the defendants from interfering with the so-called Uvada-Clover Valley Junction-Pioche Grade, until the further order of the court. The motion for

San Pedro enjoined from interfering with grade.

an additional injunction under the amended and supplemental bill filed on June 3rd, 1901, was heard at the same time, and in that cause the court held that the complainant had made out a prima facie case to entitle it to an injunction pendente lite as to that part of the right of way covered by the roadbed from Uvada to Clover Valley Junction, and from thence to Pioche, but that the complainant had not made out such a case as to entitle it to the additional injunction prayed for in the supplemental bill. It expressly declined to consider the question arising under the supplemental bill as to the right of way, maps and surveys thereof, because these questions were still pending in the Land Department of the United States, having jurisdiction of the matter, and because as to the tax title the complainant had already brought suit in the State Court to determine these questions, where it was pending at the time of the filing of the supplemental bill. The opinion of the court is found in 110 Federal Reporter, at page 879.

No decision as to right of way beyond Caliente.

"In the month of September, 1901, certain motions, demurrers and other pleadings were being considered by the Judge of the Fourth Judicial District Court of the State of Nevada, upon a hearing of the matters then before him. At that time, certain negotiations were instituted between counsel for the respective parties with respect to the disposition of all litigation then pending between the companies, and for a settlement of the right to occupy the disputed territory through the Meadow Valley Wash, which resulted in a memorandum (4801) between them, to be submitted to their respective corporations for consideration; said memorandum being as follows: 'Points for consideration in proposed settlement of pending controversies between the Utah, Nevada & California Railroad Company and the San Pedro, Los Angeles & Salt Lake Railroad Company, hereinafter respectively called the Nevada Company and the San Pedro Company.

Negotiations for settlement.

Points for consideration in proposed settlement.

I.

LINE FROM UVADA TO CALIENTE.

"Location and title of Nevada Company to stand confirmed. San Pedro Company to withdraw all contests in courts and land department, and, if requested, to convey to the Nevada Company any interest of the San Pedro Company therein derived from the Utah & California Railway Company, Lincoln County, Nevada, or from private parties.

II.

LINE FROM CALIENTE TOWARDS PIOCHE, KNOWN AS PIOCHE BRANCH.

"Location and title of Nevada Company to stand approved, San Pedro Company to withdraw all contests in all courts and land department, and to convey to the Nevada Company all rights of way secured by it from private parties, upon being paid the cost thereof, and to convey to the Nevada Company all interest derived by it

through the Utah & California Company and Lincoln County, Nevada, without compensation.

"The San Pedro Company, along said line in all places where canyons or defiles are too narrow for two complete 200 foot parallel rights of way, to have room upon the Nevada Company's right of way to construct and maintain its road, to this end dividing the practicable ground in narrow places between the companies substantially equal. San Pedro Company to compensate the Nevada Company for so much, if any, of the constructed grade of the Nevada Company as it may use along said line, and to be paid the cost of right of way along said line which it has derived by purchase from owners of land along the same, and which the Nevada Company may use, the San Pedro Company, however, not to be required to pay anything for land acquired through the said canyons under the grant from the United States.

III.

LINE FROM CALIENTE SOUTHWESTERLY TO NEVADA-CALIFORNIA STATE LINE.

"(a) For about four miles southerly from Caliente, to a point where the San Pedro Company's relocated line approaches the map (4802) line of the Nevada Company, the Nevada Company's mapped line to stand approved, it paying the San Pedro Company the value of any grading or work done upon said line by it prior to this time, and the cost of any right of way which it may have secured from private parties over said distance and which work of right of way may be used by the Nevada Company; the San Pedro Company's relocated line for said distance to be approved.

"(b) From the point named in paragraph 'a' hereof, southerly through Meadow Valley Wash and through California Wash, and to a point about 115 miles southerly from Calientes, and through places too narrow for two complete rights of way 200 feet in width, to be secured without unreasonable expense, each company to take enough ground to construct and make its line, to this end dividing the practicable ground through said narrow places between the companies upon substantially equal basis, each company wherever practicable to secure its right of way for the full width and occupy the same, so that said rights of way will not, except in said narrow places, conflict with each other and to be so located as hereafter provided as to prevent the crossing of one road by the other.

"(c) Beyond the southerly end of the California Wash and near 115 miles from Calientes, the mapped line of the Nevada Company to stand approved.

"(d) Upon the line described in paragraph 'b' of this clause, the companies to at once relocate their respective adopted lines by joint action of their respective engineers, so as to secure improved lines in compliance with the general provisions of paragraph 'b,' and for said line described in paragraph 'b' in case either company uses any constructed grade work heretofore done by the other it

shall make compensation therefor upon the basis of value of the work taken and used. If either company shall use any right of way heretofore purchased by the other company, compensation shall be made upon the basis of cost thereof in proportion to the amount used.

IV.

"All suits in courts and contests in the United States Land Department to be disposed of or dismissed, in order to carry out the foregoing.

V.

"The San Pedro Company is to withdraw its intervention in the State Court Tax Title case and to aid the Nevada Company in securing the best possible adjustment of said matter with said Lincoln County and the State.

VI.

"Hearing of the action between the parties hereto in the Circuit Court of the United States for the District of Nevada, set for (4803) September 19th, to be adjourned for thirty days, subject to the convenience of the presiding Judge of said Court, pending which continuance neither activity nor inactivity in construction work, or work done or omitted to be done along said premises described in paragraph 'b' of Clause III hereof, shall be considered or given in evidence to the prejudice or advantage of either party hereto in any suit or proceeding now pending or hereafter to be brought.

"Testimony may be taken at Salt Lake City, Utah, before J. Tracey Smith, an Examiner appointed by said Circuit Court, and a copy thereof filed with the Register and Receiver of the Land Office at Carson City, with a stipulation providing that the same shall be received and accepted with the same force and effect as if given orally before said officers by the witnesses who gave said testimony before the said Examiner, and except as to the taking and filing of said testimony, the proceedings before said Register and Receiver set for the 16th day of September, 1901, shall also stand adjourned for thirty days, such adjournment to be provided for by a stipulation to be filed with said officers. (September 13, 1901.)

Foregoing memorandum tentative.

"The foregoing memorandum was one drawn up tentatively by counsel in the absence of principals, and without authority from them, but for consideration of the principals. Soon after arrangements were made for the making of the joint surveys mentioned in said agreement, and both roads put their forces of surveyors into the field for the purpose of seeing what could be done. Of course, both parties were fully advised that under the Law of 1875, in such a canyon as this, it would be possible for the line first obtaining the right of way to construct its road, and it would be required, on terms as prescribed by the Act of Congress, to admit other railroads to the use of the line. Neither party in this case desired to be the tenant line, on account of the many and

Joint survey.

well-known objections to such a situation, which any railroad man would at once recognize. It was the intention of Senator Clark and of his associates, to build their line through to Salt Lake City. This intention of theirs was declared openly, and they were recognized in other controversies in respect to the right of way, which, however, as to the available portion of the completed roadbed, had been decided against them by the Courts at the time this tentative agreement was made, and long before the joint surveys were made. The officers of both companies had become fully convinced that it was the intention of each of the others to build their respective roads through to their supposed destinations, but upon consideration of the nature of the country through which the road was to be built, its scarcity of population, being from the western part of Utah to the eastern part of California, practically across an uninhabited desert, with very great difficulties of construction, and for business reasons they determined that the best interest of both roads would be subserved by making the property a common property. (4804) After the completion of these joint surveys and their most unsatisfactory results, the parties considered the matter together, and negotiated for a number of months in respect to terms and conditions upon which an arrangement for its joint construction could be effected. The wisdom of their conclusion in respect to the impracticable nature of the Meadow Valley Wash has been more than justified by subsequent events. From 1890 to March, 1905, the grade from Uvada to Caliente had stood practically uninjured from floods or high waters. The Short Line, built into Caliente by July or August, 1901, and that part of the line stood without injury or damage until March, 1905. After the appropriation of that railroad grade which had been the subject of so much feeling and controversy to a useful purpose was accomplished, the forces of nature began their work, and the flood waters of March, 1905, washed out much of the grade, for about twelve miles east of Caliente, and a considerable distance west thereof, doing a large amount of damage.

Reasons for conclusion that the road should be common property.

Wisdom of the conclusion.

Flood of 1905.

"During the year 1905, the road was repaired and put in working order at an expense of several hundred thousand dollars. In February and March, 1906, another flood occurred, which dwarfed the damages done by the flood of the year 1905, and the Company repaired, or sought to repair, the damages caused thereby and to improve the road by raising the grade some five feet and putting in steel bridges and first class permanent work, which was done at a very great expense, approximating a million dollars. On January 1st, 1910, another flood came, very much greater in volume and force than any of the others, and while at this time we are unable to say just what damage has been done from the best information we have, we are advised that the railroad is swept entirely out of the canyon, and that it is impossible to repair or reconstruct it there, and it will be necessary to abandon that line of road and seek a new route across the country elsewhere. The total mileage of the

Flood of 1906.

Flood of 1910.

Mileage already constructed by O. S. L.

direct line from Salt Lake City towards California already constructed by the Oregon Short Line Railroad Company amounted to about 326 miles and a large amount of material had been purchased and was upon the ground for construction work down the Meadow Valley Wash.

Lines owned by San Pedro.

"The San Pedro, Los Angeles & Salt Lake Railroad Company at the time had only its lines in California, extending from San Pedro via Los Angeles to Pasadena, with a surveyed line for which the right of way had only in part been procured for a distance of about 60 miles, and upon which 60 miles only a small portion of grade and roadbed had been completed, and not to exceed ten or fifteen

Lines to be built.

miles of railroad track laid eastwardly from Los Angeles. There remained to be completed or provided for, the joint line to be constructed from Caliente to Los Angeles, a distance of about 450 miles; while if their purpose was carried out as originally intended, they would have had to construct an independent and practically as an (4805) adjoining line of road, a distance of about 890 miles. The

Time for completion of work.

time required for the completion of the line as a joint proposition was estimated to be about 18 months, whereas the time required to build their entire line from Salt Lake City to Los Angeles, would be in the neighborhood of three years. The Oregon Short Line Railroad Company's projected line could have been built and in operation in eighteen months or two years before the San Pedro Company's line could have been constructed as an independent line.

"Question 4. When was any agreement reached by the parties in respect to the matters in question, if any was reached, after the draft was made of the tentative proposals, and what were the

Negotiations for settlement.

surrounding circumstances in relation thereto? Answer: During the winter of 1901 and 1902, the business representatives of the respective parties held frequent conferences for the purpose of seeing what terms and arrangements could be agreed

Drafting of contract.

upon. After much negotiation by them, the attorneys were called in in the spring of 1902, and as representing the interests then called the Harriman interests, Judge W. D. Cornish and myself acted in drafting all papers and all contracts in behalf of said interests. Mr. Thomas E. Gibbon, General Counsel of the San Pedro Company, acted on behalf of that company, and perhaps three weeks to a month was spent in considering the terms and language of the contract. The lawyers' work was completed and terms agreed upon within a day or two of date of contract, which was finally signed by the parties, and bears date July 7th, 1902, and is one of the exhibits to the complainant's bill.

Preliminary contract of July 7, 1902.

"This contract of July 7th, 1902, was the preliminary contract looking to the final and complete settlement of the terms of purchase of various stocks and interests in companies held by Senator Clark and the San Pedro interests, and the price and terms upon which certain properties owned by the Short Line Company were to be conveyed to the San Pedro Company. As I remember it, there were 512 miles of tracks south of Salt Lake City conveyed and to be con-

veyed to the San Pedro Company, together with a large amount of material and equipment. After the contract of July, 1902, had been signed, active work in the way of making inventories and lists, and examination of property, were carried on by both sides, and the result of their final negotiation and their agreement in respect to the prices to be paid and delivery of properties from each side to the other, was consummated and arranged, and resulted in the contract of June 18th, 1903.

Contract of June 18, 1903.

"Question 5. You recall, of course, the traffic contract between the Southern Pacific Company and the San Pedro Company, which is an exhibit in the record in this case? Answer. I do. I assisted in drafting that contract, and it received very careful scanning and consideration.

Rates on local traffic.

(4806) "Question 6. I call your attention to the provision of that contract in respect to rates on local traffic. You are familiar with that provision? Answer: Yes, sir.

"Question 7. Will you please explain that provision as it was understood and intended by the parties, and the circumstances surrounding the same. Answer: The provision is that the San Pedro will 'in the first instance adopt the local rates and tariffs and charges issued by said Southern Pacific Company for the handling of local traffic by said San Pedro Company, which is or may be subject to competition between the Southern Pacific Company and the San Pedro Company.' The words 'local traffic' written in that contract were meant by the parties who drew it, to include only, or define concretely, the local tariffs of the Southern Pacific upon that portion of its line extending from San Pedro to Los Angeles, from Los Angeles to Pasadena, and Los Angeles to Riverside and San Bernardino. These were the only local lines of the Southern Pacific, which were in touch with any part of the San Pedro Company's lines as then existing, or as proposed to be constructed. It did not refer to through or transcontinental business, as an inspection of Section 1 of that article will clearly show. And again, the Southern Pacific had no local rates to any other points upon the San Pedro Company's line of railroad within the points limited by the description last above given, and could have none without constructing additional roads. The Southern Pacific had no local rate to Salt Lake City. The only rates of the Southern Pacific Company which were ever adopted by the San Pedro Company were local rates between Los Angeles, Riverside and San Bernardino; Los Angeles and Pasadena; Los Angeles and San Pedro. When the San Pedro road was opened to through business on the first of May, 1905, the first tariff which it put in effect between Los Angeles and Salt Lake did not adopt the rates charged by the Southern Pacific for that haul. The Southern Pacific had and has a rate between Salt Lake and Los Angeles, which rate is higher than the first tariff put in by the San Pedro Company. The San Pedro Company adopted and put in force the rate between Salt Lake City and San

Francisco, and that was a lower rate than any rate made from Salt Lake to Los Angeles.

"Question 8. What ultimately became of the provision that you have just been discussing? Answer. In the year 1907, the Legislature passed an Act known as the Cartwright Act," a copy of which was marked Defendants' Exhibit 241 and set out on pages 4807 to 4810. (4810) "This act was passed March 23rd, 1907, but did not go into effect for sixty days. Immediately upon receiving a copy of this act, I concluded that the contract with the Southern Pacific Company containing the provision above mentioned was unlawful, and would subject the San Pedro Company to the payment of penalties as provided for by that act. I immediately advised the officers of the San Pedro Company, and also the officers of the Southern Pacific Company of my opinion in respect to this matter. This resulted, on the 15th day of April, 1907, in the making of an agreement between the two companies absolutely canceling, abrogating and annulling the whole agreement so that no part thereof should be thereafter of any binding force or validity as between the party or parties, or otherwise. A copy of this Abrogation Agreement which I know to be a perfect copy, I now present. It is my best recollection that within a few days after its adoption, a copy thereof was sent to the State Railroad Commission of California and the Interstate Commerce Commission. The agreement was marked 'Defendants' Exhibit 242' " and (omitting signatures and attestation clause) is as follows:

Cartwright Act.

Cancellation of S. P. contract.

"This agreement, made and entered into this 15th day of April, 1907, by and between the Southern Pacific Company, a corporation duly organized and existing under the laws of the State of Kentucky, as party of the first part, and San Pedro, Los Angeles & Salt Lake Railroad Company, a corporation duly organized and existing under the laws of the State of Utah, as party of the second part, Witnesseth, that: Whereas, under date of the 18th day of June, 1903, the parties hereto entered into an agreement consisting of Five (5) Articles; and, (4811) Whereas, it is mutually desired by the parties hereto that all of said agreement shall be abrogated and annulled, inasmuch as the validity of said agreement may be open to question under the recent act of the legislature of California, approved March 23rd, 1907, and being chapter 540 of the Statutes of 1907. Now, therefore, for good considerations to each by the other paid, the receipt whereof is hereby acknowledged, it is covenanted and agreed, by and between the parties hereto, that said agreement between the parties hereto, of date June 18th, 1903, and each and every part thereof be, and the same is, hereby canceled, abrogated and annulled, so that no part of the same shall hereafter be of any binding force or validity as between the parties hereto, or otherwise."

(4811) D. M. HANNAFORD

Hannaford.

Testimony given before Interstate Commerce Commission January 8, 1907, in the city of Chicago.

St. Paul. 2nd Vice Pres't N. P.

Lives at St. Paul; second vice-president of the N. P. (4812) His duties relate entirely to traffic and commercial interests. He has been connected with the N. P. 34 years. The N. P. has its western terminals at Portland, Seattle, Tacoma and all along up the Coast. The N. P. ran to Portland in connection with the Oregon Railway & Navigation Company at first in 1883. In the late 80's the N. P.'s own line was put through from Tacoma to Portland. The principal lines to reach Portland are the N. P., the O. R. & N. and the S. P. Witness attended the traffic meetings held by the transcontinental roads in the old days except during the Winter of 1886-1887. He often met Mr. Stubbs at those meetings. Mr. Stubbs represented the S. P. (4813) Mr. T. M. Kimball, Mr. Vining, Mr. Shelby, Mr. Munroe and whoever their traffic official in charge was at that time, represented the U. P. at those meetings.

Traffic meetings.

Divisions and pools.

Prior to 1887 there were discussions at those meetings as to divisions and pools of transcontinental business. The U. P. and S. P. figured as independent parties to those pools, and the N. P. also. There was at one time an arrangement for division of the traffic, that is, traffic for certain parts of the west being handled by the N. P., and traffic for certain parts farther south being handled by the other lines. In those negotiations the U. P. and the S. P. acted as separate roads. The different lines in those meetings including the U. P. and the S. P., were struggling to get as large a per cent. as possible of the common business. (4814) Prior to 1901 there was active competition throughout the Atlantic seaboard territory and the Chicago territory between the different transcontinental lines for the Pacific Coast business. "Q. All the roads were competing for that business? A. Well, all of the roads lying west of a line drawn north and south through Chicago." The S. P., the Santa Fe, the U. P., the N. P., the Burlington, and the D. & R. G. The G. N. and the C. P. were the principal lines prior to 1901. Of course, they had lines that led up to them. The S. P. has been one of the competitors of the N. P. at Portland on business originating on the Atlantic seaboard.

Roads competing for transcontinental business.

The route made up of the U. P. and O. S. L. and the O. R. & N. have been competitors likewise. (4815) The G. N. has also been for some time in connection with the U. P. via Spokane. The N. P. has participated quite largely in San Francisco passenger business and to a limited extent in freight. His line reaches San Francisco over the S. P. lines from Portland and over the Pacific Coast Steamship Company's boats from Puget Sound. In late years there has grown up quite a large traffic in cotton shipments from the southern states of the United States to the Orient. So far as witness knows all the lines are competing for that. Witness

Cotton traffic.

thinks that for Texas the S. P. takes that cotton by the Sunset route. He guesses they do from all the territories so far as he knows in the south. Considerable of that traffic comes to the witness—it comes up by Kansas City, the Burlington and some to St. Paul in connection with other lines. It comes from Louisiana. He supposes that cotton also moves west over the U. P. (4816) and is shipped to the Orient from Portland. When it is taken from the south by the Sunset route it is shipped to the Orient from San Francisco. He doesn't think they ever bring any up to Portland via that route.

General agents.

It has been the practice of witness to maintain general agents or commercial agents at Chicago, Pittsburg, New York, Philadelphia, Boston and Buffalo. They get all of the business they can that the railroad is able to carry and route it over its line. It includes transcontinental and Asiatic business. The agents of the N. P. meet with competition at such places with agents of the S. P. and the U. P. Recently witness has met agents who represent both the S. P. and the U. P. Witness feels that those commercial agents are a great assistance. The N. P. does not do a large Winter tourist business. It goes further south. (4817) It gets a large Summer tourist passenger business from California returning via the N. P. in the Spring. "That I presume would be called Winter tourists." A great deal of the Winter tourist business is handled by round trip tickets. The business is solicited. The N. P. does not handle as much freight into San Francisco as it did prior to 1887, but handles some business there still.

Tourist business.

Not as much business into San Francisco as prior to 1887.

Business from middle west.

All the traffic in the middle territory of this country naturally, that is, the Pacific Coast traffic or Asiatic traffic from the middle territory both ways, going and coming, is to some degree competitive between these various lines beginning with the S. P. on the south, taking in the Santa Fe, the U. P. and the G. N. Some of it of course is quite strongly competitive between all the lines. The further east you get, and the further towards the south that you get. He thinks the S. P. are competitors for the Chicago business. The N. P. is very strongly, and all the other lines are that he knows anything about, and he supposes the S. P. is and he thinks they are in connection—either via the Illinois Central and New Orleans, or via some of their El Paso connections. He doesn't see why they should not be. If he was running the road he would be. The rates are so adjusted from New York and back nearly to Pittsburg or about to Pittsburg and Buffalo—in what is known as Trunk line territory—so that the S. P. and all these northern lines are competitive for Pacific coast business in that region.

Mr. Stubbs represented S. P. and C. P. at rate meetings.

(4818) At the railroad meetings which took place in the good old times prior to 1887, Mr. Stubbs or whoever represented the S. P. would also represent the Central Pacific route. "Q. So on the theory of my friends here he was representing competitive lines, was he not? A. I don't know what his theory is. Those are the two

lines that he represented." (4819) Witness has no personal knowledge of the legitimate Chicago business that goes to California via New Orleans and the Sunset route. It is 900 miles from Chicago to New Orleans. 900 miles from Chicago west would be about 400 miles west of Omaha. Witness does not think that a great quantity of California freight from Chicago is sent via New Orleans. He thinks it mostly went via El Paso.

Not much Chicago business to California via New Orleans.

(4820) "By Commissioner Lane: * * * Q. Has there ever been any competition from eastern points to San Francisco between the three roads, one on the extreme south, the Sunset Route, one in the center made up of the Union Pacific from Omaha west to Ogden, and from Ogden up to Portland and from Portland down to San Francisco by boat and the Northern Pacific from Duluth out to Puget Sound, and from there by boat down to San Francisco? A. I don't know that there has ever been any competition between the Union Pacific, Oregon Short Line and the Oregon Railway & Navigation Company, or the Southern Pacific for San Francisco business as against the Sunset Route. The Northern Pacific has done, when its facilities enabled it to do so, quite an amount of competitive business for San Francisco. We had a share, getting from six to eight per cent. of that business in the early days."

Does not know of competition between Sunset and Portland route of U. P. for San Francisco traffic.

N. P. had from 6 to 8 per cent of San Francisco business in early days.

It is no longer possible for the N. P. to get it; because the people won't patronize it. The short rail lines I think are preferable. They prefer the short rail lines. Witness could not, without figuring it up, tell the difference in distance between freight originating at Buffalo, going to New York by rail, and from New York around by water to Galveston, and Galveston to San Francisco by rail and freight originating at Buffalo, carried by the lakes to Duluth and from Duluth to Puget Sound and then down by water on the other hand; but he thinks it is 1,500 miles in favor of the line from Duluth via Portland and the water down, perhaps not over 1,200. The N. P. has the water haul at the western end and the other people have the water haul on the eastern end (4821); "but the advantages of the southern, Sunset Route on San Francisco business are very great. There is the water competition, they can take their business in New York, gather it up from the various producing points in New England and New Jersey, and adjacent to New York, take it into their warehouses in New York and put it all on to one steamer, and have it all reach New Orleans or Galveston at one time. I have understood —it may be good service—but I have understood it was lack of facilities that forced them to take that business right off that very day and send it up to San Francisco in special trains, but unfortunately the all-rail routes cannot equal that service on 6,000 tons of freight that is ready to go on the same day. This whole 6,000 tons on the Sunset Route gets there at one time. If it was not for that service all under one control I should feel quite like opening the line that you mentioned from Buffalo to the Puget Sound to the

Advantages of Sunset route.

Special trains.

Service under one control.

water and down to San Francisco, but I cannot do it because I have got to depend on a lot of lines between Buffalo and St. Paul to do that same service that they do with their boat direct to New Orleans. Q. It is because of the superiority of the route and the superiority of the service that there is not active competition between the Northern Pacific and the Sunset, for San Francisco business. A. We cannot equal that service."

N. P. cannot equal the service.

The N. P. has tried to equal it off and on for 20 years. "Every time that the boat service on the Pacific has been a little better we thought we could get in and do some of it, but we have failed almost every time. We do some business down there, enough so that we are mentioned in the expenses of weighing, and so forth, but not very much." The N. P. appears in the tariff; and has a through rate. Supposing that the Sunset Route and the Santa Fe and the U. P. and the Central and the O. S. L. and the G. N. and the N. P. were all owned by the same persons and all under a common direction as to traffic, that Mr. Stubbs was the traffic director, witness thinks that the same competitive business would exist then that exists now, and that there would be practically the same condition of things. (4822) He doesn't see how they could be either any better or any worse. The rates are not made by the overland carriers in any respect. They are made very largely by water competition, the Pacific Coast rates. "Of course there is no one connected with that trade but what will agree with me I guess, in saying that we get all we can out of it every time. Q. All you can on the freight? A. Yes, and it is pretty nearly the cost of handling the business."

Same competitive conditions would exist if all transcontinental lines were under one management.

So far as rates are concerned, or facilities are concerned and competition between the lines is concerned, his opinion is that that condition to-day would not be changed if all the lines were under a common ownership. "Comr. CLEMENTS. Why is that so—is it because they all act in unison now? WITNESS. I should hardly want to put it that way. Tariffs are made. I know of no two competing points in the United States where the tariff is different between points by different carriers over 24 hours or 30 days at least. Perhaps it might be now. Just as quickly as they can get them the same they must do of course, so that the tariffs are uniform. You cannot operate two roads having two sets of tariffs. Comr. CLEMENTS. Have there been conflicts and contests between competing carriers in years past in which the rates figure away down to almost nothing? WITNESS. Some very disreputable ones that I have been concerned in myself.

Tariffs are uniform.

"Comr. CLEMENTS. From time immemorial the public generally has believed that there was more vitality in competition and separate ownership, and separate action. Is that all a mistake? Has the policy of the Government been altogether mistaken in regard to that fact? Does it make no difference whether one man owns or controls everything or whether there is a dozen different inde-

pendent managements existing and independent ownerships? WITNESS. I think there has been a great deal of mistaken judgment in regard to that. I am not prepared to give a discourse on it myself." Witness doesn't think his opinion is rather speculative and theoretical as to what would be the effect if all of these roads were under one management. It is based upon a pretty long and hard experience and he has never known anything but temporary warfare and struggles between carriers to get a larger percentage of the business or something of that kind, that have made any very material difference in the rates, except that there has been a general decrease in them ever since he has been in the business.

Same service with roads under one management.

(4823) "By MR. SEVERANCE. Q. Just a word about this answer that you made to Mr. Lane that you think conditions would be the same if all the railroads now competing with each other were under one management. You don't think, do you, that if there was no incentive given to these separate lines to give good service—assuming the rates are uniform—that the same situation would exist that does to-day? A. I don't see why it should not. Q. Well, self interest is the strongest thing to move people to do things in this world. A. Yes, sir. Q. Now, if you own a railroad and I own a railroad and we are reaching the same points and I am trying to get the business and you are trying to get the business, although we may agree to charge the same rate, we will each try to give better service than the other. A. We each ought to try to give the best service we can.

(4824) "Q. If a shipper has a lot of commodities to transport and we are each after them and one of us is able to give the cars quicker than the other, he will get the business naturally? A. Yes, sir. Q. Or, if he can give quicker service in transit? A. Yes, sir. Q. You don't mean to say, do you, that if you eliminate all that activity, the situation will be just the same as it is now where that activity exists? A. I don't know what you mean by eliminating the activity. The management of the Northern Pacific Railroad, the only one that I know intimately about is putting on extra passenger trains to-day, locally in Montana where we have no competition whatever, because the people complain about waiting for our delayed overland train. We don't have to do that because there is any ownership except our own. * * * Q. You don't think it makes any difference if there are other lines preparing to take the business and give good service. You think the whole thing is done from a sense of duty and that competition does not cut any figure? A. That is my view."

Competition cuts no figure.

(4825) Witness thinks that where two roads are soliciting the same business between the same points that they might be called competitors for that business. The competition of lines west of Chicago reaching the Pacific Coast consists of each trying to get the business and carry it and get the revenue out of it. It has in the past resulted many times in one of the lines cutting the rates or

reducing the rates by tariffs or otherwise, when they thought they were not getting a fair share of the business, or when they thought someone else had gotten in before them. Witness thinks that if all the transcontinental lines were owned by one corporation the service would be as good as it is now and the rates would be practically the same. Witness thinks the competition would be the same if they all belonged to one corporation. Each railroad would have to have its corps of officers who would be compelled to get all they could for their lines.

Reductions would be made.

(4826) Witness thinks reductions would be continually made, but not against each other. "Q. There would be no interest for doing it. A. There would be a reduction to get the business." (4827) Witness thinks that the substitution of one rate maker for two rate makers for those two roads (N. P. and G. N.) would have no effect upon the possible reduction of rates. Assuming that the man handling them handled them to the best of his ability. He thinks that there is some value in competition between roads in the securing by the shipper of facilities in transportation. "Q. That is, under the present condition of things it would be far better to have roads competing between each other than to have one (4828) road own all the transportation facilities of the country, so far as the shipper getting his car is concerned. A. I would not want to say yes to that question just in that way. I think there are conditions under which competition, perhaps—where a would-be shipper has got better service by there being two roads, than where there was one. I think those are rather exceptional cases, though. It depends largely on the management." (4830) The N. P. has no arrangement with the S. P. of any kind and receives no benefit from staying out of San Francisco business.

Conditions where two roads would be better than one.

(4831) If he used the water and got his road a little of the San Francisco business, he doesn't think the S. P. might compromise by not going up into Puget Sound territory. "The rate from every point in the east to San Francisco is exactly the same as it is to Seattle, that is near enough for all practical purposes. The distances are about the same. Now, in cutting that we might get a small amount of business, on the small amount of business that we should get from San Francisco we would have to carry through a very large business on our own reduction of that rate. We cannot reduce the San Francisco rate without reducing the Puget Sound and Portland rate. If I could I think I should carry a larger percentage of the San Francisco business than I do, but I cannot do it. I have got to pay the penalty myself by cutting the rates on our own business. Q. That is the reason, I suppose, that it is not wise for them to carry business up into your territory from San Francisco by water, because you have got to treat your terminal rates on San Francisco Bay and Puget Sound as sacred to yourselves? A. I don't know whether it behooves them any to do some of it or not, but there is not any understanding with us in regard to it."

Effect of cutting rates to San Francisco.

If witness was traffic manager for all the transcontinental roads and their earnings were going into the pockets of the same owners, (4832) no matter from which line the earnings came, he would still be under every inducement to make the best possible showing that he could for the N. P. and earn all that he could for the property. If the owners called on him for increased earnings or increased dividends, he doesn't think it would be much easier for him to produce that result than it would be if there were half a dozen different managers representing half a dozen different complicated ownerships in these several roads. He thinks if he was running one of them he could do that a good deal easier than he could if he was running all of them. (By Comr. CLEMENT.) "Q. You think you could increase the rates on your road and manage in competition with the others easier than you could if you managed all of them? A. Yes, because we could not raise the rates without your consent. Q. You could not? A. Not very much. You would be sort of watching over that, I guess. Q. We might be doing something about it. We don't make your rates. A. No, but you do not allow any raise of them without giving you thirty days' notice that we are going to, and people these days don't stand a raise very pleasantly.

If witness were traffic manager for all the lines.

(4832) B. CAMPBELL

Campbell.

Testimony given before Interstate Commerce Commission on January 21, 1907, in the city of Seattle.

Witness lives at St. Paul; fourth vice-president of the G. N. Has occupied that position two years. Has charge of the Traffic Department. (4833) For fifteen years prior to that was general freight agent and traffic manager and assistant traffic director of the O. R. & N. and the U. P. He was general freight agent and the traffic director of the O. R. & N. and its predecessors before the receivership, and was for a time assistant director of traffic of the U. P., O. S. L., O. R. & N. and S. P. Witness was Mr. Stubbs' assistant at Chicago. He was there two years and left at the end of 1904. He was succeeded by Mr. Store. Immediately prior to going to Chicago with Mr. Stubbs, witness was traffic manager of the O. R. & N., with headquarters at Portland. He occupied that position seven or eight years. Before that was general freight agent.

St. Paul. 4th Vice Pres't G. N.

Former traffic director, O. R. & N.

(4834) As general freight agent had no jurisdiction over the passenger department. As traffic manager also had jurisdiction over passenger matters. When witness was with the O. R. & N., that company had rail lines extending into Oregon and Washington, probably a thousand miles; certain steamboat lines on the Willamette. Columbia and Snake Rivers; a line of steamships between Portland and San Francisco, and between Portland and the Orient. The main line of railroad extended from Portland to Huntington and made connections at Huntington with the O. S. L. That in turn connected with the U. P. at Ogden or Granger. There was a

Lines of O. R. & N.

through freight service and a through passenger service. The through passenger service extended to Chicago via the Northwestern, and the through freight service from Council Bluffs, and points east by connecting lines. The boats on the Willamette River ran between Portland and Corvallis; that is substantially 100 miles from Portland.

Willamette River boat line.

The service with those boats varied according to the stage of the water. It was daily service as far as navigation would permit, say as far as half the distance, and irregular service beyond that. That line did both a passenger and freight business, both up into the country and back from the river. One steamship line ran from Portland to San Francisco. (4835) Those ships were owned by the O. R. & N. There were three of them for the most part. They had a tonnage of about twelve and fifteen hundred tons each. Those ships were engaged in both passenger and freight traffic between Portland and San Francisco. These steamers took down to San Francisco some of the traffic that originated up the Willamette River and which was brought into Portland by its steamships. That traffic consisted chiefly of farm products, wheat, oats, potatoes, hay —not much hay—some paper manufactured on the Willamette River.

Steamship line between San Francisco and Portland.

The hops moved principally by rail, occasionally some went by steamer. As to that traffic along the Willamette which the O. R. & N. brought in from the country, its line of steamships was in no particular competitive with the S. P. line running south from Portland. The S. P. did not assume or undertake to meet the competition of the ocean line. Nor were the through line from the Willamette Valley points and the S. P. competitors. What witness meant by competitors is, they did not make the same rates. He doesn't think the S. P. solicited the business actively or if it carried any of it. Up to the time he was familiar with the situation the S. P. did not attempt to make rates from that territory south that were low enough to compete with the ocean, with the all-water carrier.

Willamette valley traffic.

S. P. did not meet competition of ocean line.

(4836) The business transacted by the boats on the Willamette River was competitive with the S. P. into Portland, as to practically all the traffic. And from Portland on that traffic moved largely by steamer. Witness does not think that potatoes moved to any considerable extent from that same region south to San Francisco over the S. P. where it was competitive with the all water route. He doesn't think that from that same region that was tapped by these steamboats on the Willamette, potatoes moved south over the S. P.; not to his knowledge. When the potatoes were beyond the reach of the all-water carrier, south of Salem or Eugene, they would move south over the S. P. Witness does not think potatoes moved by rail from Salem to San Francisco. From points farther south, where they were remote from the all-water route, witness thinks they did. Generally speaking, witness thought that there was no substantial

Traffic on river competitive into Portland.

Potatoes not competitive.

competition between that water route, up the Willamette, on potatoes as against the S. P. to San Francisco. He thought the all-water route virtually controlled the business.

(4837) Hops were carried by the boats to a limited extent. "Q. And were they also carried south by rail? A. We carried through to the seaboard by rail. They didn't as a rule go to San Francisco by rail." The hops originating in the Willamette Valley moved to the Atlantic seaboard over the Sunset Route, and also by the U. P. route. He doesn't think that to any extent hops moved by this steamship route to San Francisco and thence transferred by rail to the seaboard; he does not know of any such case. There is not a considerable amount of passenger traffic over these boats of the O. R. & N., except between Portland and San Francisco, probably. There was a large traffic in that. There was also a passenger traffic between Portland and San Francisco by rail. And as to that business, the line of steamers that was run by the O. R. & N. and the all-rail route of the S. P. were competitors.

Hops.

Passenger traffic between Portland and San Francisco.

(4838) A small quantity of the business originating in the Atlantic seaboard territory moved to Portland by the Sunset Route. The larger part of the business from that same territory came to Portland all-rail over the U. P. and the N. P. The rates over these three different lines of communication were generally equal. As to the S. P., Sunset Route, cutting the rates some ten years ago in competing for that Portland business as against the U. P. line and the N. P.: Witness has been told that the rates were cut, but as a matter of fact he does not know that they were. That business for which they were competing in that way was merchandise and things of that character coming through from the seaboard territory. With reference to this cut in the Portland rate by the Sunset Route, witness doesn't think that the S. P. got at any time more than from three and five per cent. of the Portland competitive business. That is his best judgment, based upon his general knowledge of the situation.

Seaboard traffic.

S. P. at no time got more than 5 per cent of Portland competitive business.

(4839) A short portion of the time, in those days, the O. R. & N. maintained one agent in Chicago, but generally speaking they relied upon the Union agencies to secure the business. There was a steamship line operated from Portland to the Orient, known as the Dodwell Line, prior to 1901. Witness presumes it was in 1897. They operated for three years. Those ships touched at regular ports of call in Japan and China,—the same ports to which the ships of the Pacific Mail and the San Francisco lines proceed. The O. R. & N. did not maintain commercial agents in the Orient and solicit traffic for that line. They got their traffic through Dodwell & Co. They maintained agencies. Dodwell & Co. had the ships under charter and were operating under a contract with the O. R. & N. The cargoes that they brought to the port at Portland from the Orient in so far as they were destined to points in the east were delivered to the O. R. & N., and went east over that line, and the

Dodwell line.

O. S. L. and the U. P. The traffic was distributed, generally speaking, east of the Missouri River and as far as the seaboard.

(4840) The ports of call witness spoke of in Japan and China were: Yokohama, Kobe, Nagasaki, and Shanghai and Hong Kong. After the Dodwell boats ceased running there, there was a line —an irregular service operated for a short time by vessels which a man by the name of Graham claimed to have under his control. After Graham quit, the O. R. & N. organized a corporation of its own to handle the steamship business, called the Portland & Asiatic. Witness believes that was in 1900. When witness left the service of the company, the ships of that line were still running. The O. R. & N. had a general agency at Hong Kong, soliciting business for those boats. Mr. Cameron was the agent. He is in London now, as European agent for the Canadian Pacific.

Graham's line.

Portland & Asiatic.

Passenger traffic on Willamette River.

(4841) The boats on the Willamette River carried passengers in a limited way from Salem down to Portland. The rates on the steamship line between Portland and San Francisco were substantially the same both winter and summer. After the U. P. purchased the stock of the S. P. in 1901, witness still continued in Portland as the traffic manager of the O. R. & N. In addition to that he occupied an advisory relationship to the S. P. After that time he reported to Mr. Stubbs in Chicago. Mr. R. B. Miller is the present general freight agent of the O. R. & N. He has occupied that position for about five years. Before that was general freight and passenger agent of the S. P. lines in Oregon for a short time. Previous to that was assistant general freight agent of the O. R. & N.

(4842) Mr. Morse was a soliciting freight agent in Portland for the O. R. & N. Mr. Coman was for a time general freight and passenger agent of the S. P. lines in Oregon. For a time prior to that, he was at Salt Lake City for the O. S. L. Mr. McCusker was soliciting freight agent for the S. P. lines in Portland. "Q. Do you recall, Mr. Campbell, that some time after the purchase of the Southern Pacific stock by the Union Pacific, that you called these various gentlemen that I have named, or at least a part of them, into a conference in your office in Portland and told them in substance that in the soliciting of business for these lines they should solicit the Atlantic seaboard business for the Sunset Route and business west of seaboard territory for the Union Pacific route unless the shipper was particularly anxious to have the stuff the other way, or in substance that? A. There was such a conference, but no such instructions were given. * * * The instructions were given that each representative should work for his own road in preference; failing to get the business that way, to work it for the other. Q. Wasn't it stated in that conference that the effort should be made to get the business from the seaboard routed over the Sunset Route? A. I don't think so. I don't think any such instructions were given, because I am sure that the Union Pacific was not put out of the seaboard business with its connecting lines. Q. That is not

Meeting of witness with soliciting agents in 1901.

Instructions to agents.

Instructions as to seaboard business.

what I am asking you, Mr. Campbell. I am asking you whether, as a matter of fact, in that conference you did not either instruct or advise, I don't care which you call it, that the business from the seaboard territory should be secured if possible (4843) without offending the shipper or disobliging him, over the Sunset Route? A. To the best of my memory, no, sir. * * * But to the best of my recollection the instructions were as I have stated them here this morning, that each man would work for his own interest; failing to get the business that way, to help out the other fellow. But I am quite positive in the nature of things that have existed, as they have existed since that time and up to the time I was last familiar with the workings of the lines, I am quite confident that the Union Pacific—that the instructions which you describe were not given."

Each man for his own interest; failing in that help the other fellow.

Prior to that time witness had never assumed to give any instructions to the S. P. soliciting agents. He assumed to advise them after that time, and in this particular case thinks he acted on his own initiative. "In general, of course the directions emanated, the general instructions emanated from Mr. Stubbs' office." (4844) His general instructions from Mr. Stubbs were that as to the business in Portland he was in chief control, so that he felt at liberty to call in the S. P. men and give them advice, or instructions. Witness has heard the Sunset route called the Hundred Per Cent. Route. Any line that gets the entire haul is usually described as the Hundred Per Cent. Route. Business originating on the seaboard, which came by the Sunset Route, a hundred per cent. of the revenue came to the S. P. The S. P. absorbed the rate into New York from points in New York state and Pennsylvania, as far up as an arbitrary of fifteen or twenty cents per hundred lbs. would take them, and they did that for the purpose of getting the business away from the all-rail routes.

Relations of witness to S. P.

100 per cent. route.

In Cincinnati witness thinks the business to San Francisco moved both ways, but most largely through the northern gateways to Portland. "I think it moved wholly by the northern gateways." Witness does not think there was ever an arrangement by which traffic came from the east over the Santa Fe to San Francisco, and thence to Portland over the boats of the O. R. & N. At one time there were boats running from Portland to Sound points. It was the year of the Seattle fire,—1889. (4845) At the present time witness is the vice-president in charge of traffic for the G. N. He did not publish rates into San Francisco from the Sound points—he published through rates to San Francisco, going by rail over the G. N. and then from Sound points down to San Francisco by the Pacific Coast Steamship Company. The N. P. publishes rates the same way. That moves over the Pacific Coast Steamship Company. "Q. Do you happen to know whether any traffic moves to Sound points from San Francisco originating on the line of the Union Pacific or its connections or the Sunset Route by way of these boats

Cincinnati traffic.

No Portland route via Santa Fe.

San Francisco rates via Puget Sound.

of the Pacific Coast Steamship Co.? A. I do not know of any, no, sir."

O. R. & N. and G. N.

The Pacific Coast Steamship Company has been running a long time. Witness is not an officer or director in it. The O. R. & N. makes a junction with the G. N. at Spokane. Business moves to Portland from eastern points by way of the G. N. and Spokane and thence over the O. R. & N. From points in the east generally, east of the Missouri River meridian. Perhaps some lumber and shingles, and maybe a little salmon, but he thinks nothing beyond that, moves from here to points in Utah, such as Salt Lake by way of the G. N. (4846) to Spokane and thence by the O. R. & N., and thence down over the Short Line. Lumber moves to the east by the O. R. & N. from Portland and that region. It formerly moved to the east by way of the Ogden gateway, going from Portland to Sacramento, and at the same time moved to the Ogden gateway by the O. R. & N. and the O. S. L.; thence went on to the east in those days over the Rio Grande or the U. P. There was a time during witness' connection with the O. R. & N. that it was independent of the U. P. The first control secured by the U. P., witness thinks, was in 1889. He is not very certain of those figures. Afterwards the U. P. receivership lost control of the O. R. & N. in 1894. Mr. O'Neill was appointed receiver on the 4th of July, 1894. The O. R. & N. was reorganized on August 17th, 1896.

Lumber to Salt Lake.

O. R. & N. connections during receivership.

(4847) During the time the stock ownership of the O. R. & N. was not in the U. P., or during the time that it was operated by the receiver, Mr. O'Neill, the O. R. & N. still maintained its close relations on eastern business with the O. S. L. Its two principal connections to the east were via the G. N. and the O. S. L. The third route was via Wallula and the N. P. After the U. P. had acquired control, eastern shipments were solicited over the O. R. & N., the O. S. L. and the U. P. The steamships picked up at San Francisco, commodities that were brought from New York by way of the Isthmus of Panama, consigned to Portland.

Portland business via Panama.

Steamship lines under Mr. Schwerin.

(4848) The steamships between Portland and San Francisco were taken out of the O. R. & N. and put into a separate corporation sometime in 1903 and Mr. Schwerin of San Francisco was placed in charge of those boats. He has also been placed in charge of the P. & A. line since that time. Witness believes that he is also in charge of the Pacific Mail. From 1886 to the Spring of 1902 witness was the chief officer in charge of the freight traffic of the O. R. & N. In 1902 he became assistant traffic director and had headquarters in Chicago, and held that position for the U. P. and the S. P. There were other steamship lines operated between San Francisco and Portland at the time the O. R. & N. operated that line. That line was in operation when witness went to that company. They were then operating three boats, (4849) the Elder, Columbia and Oregon. They were of about 1,500 tons each. The Columbia may have been about 1,800 tons. The southbound cargo consisted

Steamship lines between San Francisco and Portland.

almost entirely of farm products originating in the Willamette Valley and along the line of the O. R. & N. They did not carry a great deal of lumber; some. The S. P. did not seriously attempt to compete for the traffic along the Willamette River to San Francisco. Willamette river traffic.

Any competition that it engaged in with the boat line was to Portland. That was between points wholly within the state of Oregon. As to the passenger traffic that moved over that line, the rate was not an important factor in that competition; it was a limited factor. In the winter season it was a question of choice,—well, both winter and summer it was a question of choice with the passenger. In the winter time they preferred the rail line and in the summer time more of them preferred the water. After the U. P. acquired the stock of the S. P. in 1901 so far as the witness' knowledge goes there was no appreciable change in the course of that business—the business of these boat lines and the S. P. lines to San Francisco—neither in the rates nor the character of the traffic. Up to the time that his connection with these properties ceased in 1903,—conditions have continued about the same as before. (4850) His recollection is that they usually classed the Sunset and Gulf route to Portland as a three to four per cent. route. As to the relative distance via that route as against the all-rail lines that handled the bulk of the business, it is as far from New Orleans to Portland as it is from New York; then there was the water haul in addition from New York to New Orleans. The Sunset Route as to Portland business from the Atlantic seaboard, was virtually an impracticable route. Wholly within state. Matter of choice between sea and rail. No change in 1901. Sunset classed as a 3 to 4 per cent route.

Samuel Samuels & Co. was the first line that operated from Portland to Asiatic ports in connection with the O. R. & N.,—no, Frank Upton put on a line, "oh, I guess as far back as 1885." The O. R. & N. Co. did not own that line. Upton was followed by Samuel Samuels & Co. They commenced probably in 1887 or '88. Witness would not undertake to be at all definite on these dates because he doesn't remember them. Frank Upton quit, because there was no money in the business. The Samuel Samuels line quit for the same reason; and Dodwell following them quit for the same reason; and after that the O. R. & N. organized its own company, the Portland & Asiatic. The P. & A. lost money every year. Asiatic steamship lines. Frank Upton and Samuel Samuels & Co. No money in the business. Dodwell. Portland & Asiatic. Lost money.

(4851) Those lines were established solely for the purpose of affording an outlet at Portland for the products, agricultural products, produced along the line of the O. R. & N. as against the competition of the N. P. bringing those products into Puget Sound where they could find an outlet. The principal product was wheat and wheat product,—flour. That flour moves largely to Asiatic points. If those lines had not been established, that wheat originating,—wheat and other farm products originating on the rail lines of the O. R. & N. Co., would have gone very largely to Puget Sound and sought an outlet that way, reaching the Sound by the N. P. The O. R. & N. felt that it could recoup itself somewhat for the Line established to handle wheat and flour. Without those lines, wheat would have gone to Puget Sound.

loss of the steamship lines by holding this traffic to its rail lines. That was the principle on which they acted.

Arrangement with Dodwell line.

The arrangement between the O. R. & N. and the Dodwell line was for interchange of traffic on a division of the through rate. The O. R. & N. did not charter the boats; did not own the boats; and had no interest in the profits of the boats. It made no guarantee against losses. In other words, it was a connecting rail and steamship line under separate management but with arrangements for through rates and interchange of business. That arrangement continued for about three years. The arrangement with the Samuel Samuels line, and also with the Upton line, was of substantially the same character. Each of these lines after trying the business for a while, quit because they could not make any money.

Arrangement with the other lines.

O. R. & N. forced to organize its own line.

O. R. & N. had to pay its guarantee.

(4852) The P. & A. was organized by the O. R. & N. because it could not arrange with others satisfactorily to maintain a line there. The O. R. & N. made a guarantee for a time to the Samuel Samuels line, particularly on flour. It had to pay the amount of the guarantee. The sailings of these ships were monthly. "Q. Wasn't it impossible for them sailing only monthly to compete with Asiatic ports, particularly from points east, with the lines via San Francisco, the Pacific and O. & O.? A. They handled practically no business from the east." The demands of the flour traffic had the first call on the tonnage of the vessels. They handled practically no tonnage from east of the Missouri River, very little. On the inward trips of the line of steamers, they handled some, picked up some business in Asiatic ports, for the various ports of the United States. Witness thinks the volume of that would not exceed an average of a thousand tons a month. The business of those ships was, witness thought, about ninety per cent. westbound and ten per cent. eastbound.

No business from the east.

Small amount of inbound business.

90 per cent westbound; 10 per cent eastbound.

Though the G. N. has in rates to San Francisco via the Pacific Coast Steamship lines, substantially no (4853) business really moves under those rates—that is, far eastern business. Far eastern business is business east of St. Paul and Minneapolis. There is business moves west of these points, eastern Washington and Montana. But there is substantially none from points east of the Missouri River. Witness does not know how long these rates have been in. They were there when he was there. Witness thinks the G. N. has in similar rates via the O. R. & N. and steamers down by way of Portland, to San Francisco; it did have. He thinks those rates are in yet. The result via that line is nothing, "our eastern business,—I don't know that we handled even any Montana business that way. I guess they are practically—I guess the business is practically *nil* via that route."

Substantially no eastern business via Puget Sound.

No business via Portland.

Lumber via S. P.

Lumber formerly moved from Portland via the S. P. to Ogden and points east of Ogden; chiefly to points reached on and by the Rio Grande road and some of the U. P. This testimony was based

on what he knew to be the situation say prior to two years ago. He does not know whether it moves that way to-day or not. "Q. And that business originated at Portland proper, not at points south of Portland. A. Some of it originated at Portland proper. Q. What was the amount of that business; was it considerable or insignificant, Mr. Campbell? A. Well, I think it was moderate; I do not remember just what the volume was; I do not think it was heavy. Q. Wasn't there an abundant supply of lumber on the Southern Pacific line south of Portland? A. Yes. Q. To move that way it had to be carried over two ranges of mountains, didn't it? A. Four of them."

(4854) Assuming that the U. P. lines and the S. P. were entirely separate with reference to ownership, and that the O. S. L. and the O. R. & N. are a part of the U. P., treating that as one line—at one time prior to the receivership the U. P. interests, those lines were all operated by the U. P. under one common control—that line made up of the U. P. and the O. S. L. and the O. R. & N. to Portland and thence via boats to San Francisco, never competed at any time prior to 1901 for business with the S. P. for California points; because it was an impracticable route at even rates and the U. P., to open such a route would stand to lose more from diversion of business that the S. P. or Central Pacific could make to its competitors, than it would gain by opening the Portland route.

No competition with S. P. via Portland route.

If witness was in charge of the traffic of the U. P. and the O. S. L. and the O. R. & N., and was working in the interests of these lines alone without any regard to the interest of the S. P. lines, he would work that business by way of Ogden. He would consider it to the interest of his lines to manage it that way. He would consider it practically suicidal from the railroad standpoint to try to work that business by way of Portland. It has always been worked by way of Ogden, ever since he has known those lines.

Would work all U. P. business to California via Ogden.

Has always been worked via Ogden.

(4855) The boat operating on the Willamette River above Salem, had a capacity of 75 tons. It ran about once a week. Her draft was six inches light. The occasion of this light draft was shallow water. The river was full of snags. The boat did not always have water enough to operate above Salem during the entire year. Above Salem the boat tied up about nine months of the year, above Independence. (4856) The boat just referred to by witness was wrecked. The name of the boat was "Gypsy." Witness thinks three boats were operated below Salem. Salem is 50 miles by rail from Portland, and about 75 by river. It took the boats all day to go down and make all the landings. Generally they would leave Salem about 6 and get in about 4:30 in the afternoon. The boats did more or less business from Oregon City and from Salem. The Oregon City business was for the Paper Company, and the Salem business was for the flouring mills. The flouring mills ran elevators along the line of the O. R. & N.

Boat service on Willamette River.

Rates in Willamette Valley.

The rates in the Willamette Valley were established longer ago than witness knows anything about. They have been practically permanently maintained during the whole entire period that witness knows of. (4857) The Portland flour mills were parties to the subsidy with the Samuel Samuels line. They were interested in that line, in order to secure an outlet for their flour. They owned mills on the lines of the O. R. & N. The Portland Oriental line was established practically altogether for the accommodation of that particular mill. It had no other reason really for its existence other than that. The largest mill about which witness has been testifying is located at East Portland. They have mills at Spokane and Dayton. Their flour also moves down the coast in the O. R. & N. ships. Some of it was trans-shipped at San Francisco. Witness does not think that any of the flour went to New York, or any points in the Atlantic seaboard. He thinks their business was all on the Pacific side.

Portland flour mills responsible for Portland & Asiatic.

None of its flour moved by rail.

None of their flour that witness ever knew of moved by rail. (4858) Oregon City, where the paper mill is located, is 16 miles from Portland. The paper moved to San Francisco by boat. Witness thinks it all went by boat. He feels confident that it did. That all came into Portland and went down the coast on the O. R. & N. boats.

Flour from Oregon City moved to Portland locally and to San Francisco. No flour that witness ever knew of moved to San Francisco by rail. It always went by the O. R. & N. boats. (4859) A little hard wood lumber was brought in by the Willamette River boats, but not a large volume of it. A small amount of wool was brought in by those boats. Witness thinks that the wool ultimately moved east over the O. R. & N. Wool from Willamette Valley points also moved east over the S. P. either via Sacramento or Sunset route. The rail line and the boat line were both soliciting passenger traffic between San Francisco and Portland, and got all the business they could. Grain of several kinds and potatoes moved from the Willamette Valley into Portland by the S. P. Witness thinks that some of those products that came in by the S. P. proceeded to San Francisco by boats other than the O. R. & N. boats. The other boats participated in the general traffic from Portland. The California and Oregon Steamship Company ran those other boats. Their headquarters were in San Francisco. The O. R. & N. boats had a three-day service.

Wool.

Grain and potatoes.

(4860) Witness means a sailing every three days. In stating that the route from the Atlantic seaboard to Portland via the Sunset Route was impracticable, witness meant that as a rule business would go through quicker all rail direct, than it would by Morgan steamers to Texas, and thence by rails. Witness does not think it is a fact that the S. P. line from Ogden to the coast was very largely dependent upon the U. P. for its business. The U. P. was as dependent upon the S. P. as the S. P. could possibly have been upon the U. P. (4861) Witness does not think that the U. P. was so situated that it could compel the S. P. to deal fairly with it; because

it is a physical impossibility for the U. P. to control anything like the volume of business over a route through Portland to San Francisco that the S. P. could take away from it by way of Ogden. Witness regards the position of this route to the coast as of no advantage whatever to the U. P. in the way of securing fair treatment from the S. P. "Q. Not as an equalizer of divisions or anything? A. Not at all."

Portland route of no advantage whatever to U. P.

Witness thinks the S. P. Sunset Route is a great deal stronger line, and in addition it has to be a stronger line in taking freight from the seaboard to San Francisco than it would be possible for the line as formerly described through Portland, because the S. P. owns the entire line through, and it is possible for it to give better service and make better time on the through eastern competitive business than it would be for the U. P. to give by way of Portland. (4862) Witness thinks it is farther from New York City by the Sunset Route to San Francisco than it is all-rail from Chicago via U. P. to Portland and down. "Q. And therefore you think the advantage lies with the Sunset by reason of the fact that it owns its own rails all the way from Galveston to San Francisco? A. And the steamship lines through the seaboard. Q. Certainly; but the Union Pacific owns its steamship lines. I was getting at the point of destination in your mind, and that is the fact, that you think that the connections of the Union Pacific east would be slow in transporting freight and making deliveries? A. I do."

Advantages of Sunset route.

(4863) One of the great advantages of the S. P. Sunset Route is that with its own steamers in New York it can gather the cargo and take it to New Orleans or Galveston in solid cargo lots and load it into train loads, whereas the all-rail route like this, for instance, the G. N. has to depend on its connections—delivering it in carload lots. The all-rail route from New York to San Francisco, made up by the G. N. and the N. P and the boat lines between Puget Sound and San Francisco, is shorter than the Sunset Route from New York to San Francisco,—notwithstanding which fact, the G. N. is not able to move any business of consequence by this Puget Sound line. If the U. P. and the S. P. were entirely separate and distinct in their ownership and the U. P. should attempt to use this route via Portland to San Francisco as a club against the S. P. and if the witness was acting for the S. P. with the Rio Grande connection at Ogden and the east, he thinks that he could hold his own for the S. P. as against the U. P. in a contest of that sort. (4864) He thinks that the U. P. would fare the worst.

In contest with S. P. over Portland route, U. P. would fare the worst.

At Ogden the U. P.'s only connection to California, outside of the San Pedro road, is the S. P., whereas the S. P. may turn its traffic over to either the U. P. or the Rio Grande. The Rio Grande in turn connects with the Burlington, the Rock Island, the Missouri Pacific and Santa Fe, in the east. In referring to the S. P.'s Portland business as being a three, or four, or five per cent., witness meant eastern competitive traffic. Of all the competitive traffic into Portland, witness would not regard the S. P. as exceeding a three to

Percentage of Portland business handled by U. P. and other lines.

five per cent. line. (4865) He is not prepared to state what percentage of the seaboard business they handle. At one time a percentage as high as 85 per cent. of that competitive business came over the U. P. and the O. R. & N.

Witness believes that the U. P. now takes into Portland probably 40 per cent. of the business. In 1900 he would put it at about 50 per cent., and the S. P. at that time, from 3 to 5, say 5 per cent. The G. N. had a little of it. The G. N. got it over the O. R. & N. Witness means that the U. P. had about 50 per cent. of the whole. The balance of it was distributed with the other lines, the G. N., N. P. and Sunset. Witness does not think the Canadian Pacific shared in the business. Witness thinks the G. N. got 15 or 16 per cent., and the N. P. somewhere around 28 or 30. (4866) Witness thinks it might be safe to say that the Sunset handled of the strictly Atlantic seaboard business, probably 20 to 25 per cent. There is very little of that business. Witness thinks the Sunset Route to Portland is physically an inferior route to the others. "It is a mere guess on my part to say that they get 25 per cent. of the seaboard business. I don't know as a fact." A large amount of structural steel and steel product is shipped from the east to the coast. Witness does not regard that as seaboard business. It is interior business.

EXHIBITS.

(4867) Defendants' Exhibit 243 is a tabulated statement showing additional main tracks of the Santa Fe, taken from its annual report for the fiscal year ending June 30, 1909. It shows 492.80 miles of second main track operated by that company. (4868) Defendants' Exhibit 244 is a tabulated statement showing second track of the N. P. and controlled lines as set out in its annual report for the fiscal year ending June 30, 1909. It shows 233.11 miles of second track. (4869) Defendants' Exhibit 244½ is a map of the N. P. Railroad, which under stipulation of parties is introduced in evidence without being printed. (4870) Defendants' Exhibit 245 is a portion of the track statement of the G. N. and proprietary companies, found on page 41 of the 20th annual report of that company, for the fiscal year ending June 30, 1909. It shows a total of 141.06 miles of second track. Defendants' Exhibit 246 is a map of the G. N., admitted under the stipulation above referred to.

Mahl.

(4870) WILLIAM MAHL (2).

St. Joe & G. I. stocks owned by U. P.

I am the Comptroller of the U. P. and S. P. systems. I have a statement of the stocks of the St. Joseph & Grand Island Railway Company, owned by the U. P., drawn off the books as of March 4, 1910. No change has occurred since that date. (4871) This statement is Defendants' Exhibit 247. Defendants' Exhibit 248 is a statement of the "investment stock owned March 4, 1910," by the U. P.

N. P. and G. N. holdings sold.

(4872) The stockholdings of the U. P., or of the O. S. L. and O. R. & N., in G. N. and N. P., and in Atchison preferred, have been sold, the last N. P. on November 19, 1908, the last G. N.

April 6, 1909, and the entire holdings of the Atchison stock July 31, 1909. The S. P. in December, 1900, issued bonds secured by mortgage, which has been referred to as the 2-5 year mortgage, the assets of the company being pledged to that mortgage to the extent of all available unpledged assets in the treasury. From and including the year 1901—fiscal years—the purchase or purchases of S. P. stock by the U. P. has been reported yearly to the Interstate Commerce Commission. (4873) The purchase of the 74,000 shares of S. P. stock testified to by Mr. Kahn, began after the first of January, 1910, although I am not certain. I can refer to the copy of the resolution which authorized the purchase. That purchase has not yet been reported to the Interstate Commerce Commission. The term "auxiliary companies" in Defendants' Exhibit 248, means the O. S. L., and the O. R. & N., of which the U. P. owns the stock, the three constituting the U. P. Railroad System. The Railroad Securities Company, mentioned in Defendants' Exhibit 248, owns nothing except stock of the Illinois Central.

S. P. 2-5 year mortgage.

Purchases of S. P. stock reported to I. C. Commission.

(4874) It owns 92,000 shares, $9,200,000, of the Illinois Central stock. "Q. To get at the total holdings of Illinois Central stock of the Union Pacific and Auxiliary Companies, you would have to add $9,200,000 to the $23,700,000 shown as directly owned in this statement? A. Not entirely. The 80,000 shares are subject to a lot of certificates which the Railroad Securities have outstanding. Q. In the nature of a bond? A. Yes. Q. But for voting purposes the Railroad Securities Company votes the stock, doesn't it? A. I don't know; I couldn't say as to that. Q. Do you remember the outstanding obligations secured by the pledge of the stock of the Illinois Central owned by the Securities Company? A. 80,000 shares. Q. I say what is the extent of the debt secured by that 80,000 shares? A. I don't recall now." (4875) We have increased our holdings of Railroad Securities stock to a slight extent, since the testimony was given, which includes Harriman Exhibit No. 2, page 746, Vol. II of the Record. We then had $3,415,400 of the common stock, we now have $3,483,400; $1,898,400 par value of the preferred stock then, and now $1,935,900. We own within .07 of one per cent. of the whole of this stock. Exhibit No. 2 just mentioned shows our ownership of $18,623,100 par value Illinois Central stock; and we now own directly $23,700,000 par value, or about $5,000,000 additional, the additional stock being all by subscription rights. Complainant here offered in evidence certified copy Minutes of Executive Committee U. P., meeting of May 29, 1906, relative to the purchase of St. Joseph & Grand Island stock.

Holdings of Ill. Central.

Action of Ex. Com. as to St. Joe & G. I. stock.

(4879) The additional shares shown by Exhibit 247 were bought last fall, beginning in October, in the open market, under a resolution of the Board of Directors. (4880) The increased holdings of the O. S. L. in Chicago & Northwestern common stock, $4,018,750 now, as per Exhibit 248, as against $2,572,000 as of July 13 and 16, 1906, was acquired under subscription rights, the relative holding re-

Investment securities.

maining the same; so, also, with the New York Central stock, $17,857,125 per Exhibit 248, as against $14,285,745. The holding in Chicago & Alton Preferred has not been changed, nor in Baltimore & Ohio Common or Preferred, the present total holding of S. P. stock, $126,610,000, out of the total of $272,672,205, or 46.43 per cent., includes the recent purchases and is the total holding now.

S. P. 2-5 year mortgage.

(4881) The two-five year mortgage of December, 1900, was a collateral trust bond running for five years, with option of retirement in two years, for $30,000,000 to raise money for betterments and additions, and to pay off certain floating debts. The bonds were sold prior to the acquisition of the S. P. stock by the U. P. The mortgage shows the nature of the assets pledged—bonds and stocks which the S. P. had acquired from time to time, in addition to the stocks which were pledged collaterally against the issue of its own stocks, bonds of the Houston, East and West Texas, the Houston & Shreveport, the Gila Valley Globe & Northern, Maricopa & Phoenix, and various stocks of small collateral lines which the Company had acquired, constituting free assets not previously encumbered.

United States v. Union Pacific Railroad Company, et al.

DEFENDANTS' ABSTRACT OF TESTIMONY.

TESTIMONY FOR DEFENDANT.

VOLUME XI.

NEW YORK CITY, MARCH 24, 1910.

(4883) C. S. STEBBINS (3)

I have a statement here as to the Asiatic business eastbound through San Francisco by the Sunset Route, Defendants' Exhibit 249, as follows:

DEFENDANTS' EXHIBIT 249.

(Stebbins)

SOUTHERN PACIFIC COMPANY.

ATLANTIC STEAMSHIP LINES.

Statement of tonnage and revenue accruing to system lines on business received from China and Japan, for fiscal year ending June 30th, 1900.

Tons	Ship revenue	Rail revenue	Total system revenue
7	$36.46	$171.86	$208.32

AUDITOR'S OFFICE,
New York, N. Y.,
Jan. 12th, 1910.

(Sgd) B. G. BARTHOLOMEW, *Auditor.*

(4884) This statement was prepared from the books of the Company. I have prepared, from the records of the company, a statement of the freight traffic to points in the Willamette Valley, Oregon, excluding Portland, via U. P. System, Granger, Wyoming, and Portland, Oregon, from eastern territories, for the fiscal year ending June 30, 1900, with detailed statement attached, specifying the points served and not served by the river boats. These papers—Defendants Exhibit 250, are as follows:

DEFENDANTS' EXHIBIT 250.

(Stebbins)

Statement of total freight traffic to points in Willamette Valley, Oregon (excluding Portland), via Union Pacific System, Granger, Wyo., and Portland, Ore., from eastern territories specified below, for fiscal year ending June 30, 1900.

From—	Tons carried	U. P. Sys. Frt. Revenue
Missouri River and common points territory	90.22	2,944.29
Mississippi River and common points "	50.01	1,758.45
Chicago and common points "	332.49	10,773.06
Cincinnati, Detroit and common points "	80.85	2,121.53
Pittsburg, Buffalo, and common points "	27.15	997.03
New York, Boston, and common points "	216.90	6,528.20
Total	797.62	25,122.56
To points served by Willamette River boats	513.78	16,229.20
To points on S. P. Co. not served by Willamette River boats	283.84	8,893.36
Total	797.62	25,122.56

Compiled by:

(Sgd) C. S. STEBBINS,
Assistant to General Auditor,
Union Pacific System and Southern Pacific Company.

(4893) I have a statement with detail of the freight traffic from points in the Willamette Valley, excluding Portland, via S. P., Pacific System, and Rio Grande Western Railroad, to the Missouri River and east, for the fiscal year ending June 30, 1900—compiled by the Freight Auditor of the D. & R. G., who is here. These papers, Defendants' Exhibit 252, are as follows:

DEFENDANTS' EXHIBIT 252.

(Stebbins)

Statement of total freight traffic from points in Willamette Valley, Oregon (excluding Portland), via Southern Pacific Company-Pacific System, and Rio Grande Western Ry. to Missouri River and east, for fiscal year ending June 30, 1900.

	Tons carried	S. P. Co. freight revenue
From points served by Willamette River boats	635.2	$6,186.10
From points on Southern Pacific lines not served by Willamette River boats	656.4	7,383.87
Total	1,291.6	13,569.97

NOTES.—1. Owing to destruction by fire of records of the Southern Pacific Co., this information was obtained from the records of the Denver & Rio Grande Railroad Co., successor to the Rio Grande Western Ry. Co.

2. "From points served by Willamette River boats" includes 72.5 tons, $910.40, from Wheatland. It is not known whether this is Wheatland, Ore., or Wheatland, Calif.,; if the latter, it should not be included in this statement.

I have a statement of freight traffic interchanged by U. P. and S. P. at Ogden Utah, having origin or destination on the line of the S. P. north of Ashland, Oregon, and south of Portland, Oregon, for the calendar year 1900. That statement was taken from a record in the office, of a statement furnished by the Freight Auditor to the General Freight Agent or Assistant General Freight Agent, some time during the year 1901, and the copy that we have of the statement—which was found within the last three weeks, gives only this information, without further detail except that the information was given for each month of the year, but we are not able to separate the traffic for the different points in Oregon, or for the different territories east of Ogden, and the use of the calendar year 1900 is due to the fact that the statement we found was for the calendar year. (4898) While the statement covers the territory between Ashland and Portland, exclusive of Portland, north of Ashland and south of Portland, I have not specified the points, as in the detail of the other statements, this being due to the paucity of information. This paper, marked Defendants' Exhibit 254, is as follows:

DEFENDANTS' EXHIBIT 254.

(Stebbins)

Statement of freight traffic interchanged by Union Pacific Railroad Company and Southern Pacific Company at Ogden, Utah, having origin or destination on the line of Southern Pacific Company north of Ashland, Oregon, and south of Portland, Oregon, for the calendar year 1900.

	Tons carried	Union Pacific Railroad Company's freight revenue
Westbound	2,485	28,098.79
Eastbound	4,813	27,221.50
Total	7,298	55,320.29

	Total tons carried	Gross operating revenue	
Total tons of freight carried by and gross operating revenue of Union Pacific System for year ending June 30, 1900 (see Note 1)	7,380,796	39,147,697 33	
Ratio of freight traffic between San Francisco and points specified above to total tons of freight carried by and gross operating revenue of Union Pacific System	0 01%	0 04%	
Total tons of freight carried by and gross operating revenue of Southern Pacific Company Lines for year ending June 30, 1900 (See Note 2)	11,631,575		63,920,414 22
Ratio of freight traffic between San Francisco and points specified above to total tons of freight carried by and gross operating revenue of Southern Pacific Company Lines	0 01%		0 01%

NOTES.—1. Union Pacific System includes Union Pacific Railroad Company, Oregon Short Line Railroad Company, and the rail and water lines of the Oregon Railroad and Navigation Company. Owing to the destruction of certain records by fire, the total tons carried have been partially approximated. The gross operating revenue is correct.

2. Southern Pacific Company Lines include the Southern Pacific Company-Pacific System and the lines east of El Paso in which the Southern Pacific Company has an interest, including the Sunset-Central Lines (so-called) and the Southern Pacific Company's Atlantic Steamship Lines. Owing to the destruction of records by fire, the total tons carried have been partially approximated. The gross revenue is correct.

Compiled by:

(Sgd) C. S. STEBBINS,
Assistant to General Auditor,
Union Pacific System and Southern Pacific Company.

(4900) I have a statement of the tonnage and revenue of freight traffic between San Francisco and Montana common points via S. P. and O. S. L., for the year ending June 30, 1900, compiled from the records of the O. S. L. Company. Owing to the destruction of the headquarters of the O. S. L. in 1901, it was necessary to compile this statement from the passing reports of Ogden station, and the information may be slightly incorrect in that it does not reflect the final revision of the waybills at destination. The statement gives the amount of the waybills as they were when they passed Ogden station in either direction. The passing statements base on the waybills, which are revised at destination and again in the general office. Mr. McNitt of the O. S. L. furnishes the information for this statement, which is marked Defendants' Exhibit 256, as follows:

DEFENDANTS' EXHIBIT 256.

Total tons of freight carried by, and gross operating revenue of Union Pacific System for year ending June 30, 1900 (see Note 1)	7,380,796	$39,147,697.33	
Ratio of freight traffic between San Francisco and Montana common points specified to total tons of freight carried by, and gross operating revenue of, Union Pacific System	0.04%	0.08%	
Total tons of freight carried by, and gross operating revenue of Southern Pacific Company Lines for year ending June 30, 1900 (see Note 2)	11,631,575		63,220,414.22
Ratio of freight traffic between San Francisco and Montana common points specified to total tons of freight carried by, and gross operating revenue of Southern Pacific Company Lines	0.03%		0.07%

NOTES.—1. Union Pacific System includes Union Pacific Railroad Company, Oregon Short Line Railroad Company, and the rail and water lines of the Oregon Railroad and Navigation Company. Owing to the destruction of certain records by fire, the total tons carried have been partially approximated. The gross operating revenue is correct.

2. Southern Pacific Company Lines include the Southern Pacific Company-Pacific System and the lines east of El Paso in which the Southern Pacific Company has an interest, including the Sunset-Central Lines (so-called) and the Southern Pacific Company's Atlantic Steamship Lines. Owing to the destruction of records by fire, the total tons carried have been partially approximated. The gross operating revenue is correct.

3. Owing to destruction by fire of the records of the Southern Pacific Company and of other records of the Oregon Short Line Railroad Company, this statement was compiled from the passing reports of Ogden, Utah, station. The figures are, therefore approximated, as they may not correspond to the waybills as finally revised before settlement.

Compiled by:

(Sgd) C. S. STEBBINS,

Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

(4902) I prepared a statement for a month in 1906 and a month in 1907, at the request of Mr. Severance, and I was called upon for some information in respect to 1900 or 1901. I have found data upon which to prepare a statement of the freight traffic interchanged by the U. P. and the S. P. at Ogden for the years ending June 30, 1900, and 1901, and prepared the statement. The data consisted of a record of the tonnage interchanged and the U. P. revenue thereon, at various junction points in 1900 and 1901. The statement gives the tonnage interchanged at Ogden with the S. P. for the two years, and the U. P.'s revenue thereon, and covers all traffic interchanged by the two companies at Ogden. The statement from which I was able to get this information was in the records of the Accounting Department at Omaha. This statement covers all traffic interchanged at Ogden, regardless of point of origin or destination. It includes traffic from and to local points on the U. P. and local points on the S. P.—not meaning traffic originating and terminating at a local point on the U. P., but traffic interchanged at Ogden between the two companies. The statement was prepared by the Freight Auditor of the U. P., it was a form of statement which was regularly prepared at that time, and this copy happened to be a copy that was retained in the general office or in the Freight Auditor's office, and was not in the record room where the fires occurred. I got access to this copy within the last three weeks. (4903) This paper, marked Defendants' Exhibit 257, is as follows:

DEFENDANTS' EXHIBIT 257.

(Stebbins)

Statement of freight traffic interchanged by Union Pacific Railroad Company and Southern Pacific Company at Ogden, Utah, for the years ending June 30, 1900 and 1901.

Year	Tons carried	Union Pacific R. R. Company's revenue
1900	588,510	3,933,555 62
1901	583,701	4,175,183 52

Compiled by:

(Sgd) C. S. STEBBINS,
Assistant to General Auditor,
Union Pacific System and Southern Pacific Company.

I have made a statement of the passenger traffic interchanged likewise at Ogden for 1900 or 1901, compiled from the records of the Company—for the year ending June 30, 1901—but owing to the partial destruction of records it was necessary to estimate a portion of the traffic for four months. As far as the reports of the U. P.'s own agents are concerned, the statement is actual for eleven months, and estimated for one month. For the reports of tickets sold by foreign roads over the U. P. the statement is actual for nine

months, and a portion of the traffic is estimated for the other three months. The estimate in each case is the most intelligent approximation we could make based on the business furnished by the same roads during other months of the year, and the business furnished by other roads during the same three months. As to three months in one instance, and one month in another instance, we resorted to approximation on account of the destruction of the records by fire. The statement, Defendants' Exhibit 258, is as follows:

(4904)

DEFENDANTS' EXHIBIT 258.

(Stebbins.)

Statement of passenger traffic interchanged by Union Pacific Railroad Company and Southern Pacific Company at Ogden, Utah, for the year ending June 30, 1901.

Passengers carried 53,132
Union Pacific Railroad Company's revenue.....$1,007,785.18

NOTE.—Owing to the destruction of records by fire, the passenger traffic is partially approximated for four months.

Compiled by:

(Sgd) C. S. STEBBINS,
Assistant to General Auditor, Union Pacific System and Southern Pacific Company.

That statement covers all traffic interchanged by the U. P. and S. P. at Ogden—from or to local points on the U. P. as well as through traffic from or to the Missouri River and east. I have a classified statement of U. P. System revenue from operations for the fiscal years ending June 30, 1900, to and including June 30, 1909, compiled from the records of the companies. As to the freight revenue, shown for 1901, for the U. P. System, there is a difference of about $75,000 between the amount shown and the amount given in my former testimony, page 4585 of the record. This difference represents the freight revenue of some auxiliary lines of the U. P. System, especially of the O. S. L., which at that time were not leased by the O. S. L. They were not really a part of the system. The figures shown in the present statement correspond to the annual reports of the Company and to the figures reported to the Interstate Commerce Commission. This statement, marked Defendants' Exhibit 259, is as follows:

(4905)

DEFENDANTS' EXHIBIT 259.

Compiled by:

(Sgd) C. S. STEBBINS.
Assistant to General Auditor,
Union Pacific System and Southern Pacific Company.

(4908) Prior to December 31, 1903, the S. P. included in its freight revenue low charges, two mills per ton per mile, on material carried for the use of the Company itself. Since that time this has not been done except in the case of material carried for construction, in which case the freight charges assessed go into the cost of the property. Exhibit 260 covers all the S. P. lines including the revenue of the Texas lines.

(TESTIMONY RESUMED, NEW YORK CITY, WEDNESDAY, MARCH 30, 1910.)

(4909) The figures in Defendants' Exhibit 249, showing a very small amount of business eastbound from the Orient, were taken from the figures in the New Orleans office. Defendants' Exhibit 250, freight traffic to points in the Willamette Valley, excluding Portland, via the U. P. and Granger, we got from the records of the O. R. & N. Company at Portland. We put in a partial statement of the Willamette Valley traffic, taken from those records at the last hearing, not being asked for this particular one. I am satisfied as to the correctness of these figures. Referring to Defendants' Exhibit 251, the Willamette Valley covers territory south of Portland as far as Divide Station on the S. P., the summit of the watershed between the Willamette Valley and the river south, Rogue River I think. Where I say on these exhibits "From points on Southern Pacific lines not served by Willamette River Boats," I mean inland points on the S. P. (4910) "Q. You do not by that mean to imply that these stations on the Southern Pacific may not be so located, with reference to stations or towns on the river, that agricultural products, such as hops and things of that character, raised in between, might go to either place? You know nothing about that, do you? A. No. Q. You merely mean common stations? A. Classified as points served by Willamette River boats, all points from which the boats actually receive business, or to which the boats actually deliver business; and also any points that were stated by Mr. Miller, the traffic manager of the O. R. & N. Company and the general freight agent of the Southern Pacific lines in Oregon, could be reached by the Willamette River boats." And the ones that are designated as "Points on the S. P. not served by Willamette River boats," are inland points, and I do not, of course, in this consider as to whether or not traffic might be hauled in from the country to the river or to the station, but merely take the points that are not reached by the river boats. These points to which attention has been called are separated, as indicated in the testimony of Mr. Miller.

Referring to Defendants' Exhibit 254, we have no means of determining now as to the amount of that traffic that was delivered at points, or originated at points, south of Portland and north of Ashland, which were served by the boats as well as the rail lines. The statement gives absolutely all the information we have concern-

ing the traffic mentioned in it, except that the original statement from which this was compiled gave the traffic for each month of the year separately. Defendants' Exhibit 257—freight interchanged by the U. P. and S. P. at Ogden, for the years ending June 30, 1900 and 1901, covers all traffic interchanged there, without reference to the point of origin or its destination. (4911) It might originate on the U. P. destined to some point on the S. P., or originate on the S. P., destined to some point on the U. P. west of the Missouri River—might be taken up at Denver by the U. P., or brought from the River, and delivered to the S. P. at Ogden. We have the detailed information concerning the passenger traffic interchanged at Ogden for the year ending June 30, 1901, Defendants' Exhibit 258, and could give the origin and destination of each item except the estimated portion, but it would be quite a task to compile it. The traffic is local and through. The figures in Defendants' Exhibit 259 correspond to the annual reports to the stockholders and to the Interstate Commerce Commission.

(4912) The figures on Defendants' Exhibit 260 include the Texas lines and are taken from the annual reports of the S. P. They do not include the S. P. of Mexico or some lines in Arizona in which the S. P. is interested, but which have never been treated as a part of the system—they have been shown separately. It does not include Pacific Mail, or the earnings from the street railway in Los Angeles, or the Utah Light & Power Company. The net receipts from those other companies would appear in the income account of the S. P. Company. I am not sure whether this Utah company is an S. P. or a U. P. proposition.

(4913) WILLIAM DAVID LINCOLN (2) Lincoln.

Defendants' Exhibit 261 was prepared in my office under my instruction. It is a memorandum statement showing the average miles per car per day on the several lines, mostly western lines. The information was obtained from the statistical bulletin issued by the Chairman of the Committee on Relations between Railroads of the American Railway Association. The first statement made up by the Committee included January, February and March in one item. They started to make up a statement for every three months, and then changed it to a monthly statement. This exhibit is as follows:

DEFENDANTS' EXHIBIT 261.

(Lincoln)

Average mile per car, per day, on following lines.

(Taken from statistical bulletin prepared by chairman of committee on relations between railroads, American Railway Association.)

Supt. Trans.

OMAHA, *March* 22, 1910.

The information as to the figures themselves is furnished by the railroads to the chairman, and the average is figured out by the Committee, Mr. Hale being in charge of the office. (4915) The greatest fluctuation is around January, February and March of 1908; after the panic in the fall of 1907, business all over the country was very quiet, slight movement of cars. There was very light business movement February, 1909; it would be density of traffic, and no doubt weather conditions on our line; the others rather hold

Greatest fluctuation.

their own. This exhibit shows the average number of miles by each car per day, and that the U. P. gets a larger mileage out of the cars it uses for each day than other lines in the same territory. It signifies that we get better movement out of our cars, and no doubt more economical operation. Our schedule on the freight train from Omaha to Ogden may show up slower than other lines, but, as I said before, all the freight is moved on a better schedule than most of the other lines. The statement shows that the cars make better mileage per day than the other lines; there are not so many cars lying around.

U. P. gets best results.

(4916) The cars handled by the U. P. make more miles per day than by the other transcontinental lines. I don't know what the other lines are doing. From the comparison—I know what we are doing—it shows that the U. P. are getting more mileage out of the cars on their lines per day than any other line—that they are moving their general line of freight, all the freight, faster than the other lines. (4917) We run the Colorado freight a little faster than the California freight. That freight is included in the totals, as is the movement of local trains carrying local business in Nebraska, wholesaled out of Omaha, Kansas City and Kansas. We take the whole movement of all the cars. In May and June, 1909, the average is shown to be less than in September and August, 1908, on account of the heavy movement of stock in September, and fruit in the fall months. As to the character of the traffic—one line moving some low-class commodity, another line moving fruit or livestock—it would depend upon the distance traveled by the freight; the speed would be a very small factor.

U. P. can make more miles per day than other lines.

(4918) EUGENE S. IVES.

Ives.

I am General Counsel for the S. P. properties in Arizona, as represented and managed by Mr. Randolph. In 1901, not beginning later than 1902, those lines in Arizona were the "Gila Valley, Globe & Northern, the Maricopa & Phoenix; and the Arizona & Colorado was organized a little prior to that time; and the Cananea, Yaqui River & Pacific was in Mexico—terminals in Naco, Arizona, just this side of the international line." The termini of the Maricopa & Phoenix were Phoenix on the north, and Maricopa, which is on the main line of the S. P., on the south. Mesa is 10 or 12 miles to the southeast of Phoenix, perhaps it is 17; my impression is it is not more than 10 or 12. The Maricopa & Phoenix went to Mesa from Tempe, on the line of that road, and about 10 miles south of Phoenix. Maricopa is on the main line of the S. P. about 35 miles south of Phoenix. The rail line from Maricopa passing through Tempe on the way to Phoenix, and the rail line goes from Tempe over to Mesa.

Attorney for S. P. in Arizona.

S. P. lines in Arizona.

(4919) The Gila Valley, Globe & Northern goes from Bowie on the main line of the S. P., in a general northwesterly direction, to Globe, which is its terminus. My relations with these properties

Phoenix & Eastern.

began in 1901 or the early part of 1902, when the Southern Pacific acquired the Cananea & Yaqui River Railroad from the Greene Consolidated Copper Company. I recall the railroad construction referred to in Mr. Murphy's testimony, from Phoenix east as far as Florence and from Florence beyond still farther east, under the name of the Phoenix & Eastern. It began in the summer or fall of 1902, and proceeded some few miles beyond Florence, altogether some 70 odd miles from Phoenix. In 1903 or 1904 construction was pushed farther east beyond Florence, the ultimate point east being Dudleyville, Pinal County, Arizona, at the conflux of the Gila and San Pedro Rivers. During the construction of the Phoenix & Eastern, or prior thereto, it was contemplated by the Harriman interests, acting through Randolph and myself in Arizona, that, including the line from Tempe to Mesa, we should build beyond and to the East.

Line from Mesa east, contemplated by S. P.

It would extend through Gila River canyon.

(4920) "It was contemplated that a line should be constructed from Mesa through in a general northeasterly direction, through Arizona and New Mexico to Durango, Colorado. The line of that road would run from Mesa to Florence, and from Florence, along the Gila River, to Dudleyville, or to a point on the Gila River, on the north side of the Gila River, opposite Dudleyville, and thence in a northeasterly direction through a canyon known as Box Canyon, or the Gila River Canyon, which is recognized as the only right of way through that mountain range, and from that point on to, as I say, and through New Mexico, up to Durango, the coalfields. On going through the Box Canyon it touches San Carlos, which is about at the easterly mouth of this canyon, which is on the main line of the Gila Valley, Globe & Northern Railroad; and that portion of the line from Mesa or Phoenix to San Carlos was designed to be available both for this contemplated line to Durango and via the Gila Valley, Globe & Northern to Bowie for a low grade transcontinental line to the Southern Pacific."

San Carlos.

Low grade line.

Bowie is in Cochise County, Arizona. "It had been in the contemplation of Mr. Randolph for a number of years prior thereto, when he was superintendent of the El Paso division of the Southern Pacific road, from El Paso to Yuma. That was as far back as 1897 or 1898, anyhow. I do not know whether the line to Durango was in contemplation by him at that time or not. * * * But that canyon as *the* best right of way for a transcontinental line was in his mind at that time. * * * The articles of incorporation of the Phoenix & Eastern Railroad, as I ascertained prior to the institution of this litigation, provided for the construction of a road from Phoenix to Florence and along the Gila River to Dudleyville, which, as I have said, is the (4921) conflux between the Gila River and the San Pedro River, and thence in a southeasterly direction along the San Pedro River to Benson. The Phoenix & Eastern Railroad Company, under the general railway law of 1875, filed its map of definite location for such a line of railroad, going along the south side of the Gila River from a point east of Florence to Dudleyville

P. & E. map showed line to Benson and Dudleyville.

and thence along the westerly side of the San Pedro River down to Benson. * * *

"It is my intention to state this as explanatory of the litigation, and not as proof of the map. This right of way was approved by the Secretary of the Interior, in October, 1902, and the Phoenix & Eastern continued its construction along such right of way. We knew of this construction, and interposed no obstacles or objection of any kind to it. In December, 1903, the grading force of the Phoenix & Eastern having at that time reached a point between Florence and a place called Kelvin, on the south side of the Gila River, about two miles west of Kelvin, commenced to throw a bridge across the Gila River from the south side to the north side, departing from its right of way, and when that fact was called to our attention we recognized that a line of railroad by the Phoenix & Eastern on the north side of the Gila River would pre-empt the approach to the Gila Canyon. * * * As I say, when the Phoenix & Eastern moved across to the north side of the Gila River, we recognized that a line on the north side of the Gila River would encroach for right of way purposes upon territory which it was in our contemplation to use for this line with respect to which I have testified; and we thereupon at once organized the Arizona Eastern Railroad Company, with a charter right to construct a railroad through that territory, and commenced a survey, beginning from the east at San Carlos, through the Gila Canyon, down toward Florence. We proceeded and filed our maps through the Gila Canyon before they had—well, they had not made (4922) any survey through the Gila Canyon, but they were surveying a strip of territory on the north side of the river, about 16 or 18 miles in length, from this point some two miles west of Kelvin to Dudleyville. We then continued our survey, having surveyed through the canyon and filed our maps covering the right of way through the canyon,—we continued our survey from Dudleyville on to Kelvin, our survey covering the same territory which they were surveying, and both surveying parties working with the utmost despatch, each aware of the fact that the other was endeavoring to secure this same territory, under the general railroad act.

No objection to line to Benson.

Change of line of P. & E.

Encroached upon line S. P. intended to use.

Filed maps through Gila Canyon, first

"Q. Was that the time the rocks fell, that Bro. Severance asked Mr. Murphy about? A. No; the rocks fell, I think, a trifle after that. The surveying parties did not do any blasting. But the two maps were filed by the two companies, on the same day—our map was filed two hours ahead of theirs—and then the litigation commenced. In the meantime our railroad, following its right of way, commenced to construct from the east westward; and they, following the line which they had already built, from Phoenix to Florence and beyond, were constructing from the west eastward, and at various points along the rights of way claimed by both of us. Our line was some 15 or 20 feet in altitude over their line, but both lines were within the limit of 200 feet allowed for right of way purposes by the act of Congress. Now, on that there were several places where there was considerable rock to be blasted—in fact, there was

Litigation commenced.

Falling rocks.

rock to be blasted all along it, practically all along it, but at some places more than others; and each side, anxious to construct and fortify itself by construction, in the inevitable contest in the courts and before the Secretary of the Interior, threw its grading parties out in advance of their regular work toward these rocky points, and at one time both of us were working at the same rocky point, and I believe that when they blasted some of their rock would reach our right of way, and when we blasted some of our rock reached their right of way. * * *

"When we met at that point in this way, we both appealed to the courts; both actions were commenced separately, each asked for preliminary injunction, and the court granted a preliminary injunction directing that each party should proceed in its grading at the place where the camp regularly was, so as not to interfere with the other, and we retired from this rocky point and they retired from the rocky point. We went back to the end of our completed grade line on the east and they to theirs on the west, and each continued to construct, they eastwardly and we westwardly, until we met, and when we met, the force of that injunction order had of course lapsed, and they appealed to the courts and we fought out another temporary injunction, and they were granted a tempo- (4923) rary injunction restraining us from building any farther, under the protection of which they proceeded and tore up our old graded line, wherever it was necessary to tear it up in the construction of their own, and constructed a line over the disputed territory. * * * Being this 18 miles on the north side of the Gila River between Dudleyville on the east and a point two miles west of Kelvin on the west.

Injunctions.

"Then the case came to trial, while they were completing their construction work, and upon the trial we prevailed and obtained a judgment perpetually enjoining them from building or interfering with us on any portion of this disputed territory. From that they appealed to the Supreme Court of the Territory of Arizona, and the Supreme Court reversed the judgment on the ground that the courts had no jurisdiction over the permanent rights of either party pending the contest before the Land Department, such contest having been undetermined at the time of the trial of the suit. So that the judgment was reversed, and the court held that it had jurisdiction to adjudicate only the temporary rights of the respective parties to the territory pending the determination of the contest before the Land Department; and in view of the fact that they had a constructed railroad at the time the Supreme Court rendered the determination, they were given a temporary injunction in this judgment. * * * From that we appealed to the Supreme Court of the United States, and that appeal was perfected and docketed in the Supreme Court and pending at the time of the contracts which resulted in the acquisition of the Phoenix & Eastern by the Southern Pacific people, and the appeal was dismissed. * * *

S. P. prevailed.

Judgment reversed, no jurisdiction.

Appeal to U. S. Supreme Court.

"When the Phoenix & Eastern filed their map on the same day that we filed ours, or definitely located this 18 miles of territory on the north side of the river, attached to their map was a relinquishment, or a document in the nature of relinquishment, whereby they relinquished their right of way acquired in October, 1902, to the corresponding 18 miles on the south side of the Gila River, such relinquishment, however, by its terms being effective only upon the approval of the map filed by them on the 14th of March, of amended location. We contended that inasmuch as it was recognized that a railroad company cannot have two rights of way (4924) and inasmuch as this relinquishment was conditional at the time we filed it, that at the time they filed theirs and therefore at the time we filed ours, they actually had a right of way on the south side of the river and therefore could not initiate a right of way on the north side of the river, and that therefore our right of way was superior." That contention was one in which we had great confidence, and their lawyers expressed themselves as having grave apprehensions of that position. The articles of incorporation of the Phoenix & Eastern contemplated Benson as the terminus in the eastwardly direction.

Contention of S. P.

Benson, eastern terminus of P. & E.

(4925) I have the excerpt here, the original articles being filed in the Territory of Arizona. "Article VII. That the place from and to which the proposed road is to be constructed and the counties into and through which it is intended to pass, and its length as near as can be set forth are as follows, to wit: 'Beginning at a point in the City of Phoenix in the County of Maricopa in said Territory, at a point of intersection with the railroad track of the Santa Fe, Prescott & Phoenix Railway Company, in said city, thence in a southeasterly direction through the counties of Pinal and Pima to the City of Benson in the County of Cochise in said Territory of Arizona, a distance of about one hundred and eighty-five miles, more or less, with power and authority to extend such line to any other point or points in said territory and to build to and from the same such branch lines as said company may decide.'" At the time of the construction by the Phoenix & Eastern, and up to the time of their departure from the south line, and their crossing the River to the north line, two miles west of Kelvin, it was in our minds and in our knowledge that the Phoenix & Eastern, by its articles of incorporation, contemplated the construction I have just quoted therefrom. During the process of construction of the Phoenix & Eastern from Phoenix to Florence, and beyond Florence, and along the south bank of the Gila River to the point of departure, where they crossed to the north bank two miles west of Kelvin, and with the knowledge in our mind that they contemplated a road to Benson as the terminus, we did not take any steps or do anything in any way, shape or manner to interfere with or obstruct the construction or progress of their enterprise. I think, prior to their departure from the south to the north bank, a reconnoissance survey had been made by Randolph, but we made no survey with a view to filing any map of

Excerpt from articles of incorporation.

S. P. supposed P. & E. intended to follow line described in charter.

Did not interfere with that line.

definite location until afterward. During the construction of the Phoenix & Eastern, and during the litigation itself, the contention was made by Mr. Murphy and his people, by the Phoenix & Eastern, with reference to its proposed terminus, as being Benson, or to its continuing on from Dudleyville to Deming.

(4926) "Their contention, as evoked by our claim that they were moving on the north side to secure the approach to the Gila Canyon in order to obstruct our contemplated plan of construction, was that they were only going on the north side because they could get a better curvature there for these 18 miles, and would get better local patronage from prospective mining industries on the north side to an extent that would warrant them in building the two bridges—one across to the north side and one back again to the south side." While the transaction was in fieri, that contention was made manifest to me by the sworn testimony of Mr. Murphy in the trial of the case in Arizona, which testimony I heard, and my memory of it corresponds substantially to the copy of it which I made from Mr. Murphy's evidence in the case, and which is as follows: " 'I had something to do with the making of the change of the route of the Company's road from the south side of the Gila River in Pinal County at a point about two miles west of Kelvin to the north side of said river. The change was authorized by me. We were progressing with our work up the Gila and were making numerous observations and a study of the country. We were confronted with the fact that our alignment on the south side contained considerable heavy curvature. From our observation and investiga-
(4927) tion it was apparent to the company and to myself as its president and the other directors that we would best serve the public by crossing the river to the north side and running on that side to a point near or opposite Dudleyville, as it was on the north side of the river that the largest mining interests were known to exist.

Mr. Murphy's testimony explaining change in line of P. & E.

" 'It was represented to us and understood by us that that section of the country could not very well be supplied when the river was up, for the river at times was impassable. I ordered an investigation of the facts by the Chief Engineer based upon information that we had been able to obtain and on the report of the engineer that we had examined the country to see whether it was the proper thing for us to do, all things considered, in serving the people there and in getting a good line. The investigation was made and communicated to me as to what could be done and what we could get in the way of a line as well as the advantages from a purely railroad point of view in undertaking to serve the country through there. As president of the company I immediately ordered Mr. Drake to make a preliminary survey. This preliminary survey was made to verify the conclusions that we had reached. Mr. Drake made that survey and communicated the results to me and as president of the Company I instructed him to adopt that line and proceed with the construction on the north side.' " Mr. Wm. A. Drake was then the Chief Engineer of the Phoenix & Eastern in charge of this construction work. The

contention of the Phoenix & Eastern, Mr. Murphy and his people, in respect to their proposed construction and terminus, was made manifest to me by Mr. Drake's testimony on the trial, and by affidavits filed during the preliminary motions for injunctions and to dissolve them prior to the trial. I heard Mr. Drake's testimony delivered at the trial, and made a copy of his testimony from the transcript of the testimony.

Testimony of Mr. Drake, chief engineer, as to change in line of P. & E.

(4928) Mr. Drake testified: " 'I am familiar with the change of location of the Phoenix & Eastern Railroad Company's line between Phoenix and Benson, beginning at a point near Kelvin and crossing the Gila river and extending to a point near Dudleyville. Before this change was made I examined the ground personally, rode and walked over it at various times, and advised the locating engineer to begin the work of making the surveys. From my examination of the ground it appeared to me, as an expert railroad engineer, that by crossing from the south side of the river, on which the first location had been made, to the north side and following it, including along the San Pedro River, for a distance of seventy-five or eighty miles that an improved line might be obtained—improved in the matter of alignment and saving in degrees of curvature and in avoiding conflicts with wagon roads. It also appeared that the future operation of the line might be less obstructed or interfered with by flood waters, by the drainage from the mountains, and that there were better prospects of revenue, traffic revenue, from the north side than from the south side. The resources of the country seemed to have developed in the meantime between surveys, and there was a better outlook for traffic on the north side. This examination of which I speak was made about the first of December, 1903; that is, the more definite investigations. It had been looked at in a desultory sort of way, even before that. By alignment, I mean less curvature, less sharp curves, less on the north side, affording easier curves and fewer of them. It is my recollection that we would save something like six hundred degrees of curves in the eighteen miles along the Gila River, of this disputed right of way, which begins at a point about a mile and a half west of Kelvin and extends a distance of fifteen or sixteen miles easterly. The elimination of this number of degrees of curvature is very valuable in the future operation of the road.' * * *

Nature of litigation.

"The litigation prior to the trial consisted in numerous applications for temporary injunctions and motions to dissolve them. Those applications were chiefly addressed to the discretion of the court (4929) and on questions of good faith by the respective parties. * * * We contended throughout these preliminary applications to the Court that their best line to Benson, which was their exclusive charter terminus, was along the south side of the Gila River, and that they had taken advantage of their opportunity, by being close to Kelvin and having a railroad behind them to convey their supplies, to cross over to the north side, and by filing a map secured for five years a right of way over the approach to the Box

P. & E. attempting to obstruct S. P.'s approach to Gila Canyon.

Canyon and perhaps the canyon itself in order to obstruct the contemplated line of ours, which they knew we contemplated. That was our contention. The courts were impressed by that, and to meet that contention— * * * The courts appeared impressed. I will correct 'was impressed,' and say the courts appeared impressed by that. To meet our contention they filed affidavits and gave this testimony to the effect that their purpose in going on the north side of the river was simply for the reason of the curvature and perhaps increased local traffic; and never, until I read it in Mr. Murphy's testimony in this case, had he or any of the persons interested in the Phoenix & Eastern Railroad and in that litigation mentioned the fact that they contemplated this low-grade line with respect to which he here testified."

Had not heard of Murphy's low grade line.

These facts and this history that I have testified to were in our mind and before us up to and including the pendency of the litigation in the Supreme Court of the United States and the making of the contracts referred to. We did not at any time from first to last intend to interfere with or obstruct the construction of any line to Benson. We did not at any time from first to last in this litigation intend to interfere with or obstruct the construction that was then proceeding under the auspices of the Phoenix & Eastern, except to the extent of conserving our interests in the essential canyon that I speak of—the Gila or Box Canyon. The appeal to the Supreme Court of the United States was dismissed after the Phoenix & Eastern was taken over by the Harriman interests.

Intended only to protect S. P.'s interest in Gila Canyon.

(4930) "The Phoenix & Eastern was not taken over by the Harriman interests until long after the lodging of our appeal in the Supreme Court of the United States. I know Mr. Murphy says that appeal was never perfected. He is wrong in that. It was perfected and docketed in the Supreme Court of the United States. * * * Pending the litigation and prior to the decision of the Supreme Court of the Territory, which was in the latter part of March, 1905, I think, possibly 1906, there were very heavy floods in the Gila River, as the result of which about a mile of the road which had been constructed by the Phoenix & Eastern over this disputed territory was washed out—not the railroad tracks simply were washed out, but the territory itself was washed out, and the course of the Gila River changed, so that the Gila River flowed for that distance right on this disputed right of way, on about half a mile of this disputed right of way, and I am advised does yet. We were advised of that fact prior, I assume, to the advices of it by the Phoenix & Eastern people; and our engineers surveyed a line about four miles in length, not of course on this disputed territory which was, as I say, then occupied by the river, but from one point on the disputed territory to another point on the disputed territory, and filed a map of amended location upon it and obtained an uncontested title to the right of way of that four miles right in the body of this disputed territory and essential to any railroad company that would

Appeal was perfected.

P. & E. washed out.

Strategic strip secured by S. P.

operate the railroad which had been built by the Phoenix & Eastern people.

"When the Phoenix & Eastern people recognized that we had that right of way and that they could not fill up this gap in their line without our consent, they came to us with a proposition which resulted in negotiations which culminated in our building a line of railroad over that four miles (I may be wrong as to the precise distance of the gap) and we leased it to them, they becoming our tenants for it at a rental amounting to five per cent. of its actual cost of construction to us, one of the provisions of the lease being that it was determinable at our will on ninety days' notice. This was prior to the contracts in this present litigation. * * * The negotiations commenced immediately after we had filed our maps, which, of course, was immediately after the floods, and the negotiations were conducted rapidly, in order that the road might (4931) be constructed and they could resume the operation of the 80 or 90 miles of railroad which had been built to Dudleyville. * * * The floods took place during the winter, when the case was argued in the Supreme Court of the Territory. The Supreme Court meets about the middle of January and hears arguments, and renders its decisions about the 30th of March." The year I am speaking of was 1905, possibly 1906, but I am confident it was 1905. "As a part of this history, illustrating the conditions in Arizona as between the Phoenix & Eastern and the Arizona Eastern, the position of the Phoenix & Eastern was made manifest to me and to Mr. Randolph by a letter," Defendants' Exhibit 262 (Ives), written by Mr. Drake to Mr. Randolph (4932) as follows:

P. & E. became a tenant of S. P.

DEFENDANTS' EXHIBIT 262.

SANTA FE, PRESCOTT & PHOENIX RAILWAY COMPANY

(and leased lines.)

W. A. DRAKE,
Vice-president and
Assistant-General Manager.

PRESCOTT-ARIZONA, *April 23, 1907.*
File 54.

MR. EPES RANDOLPH, *Pres't,*
Maricopa & Phoenix Railway,
Tucson, Az.

DEAR SIR:

I have thought it best to address you about as follows:

The Phoenix & Eastern Railroad was originally designed and built as a cross-country railway for the country's development, expecting to tie to other roads at Benson, Arizona, and the only construction features which had in mind a through freight trunk line were those of the superstructure of Bridges 89 and 117 and the substructure of the latter. For the reasons just given, there are

Mr. Drake's letter.

many things in connection with the construction which are not at all in consonance with the requirements of heavy freight carrying roads of this day, and I may be excused for drawing your attention thereto instead of permitting yourself and your subordinates to find these things and follow with unfair criticism because of them, although you may have fully investigated these features long ago.

There are some 8 and 10 degree curves which may be reduced without great expense. There is one 14 degree curve at the Salt River bridge which may be reduced by carrying the curved line upon the bridge. At the Salt River bridge the shore line of the canal at the north end must be watched closely, as it is likely to undercut at times of high water. The piles under the concrete piers in the main river are supposed to be driven to cemented rock. Outside of the piers, rows of piles have been driven and the intermediate space filled with rocks, second-hand steel, etc., and I believe are now safe, but the filling should be watched. The lost pier was not so protected, hence its loss. The concrete piers in this bridge would better have been carried down to bedrock instead of being founded on piles, but this would have necessitated pneumatic foundations, which were not at the time considered necessary.

(4933) At Bridge 89, which is the first Gila crossing, the north pier, or abutment, was designed for a short span and afterward enlarged. The piles are driven to solid rock. Rows of piles are driven outside of this pier and the intermediate space filled with large rocks. This filling should always be watched after high water, although it has stood several high water periods without harm; but until the rock has settled to a permanent bearing, it should, as I say, be closely watched. There are several points where the river threatens the embankment. We have driven a good many piles at these places and made some second-hand timber cribs filled with rocks, using old mine hoist cable, barbed wire, mesquite brush, etc., and all of the points in question are fairly safe, unless it may be one at a point about a mile west of Burns siding upon the Burns and Locust ranches. This place should be watched closely until it is more thoroughly protected. All the others of course need watching, but they have withstood very high water, the November flood having reached the maximum line. All the riprap which we placed last year has done perfect service, but there are places where more may be used with advantage. If the road should become a through freight trunk line, the pile should be replaced with heavy riprap. I need not advise you that it is well to use brush, wire cable, barbed wire, willow trees, etc., in the riprap wherever possible.

You will have observed that all the rails with which this track was laid are second-hand rails, and in certain places many of them were in bad condition. But little track repair work has been done upon the line east of Kelvin, and, for that matter, the number of section men employed has been very small at all times. All of the bridges were pile bridges built for a good branch railway, but not for the very heaviest freight locomotives. Had the construction of

the railway been initiated in the light of present information, it is likely that said construction would have been different. I presume you will agree with me that, so far as the future may be consistently contemplated, all railroads should be built to conform to the requirements as they now appear to us; in other words, it is a waste of money to build a branch line with little traffic under the specifications of a main through heavy freight line—construction work should be consistent with the business in view as far as such business can be foreseen.

Very truly yours, (Sgd) W. A. DRAKE.

(Stamp: Office of President, Tucson, Ariz., Apr. 24, 1907.)

(4934) This was virtually a letter from Mr. Drake as he ended his association and connection with the railroad—the last of the series of declarations upon the subject that I am aware of or have had access to. I have endeavored to make this history as complete as possible. After the contract Mr. Drake stayed and helped us out for awhile, and I think this ended his connection. Prior to the actual trial of the case it was in our mind that the pleading of the Phoenix & Eastern expressed their contention touching the matters in controversy. I have an extract from the amended verified complaint of the Phoenix & Eastern, reading as follows: "'That in December, 1903, the President of said plaintiff company (Phoenix & Eastern) directed its chief engineer to survey a line for a railroad, which would cross the Gila River at some convenient and desirable point east of Florence, and continue on the north bank of said river to Dudleyville, and thence by a convenient and desirable route to a connection south of Dudleyville with the survey which had theretofore been made.'" I have now stated with tolerable fullness the history of the collision, if such it may be called, between the Phoenix & Eastern and the Arizona Eastern, and the conduct of the parties therein. The Secretary of the Interior decided adversely to our contention in respect to the disputed right of way, after the trial in Arizona, and gave the right of way to the Phoenix & Eastern.

Extract from complaint of P. & E.

Decision of Secretary.

(4935) The Supreme Court of the Territory held that it had no jurisdiction, giving Mr. Murphy's company the right to remain in possession temporarily. "The decision of the Supreme Court of the Territory was that until the Secretary of the Interior determined the matter pending before him, the courts had no jurisdiction. After the determination of the Secretary, whatsoever it might be, the Supreme Court of the Territory said that the courts had the right to determine whether or not the Secretary erred in any matter of law; and we had authority by virtue of the decision of the Supreme Court of the Territory, by language employed by it in its decision, to institute such action for that purpose, as we might see fit, after the Secretary should have abandoned jurisdiction by rendering a final decision." We did not propose to institute any such action until the Supreme Court of the United States had perhaps reversed the

Decision of Supreme Court of Territory.

Confident of reversing decision.

Supreme Court of the Territory. We had not been beaten by the Supreme Court of the Territory, and we had absolute confidence that the Supreme Court of the United States would reverse it. The Court held against the contention of both sides, that it had no jurisdiction. It did not pass upon the question as to who owned that right of way.

No disputed questions of fact.

(4936) The Secretary of the Interior approved their maps, but I do not think that the approval of their maps when we were endeavoring to have our maps approved, gave them the right of way. I think the courts would have to determine that. I do not think there were any disputed questions of fact for the Secretary to decide, bearing upon the ultimate rights of the parties. Mr. Randolph is the representative in the Southwest of what are called the Harriman interests. I am counsel for the railroad corporations that he represents, a director in all of them I think, and during all of these times served as Secretary and organized them, and I think my relation was something more than that of mere counsel.

Lines—Phoenix to Mesa.

Phoenix to Mesa, S. P. line, is about 10 miles, it may be 17; it is out in the Valley of the Salt River, a very broken region. The line of the Phoenix & Eastern, Mesa to Phoenix, would have been competitive with the S. P. from Mesa to Phoenix, and with any extension of our line from Mesa up towards this Box Canyon. (4937) It was over a year after the action of the Secretary of the Interior that the Santa Fe turned over this line that it had constructed to the S. P. The line of the Phoenix & Eastern has not been constructed down to Benson since we acquired it; they stopped work on it a year before they sold out to the S. P.; they never did any work beyond Dudleyville. There was no contest beyond Dudleyville at any time, they could have been working at Dudleyville from 1903 on.

P. & E. stopped at Dudleyville.

San Carlos.

San Carlos I should say is 40 miles from Dudleyville, on the other side of the canyon. This disputed right of way is not part of the canyon proper, it is the approach to the canyon. Both lines were building along that approach, our line higher up, their line lower.

Construction of two roads.

(4938) Two roads "could have been built, but if there had been two rights of way the construction of a road on another right of way than the one in dispute would have cost, so the engineers said, about $200,000 more." As to whether two lines could have been built, it is a question between engineers as to what would be—the lower grade is the cheapest to build, but the higher grade is less liable to wash out. We were building on a grade 15 or 20 feet above their grade, but on the same right of way, within the 200-ft. limits. At parts of the way we were on one level, they on the other; at parts they were on the same level, I suppose. The S. P. had reached San Carlos from the East.

Gila Valley, Globe & Northern.

The Gila Valley, Globe & Northern passed through San Carlos 20 or 25 miles from Globe; it did not pass into the canyon from San Carlos. The canyon was unoccupied, and about 40 miles long from Dudleyville to San Carlos, and the 18-mile strip in dispute was west of the canyon.

Strip in dispute.

(4939) The Santa Fe built toward the East, without dispute, to the westerly end of this disputed strip, as to which there was this controversy. I

did not say that I was advised that the Santa Fe had also put some surveyors in the canyon. My first advice of that was Mr. Murphy's testimony to that effect in this present case; they disavowed that they were going through the canyon. The line through the canyon is now being built "but we have had trouble. There is an irrigation enterprise under the reclamation service contemplated there, and they want us to change our line by elevating it, and the dispute is going on. I have been told that it was decided by the Secretary in our favor, in the past few days, but I don't know whether it has or not. We did do a lot of construction work in the canyon."

Line through canyon now being built.

I believe that we expended more than a million dollars in that construction work. We began it about the time this litigation commenced, shortly after that. Up to the time the Phoenix & Eastern moved over to the north side of the river, we had not filed any maps of the canyon; we commenced activities then. "Three companies were organized for that road to Durango—the Arizona & Colorado of Arizona, the Arizona & Colorado of New Mexico, and the Arizona & Colorado of Colorado. The Arizona & Colorado of Arizona had been organized prior to December, 1903, when the Phoenix & Eastern undertook to go to the north side of the river. * * * (4940) I don't know whether we had or not applied to the Indian Department for the right. That line is on an Indian reservation, and before you can even survey you must get permission from the Indian Department of the Interior Department for permission to make the preliminary surveys. I forgot whether we had at that time applied for that permission or not." The records will show that. I know we were considerably delayed in getting that permit to go through the reservation.

Companies organized to build line to Durango.

(4940) WILLIAM DAVID LINCOLN (3)

Lincoln (3).

I intended to say that uniform speed had more to do with the average daily movement of the cars than high speed on some trains. It is the uniform speed which raises up the daily average of the car—that is, the uniform speed on all freight. The uniform speed we make on our freight I think is the cause of the good showing which we make on that statement. The uniform speed will take into consideration the business which is competitive; we make very little if any faster time on competitive business, as you consider it, than we do on all our other business. We make very little faster time, if any, into Colorado points and Portland than into Ogden—I would say off-hand there is not a difference of over three miles an hour on our fastest freight to Portland and our Ogden freight from Omaha to Green River. (4941) From Omaha to Green River by the Portland fast freight line it is not a good many hours faster than by the Ogden-San Francisco freight train. I don't believe it is ten hours faster. It may be ten hours faster, but a good deal of that ten hours can be taken up by the time of the district terminals being reduced. The schedule of the Portland freight train is about two miles an hour faster, but the difference in time would be governed

Uniform speed cause of U. P.'s good showing.

Comparison in time of freight trains.

by some time at district terminals. We go on the schedule of the train. As to this matter of speed not having anything to do with the question, while there is a variation from month to month, the conditions change at the different periods of the year. In the season when the fruit and stock business is heavy, the average is brought up a little more because we haven't as many idle cars lying around—which must be taken into consideration. The regular speed is the controlling factor. We move our fruit trains very little faster, if any, than our regular California-Ogden train. They move from 12 to 13 miles an hour. We move eastbound freight very little faster than westbound.

Regular speed is controlling factor.

Schedules and terminal delays.

(4942) The westbound is less than 10 hours according to the schedule, but the terminal delay on eastbound is not quite as long as on westbound—the terminal time is not quite as long on eastbound—9.9 miles an hour is the schedule time, including stops. The delay at district terminals cuts a big figure because it is included in the 9.9 miles an hour. Omaha to Ogden, with that freight train, is 100 hours and 45 minutes; eastbound fruit schedule about 83 hours; other than fruit it will run about 95 to 100 hours. Referring to the average speed of 9½ miles per hour, Omaha to Ogden, the schedule outside of the time at district terminals averages 11 to 12 miles an hour. The shipper is interested in the time the freight takes, not whether it runs or stands still. The fact that we run our fruit trains 10 or 12 or 15 miles an hour, or faster than our eastbound freight other than fruit, from one terminal to the other, Ogden to Omaha, has very little to do with the average. Whether the fruit movement is light or heavy cuts very little figure. It is the uniform movement of all freight that cuts the figure. (4943) Livestock cuts very little figure, for it is only a couple of months in the year, and is moved but very little faster than the regular freight. It is the regular movement. It is mighty near right that we move fruit, livestock, lumber, coal, grain and everything else at practically the same speed on the U. P.

It is the uniform movement of all the freight that cuts the figure.

A memorandum was offered in evidence which is to some extent a correction of Mr. Mahl's testimony in respect to the times of the disposition of the S. P.'s Two-Five years 4½ per cent. bonds. The paper referred to was marked Defendants' Exhibit 263, and is as follows:

DEFENDANTS' EXHIBIT 263.

SOUTHERN PACIFIC COMPANY.

Memorandum in respect of disposition of proceeds from sale of Two-Five Years 4½ per cent. Bonds.

The records show that the proceeds from the sale of $15,000,000, face value of bonds between December 1, 1900, and March 31, 1901, amounting to $14,175,000, were applied principally as follows:

Floating debt paid off	$6,600,000
Advances to the Texas & New Orleans R. R. Co., for betterments and additions, equipment and new construction of Dallas Division	2,500,000
Advances to the Galveston, Harrisburg & San Antonio Ry. Co., for deficiency in operations, betterments and additions and equipment	580,000
Advances to the Oregon & California R. R. Co. for deficiency in operations, betterments and additions and new construction	400,000
For account of steamships under construction	1,200,000
Total	11,280,000

The remainder was held as cash on hand, and was subsequently expended for additions, betterments and new construction.

The proceeds from the sale of $15,000,000 face value of bonds between June 1, 1903, and January 31, 1904, amounting to $14,425,000, were applied principally as follows:

Construction of new lines	$5,650,000
Acquisition of new lines and other property	7,900,000
Total	13,550,000

(4944) "MR. DUNNE. I will offer in evidence, if your Honor please, and have marked as Defendants' exhibit, a mileage statement of February, 1901, and supplementary to that a telegram to me from Mr. W. A. Worthington, subject of course to any right that Mr. Severance desires to exercise, of cross-examining, checking or otherwise.

The papers referred to were marked Defendants' Exhibit 264, and are as follows:

DEFENDANTS' EXHIBIT 264.

Mileage February, 1901.

1. Ogden to Roseville, including branches		1,024.62
2. Roseville (and Davis) to Portland, including branches		1,158.33

W. A. WORTHINGTON.

R. 11:00 a. m.

COMPLAINANT'S REBUTTAL TESTIMONY.

NEW YORK CITY, TUESDAY, APRIL 5, 1910.

Hawley.

(4946) EDWIN HAWLEY (2)

Closely associated with C. P. Huntington.

I was associated with Mr. C. P. Huntington in business about nineteen years, quite close relations, probably to a greater extent than almost any other of his associates in business in New York. I was associated with him in connection with the S. P. in the position I had in charge of traffic here in New York, and as the owner of stock in the S. P., uniting with him in the purchase, at his request, of certain S. P. stock—the Crocker stock, one-fourth interest, sold through Speyer & Co.; (4947) the purpose being to increase our

COPY BOUN

interest in the Company's affairs. One of the objects on the part of Mr. Huntington was to maintain control of the Company. This was a short time prior to his death, I am not very good on dates. The purchase was 100,000 shares. I saw Mr. Huntington in a business way nearly every day, at his office and house, our relations being quite intimate and confidential, and his habit was to talk over S. P. business with me. In those days I knew Mr. Harriman, and saw him occasionally in connection with Mr. Huntington, a short time before Mr. Huntington's death. We three made a trip for a couple of days to the Adirondacks, three or four weeks before Mr. Huntington's death. I saw Mr. Harriman occasionally in New York before Mr. Huntington's death, but not so often as I saw Mr. Huntington.

Knew Mr. Harriman.

(4948) Mr. Kahn's testimony is called to my attention as follows: After speaking of the fact that he thought it would have been prejudicial to the U. P. to have had some hostile influence come into the S. P., Mr. Kahn said: "So much so that Mr. Harriman, in the last year or two of Mr. Huntington's life, made every endeavor to arrange definite relations with Mr. Huntington so as to assure for all times the permanence and the unaltered relation between the Union Pacific and the Southern Pacific as far as the use of the Central Pacific line was concerned, and in fact he offered to Mr. Huntington, on behalf of the Union Pacific, to buy the Central Pacific alone, if a way could be found to separate it from the rest of the Southern Pacific system. That was declined. And there were also declined all other overtures on the part of Mr. Harriman looking to a permanent and definite and unalterable relationship between the Union Pacific and the Central Pacific." Later on in his testimony Mr. Kahn stated that he could not say that he was present at any such interviews, but in some way they came to his knowledge.

Mr. Kahn's testimony as to Mr. Harriman's efforts to arrange definite relations between S. P. and U. P.

I did not know or hear of this, Mr. Huntington never mentioned it to me, it may have taken place, however. I negotiated the sale for 475,000 shares of stock, which included the Huntington Estate holdings and mine, sold the stock to Mr. Harriman, transaction consummated at his house. I represented the Huntington interest and myself. (4949) My negotiations, so far as the U. P. was concerned, for the sale of the stock, were exclusively with Mr. Harriman. I say the matter was finally concluded at Mr. Harriman's house, Mr. Harriman, Mr. Schiff, Mr. H. E. Huntington and myself being present. I fixed the price for the Estate and myself, it was satisfactory to both parties. I never heard that Mr. Gould attempted to buy the Huntington stock, either from him or from the executors, or from anyone else. I was in the employ of the S. P. up to Mr. Huntington's death in August, 1900, as assistant general traffic manager. My immediate superior was Mr. Stubbs. I think in some respects the administration of Mr. Huntington's estate is still open.

Witness did not know of it.

Negotiated sale of S. P. stock to Mr. Harriman.

Fixed the price.

(4950) The Huntington stock was a part of the estate of C. P. Huntington, left by special bequest, I think entirely free from the

power of the executors. The property had not been distributed to the beneficiaries of the will, and the executors had not been discharged from their trust at the time this stock was sold. I was not employed to sell that stock. Mrs. Huntington authorized me to negotiate the sale probably sixty days before it was made; that was my first authorization. Mr. Huntington died in August, 1900, and the interview at which Mr. Schiff and Mr. Harriman were present, was in February 1901—that is, this interview and the sale of the stock took place at the same time. (4951) In the sale of this stock, so far as I was a factor in the transaction, I had no relations whatever of any kind with the board of directors of the U. P., nor with the executive committee of the U. P., as such. At this final interview, at which the transaction was closed, Mr. Jacob Schiff was present. He was at that time a member of the firm of Kuhn, Loeb & Co. It was Kuhn, Loeb & Co. who paid me for my proportion of the stock, and who paid for the Huntington stock.

Authorized to make sale, 60 days before it was made.

Mr. Huntington died in August, 1900.

Mr. Schiff present at final interview, Feb., 1901.

I stated that my negotiations were entirely with Mr. Harriman, that I saw Mr. Schiff finally at the interview when it was closed. He did not take part in the negotiations. Mr. Harriman made no proposition to me for the purchase or control simply of the Central Pacific line, there were no negotiations except for the purchase of the stock. (4952) My position in the matter was that about sixty days before the stock was sold I was authorized to sell it—that is the short of it. My business relations with Mrs. Huntington after her husband's death were friendly, advising her about her affairs, more or less, I was not employed, I put this through without any compensation from the Huntington Estate.

No proposition to witness for purchase of Central Pacific, alone.

(4952) GEORGE J. GOULD.

Gould.

Head of Gould lines.

I live at Lakewood, New Jersey, am connected with the Missouri Pacific, Texas & Pacific, International Great Northern, and the Wabash west of the Missouri River, the D. & R. G. and the Western Pacific. (4953) Mr. Jeffery is President of the D. & R. G., and had been previously to 1900. I acquired my interest in the D. & R. G., or the control of that line, in the fall of 1900 and the winter of 1901. I am chairman of the board. When I acquired my interest in the D. & R. G. that company was in negotiation for the purchase of the Rio Grande Western, closing it, I am inclined to think, after I came into the directorate on February 14, 1901. Before that time I had been a director of the U. P., and for some time thereafter—continuously since the reorganization. My relations with Mr. Harriman were rather intimate, we were friendly, I was on the U. P. Executive Committee. When negotiations were pending on the part of Mr. Harriman for the S. P. stock, he advised me of them, not in the detail, but in the general. I did not approach any representative of the Huntington Estate after Mr. Huntington's death, or while these negotiations were pending, with a view to purchasing that stock. I did talk with Mr. Harriman

Acquired interest in D. & R. G. in fall of 1900.

D. & R. G. bought R. G. W. Feb. 4, 1901.

Mr. Harriman advised him of negotiations for S. P. stock.

during these negotiations about the possibility of my taking or endeavoring to buy that stock if he did not want it.

(4954) Mr. Harriman seemed at one time to get a little lukewarm about taking the stock, about making the purchase, and I told him if he did not want it and had no objection I would take it for our interests. As a vague guess, I should imagine this was in September or October; and after the acquisition of the stock, or the contract for its purchase, I suggested to Mr. Harriman that he let the railroads with which I was connected have a half interest in the purchase—the Missouri Pacific and the Texas & Pacific. He turned the suggestion down, declined it. When I told him that I had acquired the control of the D. & R. G. he asked me for a half interest for the U. P., first saying that he supposed I had bought it for both interests. I told him no, and that I could not arrange it. I do not remember of any effort being made to buy the Central Pacific line alone. The D. & R. G. stock that I acquired was bought largely in the London market, the control being in the hands of the public, I think, Mr. Coppell representing the stock as chairman of the board.

Witness wanted S. P. stock.

Wanted half interest.

(4955) I was interested in the Missouri Pacific and the Texas & Pacific, in 1900, anterior to the purchase of the S. P. stock. The Texas & Pacific runs through Texas, and terminates at El Paso. It was a connection with the St. Louis & Iron Mountain —in which I was interested, it is part of the Missouri Pacific—at Texarkana, prolonged to the north. In 1900 the Texas & Pacific had no outlet into California other than by the S. P. rails from El Paso, except it could send business by the Atchison, I think, up to Albuquerque, but no direct outlet except over the S. P. rails. The St. Louis & Iron Mountain, having its southern terminal point on the Texas line at Texarkana, terminates at the north in St. Louis, and then the Missouri Pacific strikes out to the west, going to Pueblo. Between Pueblo and Ogden the Rio Grande Western and the D. & R. G. made a line in 1900, when I was trying to buy the control of the D. & R. G. in the market, and the D. & R. G. at that time was negotiating for the Rio Grande Western; that situation, if it had been brought to pass between the D. & R. G. and the Rio Grande Western, would have unified the line between Pueblo and Ogden, and if I had acquired the Denver & Rio Grande I should have accomplished an extension of the Missouri Pacific from Pueblo to Ogden.

In 1900, only California outlet for Gould lines was via S. P.

Control of Rio Grande roads and S. P. would have given through line via Ogden.

(4956) The D. & R. G. had no other railroad outlet from Ogden to California except over the S. P. rails. Before the U. P. purchased the S. P. stock, I suggested to Mr. Harriman, during the negotiations, that if he did not want the properties—the S. P.—I would take them for my interests. I made him aware of my willingness to take the property in the event that he did not consummate the negotiations with the U. P. I could not place the date with any absolute degree of accuracy. I should think it was some time in September or October, 1900. It was whilst he was proceeding with

Suggested to Mr. Harriman he would take S. P. stock if Mr. H. did not want it.

That was in Sept. or Oct., 1900.

Suggested to Mr. Harriman that he would take a half interest.

his negotiations with the Huntington estate. After Mr. Harriman had accomplished the purchase of the S. P. stock, I suggested to him that I take a half interest, or, rather, my interests take a half interest. I should think it was about the time that Mr. Harriman made the S. P. stock purchase—about the time he completed it. He declined. As to whether I made any statement along those same lines at that time to any member of the firm of Kuhn, Loeb & Company: I think I mentioned it to Mr. Schiff, probably. Yes, I think I mentioned it to Mr. Schiff.

Made same statement to Mr. Schiff.

"Q. You have stated to Mr. Severance that you were friendly with Mr. Harriman at the time of these negotiations, that you were a member with him of the executive committee. Do you know whether during the pendency of his negotiations for the purchase of the stock (4957) and before the consummation of the sale, he was apprehensive that other interests over and above your own interest were desirous of getting that stock? A. Yes, he talked it over with me several times, and he was afraid the North-Western would build from the Black Hills. They had a line up to the Black Hills, and he was afraid the North-Western would build from the terminus of their line through to Ogden, going through a canyon that lies to the north of Ogden. Ogden Canyon, I think the name is, but I am not quite sure. Then he also used to be afraid of the Burlington building through to Ogden. Q. Is it not a fact that in 1900, after Mr. Huntington's death, it was generally understood among railroad men of your standing and Mr. Harriman's that the Southern Pacific stock would be sold? A. Yes; I supposed it would come on the market." In the fall of 1900, or at any time, I did not personally attempt to buy the stock, I would have considered that disloyal to my associates, to Mr. Harriman.

Mr. Harriman apprehensive that the North-western and Burlington would want the S. P.

Generally understood that S. P. would be sold.

Miles.

(4957) GEORGE E. MILES.

New York. C. P. Huntington's private secretary.

I have lived in New York nearly eleven years, and before that for many years in Brooklyn; was Mr. C. P. Huntington's private secretary up to the time of his death (4958), attending to all the correspondence and traveling with him, went to California with him on his trips, living when there at his house and before that at the Palace Hotel. My relations with him were quite intimate outside of business. I was at his camp in the Adirondacks when he died. Had a desk in his room at 23 Broad Street, Mills Building, New York. I very frequently talked with him over his business matters; of course sometimes not. My relations with him were of an exceedingly intimate character. Mr. E. H. Harriman came to Mr. Huntington's office occasionally, short visits, I don't recall ever seeing him have a long conversation with Mr. Huntington. "Q. Mr. Kahn was on the stand the other day as a witness for the defendants, and in the course of his testimony he stated that it was considered it would have been prejudicial to the Union Pacific to have had some hostile influence come into the Union Pacific, and then he proceeded (I am quoting his testimony): 'So (4959) much so that Mr. Harriman, in the last

Mr. Harriman occasionally came to Mr. Huntington's office.

year or two of Mr. Huntington's life, made every endeavor to arrange definite relations with Mr. Huntington so as to assure for all times the permanence and the unaltered relation between the Union Pacific and the Southern Pacific as far as the use of the Central Pacific line was concerned, and in fact he offered to Mr. Huntington, on behalf of the Union Pacific, to buy the Central Pacific alone, if a way could be found to separate it from the rest of the Southern Pacific System. That was declined. And there were also declined all other overtures on the part of Mr. Harriman looking to a permanent and definite and unalterable relationship between the Union Pacific and the Central Pacific.'" No such negotiations ever came to my attention.

Negotiations between Mr. Harriman and Mr. Huntington did not come to his notice.

"Q. Mr. Miles, I would like to read Mr. Kahn's testimony to you once more. * * * Calling your attention to that testimony, isn't it entirely possible, so far as you are concerned, that just precisely that situation may have existed between Mr. Harriman and Mr. Huntington? A. It is possible. Q. The truth of it is, you don't appear to know anything at all about that stock purchase, do you? * * * A. The stock purchase, you are talking about? Q. Yes. A. After Mr. Huntington's death? (4960) Q. Yes. A. I wasn't connected with the estate in any capacity at all."

Situation described by Mr. Kahn may have existed.

(4960) FRANK W. WHITE (3)

White.

I have checked Mr. Spence's table, showing in February, 1910, some 77 items upon which there is a differential. His figures are correct. I have made a supplemental list of the items appearing in Complainant's Exhibit 84, showing all the differentials as they existed January 1, 1909. This table is Complainant's Exhibit 212, and sets forth the water-and-rail rates and the all-rail rates—the rates from the Morgan Line pier and also all-rail from New York City proper. These differentials do not apply to points in the seaboard (4961) zone from which rail or water haul to New York is absorbed by the Morgan Line—only from the Morgan Line or Mallory Line pier.

Mr. Spence's figures correct.

"Q. On page 887 of the printed record, when you were being examined the first time you were on the stand, you were asked, 'Now, since 1901, as shown by Exhibit 84, how many of those items have been changed until they are now the same?' And you answered, 'There are about twenty left in which the rates for the Morgan Line are lower than they are for the all-rail line.' I understand that you misunderstood that question and desire to correct your answer. A. Yes, sir. Q. Will you state what you understood when you were asked and what you intended to state? A. I understood it to mean that there was an advance of rates on January 1, 1909, and I understood it to mean how many of the rates had not been advanced—in other words, remained the same as they were before. Q. Well, how many were there that were not advanced? A. Twenty. Q. Twenty or nineteen. A. Nineteen."

Explains former testimony.

(4962) Complainant's Exhibit 212 is as follows:

COMPLAINANT'S EXHIBIT 212.

(White)

INTERSTATE COMMERCE COMMISSION.

Authorities R. H. Countiss, I. C. C. 375-865-815.

"Q. Mr. White, I call your attention to the following testimony which you gave, page 887 of the printed record, referring to Complainant's Exhibit 84 and again to Complainant's Exhibit 83. 'Q. I show you Complainant's Exhibit 84, in three sheets. What does that show? A. That continues it down to the present time, showing the changes in effect on January 1, 1909. Q. That is, it continues Complainant's Exhibit 83 down to the present time, showing the changes made by the tariff which took effect January 1, 1909? A. Yes, sir. Q. How many items of commodities are there in this Exhibit 83, the rates on which on January 18, 1900, were less by the Mallory Line and the Morgan Line to New Orleans and Galveston and from those places by rail to the California terminals than by the all-rail lines? A. Approximately 65 up till 1901. Q. Now, since

1901, as shown by Exhibit 84, how many of those items have been changed until they are now the same? A. There are about twenty left in which the rates for the Morgan Line are lower than they are for the all-rail line.' " (4968) I recollect giving that testimony. I do not mean to convey the impression that during any single year between 1901 or 1900 and 1909 there were only twenty commodity rates by the broken service, ship-and-rail, that were less than by the all-rail lines—not at all. I just corrected my testimony now to that effect.

"Q. Does it not appear from your own exhibit, 83, that from January, 1900, to and including May 16, 1908, year by year, the commodity rates by the Morgan Line, which were lower than the all-rail lines, varied from 63 or 64 down to 98, never being less than 63? Does not that appear from your own exhibit? A. I couldn't tell without I count them up, no, sir. Q. Isn't it a fact also, or are you aware of the fact that in preparing your exhibit 83 you duplicated various items, and that, for instance, in the month of May, 1908, your exhibit shows 98 items, when in point of fact, duplication being canceled, there were only 79 items. Are you aware of the fact that your statement contains a number of errors of that kind? A. No, sir."

Peter.

(4968) WILBUR H. PETER

Statistics taken from railroad reports.

I am a junior clerk of the Interstate Commerce Commission in the Bureau of Statistics and Accounts under Professor H. C. Adams. I have been at work for a short time preparing figures from the reports of different railroad companies. (4969) The figures were not directly prepared under my direction, but indirectly; Mr. Burleigh in the office with me had the statement prepared by Mr. Morrow from the annual reports to the Commission. The statement, Defendants' Exhibit 213, stops at 1905 because the Commission has no reports for the steamers since that time, the S. F. & Portland S. S. Co. then taking over the line between S. F. and Portland. Exhibit 213 is as follows:

COMPLAINANT'S EXHIBIT 213.

(Peter)

INTERSTATE COMMERCE COMMISSION.

Washington.

I, Edward A. Moseley, Secretary of the Interstate Commerce Commission, do hereby certify that the paper hereto attached is a true copy of data in the original annual reports for the carrier named now on file with this Commission.

(4970) In testimony whereof I have hereunto subscribed my name, and affixed the seal of the Commission, this Thirtieth day of March, 1910.

(Sgd.) EDW. A. MOSELEY,
Secretary.

(Seal Interstate Commerce Commission. 1887.)

Statement compiled from the annual reports of the Oregon Railroad & Navigation Company to the Interstate Commerce Commission for the years ending June 30, 1905 to 1896, showing Miscellaneous Income from Ocean and River Steamers.

Year	Gross Income	Less Expenses	Net Miscellaneous Income
1905	$568,103.19	$583,667.74	a$15,564.55
1904	1,014,352.44	1,069,485.01	a55,132.57
1903	858,940.43	936,882.02	a77,941.59
1902	860,650.20	909,763.83	a49,113.63
1901	849,346.53	835,294.08	14,052.45
1900	839,277.80	795,530.23	43,747.57
1899	747,697.32	742,080.48	5,616.84
1898	902,922.35	766,542.23	136,380.12
1897b	463,808.55	456,241.86	7,566.69
1896c	576,164.00	775,216.79	a199,052.79

a Deficit.
b Figures shown are from the report of the Oregon Railroad & Navigation Company for the period August 18, 1896, to June 30, 1897. The report of E. McNeill, Receiver, Oregon Railway & Navigation Company for the period July 1, 1896, to August 17, 1896, shows additional net miscellaneous income of $6,624.10 from Ocean and River Lines.
c Figures from the report of E. McNeill, Receiver, Oregon Railway & Navigation Company.

Complainant's Exhibit 214 was prepared under my direction. The data assembled are from the annual reports filed with the Commission. This Exhibit will be found at pages 4972-4992 of the record, and is a series of tables. (4993) Exhibit 215 for Complainant shows operating revenues and expenses, ratio thereof, transportation expenses and ratio, and average yearly mileage operated—prepared under my supervision, and amalgamating main company and subsidiary lines for the system. This exhibit is set forth at pages 4993-5041, and is a series of tables.

(5042) Complainant's Exhibit 216, prepared under my direction, recapitulates the statement of maintenance of way and structures, maintenance of equipment, and average mileage operated during the year, for the same seven systems as in the other exhibit. 216 is set forth at pages 5042-5047, and is a series of recapitulations. (5047) "Q. I call your attention to the first exhibit that was offered in evidence on your examination, the statement with reference to the Oregon Railroad & Navigation Company. What ocean and river steamers are involved in that exhibit? A. The exhibit was prepared from the statement of miscellaneous income, as called for by the annual report form, but details respecting the exact lines represented were not required by that form during those years." I do not know what ocean and river steamers are involved in that exhibit; nor do I know what quantities in that exhibit are assignable to ocean steamers, and assignable upon the other hand to river steamers; nor what quantities in that exhibit are assignable upon the one hand to transcontinental business moving by ocean or river steamer, and business not transcontinental moving by either of those vehicles of transportation; nor what data go to make up the ultimate item "Gross Income"—no detail furnished. I do not know what data go to make

up the ultimate item "Expense." Referring to the second exhibit, the records from which that exhibit was compiled are reports to the Interstate Commerce Commission.

(5048) Referring to the detail attached to that exhibit for the S. P. and to what I mean by the expression in that detail, "California Northwestern Railway, Lessee:" As I remember that report, it was a report of the operation of certain mileage leased to a party—I don't remember the name. About 90 miles was leased. I don't know between what points. I gave certain data in respect to the California Northwestern Railway for the year ending June 30, 1906, and June 30, 1907; but not for the year ending June 30, 1909, and the year ending June 30, 1908; because as you will notice by foot-note No. 4, it states that the figures for 1907 for the California & Northwestern lines were for the six months ending December 31, 1906, consolidated with certain other companies forming the Northwestern Pacific Railway. I think I can get that out of a report I have of the Interstate Commerce Commission—the companies composing the Northwestern Pacific. That does not appear in the exhibit in question. I do not know whether the Northwestern Pacific was an S. P. property.

(5049) "Q. * * * I call your attention to a specific item in your exhibit—California Northwestern Railway, and I ask you if you are able to state the actual physical mileage to which the arithmetical expressions related to that company are assigned? A. In 1907, 20.03 miles;" and in 1906, 40.06. In respect to the California Northwestern Railway, Lessee, so described in my statement, the mileage to which these arithmetical expressions are assigned was 88.87 miles for the year 1907. That mileage, as I stated it, was the average mileage put upon a yearly basis. As I stated, the report was for six months, the first six months of the year, so that in aggregating all the data of the system for the year I only used one-half of the mileage actually operated. Take the Maricopa & Phoenix and Salt River Valley Railroad, the physical mileage to which my quantities are addressed in this statement was 42.51 miles; for the North Shore Railroad, the mileage from the same point of view was 45.25; and for the Maricopa & Phoenix Railway Company, the physical mileage to which these qualities are pointed was for the year 1909, 45.64 and for the year 1908, 43.26. The physical mileage assignable to the Independence & Monmouth Railway mentioned in the list was for 1909, 18.80. As to the physical mileage of the North Shore road: 1907 was the last appearance of that road, and it is 45.25, on the same basis as the California Northwestern line. The mileage of the Phoenix & Eastern Railway Company was for 1909, 95.26, and for 1908, 95.26. Take the Lake Charles & Northern Railroad Company (5050), from the same basis as I explained in reference to the California & Northwestern, the average mileage used was 44.48. That road began operations October 25, 1908. The mileage of the Arizona & Colorado Railroad Company, in 1909 was 35.35; the Coos Bay, Roseburg & Eastern Railroad & Navigation

Company, in 1909, 31.46; the Corvallis & Eastern, in 1909, 140.58; and the Gila Valley, Globe & Northern, in 1909, 125.41. Referring to the U. P.: The mileage of the Ilwaco Railroad, which is listed under the U. P. was in 1909, 28.65. And of the Oregon & Washington Railroad Company, similarly listed, on the same basis as the one I described for the California Northwestern, 3.05. "MR. SEVERANCE. Explain a little more fully what you mean by 'On the same basis.' WITNESS. That the report as rendered covered the operations for the six months ending June 30, 1909, and in assembling aggregate data for the system for the full year I used one-half of the mileage operated at the close of the year. Q. Basing on a six-months report? A. Yes, sir; the operations covering six months. Q. The Oregon, Washington & Idaho Railroad Company, the mileage for that? A. 72.03.

"Q. Did you make any comparisons with the annual reports of the Union Pacific and the Southern Pacific to the stockholders? A. Only in a general way." I am not prepared to say that precisely the same companies and all the same companies are included in the annual reports to the stockholders of the U. P. and S. P. companies, respectively, as I have included in my showing. "Q. Have you any knowledge as to whether the methods of the various railroads listed in your exhibits are absolutely identical in respect to their methods of accounting. A. I would assume that they were. Q. Well, is that a mere assumption upon your part as distinguished from any knowledge? A. They fall within the classifications prescribed. Q. Well, you are assuming it; you are not speaking of actual knowledge upon the subject, are you? (5051) A. There might be a question of jurisdiction of the Interstate Commerce Commission. Q. I am looking at this thing not from the legal but from an accounting point of view. I asked you whether you are prepared to say that the methods of these various companies are identical in respect to their accounting so far as the showing in your exhibits is concerned? A. Not having examined anything but the annual reports as filed, I cannot say positively." For instance, I cannot say that as among all of these companies listed in the exhibits the methods of accounting in respect of the depreciation of the equipment is identical. I have no knowledge of my own as to the quality and quantity of the articles of freight carried respectively by these various lines. My knowledge does not extend that far. I do not know what the ratio of carrying capacity to dead weight of refrigerator cars, for instance, would be as compared with box cars.

I do not know anything about the westbound movement of refrigerator cars with respect to quantity of load. As to the length of haul of these various companies—the average length of haul; the reports would show that item, but I don't carry it in my head. As to the average haul upon the S. P., for example, during the interval between 1901 and 1909, the same answer would apply—the reports would show it. (5052) I cannot tell as between 1901 and 1909 whether there was not an actual falling off in the earnings per ton

upon the S. P. I have no information about that. "Q. I omitted to ask you whether you are able to express to us the average haul of the Union Pacific as between 1909 and earlier years, say 1908. A. The annual reports would reveal this figure." I have not those annual reports with me here. They are on file in Washington.

"Q. You have mentioned various roads here—the Great Northern and the Northern Pacific, for instance; I think you even went outside of the United States to get a road—the Canadian Pacific. Now take the Great Northern. Do you know to what extent the Great Northern carries Grain and Ore tonnage, and carried it during the periods mentioned in these exhibits? A. The ratio of those commodities to the total tonnage reported as carried would be shown in the annual reports. Q. You have no expression of it here? A. Not in these exhibits. Q. Do you know to what extent freight cars are loaded, as to being fully loaded, with commodities of that description? A. No, sir. Q. Can you tell us what percentage grain and ore would average of the total tonnage for instance of the Great Northern or the Northern Pacific upon the one hand and upon the other the total tonnage of the Union Pacific or the Southern Pacific? A. If I understand your question, that same ratio would be expressed in the annual reports. Q. You have no expression of it available here? A. No, sir." I know nothing about the governmental relations of the Canadian Pacific in respect to pecuniary subventions and reliefs. From my general knowledge, as an employe of the Interstate Commerce Commission, I know that the Santa Fe has considerable mileage in the territory east of Kansas City. I do not know whether the operating cost is lower in that region than in the regions farther west. One of the factors in my exhibit is mileage; but actual location of the mileage is not shown in detail. (5053)

"Q. From your general knowledge as a member of the Interstate Commerce Commission staff, could you give us any expression of the relative percentages of total traffic in respect to grain, coal, stone, sand, cement, brick and lime obtaining upon the Southern Pacific Company on the one hand, and on the Santa Fe System upon the other, during the years comprehended in these exhibits? A. Those items are part of those called for in the annual report. Q. You have no expression here? A. No, sir. Q. Now, with respect to the ton mile rates here for the Southern Pacific Company. Was there any difference in the expression of the data from which those results are derived between the period prior to and including 1904 and the subsequent period, so far as those data exist in the sources from which you have compiled these exhibits? A. Yes, sir; I think there was. * * * (Witness refers to memoranda.) * * * Q. * * * Isn't it a fact that during the period prior to and including 1904, the tonnage reported by the Southern Pacific to the Interstate Commerce Commission and the data from which the ton mile rate was arrived at, included company freight as well as commercial freight, whereas since 1904 company freight was omitted? A. You speak

of the Southern Pacific Company itself? Q. Yes. A. Or as generalized for the whole system? Q. Take the Southern Pacific Company. A. In its report for 1904, the page calling for traffic statistics, as well as the detail of commodities, apparently included some three million and a half tons of freight marked 'Company.'

"Q. Don't you know, Mr. Peter, or do you carry it in your mind as a matter of your general information as an attache of the Interstate (5054) Commerce Commission, that up to and including 1904 the Southern Pacific company reported company freight, charging a very low rate for the movement thereof, and that after 1904 that was discontinued and the report was confined exclusively to commercial freight? Do you know that as a matter of general information? A. As to the lowness or highness of the rate I can make no answer. My memorandum shows that apparently was the case so far as the inclusion of tonnage was concerned." I am not able to say in respect to operating expenses whether the methods followed by the various lines listed in my exhibits were identical as to the items included in operating expenses; nor whether any of the lines mentioned in my exhibits—take the Hill lines, the G. N. and the N. P., and also the Santa Fe,—during the years mentioned in my exhibits, or any of these years, charged into operating expenses, arbitrarily, year by year, large sums for depreciation on existing equipment. "Q. Are you aware of the fact that no such charge was made by the Union Pacific and Southern Pacific during any of these years? A. I have no information on that point. Q. Do you know in respect to the various lines listed in these exhibits, whether the transportation charges were made up in the same way for each of these lines and for each of these years? A. I cannot answer."

In the years 1908 and 1909, and pursuant to a regulation of the Interstate Commerce Commission, a new division of operating expenses was erected, entitled "Traffic Expenses," which were formerly included under the head of "Transportation Expenses." "Q. In the earlier years listed in your exhibits, did you not include these traffic expenses, while in the later years you withdrew them from the transportation expenses? A. The item named 'Transportation Expenses,' represents the amount shown as reported under that head. The foot-note appended to it for 1908 and 1909 states that the classification in question became effective so as to cover those two years. Q. If there was such a regulation did you pursue it in making these computations? A. For the previous years? Q. And the subsequent years. A. I had no basis on which to make any combination of figures. Q. If pursuant to a regulation of the Commission the so-called traffic expenses for the years antedating 1907 were included in trans- (5055) portation expenses, and were subsequently to 1907 made assignable to another category, then for the years succeeding 1907 these traffic expenses were not included in the transportation expenses, were they? A. They were not. Q. Do you know whether the item of the hire of equipment did not constitute a heavy debit with the Southern Pacific and the Union

Pacific, or either of them, amounting to several millions of dollars up to and including 1908 and 1909? A. That item is also a feature of the annual report. Q. Well, apart from the amount of the item, do you know whether any regulation as to location of that item was established by the Interstate Commerce Commission, as to whether it was taken out of one category and moved into another? A. Yes, sir. The classification mentioned in the foot-note would cover that point, the item in question being transferred to income account. * * * As I remember, it was an item of transportation prior to 1907." My only source of information in making up these figures was the annual reports, as to the correctness of which I know nothing.

(5056) 1904 is the last S. P. report in which any memorandum appears relative to Company material. As to the item of average mileage, "I may add that in several cases where the report was for less than a full year, the road from its standpoint, it being a single reporting carrier, may have considered that its ratio as based upon that average would be more correctly stated by using the full mileage operated, the fact that it was for less than a full year being indicated by the fact that the report was for less than a full year. So, where that fact existed, in order to make the returns consistent, I used an average which on the basis of the other reports would represent the average mileage operated as reflected in the other side of the equation." The S. P. and U. P. subsidiary companies were taken from the statistics of railways in the United States, a publication of the Interstate Commerce Commission.

NEW YORK CITY, APRIL 6, 1910.

Tweed.

(5057) CHARLES H. TWEED.

Formerly Gen. Counsel of S. P.

I was general counsel of the S. P. from its organization until 1900, until my retirement, and Vice-President for part of the year 1900, my office being in the same corridor with the President, Mr. Huntington. Our relations concerning the S. P. business were very intimate, as intimate as such relations would be. (5058) Touching the offer, testified to by Mr. Kahn, by Mr. Harriman to Mr. Huntington to purchase the Central Pacific line, exclusive of the rest of the system, I have no recollection of such offer having come to my knowledge. I qualified as one of the executors of Mr. Huntington's will. The S. P. stock, given by the will to H. E. Huntington and Mrs. Huntington, in the proportions of one-third and two-thirds respectively, was sold in January or February, 1901, by the beneficiaries under subdivision 8 of the will. (5059) This will, Complainant's Exhibit 217, is set forth at pages 5059-5069 of the record.

Did not know of offer to purchase Central Pacific, alone.

(5069) FRANK M. MURPHY (2).

Murphy.

I have glanced hastily over the testimony of Mr. Ives. (5070) We had surveyed a line through the Gila Canyon, had engineers in there for several months, and surveyed a line clear through to Lordsburg, beginning in May, and finishing in December, 1903. It was in December, 1903, that we crossed to the north bank of the Gila, which caused the organization of the Arizona & Eastern, spoken of by Mr. Ives. Our purpose in the survey through the Gila Canyon was to get information in view of building a railroad, extending the Phoenix & Eastern to a connection with the Santa Fe at Deming. Later on, we ran a line through the Aravaipa Canyon, 10 or 12 miles up the San Pedro, on the proposed line to Benson; this latter canyon being parallel, generally speaking, with the Gila Canyon.

Surveyed line through Gila Canyon.

Contemplated extending P. & E. to Deming.

(5071) The proposed line to Benson followed the valley of the San Pedro. The Aravaipa Canyon led off to the east something like 10 or 12 miles south of Dudleyville, our purpose being to see whether we could find a feasible line through there less expensive than through the Gila Canyon. These surveys, which were not secret, were made on my order, as President of the Phoenix & Eastern, under authority from the President of the Santa Fe, at the expense of the Phoenix & Eastern. I caused a company to be incorporated to build through the Gila Canyon, I believe the name of it was the Gila River Railroad Company. (5072) "When we made our first survey, the first preliminary survey to Benson, it was a serious question which side of the river at the point below Kelvin we wanted to occupy, but we finally located on the south side. Later on, as we began to become better acquainted with the conditions, the resources of the country on the north side and the general conditions and the prospects of building the through line, we made a survey to see what the advantages would be in crossing to the north side of the river, and after careful study of the situation, we concluded that it was the wise thing to do and the proper thing to do. The expense of building the line to Benson would not be materially increased, and we would have a better alignment for the transcontinental line than we had in contemplation. * * *

Aravaipa Canyon.

Gila River Co.

Change to north side of river.

"There were many places that it was absolutely necessary to cut out the undergrowth or the mesquite or the brushwood that generally grows in bottoms like that, or on the hillside, otherwise you couldn't make your surveys. That was all done, that was all brushed out, and the road cut through, the line cut through and stakes set, and estimates furnished our office or furnished to the company as to the cost of construction, advisability, and when we decided to go to the north side we immediately took steps to amend our location that we were making to Benson, and transferred our graders and put men to work on this right of way. * * *

"The Arizona & Eastern was not organized until after we were working on the north side of the river. * * * It developed that there

Arizona & Eastern not organized until change of line was made.

had been a preliminary, incomplete map filed by the (5073) Arizona & Eastern in the Land Office at Tucson, some time in February, and was necessarily very incomplete because no surveys had been made. * * * When we learned that they had filed a temporary map, or a temporary map had been filed in Tucson, we naturally began to investigate where the data had come from, because we had men constantly occupying the ground and there had been no engineers in there; and it developed that certain parties had been over the road on horseback and foot, and that they had been seen taking the numbers from our stakes." This was developed in that hearing by the Secretary of the Interior. "There was lots of room left there for them to get into the canyon. We had not reached the mouth of the canyon or Dudleyville. If we had stopped there and had not gone through the canyon with the east and west road, had gone on to Benson, there would have been abundance of room there for them to go on and to build their road through the canyon." (5074) The S. P. lines reached within 25 or 30 miles of Dudleyville on the east. They had a line to Mesa. Dudleyville is about 80 miles from Tempe, which is 7 or 8 miles from Mesa, or 9. They did not begin construction work at that time westerly or easterly from San Carlos or Mesa. They were considerably above us in some points on this 18-mile strip. Before they appeared we had done a good deal of work on the north side—the heavy work, where we crossed from the south, we had practically covered with graders, and it was all rock work, and we had quite a large force in there.

Room left to get into canyon.

S. P. did not begin work at Mesa or San Carlos.

(5075) I first heard of the proposed line through Gila Canyon to Durango when the Arizona & Eastern filed its articles. "When I completed the Santa Fe, Prescott & Phoenix into Phoenix the Mesa people were very solicitous and anxious to get us to come up there and give them a railroad. They had no railroad facilities. I had about perfected arrangements to build to Mesa when I learned that the Southern Pacific or the Maricopa road, then owned by the Southern Pacific, had obtained the privilege of laying track in the public road from Tempe to Mesa, largely in the public road; and they did immediately build a very cheap road to Mesa which temporarily interfered with our going there." My associates and myself had not at that time sold the Santa Fe, Prescott & Phoenix to the Santa Fe. On this road to Mesa there was very little grading, in some places none, the ties right on the ground; second-hand material in ties and rails being used. In constructing the Phoenix & Eastern, we changed the specifications for the bridges crossing the Gila, and brought them up to the Santa Fe's latest standard to carry their heaviest motive power. The Phoenix & Eastern had a bridge across the Salt River at Tempe, put in pretty nearly a year after we commenced work, I haven't the dates exactly.

Construction of S. P., Tempe to Mesa.

P. & E. bridges.

(5076) Part of that bridge is still standing, I should judge three-quarters of it. The Southern Pacific uses its own bridge at Tempe, which it previously had on the Maricopa line—the Phoenix & Eastern now uses that bridge. The bridge originally constructed

by the Phoenix & Eastern was partly washed out, and the balance of it still remains. The Maricopa road used part of the line of the Phoenix & Eastern between Phoenix and the Salt River, Tempe being on the southerly bank. As to the Phoenix & Eastern being part of a transcontinental line, as well as going to Benson, the "matter was under consideration all the time, being discussed, and the engineers were exchanging views, Mr. Dunn and Mr. Drake, and we were also having the territory looked up west of Wickenburg, with the view of building the 200 miles that we have now nearly completed; it would be a part of that line." That is, north of Wickenburg to Bengal. "The estimates of what it would cost to reduce the grade at one or two points—all of those things were being considered, and we also had the country there carefully examined by different engineers, min- (5077) ing engineers, at the different places, to determine the traffic and conditions that we might expect. That was, I might say, a matter that was being discussed more or less from the start. But the final conclusion looking to the building of the through line was, as I remember it, somewhere about 1903, maybe in November or December, along there; that is, what I considered was the definite understanding that we were going to build through to a connection with the Santa Fe at Deming. * * * We changed the specifications of the two crossings of the Gila—that would be the main big bridges. The other features of the road were more or less secondary. They could be brought up to the standard at any time. * * *

The P. & E. as part of a transcontinental line.

Conclusion to build to Deming.

"In the winter of 1904 and the spring of 1905 we had very heavy floods in the Gila and our temporary bridges (we had not put steel bridges in across the Gila at that time) were washed out, and that prevented us getting up to the point where this washout took place, and when we did get there we found that the Gila River had changed its course and had cut out quite a large piece of farm land that was lying in between our track and the river, something that none of us had ever expected, and took a large part of our track with it. The Southern Pacific having some men at work up in the canyon and in close touch with that situation, they moved down there and appropriated the ground that we would have to move on if we wanted to get away from the river, took possession of it and started work on it. We were unable to get there and, in order to open up our train service through to the end of the line—it would be necessary for us either to trestle or fill and riprap the part that had gone out, or to litigate to get possession of that right of way, if we were to get it, or make some kind of a trade, some kind of a contract with them, and at that time these negotiations were on here in New York for the disposition of the Phoenix & Eastern to the Southern Pacific, and we had no difficulty in making a contract that was reasonably satisfactory, the Southern Pacific or Randolph reserving the right to annul it at any time in case the trade here, I suppose, that was on, had not gone through."

Gila river changed its course.

S. P. seizes advantage.

Made terms with S. P.

Interests of witness in Arizona.

(5078) The Santa Fe, Prescott & Phoenix is owned by the Santa Fe, but is a separate organization. My home is in Prescott, Arizona. I have interests in the Territory, merchandising, banking, some other railroad interests, mining and smelting, and a couple of hotels on my hands—a few little things like that.

P. & E. began construction in 1901.

The Phoenix & Eastern Company was organized in August, 1901, and began actual construction, it seems to me, in October, 1901. I would like to look at the records for it. Construction began at Phoenix. In May, 1903, about 70 miles had been built I should think. I don't know that trains were running at that time. I don't think the road was open for operation. We were operating

Operating trains to Florence.

trains as you would in construction. We were operating trains to Florence, probably 60 miles. We had track laid all of the 60 miles. I would not be so sure, though, if we had every foot of it covered for the extreme 70 miles. I don't know but 70 miles would carry us across the Gila River. I don't think we had our big bridge completed at that time. "Q. When did you first make a survey of any kind or character, good, bad or indifferent, in the Gila canyon? (5079) A. The engineers were in there in May, 1903, and finished before December, 1903." We filed a profile or map of location for the canyon in April, I think it was; in April, 1904.

Survey of Gila Canyon.

"Q. Now, I will ask you again the question whether at any time prior to May, 1903, you ever made a survey of any kind, and whether prior to April, 1904, you ever filed a profile and map of location in reference to the Gila canyon? A. To your first question I will say to you that I made a reconnoissance in 1897, I think it was—1897 or 1898—with Mr. Drake, our chief engineer, to Globe, before the railroad was sold to the Santa Fe, with a view of getting an eastern outlet. Q. In 1897? A. In 1897; and that I also had negotiations on with Mr. Garland to buy the Gila Valley, Globe & Northern before the Southern Pacific got it, with a view of getting an eastern outlet. Q. Now, I will ask you again, did the Phoenix & Eastern Railroad Company at any time prior to May, 1903—did that corporation make any survey of any kind of the Gila canyon? A. Prior to 1903? Q. Prior to May, 1903. A. Well, what do you call the Gila canyon now? If you are talking about the Gila canyon from Dudleyville east, I think I would safely say no; but if you call the Gila canyon the point where we crossed from the south side of the river to the north side there, I would say yes. Q. No, sir, I am not speaking of that. You testified upon your direct examination that in May, 1903, you made a survey in the canyon. A. I think if you will say beginning some time about May and completed by December, 1903. Q. What canyon was that? A. Gila canyon.

"Q. Did the Phoenix & Eastern Railroad ever make a survey of that canyon prior to that time? A. No, sir, not the Phoenix & Eastern, only that I authorized it as president of the Phoenix & Eastern." The Phoenix & Eastern never filed a profile on that road; the Phoenix & Eastern never did, but the Phoenix & Eastern

brought about the incorporation of the Gila River Railroad, and that company filed its articles. I think the latter company was incorporated in April, 1904. (5080) In my direct testimony I said that I was not expecting any opposition. That language was not used in reference to the filing of a profile or map of location by the Arizona & Eastern. "It had been claimed, as I read Mr. Ives' testimony, that they had had it in their mind for a great many years to build a railroad up to the canyon, and no one in Arizona, as far as I knew, had heard anything of it; and we were building a railroad, and we had built 70 or 80 miles of a railroad undisturbed, and we, naturally, not knowing of anybody else in the business, or thinking of appropriating that territory, were not expecting any trouble. Q. Then, up to the time that the Phoenix & Eastern Railroad had constructed 70 miles of road you were not expecting any opposition? Isn't that the fact? A. Pretty much so, yes, sir."

Gila River Railroad incorporated April, 1904.

Built 70 miles undisturbed.

Was not expecting trouble.

At the time I crossed over from the south bank to the north bank I was acting in the interest of the Santa Fe. The Phoenix & Eastern and the Santa Fe directly. Of course if you connect it up, I was president of the Phoenix & Eastern road, and that was controlled by the Santa Fe. When we first started the Phoenix & Eastern, the point of origin being Phoenix—when I first started the road, within my limited ability, I had contemplated going to Benson. This litigation that Mr. Severance speaks of, was a litigation between that very Phoenix & Eastern Company and the Arizona & Eastern Company.

P. & E. contemplated building to Benson.

"Q. Now, in that litigation did you testify as follows: 'I had something to do with the making of the change of the route of the company's road from the south side of the Gila River in Pinal County at a point about two miles west of Kelvin to the north side of said river. The change was authorized by me. We were progressing with our work up the Gila and were making numerous observations and a study of the country. We were confronted with the fact that our alignment (5081) on the south side contained considerable heavy curvature. From our observation and investigation it was apparent to the company and to myself as its president and the other directors that we would best serve the public by crossing the river to the north side and running on that side to a point near or opposite Dudleyville, as it was on the north side of the river that the largest mining interests were known to exist. It was represented to us and understood by us that that section of the country could not very well be supplied when the river was up, for the river at times was impassable. I ordered an investigation of the facts by the Chief Engineer based upon information that we had been able to obtain and on the report of the engineer that we had examined the country to see whether it was the proper thing for us to do, all things considered, in serving the people there and in getting a good line. The investigation was made and communicated to me as to what could be done and what we could get in the way of a line as well as the advantages from a purely railroad point of view in undertaking to serve the country through there. As presi-

Testimony of witness as to change in line.

dent of the company I immediately ordered Mr. Drake to make a preliminary survey. This preliminary survey was made to verify the conclusions that we had reached. Mr. Drake made that survey and communicated the results to me and as president of the company I instructed him to adopt that line and proceed with the construction on the north side.' Did you give that testimony under oath? A. I think I did. Q. Was it true? A. I think so. Absolutely true—all things considered there. That means a good deal."

Testimony was true.

(TESTIMONY RESUMED, NEW YORK CITY, APRIL 8, 1910.)

U. P. statistics.

"MR. SEVERANCE. The following statement is introduced, subject to the right of the Defendants to file a corrected statement if, upon checking the same, the figures herein stated are found to be incorrect: The annual report of the Union Pacific Railroad Company for 1900 shows the average mileage operated to be 2,923.45. The said report also shows the number of passengers carried per mile of road was 70,098, or a total of 204,927,998 passengers carried 1 mile. Mr. Mohler testified (page 4202, printed record) that the passenger train mileage between Council Bluffs and Ogden, in 1900, was 2,597,450. He further testified (same page) that in 1909 the passenger train mileage on the Union Pacific between Council Bluffs and Ogden was 4,400,949; and it appears by the statistics introduced (5082) in connection with Mr. Peter's testimony that in 1909, the entire railroad of the Union Pacific carried 496,120,209 passengers 1 mile. MR. SEVERANCE. I offer in evidence Complainant's Exhibit 218, being a statement relative to dividends on Oregon Short Line Railroad Company's stock January 1, 1901, to March 31, 1910, prepared by the Defendants at the request of Complainant," as follows:

COMPLAINANT'S EXHIBIT 218.

O. S. L. dividends paid U. P.

"Statement giving the rate and aggregate amount of dividends paid the Union Pacific Railroad Co. as stockholder of the Oregon Short Line Railroad Co. since declaration of 50 per cent. dividend. No statement giving the rate and the aggregate amount of dividends whether declared and paid semi-annually or annually can be made in respect to the Oregon Short Line Railroad Co. as has been furnished in respect to the Oregon Railroad & Navigation Co., for the reason that from the year 1897 to and including September 1, 1906, the date of the so-called 50 per cent. dividend, no dividends were declared or paid on the stock of the Oregon Short Line Railroad Co., which is exclusively common stock. On September 1, 1906, the distribution at the rate of 50 per cent. on the common stock of the Oregon Short Line Railroad Co. was made out of the accumulated surplus from March 16, 1897, to June 30, 1906, the same being paid on September 1, 1906, this being the so-called 50 per cent. dividend. Similar distributions from the accumulated surplus were paid February 14, 1907, August 8, 1907, November 14,

1907, June 15, 1908, and June 30, 1909, in the proportion respectively of 10, 20, 10, 100 and 25 per cent. aggregating respectively, $2,734,070, $5,468,140, $2,735,070, $27,350,700 and $6,837,675. These distributions from the accumulated surplus included, in addition to transportation earnings, the income from investments and from sources other than from transportation earnings, but the expression of this distribution in the proportions above mentioned was not accompanied by any separation of items in respect to the sources from which the accumulated surplus was derived, and for that reason no segregation was made in this statement.

UNION PACIFIC RAILROAD CO.

Dividends received on stock owned of Oregon Short Line Railroad Company from January 1, 1901, to March 31, 1910, inclusive.

Date	Rate per cent.	Amount
Feb. 14, 1907	10	$2,734,070
Aug. 8, 1907	20	5,468,140
Nov. 14, 1907	10	2,735,070
June 15, 1908	100	27,350,700
June 30, 1909	25	6,837,675
Total		$45,125,655

(5083) "MR. SEVERANCE. I offer in evidence Complainant's Exhibit 219, being statement of dividends on stock of Oregon Railroad & Navigation Company, owned by the Union Pacific Railroad Company and the Oregon Short Line Railroad Company from July 1, 1901, to date, prepared by the Defendants at request of Complainant," as follows:

COMPLAINANT'S EXHIBIT 219.

O. R. & N. dividends paid U. P.

"Statement giving the rate and aggregate amount of dividends paid the Union Pacific Railroad Co. as stockholder of the Oregon Railroad & Navigation Co. since 1901. The Union Pacific Railroad Co. received no dividends on stocks of the Oregon Railroad & Navigation Co. subsequently to January 3, 1905. Thereafter such stocks were held by the Oregon Short Line Railroad Co. From 1901 to 1905 the Union Pacific Railroad Co. was paid no dividends on its holdings of common stock of the Oregon Railroad & Navigation Co., no dividends on the common stock of that Company having been declared or paid. Semi-annual dividends at the rate of 2 per cent. on the preferred stock of the Oregon Railroad & Navigation Co. were paid to the Union Pacific Railroad Co., beginning July 1, 1901, and ending January 3, 1905, and the aggregate amount thereof was $1,581,378.

UNION PACIFIC RAILROAD CO.

Dividends received on stock owned of The Oregon Railroad & Navigation Co. from January 1, 1901, to March 31, 1910, inclusive.

"MR. SEVERANCE. It is stipulated that the defendant E. H. Harriman died in September, 1909, and Robert S. Lovett has been elected President of the defendant Southern Pacific Company, the defendant Union Pacific Railroad Company, the defendant Oregon Short Line Railroad Company, the defendant Oregon Railroad & Navigation Company, and Chairman of the Executive Committee of each of said companies. MR. SEVERANCE. It is stipulated that since the commencement of the taking of testimony in this case the defendant Henry H. Rogers has died. MR. SEVERANCE. The Complainant now rests. THE SPECIAL EXAMINER. What have the Defendants to say? MR. DUNNE. The Defendants rest, subject to the right to put in a correcting statement in respect to the statements offered this morning by the complainant."

TESTIMONY CLOSED.

R., Ogden, Utah, and Southern Pacific Co.-Pacific System, for the fiscal year ending June 30, 1901.	738	X	4564
45F	.....do.....	Statement of freight traffic from the Orient via Southern Pacific Co.-Pacific System, Ogden, Utah, and Union Pacific R. R. to points in Missouri River and common points territory and points east thereof, via the Chicago, Milwaukee and St. Paul Ry. and Chicago and Northwestern Ry. for fiscal year ending June 30, 1901.	740	X	4566
45G	.....do.....	Statement of tons carried and freight revenue of Union Pacific System on westbound and eastbound freight traffic between the Orient and various eastern territories via Portland, Ore., for fiscal year ending June 30, 1900.	758	X	4602
46	Stubbs (3)...	Traffic between San Francisco and Portland, volume and Union Pacific and Southern Pacific earnings, for year ending June 30, 1901.	520	IX	3953

Defendants' Exhibits—Continued

Exhibit No.	Witness.	Description of exhibit.	Abstract page.	Printed record. Vol.	Page.
46A	"Supplemental" Stebbins (2)....	Statement of tonnage and Union Pacific System (Oregon R. R. & Navigation Co.)—Revenue on freight traffic handled by the Oregon R. R. & Navigation Co.'s steamship line between San Francisco and Portland locally (not including traffic to or from points beyond Portland), for fiscal year ending June 30, 1901.	741	X	4567
47	Stubbs (3)...	**Willamette Valley traffic, year ending June 30, 1901.**	522	IX	3956
47A	**"Supplemental" Stebbins (2)....**	**Willamette Valley traffic for year ending June 30, 1901.**	741	X	4568
47B	.....do.....	**Statement showing tonnage and Union Pacific System freight revenue on certain freight traffic handled by the Oregon R. R. and Navigation Co.'s Willamette River boats, for fiscal year ending June 30, 1901.**	742	X	4569
48	Stubbs (3)...	**Lumber and other traffic, from Portland to Ogden and common points and beyond, via Southern Pacific Co. and Denver and Rio Grande R. R. and via Union Pacific System, for July, September, and November, 1900, and January, March, and April, 1901.**	524	IX	3958
48A	"Supplemental" Stebbins (2)....	Tonnage and revenue on freight traffic (principally lumber) from Portland, Ore., to Utah common points, Colorado common points, and points east thereof, competitive between the Union Pacific System Lines and Southern Pacific Co.-Pacific System, for July, Steptember and November, 1900, and January, March, and April, 1901.	743	X	4572
48B	.....do.....	**Freight traffic originating at Portland, Ore., routed east, via Rio Grande lines.**	743	X	4573
49	Stubbs (3)...	**Traffic to and from Portland and Atlantic seaboard, Pittsburg, etc., via Sunset route and via Union Pacific Granger route, for fiscal year ending June 30, 1900.**	526	IX	3960
49A	"Supplemental" Stebbins (2)....	Statement of freight traffic between Portland, Ore., and points in Missouri River and common points territory and points east thereof, via Southern Pacific Co.-Pacific system, El Paso, Tex., and New Orleans, La., for fiscal year ending June 30, 1900.	744	X	4575

Defendants' Exhibits—Continued

Exhibit No.	Witness.	Description of exhibit.	Abstract page.	Printed record. Vol.	Page.
49B	"Supplemental" Stebbins (2)....	Statement of tons carried and freight revenue of Union Pacific System on freight traffic between Portland, Ore., proper and various eastern territories via Granger, Wyo., for fiscal year ending June 30, 1900.	744	X	4576
50	Stubbs (3)...	**Traffic to and from Portland and Atlantic seaboard, Pittsburg and Ohio River territories, year ending June 30, 1900.**	528	IX	3962
50A	"Supplemental" Stebbins (2)....	**Traffic to and from Portland and Atlantic seaboard, Pittsburg and Ohio River territories, including all traffic between Portland and points on and east of Missouri River, year ending June 30, 1900.**	745	X	4577
50B	... do	**Statement of freight traffic between Portland, Oreg., and Missouri River and common points territory and points east thereof, via Southern Pacific Co. lines via Ogden and Rio Grande Western Ry., for year ending June 30, 1900.**	745	X	4578
51	Stubbs (3)...	**Hops and wool from Portland to Missouri River and east.**	530	IX	3964
51A	"Supplemental" Stebbins (2)....	Tonnage and freight revenue on hops and wool traffic from Portland, Ore., to Missouri River and east thereof, via the Union Pacific System lines and Southern Pacific Co. lines, for fiscal year ending June 30, 1900.	746	X	4580
52	Stubbs (3)...	**Traffic between San Francisco and Montana and Idaho points (including eastern Oregon, Washington, and British Columbia), served by Northern Pacific and competed for—for the service between San Francisco and Portland—by the Southern Pacific and the Oregon R. R. and Navigation Co., for the year 1900.**	531	IX	3966
52A	"Supplemental" Stebbins (2)....	Tonnage and freight revenue of traffic from and to San Francisco Bay points via Portland, Oreg., (not via Huntington or Ogden), to and from points on Northern Pacific Ry. east of Pasco, Wash.	747	X	4581
53	Stubbs (3)...	**Traffic between Atlantic seaboard territory and Colorado common points via Southern Pacific and Gulf ports, via Union Pacific, all-rail, and via Union Pacific and South Atlantic ports, for year ending June 30, 1900.**	534	IX	3969

OCTOBER TERM, 1911.

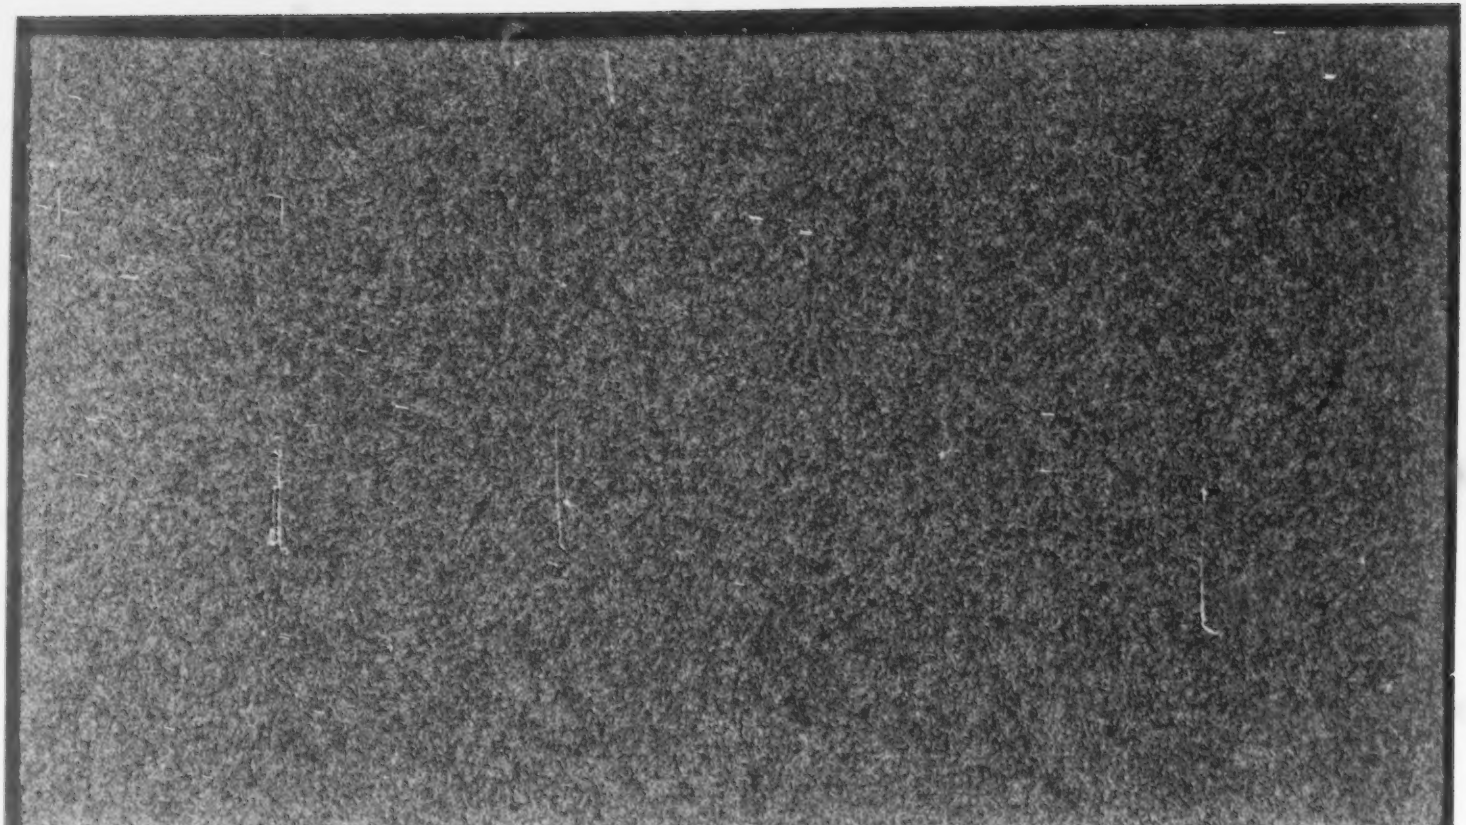
THE UNITED STATES, APPELLANT,

v.

THE UNION PACIFIC RAILROAD COMPANY; THE OREGON SHORT LINE RAILROAD COMPANY, ET AL.

APPEAL FROM THE CIRCUIT COURT OF THE UNITED STATES FOR THE DISTRICT OF UTAH.

MOTION TO ADVANCE.



In the Supreme Court of the United States.

OCTOBER TERM, 1911.

THE UNITED STATES, APPELLANT,
v.
THE UNION PACIFIC RAILROAD COMPANY; The Oregon Short Line Railroad Company, et al. } No. ——.

APPEAL FROM THE CIRCUIT COURT OF THE UNITED STATES FOR THE DISTRICT OF UTAH.

MOTION TO ADVANCE.

This suit was brought under the antitrust law of July 2, 1890, by the United States against The Union Pacific Railroad Company and its connecting lines, The Oregon Short Line and The Oregon Railroad & Navigation companies, to enjoin the said The Union Pacific Railroad Company from purchasing, acquiring, holding, or owning any stock in certain competing railroads, to wit: The San Pedro, Los Angeles & Salt Lake Railroad Company, The Atchison, Topeka & Santa Fe Railway Company, The Southern Pacific Company, the Northern Pacific Railway Company, and the Great Northern Railway Company. Certain directors of said companies were also made defendants. The bill charged a combination and

conspiracy between The Union Pacific Railroad Company and the said other companies and certain officers and directors to control the lines of railway and steamship competing with the Union Pacific and its competing lines of railroad and steamship and the connecting lines owned and controlled by it, to-wit: The Oregon Short Line, The Oregon Railway and Navigation, and the steamships owned and controlled by and connecting with these lines. Proofs were taken in said cause on behalf of the Government and the defendants. The Attorney General of the United States, under the authority of the act of February 11, 1903, "to expedite the hearing and determination of suits in equity * * * under the act of July 2, 1890," etc., filed a certificate stating that, in his opinion, the case was of general public importance. It was accordingly heard before the four circuit judges of the ninth circuit in the month of October, 1910, and on the 24th day of June, 1911, the said court rendered its final judgment and decree dismissing said bill of complaint upon the merits.

The case is one of those the expedition of which is provided for by the act of February 11, 1903, presenting, as it does, the question of the legality of the control of The Union Pacific Railroad Company over the railroads and steamship lines of The Southern Pacific Company and The San Pedro, Los Angeles and Salt Lake Railroad Company and stock ownership in and control exercised over vari-

ous other competing lines of railroad, and the question of the suppression of competition in a large territory comprising nearly one-half of the territory of the United States and steamship competition between this country and the Orient, and the question of monopoly in the control of transportation lines in said territory and the early determination thereof is of very great importance.

On behalf of the Government I therefore respectfully ask that the case be advanced and assigned for hearing as soon as the convenience of the court will permit.

F. W. LEHMANN,
Solicitor General.

OCTOBER TERM, 1911.

No. 446.

THE UNITED STATES OF AMERICA,
Appellant,

vs.

THE UNION PACIFIC RAILROAD COMPANY ET AL.,
Respondents.

APPELLANT'S BRIEF OF FACTS

GEO. W. WICKERSHAM,
Attorney General,

CORDENIO A. SEVERANCE,
FRANK B. KELLOGG,
Special Assistants to the Attorney General.

INDEX

PAGE OF BRIEF

ATCHISON, TOPEKA & SANTA FE RY.:
Description of..... 5
Acquisition of stock by Oregon Short Line and certain individual defendants, purpose being to lessen competition and give Union Pacific a voice in councils of Santa Fe.....467 to 510, 597 & 98
Frick & Rogers on boards of both companies...469 & 70
Mr. Morawetz' testimony as to having Union Pacific representation on Santa Fe board, and his objections .....473 to 80
Negotiations for surrender of Santa Fe to Union Pacific demands.....493 to 500
Division of incoming cargoes from Orient between Southern Pacific and Santa Fe.....508 to 10

CALIFORNIA FRUIT TRAFFIC:
Division of.....504 to 506
Fast fruit trains abandoned on demand of Southern Pacific & Rio Grande..... 505

CANADIAN PACIFIC:
Differentials and Mr. Stubbs' remarks concerning same .....285 & 6
Success of Canadian Pacific in handling large volume of traffic from Atlantic seaboard and interior states to San Francisco..... 306
Statements of various witnesses as to moving business over Canadian Pacific while differential was in force.....306 to 17

CENTRAL PACIFIC:
Lease to Southern Pacific.....278 & 79
Kahn's claim that Harriman tried to buy Central Pacific or secure contract from Huntington not supported by evidence.....577 to 80

CITRUS FRUIT AND VEGETABLE MOVEMENT .....83 to 88

CHICAGO, BURLINGTON & QUINCY:

Control of same through purchase of majority of Northern Pacific stock.....396, 409 to 414
Northern Pacific & Burlington..... 589

COMPETITION:

Between Union Pacific and Southern Pacific previous to merger.....34 to 272
Between Atlantic seaboard and Pacific Coast..36 to 90
Between points in interior of country and Pacific Coast .....91 to 168
Between Atlantic seaboard and Colorado and Utah common points.....169 to 203
Between Portland and Utah and Colorado common points and certain points in Nevada....204 to 215
Between San Francisco and Portland.....216 to 242
Between San Francisco and points in Montana, Idaho and other states.....243 to 55
Between various ports in Orient and points East of Missouri River in the United States.....256 to 72
Competition destroyed through consolidation of traffic departments.....318 to 59
Competitive efforts of soliciting agents withdrawn after Union Pacific secured control of Southern Pacific .....360 to 71
Competitive Transcontinental passenger business between San Francisco and Portland.....238-39 & 392
Competitive Trans-continental passenger business between various points.....392 to 94
Competition active between Union Pacific and Rio Grande, previous to merger..... 372
Traffic and other agreement eliminating competition between Union Pacific and San Pedro.....453 to 459
Elimination of competition between San Pedro and Southern Pacific.....459 to 461
Absence of competition between San Pedro and Southern Pacific on traffic between Utah common points and San Francisco and Los Angeles..461 to 465

III. PAGE OF BRIEF

COMPETITION—Continued:
Competition between Atchison, Topeka & Santa Fe and Union Pacific lessened by acquisition of stock of the Santa Fe by Oregon Short Line and others ..... 467 to 510
Competition between Union Pacific and Rio Grande ..... 372 to 381
Competition of Panama Route for Transcontinental business practically destroyed 514
Elimination of competition between Union Pacific and Southern Pacific and Panama Route 572
Harriman's views as to competition ..... 568 to 571
Discussion showing intent on part of defendants to monopolize business and destroy competition in transcontinental territory ..... 566 to 603
Purchase of Corvallis & Eastern preventive of competition 599
Competition prevented in Coos Bay region 600
Purchase of stock of St. Joseph & Grand Island Ry., eliminating possible competition ..... 601 to 3
Purchase of Northern Pacific stock to eliminate competition ..... 396 to 409
Purchase of Chicago, Burlington & Quincy to eliminate competition, and discussion of same .....
396, 409 to 414, 589

COOS BAY ..... 553 to 57
Holabird Report on riches of Coos Bay region 555

CORVALLIS & EASTERN ..... 550 to 52, 599

CONSOLIDATION:
Of management of Union and Southern Pacific. 28 to 33
Of agencies and equipment ..... 30 & 31
After Union Pacific secured control of Southern Pacific agencies consolidated, competitive efforts withdrawn, and agents instructed to handle traffic so as to produce most revenue ..... 360 to 71
Effect of Consolidation on Public interest .... 519 to 565

PAGE OF BRIEF

CONSOLIDATION—Continued:
No incentive to prompt service.....521 to 537
Excessive dividends..... 537
Great regions undeveloped.....540 to 57
Increase in rates.....558 to 63

DENVER & RIO GRANDE:
Competition between Union Pacific and Rio Grande .....372 to 82
Attempted acquisition by Union Pacific of a half interest in its competitor the Rio Grande...585 to 88

DES CHUTES RIVER:
Construction of line up same.....546 to 49

EARNINGS:
As to traffic affected by purchase of control of Southern Pacific by Union Pacific enormous in amount .....383 to 392
Earnings of various systems, rates, etc....383 to 395
Computation of earnings on passenger business between San Francisco and Portland.....238-39, 392

FRUIT TRAFFIC, California, and
Division of same.....501 to 6
Fast fruit trains put on by San Pedro and Rio Grande abandoned on demand of Southern Pacific and Santa Fe..... 505

FRUIT, Citrus, and Vegetable Movement.....83 to 88

GILA CANYON AND ARAVAIPA CANYON:
Surveys through same, in connection with Phoenix & Eastern to determine best route for low grade transcontinental line.....488 to 90

INTENT ON PART OF DEFENDANTS TO RESTRAIN TRADE AND MONOPOLIZE BUSINESS IN TRANSCONTINENTAL TERRITORY .....566 to 603
Harriman's views as to competition.....568 to 71
Southern Pacific Purchase..... 572
Central Pacific.....577 to 80

PAGE OF BRIEF

INTENT TO MONOPOLIZE—Continued:
Attempt to secure half interest in Rio Grande . . 586 to 89
Northern Pacific & Burlington 589
San Pedro, Los Angeles & Salt Lake Railroad . . 590 to 94
Atchison, Topeka & Santa Fe 595
Corvallis & Eastern 599
Coos Bay 600
St. Joseph & Grand Island . . . . . 601 to 603

MEADOW VALLEY WASH:
See discussion of San Pedro 423

NATURE OF ACTION . . . . . 1 to 5

NORTHERN PACIFIC:
Description of 5
Majority of Northern Pacific stock acquired pursuant to conspiracy for purpose of controlling that line and incidentally controlling Chicago, Burlington & Quincy . . . . . 396 to 414
Chicago, Burlington & Quincy 409
Purchase of majority of stock of Northern Pacific carrying interest in Burlington 589

ORIENTAL TRAFFIC:
Division of incoming cargoes from Orient between Southern Pacific and Santa Fe . . . . 463 & 593 to 10

OPINION OF MAJORITY OF COURT BELOW:
Discussion of Errors . . . . . 601 to 32

PACIFIC MAIL:
See Discussion under Panama Route . . . . . 511 to 18

PANAMA ROUTE:
Practical destruction of same . . . . . 511 to 18
Agreements with Pacific Mail and Union Pacific, and Panama and Pacific Mail . . . . . 511 to 515
Elimination of competition between Union Pacific and Panama Route 572

POSSESSION OF A THROUGH LINE FROM MISSOURI RIVER TO PORTLAND AND BOAT LINE FROM THERE TO SAN FRANCISCO, MADE UNION PACIFIC SO POWERFUL IN COMPETITIVE STRUGGLE FOR

VI. PAGE OF BRIEF

BUSINESS THAT SOUTHERN PACIFIC WAS HELPLESS TO DESTROY THAT COMPETITION SIMPLY BY OWNERSHIP OF LINE FROM OGDEN TO SAN FRANCISCO, OVER WHICH TRAFFIC SECURED BY UNION PACIFIC ORDINARILY MOVED 276 to 317

Through rates fixed in conference before merger.... 279
Influence of Portland Route on transcontinental rates 283
Traffic at times moved to San Francisco by way of Portland 298
Business moving over Canadian Pacific while differential was in force.....306 to 317

PHOENIX & EASTERN.....480 to 87
Surveys through Gila Canyon & Aravaipa Canyon .....488 to 90

RATES:
Transcontinental Rate Situation.....7 to 19
Rate tables as to Colorado and Utah points....171 & 2
Rates on Wool via Sunset to Atlantic seaboard from Utah and points West..... 194
Rates on Lumber Portland to Salt Lake and Ogden previous to merger, etc..... 212
Rates between San Francisco and Portland to meet ocean competition.....233 & 4
Through Rates fixed in conference, and before merger Union Pacific and Southern Pacific both had a voice in making same.....279 to 83
Influence of Portland Route on Transcontinental Rates .....283 to 298
Comparison as to Union Pacific and Canadian Pacific, and statements of various witnesses as to moving business over Canadian Pacific while differential was in force.....306 to 317

SAN PEDRO, LOS ANGELES & SALT LAKE RAILROAD:
Ownership of half of the stock and control of road by Oregon Short Line.....415 to 466

PAGE OF BRIEF

SAN PEDRO, LOS ANGELES & SALT LAKE RAILROAD—Continued:
Union Pacific took no steps to construct line to Los Angeles until independent road was assured, etc. ....417 to 21
San Pedro planned as independent line....422 to 432
Construction work by San Pedro and efforts of Oregon Short Line to prevent same, and paralleling line ....433 to 444
Union Pacific secures half interest in San Pedro, with traffic and other agreements rendering it practically a subsidiary....445 to 446
Clark-Harriman Agreement....450 to 52
Traffic and other agreements eliminating competition between Union Pacific and San Pedro....453 to 61
Agreements between San Pedro and Short Line not to invade each other's territory for 99 years.... 454

SERVICE:
Service has deteriorated.... 19
No incentive to prompt service....521 to 39

ST. JOSEPH & GRAND ISLAND RY....601 to 603

SOUTHERN PACIFIC:
Description of.... 3
Stock purchased by Union Pacific....23 to 26
Southern Pacific Purchase....572 to 85
Mr. Gould not attempting to interfere with acquisition of Southern Pacific by Union Pacific...573 to 5
Kahn's claim that Harriman tried to purchase Central Pacific or secure contract as to it from Huntington not supported by evidence....577 to 80
Kahn's testimony fully contradicted....580 to 84
Huntington's Will.... 583

STOCK:
Atchison, Topeka & Santa Fe Stock acquired by Oregon Short Line and certain individual defendants ....467 to 510, 595, 597 & 8
Central Pacific stock, and claim of Kahn that Harriman tried to purchase same alone....577 to 80

PAGE OF BRIEF

STOCK—Continued:
Chicago, Burlington & Quincy stock purchased by Northern Pacific & Great Northern...396 to 414, 589
Corvallis & Eastern purchase.....550 to 552, 599
Denver & Rio Grande purchase.....586 to 588
Northern Pacific Stock purchase.....396 to 414
Northern Pacific and Great Northern stock disposed of by Union Pacific and Short Line..413 & 14
Purchase by Union Pacific of majority of stock of Northern Pacific carrying half interest in Burlington 589
Oregon Short Line stock and Oregon Railroad & Navigation Co. stock..... 20
Pacific Mail Stock, majority of same owned by Southern Pacific..... 511
San Pedro, Los Angeles & Salt Lake R. R.: Ownership of half of stock of San Pedro by Oregon Short Line.....415 to 66, 590 to 94
Union Pacific secures half interest in San Pedro.... 445
St. Joseph & Grand Island Stock purchased by Harriman 601
Southern Pacific Stock purchased by Union Pacific .....23 to 26
Kahn's testimony relative to purchase of Southern Pacific stock by Union Pacific.....273 to 5
Union Pacific Stock, individual holdings of..... 541

TRAFFIC AFFECTED BY PURCHASE OF CONTROL OF SOUTHERN PACIFIC BY UNION PACIFIC ENORMOUS IN AMOUNT..383 to 393
Various computations and statements of rates, earnings, etc.....237 to 39, 383 to 391
Traffic in Wool.....193 to 203
Traffic—Oriental .....465 & 6

TRANSCONTINENTAL RATE SITUATION AND GENERAL CONSIDERATIONS AFFECTING CONTROVERSY.....7 to 19
Three evils caused by monopoly..... 19
Rate Tables as to Colorado and Utah common points .....171 & 2
Statement showing increase in rates since merger... 558 to 65

PAGE OF BRIEF

UNION PACIFIC-SOUTHERN PACIFIC...20 to 395
Reorganization of Union Pacific..... 20
Purchase of Southern Pacific stock.....23 to 26
Control of Panama Route.....27 & 28
Pacific Mail part of same..... 27
Unification of Management of Southern Pacific and Union Pacific.....28 to 33
Consolidation of Agencies and Equipment.....30 & 31
Competition of Union Pacific and Southern Pacific previous to merger.....34 to 272
Union Pacific efforts to render control of competitive line legal through legislation.....273 to 5
Power of Union Pacific because of through line from Missouri River to Portland and boat line to San Francisco, rendering Southern Pacific helpless to destroy competition simply by ownership of line from Ogden to San Francisco.....276 to 317

WESTERN PACIFIC:
Reason for building same..... 374
Circulars relative to Western Pacific, D. & R. G. and R. G. W..... 377

WOOL TRAFFIC EASTBOUND.....193 to 203

UTAH & PACIFIC:
Option to Oregon Short Line to purchase same..422 & 3

OUTLINE OF BRIEF

	Page of Brief	Folio of Record
NATURE OF ACTION	1	
(a) Description of Union Pacific System	2	
(b) Description of Southern Pacific System	3	
(c) Atchison, Topeka & Santa Fe Ry.	4	
(d) Northern Pacific Railway	5	
(e) Wm. A. Clark-San Pedro, Los Angeles & Salt Lake Railroad	5	
TRANSCONTINENTAL RATE SITUATION AND GENERAL CONSIDERATIONS AFFECTING CONTROVERSY	7 to 19	
Transcontinental Railroads are those between Missouri River and Pacific Ocean	7	
Transcontinental lines reaching Pacific Coast in 1901 only six in number	8	
Business interchanged at Eastern termini of transcontinental lines with many railroads leading to the East	8	
Transcontinental rates always made in conference, each independent line having voice and vote	9	
WITNESSES:		
Stubbs	9	3332
Morton	9	1391, 1399, 1403
Hawley	9	1435
All transcontinental rates were the same and a reduction in rate to any coast point by any line would at once force like reduction to all points	10	
WITNESSES:		
Stubbs	10	3268, 3321 & 2
Markham	10	3710
Babcock	10	3945 & 6

OUTLINE OF BRIEF—Continued.

	Page of Brief	Folio of Record
Transcontinental lines control making of transcontinental rates from Atlantic seaboard to Pacific Coast	11	
WITNESS: Munroe	11	6829 & 30
West of Missouri River rates so high that if necessary, any transcontinental line could handle business from the East on sum of locals	11	
WITNESS: Markham	11 & 12	3709-11
Importance of and reasons for strict enforcement of Sherman Act to these lines	12	
WITNESS: Buchanan	12	2358
Respective rail lines of Southern Pacific and Union Pacific between Ogden and Portland only railroads between those points	12	
Only rail line between San Francisco and Portland in 1901 was Southern Pacific. Only regular established line of freight and passenger boats between those points was controlled and run in connection with Union Pacific	13	
Previous to 1901 Southern Pacific acquired majority of stock of Pacific Mail Steamship Co., which had line of ships forming Pacific end of Panama Route from New York to San Francisco	13	
Pacific Mail ships were plying between San Francisco, China and Japan in connection with Southern Pacific rails East from San Francisco. Union Pacific had a line of ships between Portland and same points in Orient running in connection with its rail lines East from Portland	13 & 14	

	Page of Brief	Folio of Record
Southern Pacific boat line New York to New Orleans, and its rail line from thence to Fort Worth, Tex., carried large amount of traffic destined from New York to Colorado and Utah common points. Union Pacific at same time in connection with water lines from New York to South Atlantic ports and rail connections, actively sought and carried a large amount of similar traffic, both lines operating at a differential under all rail rate.....	14	
Union Pacific with its connections also handled traffic into Colorado and Utah common points all rail..	14	
Competition between Southern Pacific and Union Pacific for traffic between San Francisco and Montana, Idaho and Washington points	14 & 15	
San Pedro, Los Angeles & Salt Lake Railroad had been projected previously by Senator Clark, and in the spring of 1901 surveying and construction were actively proceeding	15	
Atchison, Topeka & Santa Fe extending from Chicago to San Francisco with numerous branches, including one from Ash Fork to Phoenix, Arizona, was then competitor of both the Southern Pacific and Union Pacific.....	15	
Application of Anti-Trust Statute much plainer as to railroads than to ordinary traders.....	15 & 16	
Briefs in Standard Oil and American Tobacco cases.....	16	
Quotations from opinion Standard Oil case explaining ruling in Trans-Missouri case.....	16 & 17	
Far-reaching effects of conspiracy complained of.....	17 & 18	

OUTLINE OF BRIEF—Continued.

	Page of Brief	Folio of Record
Failure to develop Oregon by reason of absence of competition produced by conspiracy	18	
Enormous dividends of subsidiary of Union Pacific carried off to New York to invest in stocks instead of being used in development of country tributary to its lines	18	
Three evils caused by monoply as defined in Standard Oil case have resulted from the conspiracy: 1. Rates have been grossly increased; 2. Construction of new lines into competitive territory has been prevented; 3. Service has deteriorated.	19	
UNION PACIFIC-SOUTHERN PACIFIC	20 to 395	
Reorganization of Union Pacific, connection of defendants Schiff and Kahn therewith, Complainant's Exhibit 109	20	1757 et seq.
WITNESS: Millar	20	11
Acquisition of securities of Oregon Short Line and Oregon Railroad & Navigation Co., giving Union Pacific through route to Coast completed in 1899	20	
Complainant's Exhibit 16	20	101 et seq.
Statement of late defendant Harriman as to completion of system to Coast	20	103
Connection of various individual defendants with Union Pacific as directors, officers and executive committeemen	21 & 22	12 to 16 & 7886
Kuhn, Loeb & Co. fiscal agents of Union Pacific from its reorganization	21 & 22	

	Page of Brief	Folio of Record
WITNESS: Kahn	21 & 22	1990
In 1900 and 1901 many combinations of previously competing companies were made, and common directors among competitors were usual	22	
Mr. Gould of the Denver & Rio Grande on executive committee of Union Pacific; Mr. Harriman on board of Rio Grande	22	383 & 4
Purchase of Southern Pacific Stock by Union Pacific	23 to 26	
Previous to his death in 1900 C. P. Huntington and associates, among them Mr. Hawley, controlled Southern Pacific. Huntington willed his stock to his widow and nephew.	23	8301
Hawley sold that stock and his own, amounting to 475,000 shares, to Mr. Harriman for Union Pacific in February, 1901.	23 & 24	8246-7 & 8250
Stock passed through fiscal agents Kuhn, Loeb & Co., Complainant's Exhibit 17	24	111 et seq.
WITNESS: Kahn	24	1991 & 7908
This stock with enough more to make 750,000 shares sold to Union Pacific by Kuhn Loeb, Exhibit 17	24	111
100 millions of convertible bonds issued, 40 millions to pay for Southern Pacific stock, 60 millions used shortly after to pay for Northern Pacific stock	24 & 25	
WITNESS: Harriman	25	1263 & 4

	Page of Brief	Folio of Record
Amount purchased sufficient to control property	25	
WITNESS: Harriman	25	1269 & 70
Additional purchase of 150,000 shares in 1903 to insure control.	25	
WITNESS: Kahn	25	7884 & 5
Since 1903 the 900,000 shares held in treasury of Oregon Short Line have been actual majority of stock present at all Southern Pacific meetings, Complainant's Exhibit 2	26	23 & 24
In 1910 74,000 additional shares purchased in anticipation of passage of Act of Congress legalizing ownership of stock in a competing railway company	26	
WITNESS: Kahn	26	7903
Under normal conditions 30% of stock of a railroad company will control same		
WITNESS: Kahn	26	2040
Control of Panama Route	27 & 28	
Southern Pacific at time of stock purchase owned and still owns majority of stock of Pacific Mail Steamship Co	27	
WITNESS: Mahl	27	425
Pacific Mail controls only boats of American register between Panama and San Francisco, hence necessary part of that route	27	

	Page of Brief	Folio of Record
WITNESS: Rossbottom	27	5444
Unification of Management of Southern Pacific and Union Pacific	28 to 33	
Southern Pacific and Union Pacific have same President, Counsel, Director of Purchases, Director of Maintenance and Operation, Traffic Director	28	
WITNESS: Millar	28	9 & 10
Majority of Directors of Union Pacific and Southern Pacific are identical. Previous to purchase of stock no common directors	28	
WITNESS: Millar	28	211 & 222
Complainant's Exhibit 1	28	12 to 21g
Complainant's Exhibit 129 to 131	28	3209-13
and stipulations	28	
Executive Committees of various companies have powers of boards of directors; when not in session Chairman represents committees; same person Chairman of each company	28 & 29	
WITNESS: Millar	29	100
Stipulation		8340
In many cases local officers represent both companies	29 to 31	
WITNESS: Stubbs	29	562 to 4
McCormick	29 & 30	624 to 7
Stipulation that Mr. Schwerin is Manager of all steamship lines.	30	3217
WITNESS: Kruttschnitt	30 & 31	613 & 14

	Page of Brief	Folio of Record
General agencies in most cities consolidated, Comp. Ex. 74	31	567 to 70
Consolidation as to equipment	31	418 to 20

Stubbs	606 & 7	6661 & 2
3. Omission of court below with reference to competitive relations between Union Pacific and Chicago, Burlington & Quincy	607 & 8	

	Page of Brief	Folio of Record
4. Error of court below in finding that Harriman tried to buy Southern Pacific stock from Huntington, there being no evidence of any sort that such attempt was made; Also error in finding attempt to purchase Central Pacific stock, there being nothing but hearsay evidence of such attempt, and the same being thoroughly contradicted.	608 & 9	
5. Error of court below in finding that George Gould was a competitor of Harriman in connection with Southern Pacific purchase	609 & 10	
6. Several errors of court below in connection with relations between Atchison, Topeka & Santa Fe and Southern Pacific concerning Phoenix & Eastern and Northwestern Pacific	610 to 13	
7. Errors of fact of the court below relative to a portion of the road now owned by the San Pedro in Southern Utah	613-14	
8. Error of court below in finding that San Pedro was not naturally competitive with Union Pacific or Southern Pacific, said finding being contrary to all the evidence	614-15	
9. Error of court below in approving of acts of Union Pacific in acquiring a half interest in San Pedro	615-16	

	Page of Brief	Folio of Record
10. Error of court below in finding it was not feasible to construct two lines of road through the Meadow Valley, Wash., and that that, and other reasons of a practical nature justified consolidation.....	616	
11. Error of court below in finding agreements between San Pedro and Union Pacific and Southern Pacific eliminating competition for 99 years, to be lawful.....	617	
12. Error of court below in finding that initial carriers commonly determine the routing of all traffic, and that the same was not controlled by commercial agencies, said findings being against the overwhelming mass of testimony.....	618 & 19	
13. Error of court below in finding that the actuating intent of Union Pacific Co. in acquiring Huntington stock was to secure permanent connection over the Central Pacific, the same being contrary to the testimony and also entirely immaterial, as recognized by the court itself in the statement in the opinion quoted in this connection.....	619-20	
14. Error of court below in stating that the Government does not claim that the Union Pacific was a competitor of the Southern Pacific for any business originating nearer than a thousand or more miles away from its lines. This statement is contrary to the claim of the Government in the petition and in the argument below, and is contrary to the evidence of scores of witnesses.....	620-21	

	Page of Brief	Folio of Record
15. Error of court below in holding that Union Pacific by reason of the fact that its traffic moved to California points over the Southern Pacific from Ogden, could not be a competitor of the Southern Pacific.....	621 & 2	
16. Error of court below in stating that the two roads instead of being competitive, acted and cooperated between themselves, this statement being contrary to the testimony of hundreds of witnesses who testified to intense competition between the two systems.....	622	
17. Error of court below in holding that question of competition was a mixed one of law and fact instead of holding, as it should have done, that the question as to whether the two railroads were competing is a pure question of fact and that the Government's contention as to said fact was thoroughly established.....	622 & 3	
18. Error of the court below in holding that the maintenance of separate soliciting agents throws little, if any, light upon the ultimate issue as to whether the two lines were competitors. This is directly contrary to statement of Mr. Justice Peckham in opinion in the Joint Traffic Case, 171 U. S. pg. 564, which we have quoted.....	623 & 4	

	Page of Brief	Folio of Record
19. Error of trial court in holding that two railroads cannot be competitors unless the competitive business can be handled by them wholly over their own rails, such ruling being contrary to the testimony and the decisions of the courts....	624 to 6	
Under the same number is considered the claim of the trial court that the fact that different items of competitive traffic are each only a small percentage of the total earnings of the systems, makes the elimination of such competition lawful....	626 to 8	
20. Error of the court below in holding that act of individual defendants in purchasing stock in Santa Fe for the purposes shown by the testimony, was lawful.....	628 & 9	
21. Error of court below in omitting from its consideration certain matters relative to competition in transcontinental rates.....	629	
22. Error of court below in finding that there has been no impairment of service upon either Union Pacific or Southern Pacific, whereas there has been a gross impairment of the same, some of the items thereof being listed by us in this connection.	630 & 31	
23. Error of court below with reference to effect of consolidating traffic agencies.....	631 & 2	

the Pacific Mail Steamship Co., which forms part of the Panama Route from New York to San Francisco, and in addition, an influential voice has been secured in the management of the Atchison, Topeka & Santa Fe Railway Company. The location of these various lines of railway is shown upon the official map of the Union and Southern Pacific systems for 1908, which appears in the record, Volume 3, opposite page 1015. The lines of the Atchison, Topeka & Santa Fe are shown upon this map, but appear more prominently upon the official map of that system, which will be found in the record, Volume 3, opposite page 1049.

(a) It is admitted by the pleadings and established by the proof, that the Union Pacific system, prior to the year 1901, may be briefly described as follows:

Two lines of railway leading from the Missouri River gateways, one from Omaha, a distance of a trifle over a thousand miles, to Ogden, Utah; another from Kansas City to Denver, with a line from Denver to Cheyenne. These lines, together with certain branches and connections were owned directly by the Union Pacific Railroad Co By stock ownership that company also owned and controlled the Oregon Short Line Railroad Co., the tracks of which leave the main line of the Union Pacific at Granger, Wyoming, thence running in a northwesterly direction through Pocatello, Idaho, to Huntington, Oregon, at which place they connect with the lines of the Oregon Railroad & Navigation Co., owned by the said Oregon Short Line Railroad Company through stock ownership, which latter lines extend to Portland, with a branch from Umatilla to Spokane, Washington and other small branches, thus giving the Union Pacific a through line from the gateways at the Missouri River to the Pacific by way of Portland. The Oregon Short Line

also owned several hundred miles of railroad in southern Utah, and its lines extended though Salt Lake and Ogden north through Pocatello to Silver Bow, Montana.

The Oregon Railroad & Navigation Co. owned a line of steamships in active service between San Francisco and Portland, which steamships were run in connection with its rail lines, and did a large amount of local and through business, both freight and passenger. The Union Pacific owned a half interest in the Occidental and Oriental Steamship Line running from San Francisco to ports in the Orient. The Oregon Railroad & Navigation Co. also organized the Portland & Asiatic Steamship Co. early in 1901, prior to the acquisition of the stock of the Southern Pacific by the Union Pacific, which steamship company operates a line of ships between Portland and points in the Orient. The boats of this company continued a steamship service between Portland and Oriental ports that had existed under traffic agreements between said Oregon Railroad & Navigation Company and various vessel owners for several years prior to 1901.

(b) It appears by the pleadings and proofs that the Southern Pacific Co., prior to 1901, through stock ownership or otherwise, owned and controlled the operation of a line of railroad reaching from New Orleans in Louisiana on the Mississippi River, through Louisiana, Texas, New Mexico, Arizona, California and Oregon, to Portland, reaching Los Angeles and San Francisco. A line in Texas also reached tidewater at Galveston, and other branches extended to various points in Northern Texas, there connecting with the lines of other companies running to Colorado terminals, St. Louis and Kansas City.

The Southern Pacific, also by stock ownership, and lease, owned and operated the line of road originally constructed

by the Central Pacific Railroad Company, extending from San Francisco to a connection with the lines of the Union Pacific Railroad Co. and the Denver & Rio Grande Railroad Co. at Ogden.

The Southern Pacific also owned and operated a line of steamships in connection with its rail lines plying between New York and New Orleans, and since 1903, the ships have also made the port of Galveston. The Southern Pacific was furthermore the owner of a majority of the stock of the Pacific Mail Steamship Co., which owned a line of ships plying between San Francisco and points in the Orient, and also ships plying between San Francisco and Panama, which with the Panama Railroad and the ships of the Panama Railroad Co. on the Atlantic side of the Isthmus, made up the through line from New York to San Francisco that has for many years been known as the Panama Route. Thus the Southern Pacific controlled two routes from New York to San Francisco, and one route from New York to Portland, and owned the line reaching from Ogden to San Francisco over which the California business of the Union Pacific and the Rio Grande moved, except such business as the Union Pacific sent down by boat from Portland.

(c) The Atchison, Topeka & Santa Fe Railway Co. was and is the owner of a line of railroad extending from Chicago, Illinois, through Illinois, Iowa, Missouri, Kansas, Colorado, New Mexico, Arizona and California, to tidewater at San Diego and San Francisco, also reaching Los Angeles.

(d) The Northern Pacific Railway, which the conspirators unsuccessfully endeavored to control, extends from Ashland, Wisconsin, and Duluth, Minnesota, on Lake Superior, and St. Paul, Minnesota, on the Mississippi River,

to Portland, Oregon, by way of Seattle and Tacoma on Puget Sound, at which latter places it connects with the Pacific Coast Steamship Co. operating a line of ships between Sound ports and San Francisco. The Northern Pacific in the spring of 1901 and prior to the attempt of these conspirators to acquire control of the same, had purchased jointly with the Great Northern Railway Co. the stock of the Chicago, Burlington & Quincy Railway Co., which latter corporation possessed a very large system of railroads, having its eastern terminus at Chicago, northern terminus at St. Paul, western termini at Billings, Montana, where it connected with the Northern Pacific, and at Denver, Colorado, and reaching Kansas City in the south and having among others, lines running from Kansas City to Denver, and from Omaha to Denver.

(e) In the year 1900 the defendant William A. Clark and his associates perfected arrangements for building a line of road from Salt Lake City to Los Angeles, connecting there with a short road owned by a corporation known as the Los Angeles Terminal Railway running from Los Angeles to tidewater at San Pedro, the stock of which they controlled. The construction of this road was commenced in the spring of 1901. It was interfered with and its projectors were harassed in the manner stated in the petition and established by the proofs, to be hereafter discussed, until after a considerable part of the road had been constructed. In the summer of 1902 an amalgamation took place under a contract made between the late defendant, Harriman representing the Union Pacific interests (which were actively building a line paralleling the San Pedro), and the said Clark representing himself and his associates, by which the Oregon Short Line, a sub company of the Union Pacific, turned over to the San Pedro, Los Angeles and Salt

Lake Railroad Co., which had been organized by Clark and his associates, and which was constructing the said line of railroad, all of its lines south of Salt Lake City, in Utah, and Nevada, being several hundred miles in extent, and the balance of the road that had not already been built was completed, with the exception of short lines of track in Southern California leased from the Atchison Co. and the Southern Pacific Co. Said Harriman having died pending the trial of this suit the defendant Robert S. Lovett as Trustee was by order of Court made a party defendant as he had succeeded said Harriman as Trustee under the contract Exhibit "B" attached to the petition. By this means the defendant San Pedro, Los Angeles & Salt Lake Railroad Co. about the year 1905, opened for traffic a new line from Salt Lake to Los Angeles and San Pedro, over which line the Union Pacific has exercised the control through officers, directors and traffic agreements hereinafter set forth. This line is shown in green on the map of the Union Pacific-Southern Pacific systems opposite page 1015. It will be observed that the lines of road above described constitute the sole means of reaching the Pacific Ocean south of Puget Sound, with the exception of the Western Pacific line which has been completed since the commencement of this action. As we have said, the conspiracy failed as to the Northern Pacific. It has succeeded as to the balance.

The lower court dismissed the bill on the merits, three judges concurring in that conclusion, Circuit Judge Hook dissenting (188 Fed. Rep. p. 102). The majority of the court fell into error with reference to the facts in a number of particulars. The discussion of the opinion of the trial court and the mistakes as to the facts therein contained will be found at page 604 of this brief.

TRANSCONTINENTAL RATE SITUATION AND GENERAL CONSIDERATIONS AFFECTING CONTROVERSY.

An inspection of the map shows that there are comparatively few transcontinental railroads. The portion of the United States East of the Missouri River is, and was at the time of the formation of the conspiracy complained of, gridironed with railroads, but from that line to the coast the railroads are few. Rates to the coast break either at the Missouri River, at the lower Mississippi River crossings or at St. Paul, and the lines running westerly to the coast from those crossings are commonly known as transcontinental railroads. The length of such lines is about two thousand miles more or less. The railroads to the East of these crossings converge at certain points, at which they interchange business with the transcontinental railroads. There have been some changes since 1901; as for instance, the construction of the new line of the Chicago, Milwaukee & St. Paul to Puget Sound, and the building of the Western Pacific from Salt Lake to San Francisco; but viewing the situation as it existed in the spring of 1901, it will be seen that at certain points railroads from the East brought the products of that region and delivered the same to the transcontinental lines, and at the same points received the products of the West from the transcontinental lines and distributed the same throughout the East. To illustrate, at St. Paul, the Eastern terminus of the Northern Pacific and Great Northern Railway lines, business was interchanged with a number of lines leading to the East, namely the Chicago, Burlington & Quincy, Chicago & Northwestern, Chicago Milwaukee & St. Paul, Chicago Great Western, Wisconsin Central, Minneapolis & St. Louis, and at a

later date the Rock Island. At Omaha or Council Bluffs, the Eastern terminus of the Union Pacific, business was interchanged with all of the lines above mentioned, except the Minneapolis & St. Louis and in addition with the Wabash, the Rock Island, and at a slightly later date the Illinois Central. Certain of the same lines and others, such as the Chicago & Alton, interchanged at the Union Pacific's Eastern terminus at Kansas City. At New Orleans, in addition to the interchange with the Southern Pacific's own boat line running to New York, the rail lines of that company interchanged business in large volume with the Louisville & Nashville, the Queen & Crescent, Illinois Central and other lines leading to the central and Eastern parts of the United States. There were also certain junction points in Texas such as San Antonio and El Paso at which the Southern Pacific interchanged a large amount of business with lines leading to the East and North. The transcontinental lines reaching the Pacific Coast in 1901 were the Canadian Pacific, the Great Northern, the Northern Pacific, the Union Pacific, the Atchison, Topeka & Santa Fe, and the Southern Pacific. All of these lines, as we will later show, were more or less competitive on transcontinental traffic. Naturally the competition was the most severe between such lines as reached most directly the same portion of the Pacific Coast territory. The Great Northern and Canadian Pacific, each extended to Puget Sound, but neither of them then reached Portland over its own rails, but the Northern Pacific, the Union Pacific and Southern Pacific all had Portland as their Western terminus. The Southern Pacific, and the Atchison, Topeka & Santa Fe reached San Francisco with their rail lines and the Union Pacific by boat line from Portland. We will later in this brief discuss in detail, with references to the testimony, the actual

competitive relations existing between these various lines having their Western termini at Portland and San Francisco and other California points, and we will show that they were engaged in an active energetic competition. Without now discussing that question fully, it may be said that there is no dispute that vast quantities of traffic were taken to Portland by the Northern Pacific, by the Union Pacific and by the Southern Pacific, the latter company handling traffic into Portland both by its Sunset Route, so-called, and from Ogden to Sacramento, and thence north to Portland. It is also undisputed that traffic moved Easterly from Portland and vicinity by these three systems. Whatever may be the situation as affected by other considerations which we will hereafter discuss, no one denies that traffic in either direction could move between Portland and vicinity in the West and practically all points East of the Missouri River in the East by any one of these routes, and usually at the same rates, all transcontinental rates being made in conference where each independent line had a voice and vote. (Stubbs' testimony, Fol. 3332; Paul Morton, Fols. 1391, 1399, 1403; Hawley, Fol. 1435.)

There is also no dispute in the evidence, that as to business moving between San Francisco and points in the East, the Southern Pacific endeavored to send the same, by New Orleans or El Paso. The Santa Fe sought to secure it for its line, and the Union Pacific for the direct line from the Missouri River to San Francisco, as it participated in the haul to the extent of a thousand miles, namely to Ogden if it moved that way, the balance of the haul to or from San Francisco being over the short line of the Southern Pacific. Traffic could move by any one of these three routes upon an equal tariff. In considering the acts of the parties in the premises, the independence of each line, so

long as it remained separate and distinct, and the power of the said lines over rates, it must never be lost sight of that it is shown by the undisputed testimony that *all transcontinental rates were the same and that a reduction in the rate to any coast point by any line would at once force a like reduction to all points.* Mr. Stubbs, chief traffic officer of the defendants Union Pacific and Southern Pacific, said:

> "Let the rate be cut on the Great Northern and it goes down to the Gulf of California."
> (Stubbs, Fol. 3268.)

Then again, when he was being examined with reference to the possibility of the Union Pacific cutting rates into San Francisco over its rail line to Portland and its boat line from thence to San Francisco, he gave the following testimony:

> "Q. If such an attempt had been made, and as a matter of retaliation the Union Pacific had taken advantage of its Portland boat line and had cut the rates, then as I understood you to testify this morning, that would have resulted in cutting rates all along the line, over all routes, as you said in your usually eloquent—
>
> A. Well, whether I said so or not, I say so now.
>
> Q. That would have involved a loss to the Southern Pacific of its rates on the enormous traffic going over the Sunset Route, would it not? That is true, if it was cut all along the line?
>
> A. Why, if it was cut it would be cut everywhere, yes." (Fols. 3321-2.)

Mr. Markham, of the Missouri Pacific, gave similar testimony (Fol. 3710), as did Mr. Babcock, formerly Vice President of the Denver & Rio Grande. (Fols. 3945 and

6.) The reason for this relation and interdependence of rates is perfectly evident. All of the coast cities from San Diego to Vancouver are reached by ships which can handle certain of the traffic between the Atlantic seaboard and the Pacific Coast. This would of itself have great influence in producing a parity of rates, but the controlling feature, as was stated by some of the witnesses, is that the merchants in the large jobbing cities of the coast are distributing into the same territory; as, for instance, jobbing houses in Seattle and Tacoma reach the same territory as those located in Portland, and to some extent the houses located in San Francisco. Portland and San Francisco jobbers are likewise in competition in common territory, as are the jobbers of San Francisco, Los Angeles and San Diego. All of these merchants demand and the railroads concede the same through rates from the East as are enjoyed by their competitors in business. So there is no doubt that on transcontinental business each through line reaching one of these terminal points from the Missouri River crossings has a voice in making the through rate. Not only do these transcontinental lines each have a voice in making the through rates, but they substantially control the making of transcontinental rates from the Atlantic seaboard to the Pacific Coast. On account of the larger interest of the lines West of the Missouri River the connections of those lines to the East have practically left the making of transcontinental rates to the few lines west of the river. This is undisputed. See testimony of Mr. Munroe, Freight Traffic Manager of the Union Pacific. (Fols. 6829 & 30.) The rates west of the Missouri River are so high that if necessary any line starting from the river could even handle business from the East on the sum of the locals and still have a margin. (Markham, Fols.

3709-11.) These lines being so few in number and the fast growing territory served by them being so vast, the prohibitions of the Sherman Act should be applied to them with the utmost rigor. Mr. Buchanan of Cincinnati, the traffic manager of Proctor & Gamble, the great soap manufacturers, and who before his connection with that concern, was Assistant General Freight Agent of the Big Four Railroad, when being interrogated on cross examination as to the reason for his opinion that the shipper would be benefited by the Southern Pacific and Union Pacific having separate traffic organizations, said:

> "I think where there are strong systems that are separate, the shipper stands a better chance. I think it is obvious that he would, even with the best intentions on the part of the traffic managers of the larger systems: that he stands a better chance of getting a fairer hearing on any question that he will bring up, less chance of an unreasonable rate or unreasonable rules and regulations." (Fol. 2358.)

We discuss this matter fully and call attention to the testimony of a large number of witnesses later in this brief.

In addition to this situation as to transcontinental business, at the time of the formation of the conspiracy the Southern Pacific had a rail line between Ogden, Utah, the terminus of the Union Pacific, and Portland, by way of Sacramento. The Union Pacific had a line between the same points. Without going into the question of the competition of these two lines in detail, which will be done later, it is undisputed that traffic could move and did move between said termini over each of these lines, and there were no other lines of railroad connecting these two destinations. It is also undisputed that in 1901, the only rail

line between San Francisco and Portland and the points in the vicinity of each was the Southern Pacific, and the only regularly established line of boats, freight and passenger, between San Francisco and Portland at that time, was the boat line owned, controlled and run in connection with the Union Pacific. Without now discussing the extent of the competition between this boat line and the rail line, which will be treated later, it is undisputed that traffic, both freight and passenger, could and did move by both lines between Portland and San Francisco in large volume. Previous to the time of the conspiracy complained of, the Southern Pacific had acquired a majority of the stock of the Pacific Mail Steamship Co., which had a line of ships forming the Pacific end of the Panama Route from New York to San Francisco, and also plying between San Francisco and China and Japan. It had a half interest, the Union Pacific owning the other half, in the Occidental & Oriental Steamship line with ships making the same ports as the Pacific Mail from San Francisco. The Union Pacific had for years maintained a line of boats under various contracts with ship owners, plying between Portland and the same points in the Orient reached by the Pacific Mail boats, and just previous to the merger of the Union Pacific and Southern Pacific systems the former had incorporated the Portland & Asiatic Steamship Co., (the stock of which was owned by a subsidiary of the Union Pacific) for the purpose of operating ships between Portland and the Orient in connection with the rail lines of the Union Pacific. Without now going into detail as to the competition between these respective lines of boats, it is enough to say that traffic to the Orient from all parts of the United States East of the Missouri River could and did move by all of the lines mentioned, and that traffic from the Orient destined to points East of

the Missouri River could and did move by all of the said lines. It is further undisputed that previous to the conspiracy mentioned the Southern Pacific with its boat line from New York to New Orleans, and its rail line from there to Fort Worth in northern Texas, actively and successfully solicited and obtained the carriage of a large amount of traffic bound from New York to Colorado and Utah common points, which was turned over to the Colorado Southern at Fort Worth, and if destined to Utah points was by it in turn ordinarily delivered to the Denver & Rio Grande, a competitor of the Union Pacific running between Denver and Grand Junction, and in connection with the Rio Grande Western, which it afterwards acquired, reaching Salt Lake City and Ogden. The Union Pacific at the same time in connection with water lines from New York to Newport News and other South Atlantic ports and the rail lines from those ports to the Missouri River crossings, was actively seeking and participating with its said connections in the carriage of a large amount of traffic bound to Colorado and Utah common points which it was able to deliver over its own rails. Without now discussing the details of this competition, it is sufficient to say that traffic in large volume moved over both of these routes at differential rates below the all rail rates, which differentials were uniform; and in addition the Union Pacific with its connections East of the Missouri River was also handling traffic into Colorado and Utah common points all rail. It is also undisputed that at that time traffic was moving from San Francisco to Montana, Idaho and Washington points, both over the Southern Pacific lines and connections, and over the Union Pacific boat and rail lines and connections. Without now discussing the details of that

competition, there is no controversy as to the fact that the traffic did move over both of these routes at equal rates.

The San Pedro, Los Angeles & Salt Lake Railroad was not then in operation, not being finally completed and opened as a through line until 1905. A portion of the line, namely, that from San Pedro to Los Angeles, with certain branches, had been constructed some years previously, and had been purchased by Senator Clark and his associates, who in 1900, projected the new line of railway; and in the early spring of 1901 surveying and construction were actively in progress at different points. The Atchison, Topeka & Santa Fe Railway in the spring of 1901 extended through from Chicago to San Francisco, with numerous branches, making tidewater at San Diego as well as San Francisco. Among its branches a very important one was known as the Sante Fe, Prescott & Phoenix Railway, which extended from Ash Fork on the main line in Northern Arizona in a southerly direction through the center of that territory to Phoenix. The latter point was also reached by a short branch of the Sunset Route of the Southern Pacific running North from Maricopa. The testimony is undisputed that the Santa Fe was a competitor of both the Southern Pacific and Union Pacific. Thus having sketched very briefly the transcontinental situation, we will now consider what was done by the defendants with reference to an amalgamation of all these great interests and the combination of the same in the hands of the individual defendants and the defendant Union Pacific Railroad Company and its subsidiaries, the Oregon Short Line, of which it owns all the capital stock, and of the Oregon Railroad & Navigation Company, the stock of which is owned by the Short Line. In entering upon a discussion of this matter, without repeating what is set forth in our brief of the law, it may be useful to observe that

great railroad systems of thousands of miles in length which are, as to a very considerable portion of their business necessarily monopolies in and of themselves, stand in a different position before the law, and the application of the statute is much plainer as to them than in the case of ordinary traders. This was pointed out in the briefs of counsel for defendants in the Standard Oil Case, (221 United States, 15,) and in the American Tobacco case, (221 United States, 135) see also the concurring opinion of Mr. Justice Brewer, *Northern Securities Co. v. United States*, 193 U. S. 407.) That this court is now impressed with the same thought is evident from the language of the learned Chief Justice in the opinion in the Standard Oil case, where, in discussing, and to a certain extent, limiting some of the general language in the Freight Association case, he said:

> "The confusion which gives rise to the question results from failing to distinguish between the want of power to take a case which, by its terms or the circumstances which surrounded it, considering among such circumstances the *character of the parties*, is plainly within the statute, out of the operation of the statute by resort to reason, in effect to establish that the contract ought not to be treated as within the statute, and the duty in every case where it becomes necessary *from the nature and character of the parties* to decide whether it was within the statute to pass upon that question by the light of reason." (221 U. S. 67.)
>
> (The italics are ours.)

And again, on the same page, the opinion proceeds:

> "And in order not in the slightest degree to be wanting in frankness, we say that in so far, however, as by separating the general language used in the opinions in the Freight Association and Joint Traffic cases from the context and *the subject and*

parties with which the cases were concerned, it may be conceived that the language referred to conflicts with the construction which we give the statute, they are necessarily now limited and qualified."

(The italics are ours.)

The court also explained the language in those cases as follows:

"The rulings in the case relied upon when rightly appreciated were therefore this and nothing more: *That as considering the contracts or agreements, their necessary effect and the character of the parties by whom they were made, they were clearly restraints of trade within the purview of the statute, they could not be taken out of that category by indulging in general reasoning as to the expediency or non-expediency of having made the contracts or the wisdom or want of wisdom of the statute which prohibited their being made.*" (221 U. S. 65.)

(The italics are ours.)

The transactions of the defendants to which we will now call attention, when viewed in the light of the subject matter and the parties, the two considerations most prominently mentioned by this court in the case just referred to, inevitably lead to the conclusion that from the beginning there existed in the minds of the individual defendants a deliberate intention to eliminate competition in transcontinental transportation and to monopolize the same or the great part thereof, thus necessarily restraining the liberty of action of such carriers, and restraining the trade and commerce of the public patronizing such railway lines. The evidence establishing this conclusion is discussed at pp. 566 et seq. of this brief. It is impossible to exaggerate the far-reaching effects of this conspiracy and its partial success. The territory traversed by

these various lines which were the subject of the conspiracy, is the portion of the United States containing the fewest inhabitants in proportion to its area, and which in 1901 gave clearest evidence of the prospective development that has since taken place, and which is constantly increasing in momentum. Deserts are being turned into gardens, great cities are being built. New settlers by the hundreds of thousands are rushing in to make homes, and while this development has been checked as to one vast region by the scandalous failure of the parties to this conspiracy to aid in its development by extending their lines of rail into the same, to-wit, the enormous territory in Central Oregon, nevertheless, the growth and increase in population and wealth has been vast during the past ten years. If instead of the amalgamation of the Union Pacific and Southern Pacific lines they had remained separate and, by the play of the ordinary forces of competition had developed the Oregon territory instead of taking the vast revenues accruing from the existing lines in that part of the country and carrying them off to New York to invest in stocks of railroad companies three thousand miles away, (the Oregon Railroad & Navigation Co. paying regular dividends on its preferred stock from 1901 on, and in 1908 an additional dividend of 77% upon the preferred stock, and 79% upon its common stock, and the following year 14½% on preferred and 12½% on common stock and in 1910 13% upon preferred stock and 15% upon common stock), the western development would have been infinitely greater; but in spite of this treatment extended to a great region which was enclosed by the lines of this combination, the growth of the West has been such, and will in the future be such, that the transportation lines which had long been independent of each other in that territory, should have so

remained. This would have prevented the injury to the public which always results from monopoly, as pointed out by this court in the Standard Oil opinion, from which we again quote:

> "The evils which led to the public outcry against monopolies and to the final denial of the power to make them may be thus summarily stated: (1 The power which the monopoly gave to the one who enjoyed it to fix the price and thereby injure the public; 2 the power which it engendered of enabling a limitation on production; and 3 the danger of deterioration in quality of the monopolized article which it was deemed was the inevitable result of the monopolistic control over its production and sale." (221 U. S. 52.)

As we will hereafter show, the transactions in question here have resulted in each one of the three evils enumerated: 1. Rates have been grossly increased; 2. Construction of new lines into competitive territory has been prevented; 3. The service, instead of being bettered, as has been the rule in other parts of the United States, has sensibly deteriorated.

UNION PACIFIC-SOUTHERN PACIFIC.

The defendant Union Pacific Railroad Company was taken out of the hands of receivers and reorganized pursuant to a plan and agreement dated October 15, 1895, (Complainant's Exhibit 109, Fols. 1757, et seq.), which organization was completed in December, 1897. (Millar, Fol. 11). The defendant Schiff was one of the reorganization committee, and Kuhn, Loeb & Co., bankers of New York City, of which defendants Schiff and Kahn are both members, were the bankers of the committee. This reorganization involved only the lines from the Missouri River to Ogden, together with certain branches. Later the stock of the Oregon Short Line was acquired by it, that company owning a majority of the stock of the Oregon Railroad & Navigation Co. The balance of the securities of these two lines was acquired in 1899. (Comp. Exhibit 16, Fols. 101 et seq.). This exhibit is the record of a meeting of the board of directors of the Union Pacific Railroad Co. held on August 29th, 1899. At that time the late E. H. Harriman, one of the original defendants in this case, was chairman of the executive committee, and he advocated before this meeting the purchase of the remaining securities of the Short Line and the Oregon Railroad & Navigation Co. by the Union Pacific. Among other things the record discloses the following:

> "He stated that the acquisition of the Navigation preferred stock and the Short Line B bonds on the basis indicated would secure the control of the Navigation property *and complete the extension of this company's system to the Pacific Coast.*" (Fol. 103.)

And at the same meeting it was voted to buy these securities, and in the preamble to the resolution we find the following language:

"Whereas the lines of railroad of said Oregon Short Line Railroad Company, the said The Oregon Railroad & Navigation Company, constituting extensions and auxiliary lines of the railroad of this company and are not parallel or competitive therewith." (Fol. 105.)

Previous to the receivership of the Union Pacific, the Oregon Short Line and the Oregon Railroad & Navigation line had both belonged to the old Union Pacific Company, and therefore, then as now, the Union Pacific line reached from the Missouri River to the Pacific Ocean. This control of the subsidiary companies was lost under the receivership, (all of the companies being in the hands of receivers), and was regained in the manner above stated.

From this it appears that the reorganized Union Pacific system as a transcontinental line was completed to the Pacific Coast, to use Mr. Harriman's language, in August, 1899. At that time among the directors were Mr. Harriman, and the defendants Kahn, Schiff and Stillman; also Mr. George J. Gould, whose relation to certain transactions will be commented upon hereafter. The executive committee consisted of Mr. Harriman, Mr. Gould, Mr. Marvin Hughitt, defendant Kahn, Mr. Pierce, the then general counsel of the company, and defendant Stillman. The same gentlemen were elected on the executive committee November 8, 1900, and with the exception of Mr. Pierce they continued until the resignation of Mr. Gould June 20, 1905, and in April, 1906, the defendant Frick was elected a member of the executive committee, he having been a member of the board since October, 1904. Henry H. Rogers, one of the original defendants, who died pending the trial of this case, was elected a member of the board in October, 1901, and continued to serve until his death. (See Fols. 12 to 16.)

The Interstate Commerce Commission conducted an investigation into the relations between these various transcontinental lines, and during the progress of that investigation the defendant Kahn testified concerning said matters, and his testimony by consent was made part of the record in this case. At Folio 1990 he stated that from the time of the reorganization of the Union Pacific down to that date, February 27, 1907, his bank (Kuhn, Loeb & Co.), had been the fiscal agents of the Union Pacific. Defendants Schiff and Kahn retired from the Union Pacific board in 1906, but late in 1909 defendant Kahn again became a member of the board and of the executive committee. (Fol. 7886.) After the death of Mr. Harriman in the fall of 1909, defendant Schiff again went on the board, but later on resigned, his place being taken by his son Mortimer L. Schiff, also a member of the firm of Kuhn, Loeb & Co., and as such a partner of his father and defendant Kahn. (Fols. 7888 & 9.) The years 1900 and 1901 were the years when the idea of amalgamation was widespread in the financial world. Combinations of previously competing companies were the order of the day. This is made manifest by many cases that have been before the courts. The Sherman Law was being ignored. Common directors among competitors were usual. Community of interest was a watchword in financial circles. Mr. Gould was on the executive committee of the Union Pacific. About this time he acquired control of the Denver & Rio Grande, which road is referred to in the opinion of the majority of the trial court as "a potential and later an actual powerful rival for the same business" (transcontinental business) Record Vol. 12, p 311, and Mr. Harriman became a member of the board of that corporation and so remained until 1905, (Fols. 383-4), when he withdrew, and Mr. Gould likewise withdrew from

the Union Pacific. These joint withdrawals were occasioned by the fact that Mr. Gould being interested in the Denver & Rio Grande, and the Rio Grande Western, deemed it for his interests to assist in building the Western Pacific, an action which apparently met with the earnest disapproval of Mr. Harriman. (Fol. 384.) We call attention to the general situation in 1900 and 1901 because it bears upon the motives and intent of the various parties to this conspiracy. The acts by which the defendants sought to obtain practical domination of the transportation interests of half a continent followed one after the other during that time, with startling rapidity.

Purchase of Southern Pacific Stock.

For many years previous to his death in August, 1900, Mr. C. P. Huntington and his associates had controlled the Southern Pacific Company. One of his intimate financial and personal friends was Mr. Edwin Hawley. He had been associated with Mr. Huntington for nineteen years, and testified with relation to that matter, as follows:

> "Q. How close and intimate were your relations with him?
>
> A. Quite close.
>
> Q. As compared with his other associates in business here in New York, how were they?
>
> A. Probably to a greater extent than almost any other man." (Fol. 8243.)

He further testified that he was particularly associated with him in connection with the Southern Pacific both in charge of the traffic of that company in the East, and as a stockholder, and that a short time prior to Mr. Huntington's death he joined with him in purchasing the so-called Crocker stock in the Southern Pacific, that interest having

at one time owned a quarter of the capital. This purchase was made among other things for the purpose of maintaining control of the company. Mr. Huntington by his will gave to his widow two-thirds, and to his nephew H. E. Huntington one-third of all Southern Pacific stock owned by him. (Fol. 8301.) Acting for those beneficiaries and himself, Mr. Hawley sold 475,000 shares of stock in the Southern Pacific Company to Mr. Harriman acting for the Union Pacific, in February, 1901. (Fols. 8246-7-50.) While Mr. Hawley sold the stock to Mr. Harriman for the Union Pacific, for some reasons probably satisfactory to them the stock was passed through the fiscal agents of the company, Kuhn, Loeb & Co., and upon the face of the papers that firm became the owner of the same, and in turn within a few days sold it to the Railroad Company at an advance of $2.50 per share. (See Comp. Exhibit 17, Fols. 111 et seq.) It should be said in this connection that it was claimed by Mr. Kahn on the stand that the purchase of the stock was made by his firm as fiscal agents for the company with the cooperation of Mr. Harriman. (Fols. 1991 & 7908.) We will later on comment on Mr. Kahn's testimony with reference to this matter, but for present purposes it is unnecessary to do more than call attention to the resolution of the board of the Union Pacific. (Comp Ex. 17, Fols. 111 et seq.) This record of the meeting of the board embodies an offer made on February 4th, 1901, by Kuhn, Loeb & Co. to the executive committee, offering to sell to the Union Pacific 750,000 shares of stock of the Southern Pacific Co., which offer was accepted, the price being fixed. It was also provided that there be issued one hundred million dollars of bonds of the Union Pacific; that forty millions par value were to be sold to pay for the stock of the Southern Pacific Co. Upon the terms provided the

forty millions of bonds would net thirty-eight million dollars as the bonds were to be underwritten by Kuhn, Loeb & Co. or a syndicate to be formed by them, which was to receive a commission of 2½%, or one million dollars, and in addition to that for their individual services Kuhn, Loeb & Co. were to have another million dollars. In this way the money was provided to pay Kuhn, Loeb & Co. for the stock upon which they received a profit of $2.50 a share or $1,875,000. Kuhn, Loeb & Co. were also given the option to take upon like terms any additional bonds of the said issue that might be sold by the company prior to May 1, 1906, and did so. Mr. Harriman's testimony given before the Interstate Commerce Commission, was read into the record. He testified that the proceeds of the forty millions of bonds were used to pay for the Southern Pacific stock, and the other sixty millions were held for the purposes of the corporation, and were actually used to pay for the stock of the Northern Pacific, which we will discuss later. (Fols. 1263 & 4.) Mr. Harriman testified that the purpose of purchasing the first 750,000 shares of Southern Pacific stock was to acquire a dominating interest in that company, and that they thought it was not necessary to buy a majority, but could control just as well with a minority. (Fols. 1269-70.) That naturally resulted from the fact that the organization of the property went with the purchase, and having control of the books so as to obtain proxies it was practically certain that so large a holding would result in continuous control, the balance of the stock being scattered. The total outstanding Union Pacific stock at that time was 1,978,090 shares, and at the annual election April 3, 1901, the 750,000 shares were voted by Mr. Harriman for the board that was elected. Of the total stock present and voting this did not constitute

quite a majority. At the meeting in 1902 it was nearly a majority. Between that meeting and the one in 1903, 150,000 additional shares were purchased, the reasons for the purchase (to guard against loss of control) being given by Mr. Kahn in his testimony. (Fols. 7884 & 5.) This made 900,000 shares in March, 1903, and at the meeting in April, 1903 these 900,000 shares appear to have been voted by the Oregon Short Line, a subsidiary of the Union Pacific. (Comp. Ex. 2, Fol. 23.) The transfer of the stock from the Union Pacific to the Oregon Short Line is evidenced by resolutions passed at the executive committee meeting. (Comp. Ex. 27, Fol. 145), the same being in reality only an exchange of securities; but as the stock of the Oregon Short Line is entirely owned by the Union Pacific, the control by that company was unaffected by the nominal change. Since 1903 the Southern Pacific stock held by the Oregon Short Line has been an actual majority of all the stock present and voting at any annual meeting, and is undoubtedly, for purposes of control, more than ample (Comp. Ex. 2, Folios 23 and 24). Early in 1910 74,000 additional shares were bought as part of a proposed purchase of 154,000 shares, which latter amount would have made a clear majority of the stock of the Southern Pacific. This purchase was not made for the purpose of solidifying the control, but by reason of the fact that the defendants had information that a law would be passed by Congress legalizing the ownership of stock in a competing railway company, provided said ownership comprised a majority of the stock of such competitor. When it was learned that the law would not be enacted purchases ceased with the 74,000 shares above mentioned. (Kahn's testimony, Fol. 7903.) The witness Kahn testified that as things ordinarily go, anyone who has 30% of the stock

of a large railroad corporation, would, under normal conditions control the corporation. (Fol. 2040.) Thus the Union Pacific acquired the absolute control and management of the great Southern Pacific Co. by this stock purchase, thus putting an end to all competition between the two systems, and by reason of the added influence it thus obtained because of its ability to divert traffic to connections, some of them also competitors, it immediately assumed a dominating position in connection with transcontinental traffic.

Control of Panama Route.

Not only was this true as to the control of the lines of the Southern Pacific, but it also secured control of the Panama Route, as the Pacific Mail formed a necessary and indispensable link in that route. The Southern Pacific then owned and still owns $10,010,000 par value out of the $20,000,000 par value of the capital stock of the Pacific Mail Steamship Co. (Mahl, Fol. 425.) This was a situation well known to the defendants, as according to the testimony of Mr. Schwerin, the Vice President and General Manager of the Pacific Mail, quite a block of the Southern Pacific holdings of Pacific Mail were bought from the late defendant Harriman himself, previous to the time of the acquisition of the Southern Pacific by the Union Pacific, to-wit, in the fall of 1900. (Fols. 2719-20.) The Panama Railroad, the stock of which has been owned by the United States since the purchase of the French canal properties at Panama, operates ships between New York and the Isthmus, and interchanges business with other lines than the Pacific Mail when the same is destined to Central American or Mexican ports, but under the law goods cannot be shipped from New York to San Francisco by way of Panama in other than American bottoms, and there is no other line

of boats running from Panama to San Francisco of American register, except the Pacific Mail. (Testimony of Rossbottom, Secretary of Panama Railroad Co., Fol. 5444.) This purchase of Southern Pacific stock, therefore, gave the absolute control of the Panama Route, both as to rates and service, into the hands of the defendants. As to the manner in which this line has been made entirely ineffectual as a competitor of the rail lines, we will comment later. For the present discussion we merely advert to this as showing the evident intent on the part of the defendants to eliminate competition so far as possible and the power given them by the Southern Pacific purchase to accomplish such purpose.

There has been a unification of management of the Southern Pacific and Union Pacific.

a. The Southern Pacific, Union Pacific, Short Line, and Navigation Co. have had the same President, Mr. Harriman; now Mr. Lovett; the same Traffic Director, Mr. Stubbs; same Assistant Traffic Directors, the same Comptroller, the same General Auditor, the same Director of Maintenance and Operation, Mr. Kruttschnitt, and in general the same Counsel, and the same Director of Purchases, Mr. Thorne. (Mr. Millar's testimony, Folios 9 and 10.)

The majority of the directors of the Union Pacific are likewise directors of the Southern Pacific, and where they are not identical, they are in many cases employees selected by the management. Prior to the acquisition of the Southern Pacific Stock by the Union Pacific Co., there were no common directors in the Southern Pacific and Union Pacific. (See Complainant's Exhibit 1, Folios 12 to 21g, and testimony of Millar, Folios 211 and 222; also Complain-

ant's Exhibits 129 to 131, with accompanying stipulations, Folios 3209-13.)

b. The by-laws of the various companies each have a provision for an Executive Committee with all the powers of the Board of Directors to manage and direct the business and affairs of the company in such manner as the committee may deem best in all cases in which specific directions shall not have been given by the board, and the chairman of the Executive Committee, subject to the control of the committee, is authorized to represent it when not in session. The President of the company has been chairman of the committee of each company. (Millar's testimony, Folio 100; Stipulation, Folio 8340)

c. In addition to having indentical chief officers the local officials are in many cases officers of both companies, as, for instance, Mr. Reeves, General Freight Agent of the Short Line, is also in charge of the traffic on the Union Pacific from Green River to Ogden, and on the Southern Pacific from Ogden to Sparks, Nevada; on the Union Pacific being made subject to Mr. Munroe, the Traffic Manager, and on the Southern Pacific made subject to Mr. Jones Freight Traffic Manager. (Stubbs' testimony, Folios 562-3.)

Mr. Miller, the General Freight Agent of the O. R. & N., is also General Freight Agent of the Southern Pacific lines in Oregon, and with respect to the latter he is immediately subject to Mr. Jones, Freight Traffic Manager of the Southern Pacific. (Stubbs' testimony, Folio 564.)

Mr. McCormick testified, at Folio 624, that he was formerly the Passenger Traffic Manager of the Southern Pacific, leaving that position to become Assistant Traffic Director under Mr. Stubbs. He stated that the supervision

of all the passenger business on all the lines is in Mr. Stubbs and his assistants. The general passenger agents report to Stubbs periodically; that Mr. Lomax, General Passenger Agent of the Union Pacific in charge of local business as far as Green River, on through business as far as Ogden; Mr. Fee, Passenger Traffic Manager of the Southern Pacific, whose jurisdiction extends to El Paso on the south; to Ashland, Oregon, on the north; to Sparks, Nevada, on the east; and on through business to Ogden, both report to Mr. Stubbs; that Mr. Burleigh has charge of the lines from Ogden to Sparks on the Southern Pacific, between Green River and Ogden on the Union Pacific, and of the Short Line, and that Mr. McMurray has charge, of the Southern Pacific lines in Oregon north of Ashland, and of the Oregon Railroad & Navigation Co. lines; Mr. Batters of the lines in Louisiana. (Folios 625-6.)

It is well known that under the laws of Texas the railway lines there must be locally operated. Hence, in form, the operation of the lines in Texas, of which the Southern Pacific is the sole stockholder, is independent, but, of course, the independence of two corporations of both of which the President of the Union Pacific is the President is a myth, and it appears from Mr. McCormick's testimony that by the consent of Mr. Dunlap, Chief Traffic Official of the Texas lines, Mr. Stubbs' office has charge of through business to and from New Orleans. It is very easy to imagine what would happen to Mr. Dunlap if he should refuse to give his consent. (Folios 626-7.)

It is stipulated that Mr. Schwerin is Vice-President and General Manager of the Occidental & Oriental Steamship Co., the Pacific Mail Steamship Co., the San Francisco &

Portland Steamship Co., and the Portland & Asiatic Steamship Co. (Folio 3217.)

As to the operating department, Mr. Kruttschnitt testified that Mr. Bancroft is Vice-President and General Manager of the Oregon Short Line, and General Manager of that part of the Union Pacific from Green River to Ogden, and of the Southern Pacific from Ogden to Sparks, Nevada, a distance of 560 miles, reporting to Mr. Kruttschnitt. (Folio 613.)

Mr. O'Brien is Vice-President and General Manager of the Oregon Railroad & Navigation Co. and the Southern Pacific lines in Oregon as far south as Ashland, about 430 miles. (Folio 614.)

d. The general agencies in most of the large cities have been consolidated. A list of these agents appears in Complainant's Exhibit 74, Folios 567 to 570. These are the railroad representatives who come in immediate contact with the shippers and carry on competition between different railroad systems.

e. In the matter of equipment, the lines have been substantially consolidated, as, for example, the refrigerator cars belong to the Pacific Fruit Express Co., a corporation with twelve millions of capital, of which the Southern Pacific and the Union Pacific each own one-half. (Folios 418-20.)

Mr. Meyer, Car Service Agent of the Southern Pacific and Oregon Short Line at Portland, denominated the Union Pacific, Southern Pacific, O. R. & N., Oregon Short Line, and Sunset lines as the associated lines, and testified that as an official of the Southern Pacific and Oregon Railroad

& Navigation Co. he was instructed to treat all the cars of the Harriman system, that is, the Union Pacific, Oregon Short Line, Oregon Railroad & Navigation Co., and Southern Pacific systems as his own cars, as distinguished from the cars of outside lines, and in the handling of equipment he made no distinction by reason of the fact that the equipment might belong to one of the associated lines or another, and that an associated line car is at home no matter what its initials may be, whenever it is on an associated line. (Folios 811-12.) It appears by Complainant's Exhibit 19, Folios 130-31, that the Executive Committee of the Union Pacific approved the action of the chairman of the Executive Committee in causing the organization of the Union Pacific Equipment Association, which the chairman of the committee said was advisable, for the purpose of purchasing equipment to be used by that company and its allied lines, the intention being that the Equipment Association should take title to the rolling stock and then lease it to the various associated companies, or at all events, hold the title thereto until such rolling stock should be distributed among the said companies.

f. It further appears by Complainant's Exhibit 46, Folio 375, that the rules and regulations of the pension system of the Union Pacific were amended on April 10, 1906, so that the term "service" and "in the service" of the Union Pacific, entitling an employee to a pension, should be deemed to refer to employment in connection with any of the railroads owned by the Oregon Short Line, the Oregon Railroad & Navigation Co., the Southern Pacific Co., the Central Pacific Railway Co., Southern Pacific Railroad Co., the Oregon & California Railroad Company, the Galveston, Harrisburg & San Antonio Railway Co., the Texas & New Orleans Railroad Co., Houston & Texas Central

Railroad Co., the Houston East & West Texas Railway Co., Louisiana Western Railroad Co., and Morgan's Louisiana & Texas Railroad & Steamship Co., respectively, as well as upon or in connection with any line of railway now owned or operated by the Union Pacific; and the service of any employee of either of said companies is considered as continuous from the date from which he has been continuously employed by said companies or either of them or by the Union Pacific.

From the foregoing facts it would seem that the Southern Pacific Co. and its subsidiary corporations have been, to all intents and purposes, as thoroughly incorporated into and amalgamated with the Union Pacific as is the Oregon Short Line and the Oregon Railroad & Navigation Co., which are confessedly a part of the Union Pacific system. All of these lines are, as to purchases, operation (including the use of equipment), traffic and the solicitation thereof, welded into one system.

COMPETITION BETWEEN UNION PACIFIC AND SOUTHERN PACIFIC PREVIOUS TO MERGER.

Perhaps the most prominent issue tendered by the pleadings is as to the relations between the Union Pacific and the Southern Pacific. It is averred at pages 6 and 7 of the petition that the rail lines of the Southern Pacific Co. from the Mississippi River to Portland by way of San Francisco and Los Angeles were in active competition with the lines of railroad of the Union Pacific Railroad Co., for the transportation of vast quantities of freight from points in the Mississippi Valley and in eastern states, both to and from the Pacific coast and points in Colorado and other interior states; and that the steamship line of the Southern Pacific Co. from New York, to New Orleans and Galveston, together with its rail lines run in connection therewith, was in active competition with the lines of the Union Pacific Railroad Co. for a large amount of traffic originating in the Atlantic coast and central states; and that the rail line of the Southern Pacific from San Francisco to Portland was in active competition with the ships plying between those points, owned by the Oregon Railroad & Navigation Co.; that the ships of the Portland & Asiatic Steamship Co. in connection with the rail lines of the Union Pacific and its subsidiary companies, were in active competition with the ships of the Pacific Mail Steamship Co. and the rails of the Southern Pacific Co. running to the east from San Francisco; that the ships and rail lines of the Oregon Railroad & Navigation Co. were in active competition with the rail lines of the Southern Pacific Co. for a large traffic between San Francisco and points in Montana, Idaho and other states, and that the line of railroad composed of the tracks of the Oregon Short Line Railroad Co. and the Oregon Railroad & Navigation Co. between Ogden, Utah, and Port-

land, Oregon, was in active competition with the lines of the Southern Pacific Co. between said points.

In subdivisions 27 to 31 inclusive of the joint and several answer of the defendant Union Pacific Railroad Co., Oregon Short Line Railroad Co. and the Oregon Railroad & Navigation Co., the allegations of the petition to which we have referred, were denied. The other defendants joined in this denial. The defendants having thus denied that competition existed as to any of the traffic set forth in the petition, the Government was obliged to and did take a large amount of testimony to establish the allegations contained in its petition, and we submit that each of the said allegations has been proved by an overwhelming mass of testimony. Although this testimony overlaps, for the purpose of this discussion, it may be roughly divided into the following subheads:

(a) Competition as to traffic between the Atlantic seaboard and the Pacific coast;

(b) Competition as to traffic between points in the interior of the country and the Pacific Coast;

(c) Competition as to traffic between the Atlantic seaboard and Colorado and Utah common points;

(d) Competition as to traffic between Portland and Utah and Colorado common points, including certain points in Nevada;

(e) Competition as to traffic between San Francisco and Portland;

(f) Competition as to traffic between San Francisco and points in Montana, Idaho, and other states;

(g) Competition as to traffic between various ports in the Orient and points east of the Missouri River in the United States.

We will call attention to the testimony under these various heads separately.

He further stated that the Union Pacific agency was working in competition with him just the same as the Santa Fe. Mr. Hawley was also asked whether the competition between the two systems included passengers. He replied that it did, that it was very active and involved the entire eastern passenger business to the coast. (Folio 1419.)

In the course of the examination of witnesses, counsel for the defendants emphasized the fact that the business secured by the Union Pacific for California points, if it went all rail, necessarily moved from Ogden over the Southern Pacific, but the testimony of Mr. Hawley is corroborated by a vast number of witnesses, both shippers and railroad men, who said that the effort of the Southern Pacific organization was to move all traffic to the coast by New Orleans that could be induced to go that way, while the Union Pacific agencies worked for the route by the Missouri River, which was the only route affording the Union Pacific any revenue. At pages 3397 to 3402 is printed complainant's Exhibit 201, which is a statement prepared by Mr J. C. Stubbs, Traffic Director of the defendants' Union Pacific and Southern Pacific systems, showing the divisions of the through rate accruing to the various lines on business from the Atlantic seaboard to San Francisco. On page 3400 Formula 22 shows the division of the New York rate where the traffic moves all rail by Omaha and Union Pacific. On the basis of a dollar rate the Southern Pacific from Ogden to San Francisco would receive 30.1 cents. Where the traffic moved by the Morgan Steamship line and rail from New Orleans or Galveston, the Southern Pacific Co would receive all the revenue. Therefore it is easy to understand why the Southern Pacific organization should have exerted all its energy to move traffic by its own route rather than to unite with the Union Pacific in a movement which would

give less than one-third the revenue. On the other hand, the Union Pacific organization was necessarily putting forth its best efforts to route the traffic by its line to secure the 34.4 cents out of the dollar rate shown by Formula 22, for the reason that if it moved by the Southern Pacific route, the Union Pacific would get nothing. Mr. Stubbs testified (Folio 3320) that those divisions have been the same since 1870, and he always felt they were more than fair to the Union Pacific, but the Southern Pacific could not get any more. Therefore there was the same incentive to active, energetic competition between these lines that there would have been had the Southern Pacific not owned the line between Ogden and San Francisco. Mr. Hawley further testified that at times the Southern Pacific carried eighty-five per cent of the seaboard business, and at one time as high as fifty per cent, or perhaps more, of all the business originating in New York common points territory. (Folios 1419 and 1420.) Defendants' counsel, cross-examining Mr. Hawley, emphasized the reason and motive of the Southern Pacific's endeavor to route this business by New Orleans with the following question and answer:

> "Q. Isn't it true that you endeavored to solicit the business from this territory under your jurisdiction and route it by way of the Sunset Route because the Southern Pacific would get more revenue out of it than it would if it went by way of Ogden?
> A. Naturally." (Folio 1424.)

(The New Orleans route of the Southern Pacific has always been known as the Sunset Route, and it will be so distinguished hereafter in this brief.)

Mr. Hawley's assistant, Throckmorton, now a stock broker in New York, testified:

"Q. I direct your attention first to the time prior to 1901. Did the Union Pacific have a soliciting agency here?

A. It certainly did; yes, sir.

Q. Were you in competition with them?

A. I was.

Q. Active or otherwise?

A. Very active; as active as I could be.

Q. In endeavoring to route traffic by New Orleans?

A. Yes, sir, and I used to get it, too." (Folio 1471.)

He further testified that the Southern Pacific had five solicitors at work in New York City alone soliciting business (Folio 1471), and stated that he worked business to Portland by the Sunset Route, consisting of merchandise, dry goods, machinery, and all general business. (Folio 1472.) He also solicited east bound traffic out of California and Oregon, such as dried fruit, canned goods, canned salmon, apples, etc., and as to this business the Union Pacific and the Northern Pacific were his strongest competitors. (Folio 1473.) On cross-examination Throckmorton testified as follows:

"Q. I understood you to testify that in soliciting freight your first effort was to work it by the Sunset?

A. The Morgan line; yes, sir.

Q. If you could not work it that way, you would then try to work it via the Ogden route?

A. No, sir; I tried to work it by the Sunset, all rail.

Q. To where?

A. To the coast via New Orleans.

Q. From this territory?

A. From this territory; yes, sir.

Q. Rather than by Ogden?

A. Oh, certainly." (Folio 1476.)

The reason for this effort on the part of Mr. Throckmorton as a Southern Pacific representative is also shown by the formulae prepared by Mr. Stubbs (complainant's Exhibit 201). Formula 25 Vol. VII page 3400, shows that on business moving all rail from New York to San Francisco by New Orleans, the Southern Pacific line from New Orleans to El Paso, received 26 cents out of a dollar rate, and the Southern Pacific line from El Paso to San Francisco 36.4 cents additional, making a total of 62.4 cents accruing to the Southern Pacific on business moving by Sunset all rail, as against 30.1 by the Union Pacific route shown in Formula 22, from which we have before quoted. On cross-examination by counsel for defendants, Mr. Throckmorton made more clear the strenuous character of the competition. At Folio 1491 he testified that if he had a telegram saying a car had moved Union Pacific and Southern Pacific, he would wire to know why it moved that way, and would always try to get future business from that consignor by the Sunset Route. This witness, at Folio 1490, emphasized the fact that the Southern Pacific and Union Pacific were both connecting and competing lines

The late Paul Morton, who was when testifying, President of the Equitable Insurance Co., for a time Secretary of the Navy, and who from 1895, to 1904 was Vice-President of the Atchison, Topeka & Santa Fe Railway Company, in charge of its traffic, was probably as thoroughly informed as to transcontinental traffic as any man in the United States. He testified, at Folio 1370, after detailing the situation of the various transcontinental lines, as follows:

> "Q. Taking into consideration the situation of all those railroads you have mentioned, and with which

you are familiar, will you state whether in your opinion in the spring of 1901, prior to the time that the Union Pacific purchased a large amount of stock in the Southern Pacific, the Union Pacific and the Southern Pacific were competitors for transcontinental business?

A. They were both competitors and connections.

Q. They were competitors, were they?

A. Yes."

Previous to 1897 or 1898, when the Atchison bought the San Francisco & San Joaquin Valley Railroad, which runs from Bakersfield to Point Richmond, opposite San Francisco, it had no entrance into San Francisco, but all of its traffic moved from Mojave in Southern California up to San Francisco over the Southern Pacific. Therefore it was in the same position handling business from the Missouri River and east thereof to San Francisco, that the Union Pacific was in delivering business as it did, to the Southern Pacific at Ogden. Mr. Morton testified (Folio 1376):

"Q. When your line ended at Mojave and you went up to San Francisco over the lines of the Southern Pacific, was the Atchison competing for eastern business with the Southern Pacific?

A. I always considered it was.

Q. Was that competition active or passive?

A. It was active."

Mr. Stubbs when called by the defendants confirmed Mr. Morton's statement as to the competition between the Santa Fe and the Southern Pacific on San Francisco business at a time when as he expressed it at Folio 6645, "we interchanged with the Santa Fe at Mojave just as we interchanged with the Union Pacific at Ogden."

Mr. Morton also testified, at Folio 1379, that the Panama Line, made up of the Pacific Mail on the Pacific Ocean, the Panama Railroad, and steamers from Colon to New York, was engaged in competition for transcontinental business and was a factor in the traffic. The competition between the Union Pacific and Southern Pacific embraced passenger business as well as freight, both first-class passenger traffic and emigrant passenger business, prior to 1901, and the rates by all transcontinental lines were the same.

> "Q. Then there was no competition in rates, but the competition was on service and in attracting people's attention to the various lines, was it?
> A. That is right." (Folios 1379-80.)

It appears from the testimony of all of the witnesses and by the tables introduced as exhibits by the witness Frank W. White (pages 882 to 890 inclusive) that with a few minor exceptions, from the pier in New York, the published rates to the Pacific Coast by all lines are, and always have been, the same. Defendants' counsel brought out on cross-examination of Mr. Morton that the Union Pacific could not have made, prior to 1901, an all rail joint rate to California without the concurrence of the Southern Pacific, as it could not reach California points except over that line by way of Ogden. On re-direct examination Mr. Morton testified as follows:

> "Q. Mr. Morton, you spoke of the Atchison and the Southern Pacific having the rate-making power for transcontinental business by reason of being the only lines that reached California. Now it is immaterial, isn't it, when it comes to a question of competition between the Union Pacific or any of these other lines, and the Southern Pacific and the Atchison, what the rate is so long as the rate is the same

over all lines? The full rate does not make any difference in the matter of competition when it is the same over all the lines, does it?

A. No, except that there is no competition in rates, that is all. The competition is in service and in other things." (Folio 1396.)

It further appeared by his testimony that before the Interstate Commerce Law there was a pool on transcontinental business, and that the Northern Pacific and Union Pacific with its line to Portland and the Union Pacific to Ogden, and the Sunset Route were all parties to that pool, and were all scrambling for all they could get out of it, Mr. Morton further testified:

"Q. Now, in the traffic meetings that have been held since the days when the pool went out of existence, where questions of policy were up for consideration or *questions of rates* were not the Union Pacific and the Sunset Route competing with each other oftentimes?

A. Frequently." (Folio 1399.)

As we have said before, the evidence discloses that rates are made in conference, and are uniform over all the lines in the same territory; but in the meetings at which said rates are arrived at, each line is independent and has its vote upon advances and its influence in favor of reductions, so there is large opportunity for the play of competition in rates in the said meetings, as suggested by this answer of Mr. Morton's. Naturally, if the various competitive lines cannot get together in their meetings, rate wars ensue, and the whole rate fabric is disorganized, but in the absence of such wars rates must necessarily be the same over all lines in common territory.

Mr. Chumasero, Traffic Manager of the Royal Baking Powder Co., said in answer to counsel for defendants, that the Union Pacific and Southern Pacific agencies are still actively soliciting his business out of New York; that they are still competing. (Folio 1501.) (New York is one place in which the agencies have not been consolidated.)

Mr. Mesick, General Eastern Freight Agent of the Rock Island, for many years worked in connection with the Union Pacific for transcontinental business, competing with the Sunset Route and the Atchison. (Folios 1503-4.)

Louis M. Allen, General Eastern Freight Agent of the New York Central, in the traffic departments of eastern railroads since 1868, and since 1880 in the Traffic Department of the New York Central, testified that he was familiar with the competition made by Hawley with other lines when he represented the Southern Pacific, and that the Union Pacific was competing for coast business against the Sunset. (Folio 1512.) He remembers that at a time when competition was very strong business was routed to San Francisco by way of the Portland boat line. (Folio 1513.)

George T. Smith, banker, Jersey City, for seventeen years General Agent or Commercial Agent of the Pennsylvania Railroad in New York City, when asked what transcontinental lines were competing for business to California points, replied: "Southern Pacific, Union Pacific, Santa Fe." He further testified that at the time Hawley represented the Southern Pacific he was acquainted with the representatives of the Union Pacific in New York, and then said:

"Q. Were those two lines in competition for business to the coast?

A. Yes, sir.

Q. Did you learn at that time which way Mr. Hawley was routing his business to the coast—by what line, whether by the Sunset or by Ogden?

A. By the Sunset." (Folio 1521.)

He recalled a time when the Northern Pacific routed business to San Francisco by boat as a competitive measure because the Southern Pacific was routing it up by steamer. (Folio 1522.)

Defendants' counsel, on cross-examination, endeavored to break the force of Mr. Smith's statement, with unfortunate results:

"Q. The solicitation of the Union Pacific and Denver & Rio Grande was really against the Atchison route, wasn't it, Mr. Smith?

A. Really against the Atchison?

Q. Yes.

A. It was against the Southern Pacific.

Q. Against the Sunset Route of the Southern Pacific?

A. Yes." (Folio 1530.)

Counsel for defendants and his traffic associate not seeming to understand exactly what was meant by the competition between the Southern Pacific and the Union Pacific, on re-direct examination the matter was cleared up as follows:

"Q. So that Mr. Stubbs will understand thoroughly just what you meant to testify to when I asked you as to their being competing lines, you meant to testify, didn't you, that the agents of the Union Pacific were endeavoring to route traffic over their line and thence to the coast, and the agents of

the Southern Pacific were endeavoring to route it by the Sunset Route?

A. That is exactly what I mean." (Folio 1536.)

Mr. Blye, for many years statistician of the Trunk Line Association, and familiar with traffic movements out of New York, testified:

"Q. And it is a fact that Mr. Hawley and his solicitors were soliciting business by way of New Orleans, the Morgan line steamers for the coast?

A. Yes.

Q. And were the solicitors of the Union Pacific soliciting business over their line in competition with Mr. Hawley and his subordinates?

A. Yes.

* * * * * *

Q. So that the Southern Pacific agents here were endeavoring to send everything they could by New Orleans or Galveston?

A. Yes.

Q. And the Union Pacific everything they could by Kansas City or Omaha, isn't that true?

A. Yes." (Folio 1557.)

George M. Hughes, from 1863 to 1884 with the Erie, and from 1884 to 1894 with the Chicago, Milwaukee & St. Paul Railroad, testified that when Mr. Hawley was Southern Pacific Agent in New York, he, Hughes, worked with the Union Pacific agency for Pacific Coast business in competition with the Southern Pacific agency, and the competition was active. (Folios 1729-30.)

Since 1900 Hughes has routed the traffic for the Singer Sewing Manufacturing Co. At the beginning of his service this business was solicited by the Union Pacific and Southern Pacific in competition. (Folios 1731-32.)

Mr. Swope, General Eastern Agent of the Louisville & Nashville Railroad, and Secretary of the Traffic Club of New York, testified:

> "A. I came to New York in 1898, and between that time and 1901, there was competition to transcontinental points between those two lines—between all the lines.
>
> Q. Was there competition between the Union Pacific and Southern Pacific, the Santa Fe, the Northern Pacific and the Great Northern?
>
> A. Yes." (Folios 1743-44.)

Mr. Swope, at Folio 1748, emphasized the fact that while east of the Missouri River gateways there were many lines of road, there were very few lines west of those gateways.

Mr. E. T. Jeffery, President of the Denver & Rio Grande, was examined generally about competitive conditions with which he had been familiar. Defendants' counsel endeavored to break the force of this testimony, which was as to competition in many quarters, but finally the matter was summed up during the cross-examination as follows:

> "Q. It was whether the competition for this transcontinental traffic east of Ogden (except such as went by the Sunset Route) was not between the Union Pacific and the Denver and Rio Grande and its connections.
>
> A. That is, transcontinental traffic?
>
> Q. Yes.
>
> A. Yes.
>
> Q. Traffic from the Atlantic seaboard and any points west of the Atlantic seaboard was always competed for by the Southern Pacific Sunset Route in connection with the Morgan Line, wasn't it?
>
> A. Yes." (Folios 1845-6.)

In answer to a rather involved question of defendants' counsel, which embodied the suggestion that all traffic moving by Ogden had to reach the coast over the Southern Pacific, Mr. Jeffrey said:

> "A. All that the Denver & Rio Grande brought to Ogden was grist for the Southern Pacific mill, because it was the only route that there was to send business west from Ogden by. Now the reason why I am in doubt about answering your other question, which you have taken so much pains to elaborate, and which I apologize for troubling you with, is that there were periods, as I remember it, some years ago, when Southern Pacific rates ran back into Nevada, certainly into certain points in the interior of California, which affected competitive traffic to those points and in that territory so that it made a competition at some of those points through the Ogden gateway for the Denver & Rio Grande or Union Pacific and their eastern connection and through the San Francisco gateway to those points and connections via sometimes vessels around Cape Horn, an all water route, sometimes via the Panama Route, sometimes perhaps via New Orleans and the all rail route, thence to San Francisco, although I imagine that the Southern Pacific protected that long haul carefully." (Folio 1843.)

And again, at Folio 1848, Mr. Jeffrey said:

> "A. In the first three or four years of my presidency of the Denver & Rio Grande, which commenced seventeen years and four months ago, I was told by the Denver & Rio Grande traffic officers, and especially by its Traffic Manager, that there were certain lines of business at local points in Western Nevada and in the interior of California, which points were reached by the Southern Pacific, to which points business was done from San Francisco by San Francisco jobbers, and perhaps by job-

bers from the Atlantic seaboard through San Francisco in competition with traffic that would go via Southern Pacific, the Union Pacific, and Denver & Rio Grande, and the eastern connections of the two last named. * * * Certain classes of business would be shipped to certain interior points in California from San Francisco, which same points could buy directly from the east and the business be sent on the long all rail haul."

Mr. J. C. Stubbs, Traffic Director of the Union Pacific-Southern Pacific System, and who has been connected with the Southern Pacific since 1870, and for a long time prior to the amalgamation as Vice-President in charge of traffic, after testifying that the rates from Atlantic seaboard territory applied to the coast by the Morgan Line, was asked concerning Portland:

"Q. Well, business moved from the eastern points via that line, didn't it?

A. I think some did; that line was worked for Portland." (Folio 530.)

And again, speaking of the competition from Atlantic seaboard points to California points, he testified that prior to 1901 and for many years the Southern Pacific and the Morgan Line was an important factor in that competition. (Folio 538.)

He further said, with reference to the movement out of Atlantic seaboard territory (Folio 556):

"A. What I said was this: that with respect to Atlantic seaboard business, that the conditions today in the matter of two representatives were the same as before 1901 that you speak of; that the Union Pacific had its general agents there soliciting or working in aid of its connections and watching its connections, and the Southern Pacific still

had its agents, its general agents, there, but the Southern Pacific is the initial line there, while the Union Pacific is not; but even the Union Pacific, all the endeavor of the Union Pacific general agencies in this Atlantic seaboard system must contribute to the Southern Pacific because they cannot get into California otherwise, and really you may say that the agency was practically joint."

This answer of Mr. Stubbs really sums up the defense in this case. Defendants cannot deny that for years the Southern Pacific actively solicited and worked for business out of New York common points to the coast by way of the Morgan Line and the Sunset Route; that the Union Pacific agencies also actively worked to secure the same business, but although this competition for that business was most active, still Mr. Stubbs' answer implies that there was really no competition because for a portion of the way the traffic secured by the Union Pacific, thus taken away from the Southern Pacific, was hauled by another line of the Southern Pacific; that although the Southern Pacific agency was working against the Union Pacific endeavoring to take everything by the Morgan line while the Union Pacific was working to take everything it could away from the Morgan line, nevertheless, because of the haul from Ogden to San Francisco, its efforts did not amount to competition. It is an interesting fact that Mr. Stubbs upon another occasion demolished this theory.

From 1887 to 1898 the Canadian Pacific participated in San Francisco business from the Atlantic seaboard by rail to Vancouver, and thence by the Pacific Coast Steamship Co. It was able to secure business by this route by transporting traffic at a differential, at certain times by agreement with the American lines and at other times fixed by itself without consent of the other lines. This differential or

difference in rates led to general demoralization of transcontinental rates, and efforts were made to induce the Canadian line to abandon it. It finally consented to an arbitration, which was had in Chicago. The American lines were represented by a committee, of which Mr. Stubbs was chairman and Mr. Morton a member. The case was presented for the respective sides by Mr. Stubbs for the Americans, and Mr. Kerr and Sir Thomas Shaughnessy for the Canadians. At page 1990, Folios 3241 et seq., Mr. Stubbs was examined with reference to this matter and to the statements that he had made upon that hearing, and although these statements were very unpalatable to him, in view of his present relations to the case in suit, he very honorably stated that all the statements of facts contained in his presentation of the American case were accurate to the best of his belief, and that he had not consciously misstated anything. He repeated this a number of times, notably at Folio 3324. After examining Mr. Stubbs at length, it was agreed by both parties that the entire record of this arbitration might be put in evidence, including Mr. Stubbs' remarks and Mr. Kerr's. Mr. Stubbs detailed a number of mixed water and rail lines that were open for business between the Missouri River gateways and San Francisco (St. Paul being on a parity with Missouri River points). These routes included the Great Northern and Northern Pacific Railways to Puget Sound points, and thence to San Francisco by boat. from Omaha three routes, one by the Union Pacific via Granger, the Oregon Short Line, Oregon Railroad & Navigation rail line to Portland and its boat line to San Francisco; second, the Burlington through Denver, thence by the Rio Grande and Oregon Short Line and Oregon Railroad & Navigation Co. to Portland, thence by O. R. & N. boats to San Francisco, and, third, the Rock Island through Colo-

rado Springs and Denver, thence via the Midland, or the Rio Grande, the Short Line, the Railroad & Navigation Co., and the steamships of the latter to San Francisco; also three similar lines from Kansas City. (Folios 3259-60.)

He then proceeded in his argument, which is quoted at Folios 3265 and 3266:

> "Does the existence of the Central Pacific road and its operation as a part of a through all rail line (in which some of the integral parts of the through lines via Portland, which are part water and part rail, are interested) alter the rights, the equitable rights, of the Portland mixed lines as against the Canadian line or against any other competitor? We contend that it does not—that as a matter of right, equitable rights, as well as a matter of law under Justice Brewer's decision in the case of the Chicago North-Western, plaintiff in error, against John Osborn, and the same plaintiff in error against A. J. Junod, a through line is a line, is a unit, regardless of whether part of it may be used in forming another through line even if it be a rival through line. The reasonableness of this proposition is manifest. Any other view would deprive certain individual carriers not only from participation in, but *also of an opportunity to compete for a given traffic.*
>
> * * * * * *
>
> "To illustrate: If the Oregon Short Line, running from Huntington to Granger and to Salt Lake, were deprived of a connection for the purpose of making a through line to San Francisco via Portland with the Union Pacific at Granger, or with the Rio Grande Western at Salt Lake City because those respectively had physical connection with the Central Pacific at Ogden, the Oregon Short Line would be deprived of all opportunity to compete for a share of the San Francisco traffic."

Mr. Stubbs thus thoroughly answered the entire technical argument that is advanced to show that a railroad company cannot compete for business, when as a matter of fact it is competing for business.

Mr. Munroe, Freight Traffic Manager of the Union Pacific, who has been with that company for many years, and whose sympathies are naturally with the defendants, testified (Folio 656) as follows:

> "Q. Did you not find prior to 1901 that the Southern Pacific was competitive with the Union Pacific, the Short Line and the Oregon Railroad & Navigation Co. into Portland?
> A. Just the same as it is now.
> Q. Is it competitive now?
> A. It is.
> Q. Then there is competition?
> A. There is."

And again, at Folio 658:

> "Q. You say that through your commercial agents you keep tab of your competitors as far as you can?
> A. Yes, sir.
> Q. What roads do you mean by your competitors?
> A. I mean—well, of course, it depends on the business.
> Q. We are talking about transcontinental business.
> A. Speaking now of the San Francisco business, for the purpose of illustration, all lines east of Ogden other than the Union Pacific, all lines east of El Paso, *including the through route of the Sunset Line from New York to San Francisco*, and incidentally, of course, all the lines operating via the northern gateways."

Mr. Bogert, now the agent of the San Pedro road in Pittsburg, was General Eastern Agent of the Chicago & Alton twenty-one years, and was with the Pennsylvania Road for twenty-three years in New York City. The Alton, of course, operates in connection with the roads beginning at the Missouri River gateways. He testified that Mr Hawley endeavored to route his traffic by way of New Orleans, either boat and rail or all rail, and that Mr. Tenbroeck, for over twenty years General Eastern Agent of the Union Pacific, was trying to work everything by Omaha and the lines north, and that Hawley and Tenbroeck were in competition with each other for coast business for many years previous to 1901. (Folio 2078.)

Mr. Fowler, now Freight Agent of the Merchants' & Miners' Transportation Co. in Pittsburgh, from 1888 to 1891 Agent of the Union Pacific at Philadelphia, testified that at that time competition for coast business out of Philadelphia between the Union Pacific and the Southern Pacific was "very strong." (Folios 2105-6.)

Mr. Hahn a wholesale grocer in Portland, Ore., testified that they were bringing goods from the east prior to 1901, and that business was solicited by the Union Pacific and Southern Pacific systems separately. (Folio 667.)

Mr. E. Newbegin, of Portland, a very large dealer in agricultural implements, which he imports from New Jersey, Pennsylvania, and different eastern states, as well as from states further west, testified that his business was, prior to 1901, solicited by the Southern Pacific and the Union Pacific solicitors separately, and that most of it was routed by the Rio Grande, to Ogden and thence by South-

ern Pacific via Sacramento, to Portland. (Folios 670 to 672.)

The testimony which will be hereafter commented on shows that this Sacramento route has been closed to traffic since the joint management, and no traffic from the east is permitted to move by way of Ogden and Sacramento, but it is all brought over the Oregon Short Line.

Mr. Honeyman, a wholesale hardware dealer at Portland, testified that their business was solicited by the two lines separately, and they shipped goods from the Atlantic seaboard by Sacramento. (Folio 684.) He also shipped by the Sunset Route. (Folio 688.) This competition went to the extent of cutting rates. (Folio 691.)

Mr. Gill, wholesale and retail stationery and book dealer, having the largest store of the kind in Portland, was solicited by both routes, and sometimes shipped by the Sunset from New England and New York common points. (Folios 696-697.) These shipments were the result of solicitation by agents and rates. (Folios 698-9.)

Mr. Ehrman, of Portland, a wholesale grocer, was formerly solicited by the different lines, and to some extent shipped from the Atlantic seaboard by the Sunset Route, as well as over the northern lines. (Folios 707 to 709.)

Mr. McCusker, for many years a representative of the Southern Pacific at Portland, worked with the Missouri Pacific, Rock Island, Burlington, and Rio Grande, also for the Sunset Route as against the Union Pacific and the O. R. & N. for all classes of merchandise and from all points, east, including the Atlantic seaboard. (Folio

712.) He also worked the east bound traffic in hops, which is a very large traffic, amounting to from 75,000 to 100,000 bales per year, each bale weighing 180 to 200 pounds. He moved hop shipments to the east, to the Atlantic seaboard and Europe by the Sunset. The Oregon Railroad & Navigation Co., Short Line, and Union Pacific was the strongest competitor for that business. (Folios 712 to 714.)

The Oregon Railroad & Navigation Co. had boats on the Willamette River to this hop district to bring in the hops from points tributary to the rail line of the Southern Pacific, and sent them east over its rail lines. (Folios 715-716.) He also routed hops east by Sacramento and Ogden, thence over the Rio Grande and other lines. (Folio 717.) Also competed strongly for Willamette Valley wool to Boston by the Sunset against the all rail line. (Folio 725.) There was formerly competition in rates between the Southern Pacific and O. R. & N. and its eastern connections, by the use of a differential on San Francisco. (Folios 726-7.) All the lines were cutting rates against each other at times. (Folio 728.) Also competition in hides to the east. (Folio 732.)

Mr. McCusker recalled, testified that at the time of the war between the Union Pacific and Short Line, when the Union Pacific was operating in connection with the Shasta Route, that line made such fast time that they brought freight from Chicago to Portland in seven and a half days. (Folio 4490.)

He further testified that the traffic moving out of Portland via Sunset Route to the Atlantic seaboard, consisted largely of hops, prunes, canned goods and hides; and westbound all classes of merchandise. (Folios 4496-7.) To get

this business the Southern Pacific ran open warehouses for the benefit of the hopmen. (Folio 4498.)

Louis Lochman, of Salem, Oregon, shipped hops to New York and to London; there was active competition between the Southern Pacific and the O. R. N. (Folios 737 et seq.) O. R. & N. boats were then on the Willamette River to bring in hops. (Folio 738.)

Otto Breyman, manufacturer of saddlery goods at Portland, formerly shipped by the Southern Pacific, Sunset, and Union Pacific, and Oregon Short Line. (Folio 761.)

Mr. McBride, General Agent, Denver & Rio Grande, Portland, states that in the year 1900, the year before the amalgamation, 320 carloads of hops were shipped from the Willamette Valley and went east over the Denver & Rio Grande, of which 280 cars went by Sacramento and Ogden, and about 40 cars came from Portland over the O. R. & N. and the Oregon Short Line. (Folio 827.) A large amount of hops moved to the Atlantic seaboard over the Sunset Route. (Folio 831.)

Mr. R. B. Miller, who is now the representative of both railroads at Portland, being General Freight Agent of the O. R. & N., and General Freight Agent of the Southern Pacific lines in Oregon, testified on cross-examination that in years gone by hops moved to the Atlantic seaboard both via the Sunset Route and by the Union Pacific, but largely by the Sunset Route. (Folio 861.)

Mr. O'Reilly, in the towing and lighterage business at Portland, and who was employed by the Union Pacific Rail-

road Co. and the O. R. & N. at Omaha, Denver and Portland, severing his connection with the latter company in 1897 (Folios 4331 to 4333), testified that the business from Atlantic seaboard territory reached Portland via Union Pacific, Great Northern, Northern Pacific and Southen Pacific, including the Sunset Route; that each of these lines had separate agencies, and the Atlantic seaboard traffic was the subject of solicitation by such agencies, and that competition was active and covered all classes of traffic, including dry goods, iron and commodities of that character. (Folio 4340.)

He also testified that there was an important tonnage east bound to the Atlantic seaboard from Portland and vicinity, consisting of wool, hides, hops, canned goods and canned salmon, which was the subject of this same competition. (Folios 4342-3.)

During the receivership of the Union Pacific and separate management of the Short Line, for a time the Union Pacific worked Portland business from the east in connection with the Southern Pacific Shasta Route, as against the Denver & Rio Grande and the Oregon Short Line. Special efforts were made in the matter of service during the time that condition continued. (Folios 4344 and 4345.)

This same competition of the Union Pacific and the Shasta Route as against the Denver & Rio Grande and the Short Line was testified to at Chicago by Mr. Gallagher, agent in that city of the Soo Line and Canadian Pacific, and who was formerly employed by the Union Pacific in Omaha and Kansas City. At that time a train was put on by the Union Pacific called the "Portland Special," for the purpose of trying to whip the Short Line into giving better divisions. (Folios 3122 to 3124.)

Mr. McCarthy, Traffic Manager of the Salt Lake Hardware Co. and for a long time the contracting freight agent of the Union Pacific at Salt Lake, also testified to this competition, which resulted in the putting on of this Portland train moving over the Union Pacific and the Shasta Route, and that it made the run from Omaha to Ogden in about thirty-two hours, which is extraordinarily fast time for a freight train. During the time that train was on, they endeavored, if they desired quick deliveries into Salt Lake, to get the traffic on the Portland train as far as Ogden. (Folios 3911 and 3912.)

Mr. Burdick, in the prune canning business at Portland, who shipped his product to all parts of the country, testified to the competition between the Sunset Route, the O. R. & N., the Oregon Short Line, the Union Pacific, the Northern Pacific and the Great Northern, in the days when the companies had separate agencies. (Folios 4384 and 4385.)

Mr. Adams, General Freight and Passenger Agent of the Spokane, Portland & Seattle Railroad, commonly known as the North Bank Route, which is owned jointly by the Northern Pacific and Great Northern, was, previous to the amalgamation of the Southern Pacific and Union Pacific, traveling freight agent of the O. R. & N. out of Portland. He testified to the competition in the movement of hops to the east, the O. R. & N. maintaining a boat line to the head of navigation on the Willamette River, bringing the commodity into Portland, and thence sending them to the east over the Union Pacific system in competition with the Southern Pacific, which reached the same points with its rail lines and moved the business to the Atlantic seaboard via

the Sunset. This business was competed for by the two lines. (Folios 4414-16.) This hop business was also solicited and some of it moved, by the Northern Pacific out of Portland. (Folio 4424.)

Captain Graham, for thirty years operating river steamers on the Willamette River, testified that at the time the O. R. & N. and the Southern Pacific were separate in management, there was competition from the Willamette Valley between the O. R. & N. boat lines and the Southern Pacific Ry. on hops and prunes, each company having separate soliciting agencies in the Willamette Valley. (Folios 4434-35.) He further stated that the crop of hops in the valley runs from 80,000 to 110,000 bales per annum, averaging about 75 bales to the carload, which would be between 1,400 and 1,500 carloads. They are moved to New York, New England, London, and some to St. Louis and Milwaukee. (Folio 4436.)

Mr. Sweek, now in the real estate business in Portland, was in the traffic department of the O. R. & N. for two or three years, beginning with 1899; he testified that the hop business in the Willamette Valley was actively competed for between the Southern Pacific and the Union Pacific. The competition was very active. The Southern Pacific solicitation was for the Sunset Route, and he assumed that was the way traffic secured by that line was moved. (Folios 4454-4455); that the revenue on shipments to the seaboard ran from 200 to 400 dollars a car, depending on the size of the car. (Folio 4456.)

Where hops were more nearly tributary to the Southern Pacific the O. R. & N. would pay the expense of hauling them to its boat line on the river. (Folios 4455-4474.)

Mr. Elmore, of Astoria, Oregon, the largest shipper of Columbia River salmon, his annual shipments amounting to about twelve million pounds, testified that previous to the consolidation of the management of the O. R. & N. and the Southern Pacific lines, his traffic was solicited by all the transcontinental lines, namely the Northern Pacific, Great Northern, Southern Pacific and Union Pacific, and it moved over all routes, including the Sunset Route, although not much went that way; some of it went by the Southern Pacific to Ogden, and thence by the Rio Grande. (Folios 4600-4603.)

Mr. Kollock, who has been for sixteen years the solicitor for the Pennsylvania Railroad at Portland, testified that previous to the union of the Southern Pacific and Union Pacific systems, he met the agents of those respective systems in the Willamette Valley competing with each other. He solicited hops, lumber, prunes and also passengers. (Folios 4605-6.)

Mr. Crichton, Secretary and Treasurer of the Columbia River & Puget Sound Transportation Co. operating boats on the Columbia River from 1894 to 1901, had a contract with the Southern Pacific to carry salmon from points on the Columbia River to Portland, delivering the traffic there to the Southern Pacific. The O. R. & N. was at that time bringing in salmon to Portland from the same points by its boat line, in competition with Mr. Crichton's line. The salmon delivered to the Southern Pacific was destined to the seaboard, Boston, New York, Philadelphia, also to some interior points. The Railroad Company absorbed the steamship charge into Portland of $1.25 a ton. His company also delivered salmon to the Northern Pacific at Kalama, where that line crosses the Columbia River. (Folios 4610-11.)

This contract was cancelled by the Southern Pacific August 13, 1901. (Folio 4613.) Previous to its cancellation they had also carried tin plate to the canneries, brought from the east by the Southern Pacific and delivered to the steamship line at Portland, and in addition some merchandise such as shoes. (Folio 4614.) The Southern Pacific had a solicitor endeavoring to get the business. The boat line also solicited traffic at these points on the river, and the O. R. & N. had solicitors there at the same time. (Folio 4615.)

Mr. McGuire, of the Pacific Paper Co., a wholesale paper house at Portland, testified that previous to the consolidation, their business was actively solicited by the Southern Pacific as against the O. R. & N., Oregon Short Line and Union Pacific representatives. They shipped paper from Massachusetts by the Sunset and also by the Union Pacific and Short Line. (Folios 4620-21.)

Mr. Hurlburt, now in the business of developing a power plant, for many years in the railroad service at different points in the east, testified to the movement of passenger business over various lines to the coast. (Folios 4524, et seq.) In 1890 he came to San Francisco as Assistant General Passenger Agent of the Union Pacific. The Southern Pacific was working passenger business by its Sunset Route at that time; he was working business over the Union Pacific. (4526.) He testified to the methods employed by passenger departments to secure traffic, such as personal solicitation, and advertising in magazines and newspapers. Those were the methods pursued by the Union Pacific and Southern Pacific when he was in San Francisco, and by lines in all places where he has been. (Folios 4530-31.)

At that time the Southern Pacific did not have the Sunset Limited train, which it afterwards put on, and thereby increased its business. If the Southern Pacific controlled the business, it sent it by New Orleans. (Folios 4537-39.) He further testified that round trip tickets were always sold, good over one line and back over another. **All the roads united in issuing these tickets,** and the various passenger agents put forth their efforts to secure that kind of traffic one way for their lines. (Folios 4539-40.)

Mr. Lang, now in other business, was employed by the Union Pacific from 1888 to 1906, and was in the passenger office of the company at Portland from 1895 to 1900. His business was booking passenger business of all classes, including transcontinental passenger business at Portland, for the Union Pacific. The same business was being solicited by the Southern Pacific for its Sunset Limited train. (Folios 5054-57.) It was also part of his business and that of the other passenger agencies in Portland to secure travel one way at least, by round trip excursionists. These agencies also competed for European immigration business. There was a great deal of that business coming into the United States through the different ports from Halifax down to the Gulf points. (Folios 5057-58.)

On cross-examination he testified to the methods of securing passenger business, namely, advertising the routes by newspaper advertising, folders, posters calling attention to the time, service, through car service, and scenery. (Folio 5059.)

Mr. Koshland, a large wool merchant engaged in the business for thirty-eight years, and shipping wool to Boston from the various parts of the country, testified that thirteen

or fourteen years ago wool moved out of the Willamette Valley to the east partly over the Shasta Route, partly over the Southern Pacific route by Galveston, and also by the **Northern Pacific, the Short Line** and the Union Pacific. (Folio 5113.)

Mr. Wilde, in the cold storage business at Portland, formerly chief clerk in the Union Pacific Railroad offices in San Francisco, previous to the amalgamation of the companies, testified that the Union Pacific agency endeavored to move Atlantic seaboard business to San Francisco via the Union Pacific, and the Southern Pacific endeavored to move it by the Sunset Route. (Folio 4562.)

It appeared by the testimony of Mr. Baumgartner, for eleven years agent of the California and Oregon Coast Steamship Company, that boats of that Company stopped at Coos Bay and Humboldt Bay, commonly called Eureka, and took traffic out of those points, consisting principally of redwood lumber and shingles. East bound traffic was handled by way of Portland in connection with the O. R. & N. from Eureka, the O. R. & N. traveling freight agents going there and soliciting it. Mr. Baumgartner's company also had a local agent there, soliciting it. This same traffic was solicited at Eureka by the Southern Pacific agents, who were endeavoring to route the lumber for the east by way of San Francisco. This lumber moved both ways. (Folios 4509-10.) The rates were equal. On cross-examination, (Folio 4514), he said that the tariffs in effect were by Portland via his company and the O. R. & N., and by San Francisco via the Pacific Coast Steamship Co. and the Southern Pacific. Mr. Baumgartner further testified that lumber moved from Coos Bay,—white cedar lumber used

in the east for finishing purposes, being a product peculiar to that region. This is shipped to the Atlantic seaboard, and also to Chicago, and it moves by boat both to Portland and to San Francisco, and thence east. (Folios 4510-11.)

At Folio 4515 he said the O. R. & N. Co. had a tariff in specifying the rate from Coos Bay, and absorbed 10c a hundred the charge of the Steamship Co., and that arrangement had been in effect there for years.

Mr. Gallagher testified, at Folio 3125, that a lumber tariff was in from Coos Bay by San Francisco, thence over the Southern Pacific, and that the boat line got 10c a hundred of that through rate.

Colonel Holabird of Los Angeles, an expert in the employ of the late defendant Harriman, examined into the traffic possibilities of the Coos Bay region, and his report will be found in the record as Complainant's Exhibit 162, Folios 4721 et seq. At Folio 4725, this report states that the mill men, Chamber of Commerce and bankers claimed that the merchantable timber tributary to Coos Bay amounts to sixty billion feet, but that in his opinion, considering the losses by fire, and the timber that can never be gotten out, he would estimate the merchantable standing timber at fifteen billion feet. At Folio 4726 he states that the mill of the C. A. Smith Co. on Coos Bay, is of the most modern construction; he has visited many saw mills, and never saw one equal to it.

Mr. Grimes testified that this mill would cut 300,000 feet in ten hours, and that there are several other mills besides. (Folio 4740.)

Mr. Kelly testified that he was in charge of the transfer of freight from the steamers and river boats on the docks at Portland for the O. R. & N. from 1894 to 1901. He said that lumber and shingles were received from Coos Bay or Eureka, and moved east, and merchandise was taken to Coos Bay from Portland; that the river boats brought in from the Willamette Valley a great deal of traffic such as potatoes, onions, paper and prunes. Prunes and hops moved east all rail over the O. R. & N. Some of that traffic moved to the east by the Southern Pacific, and some by the Northern Pacific, and some by the O. R. & N. to Spokane, and thence east over the Great Northern. It will be remembered that other boat lines were on the river aside from the O. R. & N. boats. (Folios 4568-9.)

On cross-examination, at Folio 4571, it appeared that the Cowlitz River boats landed at the same docks; they were not controlled by the O. R. & N. Boats were also landed there from Vaucouver and other places. It will be remembered that Mr. McCusker testified that he secured the shipment of shingles that came in by the Cowlitz River boats in competition with the O. R. & N.

Mr. Connor, now in private business, but for many years in the railroad and steamship business in San Francisco, including service with the Chicago, Milwaukee & St Paul, with the O. R. & N., the Panama Railroad Co. and the Pacific Coast Steamship Co., gave very significant testimony with reference to the attitude of the Southern Pacific upon transcontinental business at Folio 4814:

"Q. Previous to 1901 how did the Southern Pacific Railroad Co. endeavor to route its transconti-

nental business after the establishment of the Morgan line, its Gulf Route, Sunset Route, so called? By transcontinental business I mean first the seaboard business from the Atlantic seaboard territory.

A. My connection with the transcontinental business while with the Milwaukee Road was that of a solicitor for the freight over our lines only, and in connection with what other lines I could work the traffic, and it is my recollection that the Southern Pacific solicitors were never at any time to be depended upon to help get this traffic, whereas the other connecting lines with which the Milwaukee had rates and divisions could be depended upon."

And again, at Folio 4816, after testifying to the good service given by the Sunset Route on business from the Atlantic seaboard, he said that the Southern Pacific maintained a soliciting agency, and the Union Pacific also had an agency in San Francisco. He then testified:

"Q. What were the relations between your agency and the Union Pacific agency in securing the routing of transcontinental business?

A. We co-operated very closely.

Q. And I believe that you stated that you did not run across any co-operation on the part of the Southern Pacific?

A. No, sir."

Mr. Connor also said that in 1894, when he was the general agent of the O. R. & N. at San Francisco, he negotiated an arrangement with the Panama Railroad for divisions on business from the Atlantic seaboard to Portland, and that large traffic moved that way and the business grew. This was before the Southern Pacific purchased control of the Pacific Mail Steamship Co. (Folio 4828.)

Mr. Toll, for many years up to 1905 connected with the Southern Pacific at San Francisco, finally becoming Chief Clerk in the general freight office, testified that previous to the time the Union Pacific purchased the control of the Southern Pacific, the latter endeavored to route its business from Atlantic seaboard territory by the Sunset Gulf Route. (Folio 4848.)

On cross-examination, after repeating his statement that the Atlantic seaboard business was worked by the Southern Pacific by the Sunset Route, he testified that on anv business moving through the Ogden gateway, the Southern Pacific was neutral as between the Denver & Rio Grande and the Union Pacific. (Folios 4857-8.) On re-direct examination, he said the Union Pacific actively solicited Atlantic seaboard business in San Francisco in competition with the Southern Pacific (Folios 4859-60.) Mr. Toll further testified that the routing of business brought from the east by San Francisco merchants was at that time largely controlled at San Francisco. (Folio 4861.)

Mr. Graham, now in private business, was a railroad solicitor for the Rio Grande from 1898 to 1902, previous to that for about eleven years with the Southern Pacific, and as such solicitor for the Southern Pacific, he solicited business for the Sunset Route, all classes of freight traffic originating in New York, and also east bound from California points to New York territory. The Union Pacific soliciting agency was actively soliciting the same classes of traffic by their line. (Folios 4866-68.)

Mr. Adams, now traffic manager of the Pioneer Fruit Co. was commercial agent of the Rock Island-Frisco system at San Francisco from 1891 up to a year ago. He

gave the names of certain of the agents and solicitors of the Southern Pacific and Union Pacific respectively previous to 1901, and said that the effort of the Southern Pacific was to move business from the Atlantic seaboard by the Sunset Gulf Route. The Union Pacific was also actively soliciting that business.

He corroborated Mr. Toll's statement that the majority of the shipments from the Atlantic seaboard were routed on the coast by the purchasers. (Folios 4870 to 4874.) The Southern Pacific was competing with the Union Pacific and with the Rock Island agency for this business. (Folio 4876.)

Mr. Loose, who for twenty years has been a shipper of dried fruits from San Jose, his shipments at times reaching as high at 400 cars a year, testified that the Southern Pacific endeavored to move his traffic to Atlantic coast points by the Sunset Gulf Route, and the Union Pacific by its route, each system being represented by separate soliciting agencies. (Folio 4891.)

Mr. Clifford, who was a long time in the service of the Union Pacific in important positions, commencing with employment in the general freight offices at Omaha, then acting as general agent at Butte, afterwards at Cincinnati, and finally from 1901 for five years at San Francisco, testified that when he arrived at San Francisco he found that the general agent of the Union Pacific also acted as claim agent, and being asked why that claims bureau was established, said:

> "A. That was established originally to put the Union Pacific on the same basis for expeditiously handling all claims as was the Southern Pacific; that was the reason for it.

Q. What effect did the establishment of that claims bureau at San Francisco have upon the securing of business by the Union Pacific?

A. The Union Pacific made themselves stronger by reason of their ability to settle promptly a man's claims, pay him his money promptly.

Q. At that time which way was the Southern Pacific routing its business, so far as they could control it?

A. The Southern Pacific were routing via New Orleans." (Folio 4904.)

This testimony is highly significant as showing that the Union Pacific system recognized that its strongest competitor in securing business was the Southern Pacific. It is a well known fact that in soliciting business one of the important considerations that affect shippers is their ability to secure prompt adjustment of claims for overcharges and damage, and Mr. Clifford by this testimony shows that the Union Pacific, in order to meet the competition of the Southern Pacific, did the very unusual thing of establishing a claims bureau nearly two thousand miles away from its general office. On cross-examination he stated that none of the other lines adjusted claims through their general agent, to his knowledge. (Folio 4907.)

Mr. Havens, Vice-President of Murphy, Grant & Co., wholesale dry goods, testified that the principal part of their freight from New York, since shortly after the Sunset Route was established, has moved to the coast by that route. (Folio 4917.)

Mr. Scott, President of the Pacific Hardware & Steel Co., one of the largest concerns on the Pacific coast, testified:

"Q. Previous to the time that the Southern Pacific and Union Pacific came under one domination,

what was the attitude of the Southern Pacific people in the solicitation of freight, if you knew anything about it at that time?

A. Yes, I am somewhat familiar with it; the position of the Southern Pacific?

Q. Yes, sir.

A. They were very anxious to get their business via that route, via New Orleans, and the Union Pacific was very anxious to get it by the other route." (Folio 4924.)

Mr. Watkins, Vice President of W. W. Montague & Co., wholesale stoves, ranges, tinware, plumbing goods, mantels, grates and tiling, has been connected with that company for forty-five years. When asked over what transcontinental line their freight moved, he answered:

"A. The Southern Pacific, the Union Pacific and the Santa Fe."

The seaboard business, when it came Southern Pacific, moved by the Sunset Route. (Folio 4948.)

Mr. Shepard, General Manager and Secretary of the Pacific Improvement Co., who up to September, 1901, was general freight agent of the Southern Pacific at San Francisco, testified that he was with the company at the time the Sunset Gulf Route was established in 1883, and further said:

"Q. From the time of the establishment of that route what was the policy of the Southern Pacific in moving traffic from the Atlantic seaboard to San Francisco, by what route did they endeavor to move it?

A. They moved it from New York to New Orleans by water, and from New Orleans to San Francisco by rail. * * *

Q. What was the condition in your day as to competition between the rail lines and the Sunset Line for that business?

A. It was very active.

Q. Did the Union Pacific maintain an agency here soliciting business for that route?

A. Which route?

Q. By the Union Pacific?

A. Yes, sir." (Folio 4993.)

He further testified that the service of the Sunset Route varied with conditions; sometimes it was five days quicker than the all rail routes, sometimes no better. (Folio 4993.)

From interior points east of Pittsburg and Buffalo, from which traffic had to be taken to New York for shipment by the Sunset Route, the time was no better than all rail, but that traffic moved in large volumes both ways, namely, all rail, and by the Sunset Route from that interior country. It also moved from Boston and vicinity. When the Sunset Route was first opened in 1883, what was known as the Sunset fast freight or Sunset fast freight train, was put in service. (Folio 4995.) He further testified at Folio 5002:

"Q. Now the Southern Pacific had its line clear through from New York, the Union Pacific had its connections east from the Missouri river, and the Atchison its connections east from Chicago, that is correct, isn't it?

A. Yes, sir.

Q. Were those three routes competing with each other for transcontinental business always from the time the Santa Fe was built?

A. They were all carrying traffic, yes sir.

Q. And all trying to get all they could weren't they?

A. All trying to secure the traffic, and had their agents out on the street, I believe."

Mr. Rulofson, representing large eastern manufactories, President of the Architectural Sheet Metal Company in San Francisco, and who was from 1870 to 1904, connected with Baker & Hamilton, a large wholesale hardware house in San Francisco, wholesaling all over the Pacific coast states, territories and Hawaii, receiving their stock from all the large manufacturing centers in New England, the Atlantic seaboard and elsewhere, testified that he remembered that the Southern Pacific and Union Pacific each solicited their business from the east, the Southern Pacific agency routing via the Sunset, and the Union Pacific by the Missouri River gateways. (Folios 5023-24.)

Mr. Prentice, President of Phoenix Desk & Chair Co. at San Francisco, and from 1878 to 1906 connected with the Southern Pacific Ry., for fifteen years soliciting freight, testified that prior to 1901, the Southern Pacific agency in San Francisco endeavored to work freight from the Atlantic seaboard east of Buffalo, by the Sunset Gulf Route. (Folio 5033.)

Mr. Sanborn, who has been for twenty-four years the general agent of the Chicago, Burlington & Quincy Railroad in San Francisco, testified that previous to the consolidation of the Southern Pacific and Union Pacific, the former agency endeavored to route its Atlantic seaboard freight by the Sunset Gulf Route, and the Union Pacific agency was at the same time soliciting that traffic by Ogden. (Folio 5050.)

Mr. Guyett, now in the insurance business, was connected with the Union Pacific at San Francisco from 1892 to 1904 in the passenger department. (Folio 5060.) He

testified that the Southern Pacific put on the Sunset Limited train to the east by way of New Orleans about 1897 or 1898, possibly earlier. It was a first-class Pullman equipment train, and was largely advertised by billboards, posters and newspaper and magazine advertising, and travel by that route to the east was very thoroughly worked by soliciting agencies. In working for the Union Pacific he met with this activity on the part of the Southern Pacific, and very substantial business was secured by the Sunset Limited. (Folios 5062-3.) He also testified to the efforts made to secure immigrant business by the respective lines (Folio 5064), and that the Union Pacific worked hard for the eastound passenger traffic from Los Angeles, but the larger part of that business went east by either the Santa Fe or the Southern Pacific. (Folio 5065.)

Mr. Jacobs, President of the California Canneries Co. and of the Napa Cannery Co., canning all kinds of fruit, which is marketed throughout this country and in Europe, testified that previous to 1901, the largest part of his traffic moved to the seaboard by the Sunset line; that the Southern Pacific made a great effort to get freight by the Sunset, and the Union Pacific had a soliciting agency in San Francisco and endeavored to secure traffic by that route. (Folio 5087.)

Mr. Michaels, Vice-President of Langley & Michaels Co., wholesale drug house, the business having been in existence since 1850, testified that his business was formerly solicited for the Sunset Route by the Southern Pacific, and also by the Union Pacific, and the Santa Fe. (Folio 5090.)

Mr. Settle, Traffic Manager for E. Clemens Horst Co.,

in the business of growing hops in California, Oregon, and British Columbia, testified that the hops they shipped from the Willamette Valley mostly go to Europe. Years ago hops used to move from that region by the Shasta Route, Sacramento and Ogden; also by the Sunset Route. (Folios 5093-4.)

Mr. Wolff, for twenty years in the canned goods and dried fruit business at San Francisco, and whose goods are marketed all over the world, testified that previous to the time the Southern Pacific and Union Pacific came under one management, the Southern Pacific endeavored to route all shipments to the Atlantic seaboard territory by the Sunset Route, and the Union Pacific at the same time solicited his business to the same territory. (Folio 5119.) Business to Europe also usually moves by New York either all rail or Sunset. (Folio 5120.)

Mr. Rosenberg, of San Francisco, shipper of dried fruits, stated that previous to the time the Southern Pacific and Union Pacific came under one traffic management, the Southern Pacific solicited his Atlantic seaboard business from California by the Sunset Route; the Union Pacific by its route. (Folio 5124.)

The natural competitive character of these systems is emphasized by the testimony of Mr. Melvin, now the Traffic Manager of the California Fruit Growers' Association, consisting of twenty-two or twenty-three canneries located in different parts of the state, canning all kinds of green fruits, and also asparagus, and shipping to all parts of the world. He says that his traffic moves to the eastern part of the United States through the Ogden gateway, by the Santa

Fe, by the El Paso gateway, by Sunset Gulf, by the American-Hawaiian, Pacific Mail, and in some instances Sunset all rail. (Folio 5137.)

Mr. Ray, of the Ray Manufacturing Co., manufacturer and wholesale and retail dealer in stoves and ranges, ships stoves and material from which they are manufactured, from Massachusetts and other eastern points. His traffic has moved by the Union Pacific, the Sunset Route, the American-Hawaiian line, and the Pacific Mail line. (Folio 5144.)

Mr. Lincoln, now Commissioner of the Merchants Exchange Traffic Bureau at St. Louis, formerly General Freight Agent and Assistant Freight Traffic Manager of the Missouri Pacific, which company participated in Pacific coast business by reason of its lines to El Paso and Pueblo, testified that his company had commercial agents in the principal cities of the East, and such business as they secured going west by Pueblo moved to San Francisco in connection with the Central Pacific from Ogden, and moved to Portland by the Oregon Short Line or by the Central Pacific by Sacramento commonly known as the Shasta Route, and that the strongest competitor for Pacific coast business out of New York was the Sunset Route. (Folio 3747.) On transcontinental eastbound business the Sunset Route of the Southern Pacific competed against all the lines participating in the business east of Ogden. (Folio 3749.)

Mr. Babcock, now Commissioner of Traffic of the Commercial Club Traffic Bureau, Salt Lake City, and for many years in railroad service with different companies, and who was from 1892 to 1901, with a short intermission, in charge

of the traffic of the Rio Grande Western Ry. Co., owning a line from Grand Junction, Colo., to Ogden, and from that time until 1903 Assistant General Traffic Manager of the Denver & Rio Grande at Salt Lake City, testified that business from the east to Portland and Oregon points moving over the Rio Grande, formerly moved between Ogden and Portland and Oregon points over the Southern Pacific. The business of the Union Pacific between the east and Portland and Oregon points, moved from Granger to Portland over the Short Line and the O. R. & N. (Folios 3942-3.) The Southern Pacific sought this business over their own rails from Ogden to Portland. (Folio 3944.)

During the time that the Short Line was separate from the Union Pacific, the Rio Grande worked with the Short Line and hops were moved to the Atlantic seaboard over the Short Line, Rio Grande and eastern connections in competition with the Southern Pacific Sunset Route. (Folio 3945.)

It is a significant fact that the defendants spent several weeks in introducing testimony to show with infinite detail the improvements made since 1901 on the right-of-way and equipment of the Union Pacific and Southern Pacific, but made no effort to break down or contradict the showing made by the complainant as to the active competition thus existing up to the time of the merger between the two systems The witnesses sworn on behalf of the defendants and whose testimony appears in Volumes 9, 10 and 11, were entirely their own employees, with the exception of Mr. Kahn, one of the defendants, and who is a director and member of the Executive Committee of the defendant Union Pacific Railroad Company. It is true that the defendants read into the record the testimony of J. M. Hannaford, Vice President of the Northern Pacific

Railway Company, and B. Campbell, Vice President of the New York, New Haven & Hartford Railroad Company, given before the Interstate Commerce Commission in 1907, but both of these witnesses corroborated the testimony of the witnesses for the complainant as to the competition we have discussed and as to other competition hereafter discussed in this analysis. Mr. Hannaford, who has been connected with the Northern Pacific Railway Company in charge of traffic for about thirty-seven years, testified that previous to the Interstate Commerce Act when business was pooled, Mr. Stubbs in the traffic meetings endeavored to get as large a percentage of the business as he could for the Southern Pacific system, and Mr. Munroe and other gentlemen representing the Union Pacific, as large a percentage of earnings and as small a percentage of expenses as possible for the Union Pacific. Folios 8038-39. He further testified that prior to 1901 there was active competition throughout the Atlantic seaboard territory between the different trans-continental lines for Pacific Coast business, and he mentioned the Santa Fe, the Union Pacific, the Northern Pacific, the Rio Grande, the Sunset Route of the Southern Pacific, the Great Northern, and the Canadian Pacific, as being engaged in that competition.

Folios 8039-40.

He further testified that in handling their traffic it had been the practice of the Northern Pacific to maintain general agents and commercial agents at different large points in the East, and that they there met the competition of the agents of the Southern Pacific and the Union Pacific, and recently at certain places, of agents representing both of those companies, and that such commercial agents so maintained at different points throughout the country were of

great assistance to the lines they represented in securing the routing of traffic over those lines; (Fol. 8042.) that the passenger tourist business was a large business and actively competitive, and was solicited by the Southern line. (Folio 8043). While Mr. Hannaford expressed rather strange views as to the question of competition where naturally competitive lines were owned by the same interest, he still testified in answer to Commissioner Lane, that there was value in competition between roads in the securing to the shipper, of facilities in transportation. (Folio 8060.) Mr. Campbell testified that when he was in charge of the traffic of the O. R. & N. at Portland, business originating in Atlantic seaboard territory destined to Portland to some extent moved by the Sunset Route, and business from the same territory came to Portland all rail over the Union Pacific, Oregon Short Line, and Oregon Railroad & Navigation Co., and their eastern connections; also over the Northern Pacific; (Folios 8075-6), that in competing with the Southern Pacific that line at times made lower rates in an effort to get the business to Portland; that the business consisted of merchandise and traffic of that character from the seaboard territory; (Folios 8076-7); that the Sunset Route absorbed the rate into New York from points in New York and Pennsylvania for the purpose of getting the business away from the all rail routes, which were the Great Northern and the Union Pacific. (Folio 8085.) Traffic formerly moved to the East by way of the Sacramento gateway to Ogden, and thence to the East over the Rio Grande or the Union Pacific. (Folio 8088.) He further testified that wool from the Willamette Valley moved to the Atlantic seaboard both ways, by the O. R. & N. and the Southern Pacific. He also testified that in his opinion, of the Atlantic seaboard business, the Sunset

Route handled into Portland from 20 to 25% (Folio 8117), and of the total competitive business east of the Missouri River, the Sunset Gulf Route carried from three to five per cent. (Folio 8118.)

Mr. Stubbs, testifying for the defendants, gave very interesting testimony at Folios 6561 to 6563, as to the initial competition made by the Southern Pacific management over the Sunset Route as against the all-rail lines of the Union Pacific and its connections. He described the effect of the ability of the Sunset to make prompt settlement of claims as against the Union Pacific and its Eastern connections. (Folio 6565.) This corroborates the testimony of Mr. Clifford to the effect that the general agent of the Union Pacific at San Francisco was given authority to settle claims so as to more effectually compete against the Sunset Route. Mr. Stubbs further testified that previous to the amalgamation, the Union Pacific maintained a traffic agency in San Francisco which was trying to route business to points on the seaboard via Ogden, and the Southern Pacific agency was trying to move the business, so far as it could properly move that way, to the Atlantic seaboard via the Sunset Route. (Folios 6629-30). After the Sunset Route was established the Union Pacific and its eastern connections continued to try to give good service, and through their soliciting agents in New York actively solicited transcontinental business; that if the Southern Pacific secured the business and sent it by the Sunset, the Union Pacific got no share of it. (Folio 6633.)

Mr. Spence who succeeded Mr. Hawley as General Agent of the Southern Pacific in New York, testified that his function as Southern Pacific Agent was to work business

from New York to California by the Sunset Route, and the function of the Union Pacific representative was to work it by his route, and that he regretted that he had never known the entire New York business to be attracted to the Morgan Line ships, but that a substantial tonnage moved west over the trunk lines to California. (Folio 6730.) He further stated that in the aggregate it was fair to say that the bulk of the traffic westbound out of New York, to California, can move boat and rail as well as all rail. (Folio 6758.) At Folio 6764 he stated that when Mr. Hawley was at the head of the Southern Pacific agency he was working under him, and the Union Pacific agents were at that time soliciting business for that company from shippers, and he, in endeavoring to route business by the Sunset, met the efforts of the Union Pacific agents who were trying to ship it by the Union Pacific. He further testified at Folios 6765-6, that the earnings of the Sunset Route on California business for the year ending June 30, 1900, were westbound $2,406,-915.05, and eastbound $1,658,568.15, or a total of $4,065,-483.20; that since 1900 the development of the state of California has been very marked and the amount of traffic moving between New York and California has increased enormously. (Folio 6766.) At Folio 6769 he says the time of the Sunset Route from New York to California is sixteen or seventeen days, about the same as made by the all rail lines. At Folio 6771 he repeated the statement made on direct examination, that in 1900 the Sunset Route carried 34.79% of the total business to California and Nevada. He had previously stated that the amount carried to Nevada by the Sunset Route was very small, so it is a fair assumption that about one-third of the California business moved Sunset, and if their earnings aggregated slightly over four millions, as Mr. Spence testified, the entire business inter-

changed between California and New York, which was the subject of competition, was about twelve million dollars per year at that time, and since then, as Mr. Spence testified, it has greatly increased.

Citrus Fruit and Vegetable Movement.

There is very large traffic east bound to the Atlantic seaboard and other points in the east, consisting of oranges, lemons and other fruits, and certain vegetables such as celery, which was the subject of competition between these lines. Los Angeles is, perhaps, the central point of origin of this traffic, but it is actually shipped in great quantities from many towns in the interior of California, control of the routing, however, being largely consolidated at Los Angeles. Previous to the building of the San Pedro, Los Angeles & Salt Lake Road, this traffic found its way to the east over three routes: first, the Union Pacific-Southern Pacific, by way of Ogden; second, the Santa Fe; and third, by the Sunset Route of the Southern Pacific. Prior to the construction of the San Pedro, Los Angeles & Salt Lake Road, the effort of the Union Pacific, of course, was to work this by way of Ogden, and thence over its line. Since the construction of that line, certain traffic has been solicited and worked by the Union Pacific in connection with that route by way of Salt Lake City. The rate on oranges to the east for twenty years had been $1.25 a hundred pounds. That rate applied to all territory in the United States east of the eastern boundary of Colorado, except certain southeastern territory and Canadian territory, where there was a still higher rate than $1.25. This was testified to by Mr. Woodford, General Manager of the California Fruit Growers' Exchange. (Folios 1250, 1251.) This testimony was given at a hearing before the Interstate Com-

merce Commission at Los Angeles, February 8th, 1907. (Folio 1246.) Within a few days after that investigation, the railroads voluntarily reduced this rate which had so been in force for twenty years, to $1.15. We call attention to these rates to show the large earnings to the carriers accruing from this business, and hence its importance as competitive traffic. The bulk of the shipments by the Sunset Route moved by El Paso, but the testimony in the east showed that it had also moved by New Orleans (Markham Fol. 3703). The Union Pacific was necessarily competing for this business as against the Santa Fe and the Sunset Route, for the reason that it received no earnings whatever upon any traffic moving by either of those routes.

Since the construction of the San Pedro, Los Angeles & Salt Lake Road, it is, of course, in the interest of the Union Pacific to move all the traffic it can over that route, for the reason that the rate to the Missouri River is divided on a mileage basis between the Salt Lake Road and the Union Pacific, which results in giving the Union Pacific the haul for a thousand miles over its own rails, and through the ownership by the Oregon Short Line of one-half of the capital stock of the Salt Lake Road, it is interested to the extent of one-half of the haul from Los Angeles to Salt Lake. Or in round figures, the interest of the Union Pacific is a thousand mile haul to the Missouri River from Salt Lake City, and one-half of the 800 mile haul from there to Los Angeles, or a total of 1,400 miles to the Union Pacific, as against 400 to the Clark interest in the Salt Lake. If the traffic moves by way of Ogden, which is about 1,200 miles from Los Angeles by way of the Southern Pacific, the proportion of the through haul accruing to the Union Pacific proper is less than one-half the through rate, and it has only a 46 per cent interest in the revenue of the

Southern Pacific. For that reason, the Traffic Manager of the Union Pacific, Mr. Munroe, acting, of course, under the instructions of the head of the traffic department of the consolidated system, and accompanied by Mr. McCormick, Assistant Director of Traffic, was in Los Angeles in the autumn of 1906, just before the testimony was taken by the Interstate Commerce Commission, actively soliciting this traffic over the Salt Lake and Union Pacific.

See testimony of Mr. Wells, General Manager of the San Pedro, Los Angeles & Salt Lake Road (Folio 1221); testimony of Mr. Woodford (Folio 1248).

This traffic is, of course, directly competitive with that moving by El Paso or New Orleans, and is also competitive with traffic moving by the Southern Pacific and the Rio Grande. Therefore the situation as to this fruit movement is, first, that prior to the amalgamation of these lines, the Union Pacific was competitive with the Southern Pacific-Sunset Route; second, since its interest in the total revenue is that way, it is, since the construction of the Salt Lake Road, naturally competitive with both the Ogden Route of the Southern Pacific and the Sunset Route of the Southern Pacific.

Mr. Munroe when called as a witness for the defendants testified that the San Pedro was the Union Pacific's preferential route for Southern California traffic both east and westbound, and that he had been out at Los Angeles at times soliciting that traffic over the San Pedro in connection with the Union Pacific, and that the Southern Pacific traffic organization in Los Angeles was seeking the same business, and the business was competitive with the through route formed by the Southern Pacific via El Paso, and that in soliciting this traffic for the San Pedro-Union Pacific route,

he was working against all competitors, one of them being the Southern Pacific from Los Angeles via El Paso. (Folios 6831-2.)

From this great mass of testimony it would seem to be conclusively established that not only as to business moving between New York common points territory and Portland and vicinity, where traffic was carried by the Southern Pacific, both Sunset Gulf and Sunset all rail, and also over the route via Ogden and Sacramento in connection with the Rio Grande and other lines leading to the east in direct competition with the Union Pacific, Oregon Short Line and Oregon Railroad & Navigation Co. in handling which traffic neither system used a foot of the rails of the other, and as to which competition, no witness has suggested a doubt, these lines were also competitive as to an enormous traffic moving between New York common points and California. The only difference between the movement to California and to Portland and Oregon points consisted in the fact that from Ogden to San Francisco the California traffic moved over the rails of the Southern Pacific. But the Union Pacific line is a thousand miles long. Through its friendly connections east of the Missouri River, it constitutes a direct line from the seaboard to Ogden, 2,500 miles in length in round figures. Under the laws of Congress, as we will show in our brief of the law, the Union Pacific and the Central Pacific lines were required to be operated as a continuous line without discrimination; but irrespective of the law, the Southern Pacific, as a matter of self-preservation, was always compelled to and did gladly interchange business with the Union Pacific, accepting for its share of the through haul, the division of the through rate accorded to it by consent, from 1870 down to the present time, as testified to by Mr. Stubbs. The fact

that at Omaha the Chicago, Milwaukee & St. Paul, the Chicago & Northwestern, Chicago, St. Paul, Minneapolis & Omaha, the Chicago, Burlington & Quincy, the Rock Island, the Wabash, the Chicago Great Western, and the Illinois Central, were pouring vast streams of traffic into the Union Pacific to be transported thence to the coast, made that a very powerful transcontinental line; and in addition to this traffic moving through Omaha, there are many lines connecting with the Union Pacific at Kansas City, with which transcontinental business was interchanged.

The statistics to which we shall later refer, show the immense earnings accruing monthly to that system for the handling of business to and from California points. These two great routes from the east were open at equal rates, the business was fought for by the one against the other by all means known to railroad solicitors, and it is idle speculation to consider what might have been done by the Southern Pacific in the way of diverting traffic, or raising divisions or anything else of that sort. It was, as a matter of practical railroading, an impossible suggestion that the Southern Pacific would deliberately refuse to do business turned over to it by the Union Pacific and its eastern connections, to secure which it was at no expense, and which was worked in connection with its local and intermountain business. This did not in any way, however, prevent the Southern Pacific from endeavoring to take every pound of freight it could by its own through line from one coast to the other. Every railroad man who testified, and it must be remembered that the natural sympathies of railroad men are not with the complainant here, was emphatic as to the strenuous competition and active efforts of the Southern Pacific on the one hand, and the

Union Pacific on the other, to get and keep from each other this great traffic; and it is a new suggestion, born out of the necessities of this case, that the Union Pacific could not be a competitor of the Sunset Route of the Southern Pacific because it does not reach through to California, and hence had no power, independent of its connections, to make rates. As we have shown above the power it concededly possessed to make rates to Portland included the power to make rates to San Francisco.

Some of the witnesses on cross-examination testified that where the Southern Pacific agencies were unable to move traffic by the southern route to Pacific Coast points, they endeavored to get the short haul from Ogden to the coast as against the competition of other lines. This, however, in no way modified the testimony as to the energetic efforts made by the Southern Pacific to route traffic by the Sunset Route and similar efforts by the Union Pacific to move the same traffic through the Ogden gateway. If traffic went by the Sunset the Union Pacific received no part of the revenue. It did not have the aid of the Southern Pacific organization in moving any traffic by Ogden which could be secured for the Southern route. In spite of the testimony that the service was about the same over both routes, it is undoubtedly the fact that the shortness of the line by way of Ogden commended it to certain shippers who could not be persuaded that the longer line by the south could afford equally good service, and certain commodities could not be transferred to boats, and hence could not move by the Morgan Line; and in the case of traffic that would not move by the southern route in spite of the efforts of the Southern Pacific organization, it is natural that its agencies should endeavor to get the short haul from Ogden as against the competition of other lines. It will be remem-

bered, however, that the testimony shows that before the amalgamation, the Southern Pacific, so far as its Ogden route was concerned, was impartial between the Denver & Rio Grande and the Union Pacific. It did not join forces with one as against the other.

As a matter of fact, it is clear from all the testimony in the case, that the effort to move business by the Central route was chiefly exerted by the Union Pacific and the Rio Grande, together with their connections to the east. As to traffic that had to go by this Central route and would not move by the Southern route, it is quite likely the fact, as was said by Mr. Morton, that the chief strife was east of Ogden, but the competition, the destruction of which is complained of in this action, was as to that great mass of traffic that would move freely by either route. The Southern Pacific bent its every energy to send that traffic by the Sunset Route, and the Union Pacific to send it by the Missouri River.

Complainant's Exhibit 181 (Folios 5494 et seq.), which is a contract made as far back as 1872, between the Pacific Mail Steamship Co., then operating steamships on each side of the Isthmus, and the Union Pacific Railroad Co., and which was received in evidence without objection, shows that nearly forty years ago railroad and steamship men regarded the Union Pacific as a competitor of the through lines. The preamble to that agreement, so far as material, reads as follows:

> "This indenture made and executed this first day of October, 1872, by and between the Pacific Mail Steamship Company a corporation duly created under the laws of the state of New York, and owning steamships and conducting transportation between the cities of New York and San Francisco via Panama, of the first part, and the Union Pacific

Railroad Company, a corporation created by the laws of the United States of America, also *conducting transportation between said cities of New York and San Francisco via connecting roads*, and operating a railroad between the city of Omaha, state of Nebraska, and the point of junction with the Central Pacific Railroad, of the second part, WITNESSETH:

That by reason of the natural competition between the parties hereto in relation to the transportation of merchandise and other freight between the two cities of San Francisco and New York, and from other causes, the rates at which said business is transacted are liable to uncertainties and fluctuations which tend to impair the usefulness of both said companies to the public, and render the obtaining by either of said companies of a reasonable and just compensation therefor doubtful and precarious," etc.

From that date to the present, we doubt whether any disinterested railroad man would for a moment think of suggesting that this great railroad system extending for a thousand miles from the Missouri River to Ogden and also nine hundred miles further to the waters of the Pacific at Portland, did not necessarily and naturally constitute a competitor of any through route from one coast to the other.

b. COMPETITION AS TO TRAFFIC BETWEEN POINTS IN THE INTERIOR OF THE COUNTRY AND THE PACIFIC COAST.

There has been incidentally mentioned in discussing the traffic between the Atlantic seaboard territory and the Pacific Coast, certain of the movements of freight to interior points, such as the hop movement out of Oregon, which in part found its destination at interior points such as Cincinnati, St. Louis and Milwaukee, but we will now take up somewhat in detail the testimony as to the active competition between the Sunset Route (all rail) and the Union Pacific for business originating in the great manufacturing and trade centers of the interior of the country, beginning at the west line of the New York common points territory, to-wit, at Buffalo and Pittsburg, and thence west even as far as Kansas City, and show that the traffic to and from all this great region was the subject of the most energetic competition. It is important to consider in connection with this matter that the rates by the two routes from all this great interior country, have been maintained at all times at the same figure. It is inconceivable that rates would be kept in over a long period of years, if it was not expected that traffic would move by these various lines. Tables of rates were introduced in connection with the testimony of Mr. White of the Interstate Commerce Commission, as we have before observed at pages 866 to 883 inclusive, and at Folio 5601 he testifies that the transcontinental rates shown upon the said statements were the same by all the lines from the Canadian Pacific down to the Sunset. The rates being equal and the same incentive existing for competition that we have called attention to in connection with Atlantic seaboard traffic, that is, the divisions being such as to afford much greater revenue to the Southern Pacific if traffic moved by the Sunset Route, it is not strange that the traffic

officials in charge of the business of that company actively and energetically endeavored to route business by the Sunset Route, competing with the Union Pacific for that business, even though that route in some instances was substantially longer than by the lines through the Missouri River gateways. They not only sought to move business by that route, but they succeeded.

Mr. Hawley, during nearly twenty years in charge of all the traffic of the Southern Pacific from the Mississippi River to the Atlantic seaboard, testified as follows at Folio 1414, after saying that he endeavored to route all the New York common points business by the Gulf routes:

> "Q. And as to business originating at Pittsburg or Cincinnati and in that territory, how did you endeavor to work that business to the coast?
>
> A. Via New Orleans in connection with all rail lines.
>
> Q. Did the Union Pacific maintain eastern agencies at that time?
>
> A. Yes sir.
>
> Q. And were those agencies working in competition with you?
>
> A. Naturally.
>
> Q. Was that the same with the Santa Fe and the other lines?
>
> A. Just the same."

And again at Folio 1421:

> "Q. Now, as to the territory beginning at Pittsburg and Buffalo and extending westerly, what territory was embraced in what is called Pittsburg common points?
>
> A. Well, there are numerous points.
>
> Q. How far west did it go, if you remember?
>
> A. There were some few points just east of Pittsburg which took Pittsburg rates. We did not compete for that business via New York.
>
> Q. But you did by way of New Orleans?
>
> A. For iron and steel products, generally. * *

I am only speaking now of territory east of Pittsburg.

Q. Yes, I know, but I am asking you now of the territory west of Pittsburg.

A. Well, I don't know as to that. We did not compete for that business at all by way of New York.

Q. I understand; not by way of New York, but did you by way of New Orleans and the rail lines?

A. Yes.

Q. Did that business take the same rate via New Orleans to the coast as it did via Omaha?

A. Yes, there was a certain group of points that took Pittsburg rates both east and west of Pittsburg, and they were routed by all rail either by Cincinnati or by Chicago.

* * * * * *

Q. Now there was Cincinnati and common points too?

A. Yes.

Q. Did all that territory take the same rates each way?

A. That was open to all routes.

Q. And was that also competed for?

A. Yes sir.

Q. By the same lines?

A. Yes sir.

Q. By the Union on the one hand and the Sunset on the other?

A. Yes.

Q. *How far west did this competition extend between these lines—to the Mississippi River?*

A. Yes sir.

Q. How about the territory in Tennessee and Alabama, the southeastern territory?

A. That was competitive as well."

Mr. Throckmorton testified, at Folio 1469:

"Q. From territory that was not tributary to the Morgan line but originated west of Pittsburg, how did you endeavor to route it?

A. All rail Sunset Route to New Orleans."

(The word "originated" in the question is by mistake in the record printed "tributary.")

On cross-examination he was asked how this competition could be carried on in view of the fact that the Southern Pacific owned the line west of Ogden. He replied, at Folio 1491:

"A. Well, we always tried to divert it if we could, even after it moved there. If it moved via Omaha and Ogden and that route, and we knew it, we would try to put it down by the all rail line via New Orleans.

Q. Do you mean that the Southern Pacific—

A. I mean if we found out a car—if I got a telegram saying a car had moved Union Pacific and Southern Pacific, I would wire ahead to know why it moved that way, and we would always try to get it via our all rail route, the Sunset Route.

Q. Do you mean if the Union Pacific got control of a car of freight that was going to the Gulf and going over the Southern Pacific line from Ogden, that the Southern Pacific would still try to avoid taking that car?

A. Oh, no, not that car; future cars.

Q. Well, in other words, you mean what you stated a number of times, that you would work all the business you could by way of New Orleans?

A. Yes sir, that is exactly what I mean."

Mr. Swope, of the Louisville & Nashville Railway, testified that the territory under his jurisdiction was east of Buffalo and Pittsburg, but that he also solicited business originating in Cincinnati and Louisville and that territory; that if business was moving from that territory which was controlled in New York or the territory east of Buffalo and Pittsburg, it was reported to him, and he endeavored to secure it via New Orleans; that his interests were entirely

with the Sunset Route of the Southern Pacific as against the Union Pacific-Ogden route. (Folios 1744-5.)

Mr. Gregory, Traffic Manager of the Central Foundry Co., with foundries located in Alabama, Tenessee, Indiana, and other states, testified that traffic moved from Anniston, Alabama, and South Pittsburg by the Southern Pacific, and from the same places by the Union Pacific, although the movement by the Southern Pacific from South Pittsburg is exceptional. (Folio 1752.)

Mr. Stuyvesant Fish, for many years President of the Illinois Central, was asked whether prior to 1901 the Union Pacific and the Sunset Route of the Southern Pacific were competing for business along the Illinois Central, and if so, in what territory. He replied (Folio 1815):

> "A They were competing for our business by the two several lines; that is to say, the Union Pacific taking it at Omaha for their direct line west, and the Southern Pacific taking it at New Orleans for their more circuitous route around through Southern California.
>
> Q. Prior to 1901, how active was that competition?
>
> A. I think it was as active as between any two roads that were in the business.
>
> Q. What territory did that competition cover?
>
> A. The competition between those two railroads covered the whole territory as I understand it. Of course the Illinois Central did not reach the eastern states territory.
>
> Q. No, but I mean did it cover the whole of the territory that is reached by the Illinois Central; that is what I want to get at.
>
> A. Yes."

This territory speaking broadly reached from the Missouri River on the West to Cincinnati on the East and from Chicago on the North to New Orleans on the South.

Mr. Henry, who has been Traffic Manager for various companies, like the Pressed Steel Car Co., and the American Window Glass Co. at Pittsburg, testified that previous to 1901 Mr. Herring, the Agent of the Southern Pacific at Pittsburg, was endeavoring to get the long haul by New Orleans if he could, the Union Pacific endeavoring to route traffic by Kansas City or Omaha. (Folio 2094.) He further said that he routed some of his business by way of New Orleans because of his friendly feeling towards the representatives of some of the lines soliciting that business. He further testified:

> "A. The personality of a representative nowadays has considerable influence in securing business; that is, his activity in showing his disposition to do what he can to facilitate your shipments and your business in general, in small ways, which he can within the law." (Folios 2099-2101.)

Mr. Fowler, many years in the railway business in Pittsburg, and for something over two years, from 1891 to 1893, representing the Union Pacific there, testified, at Folio 2105, that at the time he was with the Union Pacific, the conditions as to competition between the Union Pacific and the Southern Pacific for coast business was very strong, and that the efforts of the Southern Pacific were to get it by New Orleans. He gives an instance of a competition between himself and Mr. Herring over a consignment of trolley poles, where there was some question as to the proper classification. He succeeded in getting the business, while Mr. Herring was endeavoring to send it by New Orleans. (Folio 2108.)

Mr. Paar, of Canton, Ohio, in charge of the traffic of the Diebold Safe & Lock Co., manufacturers of vaults,

safes, safe deposit boxes, etc., the largest manufacturers of articles of that kind in the United States, testified that prior to 1901, his traffic was solicited by the Union Pacific agency, and also by the Southern Pacific agency, and that the latter was endeavoring to move the traffic by way of New Orleans. (Folio 2123.)

Mr. Townsend, Traffic Manager of the National Tube Co. in Pittsburg for ten years, and previous to that for twenty years in the railroad business, the Tube Company being the largest manufacturer of wrought pipe in the world, testified, at Folio 2134, that at the time Mr. Hawley of New York was the eastern representative of the Southern Pacific, and Mr. Choate was the representative of the Union Pacific in Pittsburg, there was competition between the Union Pacific and Southern Pacific for coast business. On cross-examination he said the competition then was between the Sunset Route by way of New Orleans, and the other rail lines. (Folios 2135-36.) And at that time the Union Pacific had its own soliciting agency in Pittsburg and solicited business exclusively in the interest of its own line, and the Southern Pacific had its own soliciting agency and solicited business for its own line irrespective of any other line. (Folio 2139.)

It is admitted that since the consolidation, Mr. Herring has been the joint representative of the two systems.

Mr. Ogden, Traffic Manager of Jones & Laughlin, the great steel manufacturers of Pittsburg, testified that previous to 1901 the Union Pacific and Southern Pacific had separate agencies in Pittsburg, calling on him and soliciting business for their respective lines in competition, and that now Mr. Herring, representing both lines, and his

assistants, call on him for business, and give no preference to one line over the other. (Folio 2145.)

Mr. Lent, for four years Traffic Manager of a number of large manufacturing companies in Pittsburg, previous to that Traffic Manager of the Union Steel Co., before that in railroad service, testified that previous to 1901, the Union Pacific and Southern Pacific maintained separate agencies, the agent of each line soliciting business in the interest of his road, and the Southern Pacific endeavoring to work his business to the coast by New Orleans. (Folio 2172.) Again, at Folio 2184:

> "Q. You have spoken about the consolidation of these agencies here, in Mr. Herring, and Mr. Lovett has asked you a number of questions with reference to it. When the agencies were separate, the agent of the Union Pacific, Mr. Lothrop or Mr. Choate, was trying to get business exclusively via that route, wasn't he?
>
> A. Yes sir.
>
> Q. The agent of the Southern Pacific, Mr. Herring, was trying, if possible, to get business via the Southern route?
>
> A. Exactly.
>
> Q. So that there was active competition between the two wasn't there?
>
> A. There was."

He said, at Folio 2174, that previous to the amalgamation of the agencies of the Southern Pacific and Union Pacific, it was the custom of the transcontinental lines to maintain commercial agencies in Pittsburg. He then testified:

> "Q. What are these agents doing for these various lines?
>
> A. The solicitation on their part seems to be more in the matter of advocating the service that the road is capable of giving, and supplying rates

and tariffs, and giving such information as helps the shipper out on matters that the shipper cannot have as intimate a knowledge of as the agent.

Q. Do you regard these agencies as efficient and useful to railroads in securing business?

A. Yes sir."

Again, at Folio 2189, after stating that the rates were uniform by the different lines, he testified:

"Q. So that the competition which has existed for many years—the legitimate competition which has existed for many years—has been competition in service and competition in solicitation of business?

A. Yes sir.

* * * * * *

Q. And in soliciting business, the soliciting agent has used the various means of inducing traffic to go via his line, that have been stated here on the stand?

A. Yes sir.

Q. Now, prior to the amalgamation of these agencies here in Pittsburg—the agencies of the Southern Pacific and the Union Pacific—that competition, the only competition that can legitimately exist, was in existence between the Union Pacific Route and the Sunset as you have testified?

A. Yes sir."

Mr. Watson, representing Knowles, Taylor & Knowles Co., large manufacturers of earthenware at East Liverpool, Ohio, testified that Mr. Choate, representing the Union Pacific, solicited his business in former days, and that Mr. Herring solicited business at the same time by way of New Orleans, and that he made shipments by that route. (Folio 2206.) He was a rather humorous individual, and he testified further, at Folio 2214, after saying that he remembered in the old days that efforts were made by the Southern Pacific to send business via its line:

"Q. And there was competition between them and the Union Pacific people, who tried to send it by Omaha?

A. Well, I never got anything out of it; but I know they were always hustling for it."

And again, at Folio 2215, after defendants' counsel had endeavored to develop the fact that the Southern Pacific was the owner of the line west of Ogden, over which the Union Pacific traffic had to move, Mr. Watson said:

"A. In those days, we thought we were shipping by a competing line when we shipped by the Union Pacific and Central Pacific.

Q. You thought you were shipping over a line—

A. In those days, yes.

Q. —that was competing with the Southern Pacific?

A. Yes, or any other lines.

Q. But you did not know in those days that the Southern Pacific controlled the Central Pacific?

A. No, I am not up in stocks."

It is perfectly evident from this testimony that Mr. Herring, the Southern Pacific representative, was not endeavoring to route any traffic by Ogden, for if he had been, he would certainly have disclosed the fact that his company controlled the line from Ogden west.

Mr. Belleville, Traffic Manager of the Pittsburg Plate Glass Co. since 1898, said that prior to 1901 the San Francisco business was pretty fairly divided; that the Union Pacific got a little more than half of it, the lines by New Orleans about a quarter of it, and the rest was divided among two or three different routes; that he knew Mr. Herring and Mr. Choate when he represented the Union Pacific, and that those gentlemen were competing with each other for coast business then. (Folios 2220-21.)

On cross-examination, the defendants' counsel endeavored to exploit his favorite theory that the Union Pacific had to send their traffic over the Southern Pacific from Ogden and could therefore not compete, with very unfortunate results, as follows, at Folio 2222:

> "Q. Mr. Choate, or other agent, in soliciting for the Union Pacific then, was necessarily soliciting for that portion of the route of the Southern Pacific, was he not?
>
> A. I presume so; though he did not talk about the Southern Pacific."

Then again, speaking of Mr. Herring:

> "Q. His solicitation was really against the Atchison, was it not, Mr. Belleville?
>
> A. No, I think it was against the Union Pacific as well as the Atchison. The Union Pacific was the strong competitor at that time for the Pacific coast business, much stronger than the—
>
> Q. Competitor for what?
>
> A. Particularly in the early days from 1898 to 1901.
>
> * * * * * *
>
> Q. You say that the strong competitor was the Union Pacific, you mean competitor for what?
>
> A. Competitor of the Southern Pacific for coast business.
>
> Q. Was it stronger than the Santa Fe?
>
> A. I regarded it so at that time. That was in 1898." (Folios 2223-4.)

Mr. Crowley, salesman for the Carnegie Steel Co., and for five years previous to 1901 freight solicitor for the Southern Pacific at Pittsburg, testified that he endeavored to route traffic for California by New Orleans, the traffic moving partly by way of Cincinnati and some of it by St. Louis by the Illinois Central, the Union Pacific being sep-

arately represented and working traffic by Ogden. (Folios 2236-7.)

Each company was also represented at Pittsburg by a passenger agent, and the Sunset Route was advertising its train to the coast. (Folio 2238.)

Mr. Woodside, General Freight Agent of the West Side Belt and the Wabash Pittsburg Terminal Railroads at Pittsburg, from 1902 to 1907 Traffic Manager for the Pittsburg Coal Co. and the River Coal Co. and allied interests, and previous to that for fifteen years General Agent of the Erie Railroad in Pittsburg, testified that he knew the Southern Pacific and Union Pacific representatives in Pittsburg when the offices were separate, and that the representatives of those roads were competing with each other for coast business. (Folios 2249-50.)

Mr. Herring, the Southern Pacific Agent, endeavored to route Mr. Woodside's traffic through Cincinnati and New Orleans, and it moved to Cincinnati by way of the Erie, and thence by the Louisville & Nashville, or Queen & Crescent, and later by the Illinois Central. (Folio 2251.)

Mr. Blackburn, who routes the shipments of the W. H. Mullins Co. of Salem, Ohio, very large manufacturers of architectural sheet metal work, pressed steel bolts and fireproof windows, shipping their products practically all over the world, testified that Salem, which is about seventy miles from Pitsburg, takes the Pittsburg rate. When Mr. Herring was agent of the Southern Pacific, before the amalgamation of the agencies he solicited transcontinental freight by New Orleans. His company still ships some freight to the coast by New Orleans. At the same time the Union Pacific representative was soliciting the same traffic, each

agency urging as arguments for business, that they would give prompt service and trace cars. (Folios 2256-8.)

Mr. Thompson, Traffic Manager of the Oil Well Supply Co., manufacturers of everything that is used in the drilling and operating of oil wells, pipe lines, and also manufacturing boilers, engines and machinery, being the largest concern of the kind in the world, and shipping their product to all countries and places where there is any gas or oil, testified that their business was moving to the coast over various lines, and that his concern had moved goods by way of New Orleans from Reading Mills and Pittsburg, but that they did not now ship as much as they used to by that route. (Folio 2269.) He further testified that Mr. Herring had been his friend for twenty-five or thirty years, and he solicited the traffic by New Orleans when he represented only that company, and that Mr. Herring's solicitation when he was working the New Orleans route exclusively was largely responsible for the fact that he shipped more by that route than now, when Mr. Herring has a divided allegiance. (Folio 2270.) At that time Mr. Choate and Mr. Lothrop, Union Pacific agents, solicited his business by the Union Pacific. (Folio 2271.)

Mr. McGrew, in charge of the traffic of the Standard Underground Cable Co., manufacturing wire and cable for all kinds of electrical service, shipping all over the country, testified that Mr. Choate and Mr. Herring were soliciting business in competition with each other when the agencies were separate, and when Mr. Herring secured the business he routed it by New Orleans. (Folio 2281.)

Mr. Gano, of Cincinnati, from 1892 to 1894 Freight So-

licitor of the Union Pacific in that city, testified that the Southern Pacific was then represented by Mr. W. H. Connor, now the joint agent of both lines. He further testified:

"Q. During the time when you were with the Union Pacific was there any competition between that company and the Southern Pacific for transcontinental business?

A. Decidedly.

Q. To what points was that competition directed, that is, to what coast points?

A. All the Pacific coast.

Q. How far north?

A. Portland, Seattle, Tacoma and Puget Sound points.

Q. And all the California points?

A. And all the California points.

Q. What way was the Southern Pacific working transcontinental business?

A. Via New Orleans and El Paso.

Q. And which way did the Union Pacific work business?

A. Through Missouri River, Council Bluffs, Kansas City, Omaha and Ogden.

Q. Which way was the Portland business worked by the Southern Pacific?

A. Why, that had two routes; they had a steamship route from San Francisco to Portland, and they had an all rail route by what they called the Shasta line from Sacramento to Portland.

Q. How did the business move to reach the Sacramento route?

A. Via New Orleans, when the Southern Pacific secured the business.

* * * * * *

Q. And how did the Union Pacific work Portland business?

A. By the Oregon Railway & Navigation Co.

Q. Was there any competition at that time for passenger business to the coast?

A. There was.

Q. Active or otherwise?

A. Very active.

* * * * * *

Q. How did they work to get the business?

A. By personal solicitation. People that they heard were going to the Pacific coast, their representatives, passenger men, would go to see them.

Q. That is, the Southern Pacific?

A. Both the Southern Pacific and Union Pacific had passenger men in the territory.

* * * * * *

Q. Which way did they endeavor to send the coast business?

A. Who endeavor to send?

Q. The Southern Pacific.

A. Via New Orleans."

(Folios 2299 to 2301.)

At Folios 2302 and 2303 Mr. Gano gave the list of men working for these respective agencies. Mr. Gano also testified (Folio 2314) that passenger business was worked to San Francisco by way of Portland and the boat line. In working for passenger business, he said (Folio 2316) that the Southern Pacific would take advantage of the Union Pacific and say it was a slow route in winter time, and the Union Pacific would talk about the sand blasts and sand storms in the south during the summer time. He further said that both the Southern Pacific and Union Pacific overland route had publications showing the beauties of the lines. These were folders, newspaper advertisements and periodical advertisements. The effort of the solicitors for the Southern Pacific was to send passengers, if they could, via the Sunset Route, and that of the Union Pacific to send them by the Ogden Route. (Folio 2317.)

Mr. Williamson, for five years Commissioner of the Re-

ceivers' & Shippers' Association of Cincinnati, formerly connected with the traffic department of the Queen & Crescent Route, said (Folios 2323-4) that the Southern Pacific and Union Pacific were in competition for business out of Cincinnati territory prior to 1901, the Southern Pacific endeavoring to route the traffic by New Orleans. The Queen & Crescent, with which Mr. Williamson was connected participated in that business. Most of the business was to California, but some shipments were handled to Tacoma and Portland. The Union Pacific was moving that business through Ogden for California, and over their own line to Portland. Competition was very active. At Folio 2327 he said that the Queen & Crescent worked exclusively with the Southern Pacific, and the principal competitor of that route was the Union Pacific.

Mr. Buchanan, Traffic Manager of the great soap manufacturing company of Proctor & Gamble, manufacturers of Ivory Soap and other products, who was formerly Assistant General Freight Agent of the Big Four Railroad at Cincinnati, testified that previous to 1901 the Union Pacific and Southern Pacific were competing for Pacific Coast business out of the Cincinnati territory, the Union Pacific working business via Ogden, and the Southern Pacific via New Orleans preferably, and also El Paso. (Folio 2338.)

Mr. Keavy, Commissioner of the Indianapolis Freight Bureau since 1906, and previous to that time in the Freight Traffic Department of various railroads from 1872 on, said that Indianapolis was within Mr. Connor's jurisdiction, when he represented the Southern Pacific Co. alone, and that the Union Pacific Co. had separate representation in that field. He then testified:

"Q. What was the fact as to whether there was competition for transcontinental business between the Southern Pacific and Union Pacific prior to 1901 in that district?

A. It was quite well understood that there was that competition between those two routes; in other words, when dealing with the representative of the Southern Pacific it was known that you were treating with a rival of the Union Pacific, and vice versa.

Q. Which way did the Southern Pacific agents, Mr. Connor and his subordinates, endeavor to route their transcontinental traffic?

A. Via New Orleans.

Q. And the Union Pacific?

A. By the Missouri River gateway." (Folios 2372-3.)

On cross-examination, at Folio 2375, he stated that the territory in which he observed this competition was Indiana. He then testified as to the connecting lines running to New Orleans and Chicago respectively, which participated in this competition in connection with the transcontinental line representatives. (Folios 2376-2377.)

Mr. McDowell, Traffic Manager of the Atlas Engine Works, one of the largest, if not the largest, institution of the kind in the country, with shipments all over the United States, testified that previous to the amalgamation of the Southern Pacific and Union Pacific the two systems were soliciting business against each other, Mr. Connor and his subordinates endeavoring to route the traffic by New Orleans, and the Union Pacific by Missouri River gateway. (Folios 2382-3.)

Mr. Bean, in charge of traffic of the Thomas Manufacturing Co., manufacturers of farm machinery at Springfield,

Ohio, and shipping to all parts of the United States, testified that he knew Mr. Connor, when he represented only the Southern Pacific, and that he endeavored to route Pacific Coast traffic by New Orleans; that the Union Pacific had a soliciting agency in the field at that time endeavoring to route their traffic through the Missouri River gateways. He then said:

> "Q. How was the competition between Mr. Connor and his agency and the Union Pacific for this coast traffic, was it active or otherwise?
>
> A. It seemed to be quite aggressive, particularly on Mr. Connor's part.
>
> Q. Particularly on Mr. Connor's part?
>
> A. Yes sir, the other side as well, I may add they were both aggressive in the business." (Folio 2390.)

Mr. Mayer, for fifteen years in charge of the traffic of the Mosler Safe Co. of Hamilton, Ohio, which with the Diebolds are the largest manufacturers of safes, vaults and deposit boxes in the country, testified that when Mr. Connor represented the Southern Pacific, and the Union Pacific had a separate agency, the Mosler Company's business was solicited by New Orelans by the Southern Pacific, and by the Missouri River gateway by the Union Pacific, and he stated that the competition between those two companies at that time was very active. (Folio 2399.)

Mr. Smith, now in the mill and factory supply business at Cincinnati, and for fifteen years prior to 1900 Traveling Freight and Passenger Agent of the Union Pacific, traveling through Ohio, Indiana, Kentucky, part of Pennsylvania and West Virginia, soliciting business from shippers, testified that there was competition at that time between the

Southern Pacific and the Union Pacific, as well as the Santa Fe for transcontinental business; that the Southern Pacific agency at Cincinnati endeavored to move transcontinental business via New Orleans and El Paso, while he endeavored to route it via the Union Pacific. (Folio 2412.) The competition between the Southern Pacific agency trying to work the business via New Orleans, and his agency via Omaha was quite active. (Folio 2413.) He remembers a rate war on this class of business, when he had a minimum of 50 cents a hundred from Chicago or the Mississippi River to work on, covering business to San Francisco; that at that time everybody was out scrapping for business at any price they could get, and the Sunset Route participated in that war This was before the Interstate Commerce law was enacted. (Folios 2413-14.) When the two lines were in competition, they advertised to get passenger business. The Southern Pacific principally advertised through tourist sleeping cars from Cincinnati by way of New Orleans; the Union Pacific the same equipment from Chicago in connection with the Northwestern. (Folio 2416.) He also said, at Folio 2417, that he could not recall that the Southern Pacific advertised the Ogden Route, but remembered that they did advertise the Shasta Route and the route via New Orleans.

Mr. Blair, Secretary of the Niles Tool Works Co., manufacturing machine tools and heavy machinery at Hamilton, Ohio, shipping to all parts of the United States, testified that previous to the amalgamation of the agencies in Cincinnati, there was an active competition between the two agencies for Pacific Coast business; that Mr. Connor and his subordinates tried to route traffic by New Orleans and Mr. Welch, the Union Pacific agent, and his subordinates

by way of Omaha; that his company shipped both ways. (Folio 2421.)

Mr. Gothlin, Railroad Commissioner of Ohio, and for many years in the traffic business either with railroads or the National Cash Register Co., testified that he knew the Southern Pacific and Union Pacific representatives when they were separate, and was asked:

> "Q. What was the fact as to whether the Union Pacific and Southern Pacific were competing with each other for coast business prior to 1901?
>
> A. I never had any doubt as to that; that was always my impression judging from my interviews with their representatives.
>
> Q. Did the Union Pacific agents and the Southern Pacific agents both call on you and solicit business?
>
> A. Yes sir."

He stated that the Southern Pacific endeavor was to secure business by New Orleans and the Union Pacific by Omaha. He had previously stated that the bulk of the National Cash Register business to San Francisco moved by New Orleans, and was asked the reason for that. He said:

> "A. Well, there were several reasons. One was, in my experience, that we generally got better service for less than carload freight. Ours was less than carload freight. For a large part of the time there was a package car from Cincinnati through to San Francisco. I do not just recall how long that was on, but for quite a long time, which was an advantage for less than carload shipments.
>
> Q. Just explain what a package car is, Mr. Gothlin.
>
> A. The Southern Pacific, in connection with the Queen & Crescent, ran one or more cars daily,

loaded with less than carload freight through from Cincinnati to Frisco, via New Orleans. That was one of the arguments and a very good argument, used by the Southern Pacific for securing less than carload freight for San Francisco.

Q. How frequently did the National Cash Register Co. ship to San Francisco?

A. Practically daily. The shipments were of various sizes. Their shipments were not large in themselves, but in aggregate they amounted to quite a good deal.

Q. Were there any other reasons for giving the business to the Southern Pacific aside from the fact that they had this package car?

A. Yes sir. I was personally acquainted with Mr. Connor. I had known him for a number of years. Furthermore, he rendered myself and the company I was working for favors on several occasions, which were perfectly legitimate and yet they were favors which we recognized." (Folios 2431-2.)

Mr. Gothlin was formerly a representative of the Wisconsin Central in Ohio and Pennsylvania territory, and he gave instances of active competition on large shipments, as in Folios 2439-40 he said the Union Pacific and Southern Pacific agencies and his own agency in connection with the Northern Pacific were working for months endeavoring to route a lighthouse, which was a very large shipment, from Mt. Vernon to Astoria, which he secured. At Folio 2440 he spoke of a steel bridge shipped from Massillon, Ohio, to a point in Oregon south of Portland, and he stated that it was his impression that all the agencies were after that, and it was secured by the Louisville & Nashville and Southern Pacific.

On cross-examination defendants' counsel endeavored to develop that this was some point on the Southern Pacific

in Oregon, but he stated that the Northern Pacific took freight for points south of Portland in Oregon, based on the Portland rate plus an arbitrary. (Folio 2457.) This was, of course, a competition equally open to the Union Pacific. Again, on cross-examination, at Folio 2461, he was asked if Mr. Connor in soliciting traffic, if he was unable to get it by way of New Orleans, did not ask for it by way of El Paso or Ogden, and stated that he did not recall that he ever asked him for business by any other route than by New Orleans.

Mr. Rheinstrom, who shipped distilled liquors to California, and fruits from California to Cincinnati, testified that when the Union Pacific and Southern Pacific had separate soliciting agencies in Cincinnati, they were actively competing with each other. (Folio 2478.)

Mr. McGuffey, in the freight department of the Proctor & Gamble Co. at Cincinnati, and formerly in the general freight department of the Queen & Crescent, testified that before the consolidation of the agencies, the Union Pacific and Southern Pacific were actively competing with each other for California business; that occasionally shipments were secured by the Queen & Crescent and Southern Pacific for Portland. (Folio 2486.) He further testified on cross-examination, that his experience has been that the lines leading directly from Cincinnati do not solicit coast business with anything like the activity that the western lines do, and that by the western lines he meant the Santa Fe, the Union Pacific and the Southern Pacific. (Folio 2491.)

Mr. Shewalter, for many years in charge of the traffic of Mass, Foos & Co., manufacturers of windmills, iron

pumps and lawn mowers, at Springfield, Ohio, one of the principal manufacturers of goods of that class in the country, testified that the representatives of the Union Pacific and Southern Pacific agencies separately solicited his business before the agencies were consolidated, in competition with each other, and that he would say that the competition was quite active. (Folio 2499.) That the solicitation of the Southern Pacific was by way of New Orleans, and sometimes by El Paso, but he could not remember that they ever solicited by Ogden. (Folio 2501.)

Mr. Cory, in charge of the traffic of James Leffel & Co., Springfield, manufacturers of water wheels, steam engines, and boilers, in the water wheel department, probably as large as any concern in the United States, testified that Mr. Connor and his representatives and the Union Pacific and its representatives were actively competing with each other for business when the agencies were separate. (Folio 2503.) That Mr. Connor and his representatives never solicited shipments by way of Ogden. (Folio 2505.)

Mr. Marshall. Traffic Manager of the Pioneer Pole & Shaft Co., of Piqua, Ohio, the largest manufacturer of buggy poles and shafts in the country, transacting from 50% to 60% of the entire business in the country, testified that when the Southern Pacific and Union Pacific had separate agencies in Cincinnati, the Southern Pacific endeavored to route business by New Orleans, and the Union Pacific by way of Omaha, and the competition was active. (Folios 2507-8.)

Mr. Vosmer, who is connected with the Globe-Wernicke Co., manufacturers of sectional bookcases, sectional filing

cabinets, and general office equipment (being the largest of its kind in the world, as stated by Mr. Blum, another witness, at Folio 2513), testified that when the Union Pacific and Southern Pacific had separate soliciting agencies in Cincinnati, those agencies solicited the business of the Globe-Wernicke Co., in competition, Mr. Connor and his subordinates endeavoring to route the traffic to the coast always by way of New Orleans. (Folios 2517-18.)

Mr. Doyle, for sixteen years in charge of traffic of the Fay & Egan Co., one of the largest manufacturers of woodworking machinery for furniture factories, etc., in the world, and shipping to all parts of the country, testified that when the Union Pacific and Southern Pacific had separate agencies in Cincinnati, his traffic was solicited by them, the Southern Pacific endeavoring to route the traffic by the New Orleans route, and the Union Pacific by the Omaha, and that the competition was very active. (Folios 2525-6.) In correcting an inadvertent remark made on cross-examination, he said that Mr. Connor always tried to work the business by New Orleans. (Folio 2531.)

Mr. Pursel, in charge of the freight traffic of the Armdeler Wagon Works, Cincinnati, and previous to three years ago with the Frank J. Enger Carriage Co. of Cincinnati, testified that he knew the agents of the Southern Pacific and Union Pacific when the agencies were separate, and that in those days the two lines were competing for Pacific Coast business, and he would consider the competition active. (Folio 2538.) He further testified that the matter of equipment was of importance to shippers of vehicles, and that business was diverted from one line to another by reason of such line being able to furnish equipment superior

to the other, and that the Union Pacific was the first to have a large vehicle car, which resulted in taking business away from the other lines and giving it to them. (Folios 2538-2539.)

Mr. Berndt, Traffic Manager of the Andrew Jergens Co., manufacturers of toilet soaps, perfumes, talcum powders, Florida water, etc., a large concern in Cincinnati, testified that when the Union Pacific and Southern Pacific had separate agencies his business was solicited by them respectively in competition with each other. (Folio 2542.)

Mr. Freiberg, a distiller at Cincinnati, testified that the Union Pacific and Southern Pacific agencies were actively competing for business to the coast when they were separate, and that traffic moved by all routes to San Francisco, including the New Orleans route. (Folios 2548-9.)

Mr. Coakley, Division Freight Agent of the American Steel & Wire Co. at Cleveland, in charge of their traffic, and employed by that company since June, 1901, either at Cleveland or Pittsburg, previous to that with different railroad companies, including the Queen & Crescent, which worked with the Southern Pacific agency for transcontinental traffic, testified that when the Southern Pacific and Union Pacific had separate agencies in Pittsburg, they were competing with each other for transcontinental business, the Southern Pacific endeavoring to route its traffic by New Orleans or by El Paso, and the Union Pacific by way of Omaha, and that the competition between those agencies was active. (Folios 2554-5.)

Mr. Boltz, of Cleveland, Traffic Manager of the Na-

tional Petroleum Association for the last three years, and previous to seven years ago in the railroad service of various lines, including the Milwaukee & St. Paul for eleven years, from 1887 to 1898, and in 1899 becoming the General Agent at Cleveland of the Iowa Central, said that previous to the consolidation of the Southern Pacific and Union Pacific agencies he was acquainted with the gentlemen representing those respective lines in that territory, and named them. He testified, at Folio 2569:

> "Q. How was this competition between the Union Pacific and the Southern Pacific as to being active or otherwise?
>
> A. It was extremely active in those days.
>
> Q. In what way did their activity show itself?
>
> A. Well, the representatives of the Union and the Southern Pacific lines were actively engaged as competitors in securing as much business as possible for their respective lines, and the Union Pacific endeavored to handle their business in connection with the lines via the Missouri River gateways, whereas the Southern Pacific handled almost their entire business via the New Orleans gateway."

He further said that as agent of the Chicago, Milwaukee & St. Paul, he frequently ran up against competition of the Southern Pacific for that business. (Folio 2570.) At Folio 2578, on cross-examination, he testified that the Union Pacific was the natural connection of the Chicago, Milwaukee & St. Paul, and that he worked very closely with that line

Mr. Ryan, of Toledo, is in charge of the traffic of the National Supply Co., one of the largest manufacturers of oil and gas well supplies in the country, the business of which he describes as follows (Folio 2605):

"We manufacture oil and gas well supplies, except the pipe that produces the oil from the ground. The pipe, we are agents for the National Tube Co. But boilers, machinery, cordage, valves, and fitting we manufacture ourselves at our own factory, and ship from our own factory to our warehouses and stores in the Southern California oil fields. We have eight or nine warehouses in Southern California."

He also said they manufactured tanks. He knew the representatives of the Southern Pacific and Union Pacific in the Toledo district when they had separate representatives, and says they were competing with each other for coast business actively, the Southern Pacific endeavoring to route the coast traffic by New Orleans and the Sunset Route, and the Union Pacific via Omaha. (Folios 2606-7.)

Mr. Kleuter, of Toledo, in charge of the traffic department of the Gendron Wheel Co., a large concern shipping its product all over the world, testified that when the Southern Pacific and Union Pacific had separate commercial agencies in that field, both of those agencies solicited his traffic, the Southern Pacific endeavoring to route it via New Orleans, and the Union Pacific by the Missouri River. (Folio 2621.)

Mr. Rand, now employed in the Lake Shore local freight office at Cleveland, and in 1889 and 1890 freight solicitor in Cleveland for the Union Pacific, testified that at that time the Southern Pacific was endeavoring to work business by the New Orleans gateway, that the competition between the Union Pacific and Southern Pacific for California business was very active, and that the strongest competitor the Union Pacific had was the Southern Pacific. (Folio 2627.)

Mr. Longacre, Traffic Manager of the Atlantic Terminal Line, which is an association of several manufacturers whose freight business he handles at Cleveland, was in the railway service from 1895 to 1901, with the Erie Railroad, the last three years Division Freight Agent at Meadville, Pa. While connected with the Erie, he was familiar with the movement of transcontinental traffic. He testified that the Southern Pacific and the Union Pacific agencies out of Pittsburg were competing with each other very actively in his territory, the Southern Pacific endeavoring to move business via Cincinnati and New Orleans, and the Sunset Route and the Union Pacific by the Missouri River. (Folios 2634-5.)

Mr. Henderson, Traffic Manager for the last fifteen years of the White Sewing Machine Co., at Cleveland, shipping its product all over the world, testified that he remembered when the Union Pacific and Southern Pacific had separate agencies soliciting traffic in that territory; that the Southern Pacific agent endeavored to route traffic to the coast by New Orleans, and that he was successful to a certain extent in doing so. The Union Pacific endeavored to move traffic via Omaha, and the competition between the Union Pacific and the Southern Pacific for coast business was very active. (Folios 2638-2639.)

Mr. Rushforth, in charge of the traffic of the W. S. Tyler Co. manufacturing all kinds of wire screen, states that at the time the Union Pacific and Southern Pacific had separate agencies in the Cleveland territory, the Southern Pacific were trying to route the traffic by New Orleans and succeeded in routing business that way, and the Union Pacific by the Missouri River. (Folios 2645-6.)

Mr. Gordon, Traffic Manager of the Anderson Carriage Co. for the last seven years, previous to that contracting freight agent for the Michigan Central Railroad Co. in Detroit for several years, remembered when the Union Pacific and Southern Pacific had separate representatives in that territory, and gave their names. The Southern Pacific was endeavoring to route traffic to the coast by New Orleans, and the Union Pacific by Omaha. (Folios 2654-5.) This shows the intensity of this competition, as the Southern Pacific was in the field as far north as Detroit, endeavoring to take traffic down by New Orleans and to the Pacific Coast.

Mr. Evans, now Traffic Manager of the Sherwin & Williams Co., manufacturers of paints, varnish and linseed oil at Cleveland, formerly in the transportation service in that city, testified to the names of the representatives of the Union Pacific and Southern Pacific when they were separately represented in Cleveland, and stated that in those days the Southern Pacific endeavored to route their traffic to the coast by way of New Orleans, and the Union Pacific by the Missouri River. (Folio 2661.)

Mr. Hart, Traffic Manager of the Gresselli Chemical Co., chemists, at Cleveland, and shipping to all points of the United States, with plants at Cleveland, Chicago, Cordaville, N. Y., Birmingham, Beaver Falls, Titusville and Park City, testified that they shipped mostly to the Pacific Coast from Chicago, also occasional coast shipments from Cleveland; that when the Union Pacific and Southern Pacific had separate agencies in the Cleveland territory, the Southern Pacific endeavored to route the business through New Orleans, and the Union Pacific through Omaha to Ogden.

and in those days his traffic moved both ways, about evenly divided. (Folios 2666-7.)

Mr. Wilkison, Treasurer of the Chandler & Price Co., of Cleveland, manufacturing printing presses and printing machinery, shipping their product all over the world, recalled that when the Southern Pacific and Union Pacific had separate agents in that territory who called on him for business, that the Southern Pacific agency endeavored to route traffic to the coast via New Orleans, and the Union Pacific by Omaha. (Folios 2672-3.)

The route from Chicago to California by way of New Orleans is a very roundabout route, and the fact that any traffic moved by that route or was competed for by that route only emphasizes the strenuous character of the competition that formerly existed between the Southern Pacific and the Union Pacific. This strife for business between those systems permeated all their agency force to such an extent that supreme efforts were made by the Southern Pacific to move business even by a roundabout route, in order to get the haul and keep it away from the Union Pacific. When it was not possible to get the business by New Orleans, their next effort was to get it by El Paso.

Mr. Wentz, Commercial Agent of the Rock Island in Chicago for fifteen years, up to 1908, in close contact with the traffic situation there, testified that the Southern Pacific by way of New Orleans reached Chicago over the Illinois Central, and that route was actively worked for business both ways, and he felt it in his business as the representative of the Rock Island. (Folio 2833.)

He again testified:

"Q. Do you have any recollection of a fast freight train run by the Illinois Central to New Orleans on which coast business moved?

A. Why, I remember that in the soliciting of business they used that as an inducement to ship that way. I forget now whether it was the Union Pacific solicitors that especially mentioned that, or the Illinois Central.

Q. You mean the Southern Pacific?

A. I mean the Southern Pacific, yes sir.

* * * * * *

Q. What class of commodities moved to the coast by these different routes from Chicago territory? All classes?

A. All classes I should say. I remember especially one time some large shipments of furniture that were moving, and if I remember right, we lost those shipments or some of them. Some furniture shipments I recall one of my solicitors reporting to me that he could not get; they were pledged to the Southern Pacific." (Folio 2835.)

On cross-examination defendants' counsel secured the following information (Folios 2842-3):

"Q. Well, isn't it true that you never knew any solicitation by the Southern Pacific in this territory by way of New Orleans? I am not asking whether they had refused business that way, but isn't it true that they did not solicit it that way?

A. I was under the impression that they did solicit it. That is my recollection.

* * * * * *

Q. Whom do you recall as soliciting from this territory by way of New Orleans?

A. The Southern Pacific representatives.

Q. Who?

A. Mr. Niemyer and his assistants.
Q. As soliciting by way of New Orleans?
A. I think they were."

He further testified that the Rio Grande handled business in connection with the Rock Island and the Shasta Route to Portland

"Q. Were the Southern Pacific representatives here in the field for Portland endeavoring to secure the routing of business by the Shasta Route in connection with the lines leading east from Ogden?
A. Yes, sir. That is my recollection." (Folios 2846-7.)

And again he gave the following testimony at Folio 2849:

"Q. Judge Lovett has asked you whether the Pacific coast business that was solicited by way of New Orleans by the Southern Pacific was not destined to Los Angeles. Was the Union Pacific soliciting business at Los Angeles?
A. Yes sir.
Q. Actively, weren't they?
A. Oh yes, they had a route to Los Angeles by way of Sacramento." (Folio 2849.)

Mr. Morse, now in private business at Chicago, formerly in the railroad service with the Burlington, from 1870 to 1877, at Omaha as General Agent, then ten years with the Union Pacific at Chicago and Omaha, after that with the Missouri Pacific up to 1906, gave a list of the various officials representing the Southern Pacific and Union Pacific in Chicago at different times, and then testified (Folio 2857):

"Q. During the days when you were familiar with the conditions here, previous to the time the

two offices were united—the Southern Pacific and the Union Pacific—which way was the Southern Pacific working its coast business, as far as it could?

A. By way of El Paso.

Q. Did you know of any business being worked by the Southern Pacific by way of New Orleans?

A. Yes sir.

Q. When was that?

A. That was almost from my first coming here for the Missouri Pacific many years ago."

He then explained that when he spoke of working by way of El Paso he treated that as the converging point, meaning by way of New Orleans, or any other junction points between El Paso and New Orleans, but that they worked the southern route to the coast, and that they worked their business by way of New Orleans with the Illinois Central. He further testified, at Folio 2858:

"Q. Was the solicitation of business here as between the Union Pacific agency on the one hand, and the Southern Pacific on the other, an active solicitation?

A. Yes sir.

Q. Active competition?

A. Yes sir.

Q. And did that continue up to the time of the amalgamation of the offices?

A. Yes sir."

On cross-examination it developed that his best opportunity for observing their relations was after 1887, when he was moving coast business over the Missouri Pacific, soliciting freight for California, both by way of Ogden and El Paso. He then testified (Folios 2861-2):

"Q. And did I understand you to testify that the Southern Pacific prior to 1901 solicited business by way of New Orleans rather than by way of El Paso or Ogden from this territory?

A. Yes sir.

Q. Is that of your own knowledge, Mr. Morse, or is it an impression that you have?

A. My own knowledge.

Q. Your own knowledge. Who solicited it?

A. Through Mr. Niemyer and his agency; we were co-operating with them and were doing business with them.

Q. Moving it by way of New Orleans?

A. By way of Texarkana and El Paso.

* * * * *

Q. Well, I understood you to testify in answer to Mr. Severance that when you said El Paso you meant New Orleans?

A. Well, when I spoke of El Paso, I spoke of El Paso as the converging point. The Illinois Central worked their business for the coast by way of New Orleans, but we had no connection at New Orleans at that time.

Q. All of your business for the coast was worked by way of El Paso or by way of Denver?

Q. By way of Texarkana and El Paso, or by way of Pueblo and Ogden.

Q. And you worked with Mr. Niemyer for California business by way of El Paso and Pueblo?

A. No, not with Mr. Niemyer by way of Pueblo. With Mr. Niemyer by way of Texarkana and El Paso.

Q. You never worked with him by way of Pueblo?

* * * * *

A. No, he had no routes that way at that time.

Q. Hadn't he, from Ogden ?

A. Business wasn't solicited that way by his agency."

It appeared on re-direct examination that Mr. Morse was, from 1880 to 1887, the General Passenger Agent of the Union Pacific at Omaha, and he testified as follows, at Folio 2871:

"Q. Now, take passenger traffic moving to California points from the east, from New York and the central territory, Cincinnati and that region, was there any competition between the New Orleans route and these routes through here at that time?

A. Oh yes, there was.

Q. On passenger business?

A. Yes, sir.

Q. That is, between the New Orleans route on the one hand, and the Union Pacific and Santa Fe on the other?

A. Yes sir."

On re-cross-examination, he explained in answer to counsel for the defendants:

"A. The Southern Pacific, by way of New Orleans, solicited business at eastern points by way of New Orleans, and at that time the Galveston, Harrisburg and San Antonio, and the Southern Pacific at El Paso. I do not know that they were consolidated at that time, but they solicited passenger business in the east at that time, and obtained a large amount of business, and especially the emigrant business.

Q. When was that?

A. That was in 1883 and 1884 and subsequently.

Q. 1883 and 1884 and subsequently. And what was the competing business that you spoke of then —the Union Pacific competing with that?

A. The Union Pacific, and at that time, the Central Pacific.

* * * * *

Q. Where was that business going to—San Francisco or Southern California?

A. Well, to various points in California. We were all trying to populate California, and took it to all points." (Folios 2872-3.)

Mr. Philipp, who in 1891 represented the Union Pacific Railroad in Milwaukee, testified that even from that point some traffic moved to the coast over the Illinois Central by way of New Orleans, also considerable freight moved by El Paso, and that it was solicited. He also knew of some shipments moving to Portland by the Shasta Route through Ogden, and also through El Paso, although it was a round-about route. (Folios 2906-7.)

On cross-examination it appeared that traffic moved by New Orleans in the winter, but through El Paso all the year around. This Milwaukee traffic was beer. (Folio 2912.)

Mr. Jilson, in charge of the traffic of the Emerson Manufacturing Co., of Rockford, Ill., a large concern manufacturing agricultural implements, testified that when the Union Pacific and Southern Pacific were separate their traffic to the coast was routed by the consignees in California, and that some of it moved by New Orleans by the Southern Pacific, and some of it by El Paso, the efforts of the Chicago agencies of the separate lines being to see that the routings specified on the coast were respected. (Folios 2915-18.)

Mr. Jones, wholesale groceryman in Peoria, shipped east from California points, such as San Francisco, Fresno and San Jose. Their houses in California from which they shipped were on the Southern Pacific lines, and the Southern Pacific agency endeavored to move the traffic by the southern gateway, some of it by New Orleans over the Illinois Central, and a considerable amount by El Paso. The

Union Pacific men solicited this business by the Missouri River route. (Folios 2921-23.)

Mr. Younge, of Peoria, from 1900 to 1903 Traffic Manager of the Acme Harvester Co., and previous to that in the office of the Santa Fe at Pekin, Ill., was acquainted with the separate soliciting agencies of the Union Pacific and Southern Pacific in Chicago when they existed, and the Southern Pacific agent endeavored to route the California traffic of the Acme Harvester Co., by El Paso or New Orleans, the Union Pacific men by Kansas City or Omaha. (Folios 2925-6.) Counsel for defendants succeeded in bringing out from this witness that they shipped to Portland by way of Sacramento. (Folio 2929.)

Mr. Bolger, Traffic Manager of the Michigan Stove Co. at Chicago for the last four years, previous to that in the service of various railroads, including a long service for the Illinois Central as chief rate clerk and chief billing clerk, testified that he remembered when the Southern Pacific and Union Pacific had separate agencies in Chicago, and the Southern Pacific was handling its Pacific Coast business via New Orleans Sunset Route in connection with the Illinois Central, and business was actively worked that way, the Union Pacific working business by its route. The competition for coast business between the Southern Pacific by New Orleans, and the Union Pacific by Omaha, was keen. (Folios 2931-2.) He also described in detail the Illinois Central fast manifest train, No. 51, which ran from Chicago to New Orleans, and from thence the cars went on to the Pacific Coast by the Southern Pacific. This train went out of Chicago every day, sometimes in several sections, and the cars for the coast went through without

unloading. The train had the right of way over everything except passenger trains. (Folios 2932-3.) At Folio 2940, on cross-examination, he was asked if the New Orleans route was the only way the Southern Pacific was soliciting California business, and replied:

> "A. It is the only way I know of.
> Q. Didn't they try to get it by way of El Paso?
> A. I don't remember a car moving that way.
> Q. I am asking you about the solicitation. Didn't they attempt to solicit it by way of El Paso?
> A. The only time I would see their men would be to get the volume of business moving via New Orleans." (Folio 2940.)

Again, in response to counsel for defendants, Mr. Bolger testified as to the Southern Pacific solicitors coming to him at Fordham Yards in Chicago, and asking for any unrouted business coming in by the Nickel Plate or the Belt Line by way of New Orleans, and counsel for the defendants then secured the following very significant testimony, (Folio 2951):

> "Q. Now mind you, I am not asking about cases where they worked with the Illinois Central agent to help him control business that he had secured, but business where they solicited independently of the shipper.
> A. Yes, I would call that soliciting both from shippers and railroad men.
> Q. You would call that soliciting both from shippers and from railroad men?
> A. Yes. And then there were industries on the Belt, close, that I knew they were going to for Southern Pacific.
> Q. Going to industries located on what?
> A. On the Belt railway of Chicago.
> Q. And soliciting from them?

A. Yes sir.

Q. For California by way of New Orleans?

A. Yes, sir.

Q. Do you know any of those shippers or industries?

A. I can't recall now, because they were scattered from Burnside to Stockyards."

On re-direct examination (Folio 2952), he testified:

"Q. I believe you stated in answer to Judge Lovett, in his endeavor to accentuate your testimony in this regard, that you were acquainted with a good many shippers in the town and the representatives of shippers, did you not?

A. Yes sir.

Q. And you were familiar with the movement of traffic at that time, it was part of your business to keep track of it?

A. Yes, that was.

Q. And from your general knowledge of the situation and from statements made to you by representatives of shippers and by shippers, you know that the Southern Pacific was endeavoring to work coast business by New Orleans at that time?

A. Yes sir. That was, of course, Illinois Central and Southern Pacific."

Mr. Montgomery, Traffic Manager of the International Harvester Co. since it was organized in 1902, previous to that with the McCormick Harvester Machine Co., testified that he was acquainted with the Union Pacific and Southern Pacific when they had separate soliciting agencies in Chicago. Mr. Niemyer, the Southern Pacific agent, tried to route his traffic to the coast as a general thing, by the long haul through the Texas gateways. The Southern Pacific might get the traffic at a number of points in Texas; the Houston & Texas Central junctions with the Santa Fe;

the Rock Island-Frisco, Fort Worth, Dallas, Sherman, and then further down the state, and at some of the other crossings. The Union Pacific was soliciting business through Omaha and Kansas City. (Folio 2955-6.) At Folio 2964, Mr. Montgomery testified:

> "Q. Before the amalgamation of these agencies when Mr. Knight represented the Union Pacific and Mr. Niemyer represented the Southern Pacific, what would you say as to whether those two agencies were competing with each other for coast business?
>
> A. I should think so, yes. They did, I should say positively."

Mr. Bell, Traffic Manager of the Crane Co., manufacturers of steam fitting goods, fittings, valves, iron and brass and also jobbers, dealers in plumbing and heating goods, the largest concern in the country manufacturing these steam fitting materials, shipped to the Pacific coast from Chicago, Pittsburg, Cincinnati and Bridgeport. He stated that he knew the agents of the Southern Pacific and Union Pacific in Chicago when they were separate, and the Southern Pacific agent endeavored to route the business from Cincinnati and Pittsburg by New Orleans via the Southern Pacific, and the Union Pacific agent through the Missouri River route, and that that solicitation was active on the part of both agencies. (Folio 2969.) As to business originating on the Atlantic seaboard, the Union Pacific organization always solicited that traffic, and Mr. Niemyer, representing the Southern Pacific solicited it by way of the Morgan line and the Sunset Route of the Southern Pacific. (Folio 2973.)

On cross-examination he says that the traffic still moves from Pittsburg, Cincinnati and the east by way of New

Orleans, and a very little of the Chicago business by New Orleans. (Folio 2975.) Prior to the amalgamation Mr. Niemyer solicited business from Chicago territory to Portland via Ogden and the Shasta route. When the O. R. & N. was a part of the Union Pacific system, the Union Pacific agency solicited in connection with the Short Line and the O. R. & N. (Folio 2972.) On cross-examination he testified that some of their business moved to Portland by the Shasta Route in former days. (Folio 2977.)

Mr. Ginz, of South Bend, Indiana, formerly Traffic Manager of the South Bend Chilled Plow Co., a large manufacturer of plows, harrows and cultivators, selling in all parts of the country, testified that he remembered when the Southern Pacific and Union Pacific had separate soliciting representatives coming from Chicago; that the Southern Pacific representative endeavored to route his business to the coast via the Illinois Central to New Orleans, Southern Pacific from there to the coast, and the Union Pacific endeavored to route it over any of the lines from Chicago to the Union Pacific, and thence over that line to Ogden. He further testified as follows:

"Q. How energetically did these gentlemen work for that business? Was it an active competition for the business, or otherwise?

A. They were very anxious to get all they could.

Q. By those respective routes?

A. Yes sir.

Q. What means did they take to get that business?

A. They used every effort they could to get it.

Q. What efforts, in what way?

A. I don't remember just what he did say, but at one time they were willing to pay for it.

Q. Those were in the old wicked days, were they?

A. Yes sir.

Q. Outside of this time when they were willing to pay for it, what efforts did they make to get the business?

A. They used different arguments, as to the time they could make, and after that time that is about the only inducement they could offer for business."

Previous to 1901 they tried to divide their business equally between the Southern Pacific at New Orleans and the Santa Fe, and the Union Pacific at Ogden. (Folios 2084-5.) He further testified on cross-examination, as follows:

"Q. Did the Union Pacific and Southern Pacific men ever call on you together, Mr. Ginz?

A. I think not.

Q. Did the Southern Pacific ever call with any other agent, or always alone?

A. I think the Southern Pacific man usually came with the man representing the Illinois Central.

Q. Did he ever work with any of the lines leading westerly?

A. I do not remember that he did; but in calling on us there I think probably half the time that he came, he came with the Illinois Central man." (Folio 2087.)

He further explained on cross-examination, that he did not consider the intermediate lines with reference to California business, but divided it between the Union Pacific, Southern Pacific and Atchison. He testified:

"A. Because the Southern Pacific and the Union Pacific—that business was practically all we had

that they could handle. As to the other lines, the intermediate lines, there was a good deal of business outside of the coast business that they could get a haul on which the through lines running through to the coast could not haul.

Q And your purpose was to divide your business among all lines?

A. Yes, sir." (Folio 2991.)

Mr. Millhouse, of South Bend, manufacturer of asphalt roofing for eight years, for three years previously Traffic Manager for the Studebaker Manufacturing Co., and previous to that commercial agent for the Santa Fe Co. at Peoria, Ill., testified that when he was with the Santa Fe, his territory covered Northern Indiana and Northern Illinois, and that he was working coast business; that the Southern Pacific was represented in that territory, working coast business too, and that they endeavored to route the business by way of New Orleans. The Union Pacific was represented in the same territory trying to work the business via Omaha; that the traffic moving west which was the subject of the solicitation of the Santa Fe, the Southern Pacific and Union Pacific agencies, consisted of agricultural implements largely, and furniture. Also eastbound, canned goods, dried fruits, oranges and green fruits. (Folios 2992-3.) On cross-examination, counsel for defendants endeavored to bring out from him that the Southern Pacific and Union Pacific were working the Ogden route in competition with the Santa Fe; but on re-direct examination, he testified that it was the Union Pacific solicitor who was working business by that route, and the Southern Pacific solicitor by the Sunset Route; that he was working business for the Santa Fe route, and that all three were competing with each other for business both eastbound and westbound. (Folio 2995.)

Mr. Holderness, of Kenosha, Wis., shipping clerk of the Bain Wagon Co., remembers when the Union Pacific and Southern Pacific were separately represented. The Union Pacific representative called on him, soliciting business, and the Illinois Central representative solicited business for the coast by the New Orleans gateway in connection with the Southern Pacific. (Folios 2999-3000.)

On cross-examination he testified that some of the shipments went to California by way of New Orleans. Counsel for defendants questioned this, saying that he was informed that no rates ever applied that way, and in response to his question, Mr. Holderness said:

> "A. Well, previous to the merger, I say we have shipped that way." (Folios 3002-3.)

Mr. Knight, for many years in the railroad service, and from the first of December, 1888, until the first of September, 1901, General Agent of the Union Pacific at Chicago in charge of freight and passenger business, testified that his territory extended east as far as Erie, Pa., and generally to the east bank of the Mississippi River, and north to the north line of the United States above a line about through Indianapolis. He said that in the territory in Ohio and Indiana, he was endeavoring to send all the business he could to the coast by the Union Pacific, and then testified:

> "Q. And did you, in that territory, meet the representatives of the Southern Pacific?
>
> A. We were doing business in competition with the Southern Pacific, yes sir.
>
> Q. And who was the agent of the Southern Pacific who had charge of that territory?

A. Mr. Niemyer had charge of it, because the man at Cincinnati who nominally looked after that territory was under Mr. Niemyer's jurisdiction.

Q. Was the traffic from that territory to the coast substantial in amount?

A. Yes sir, it was quite substantial.

Q. Was the competition for it active or otherwise?

A. It was active." (Folios 3009-10.)

He then explained that as to the northern part of the territory the Southern Pacific worked more or less with the Union Pacific and the other lines, where the quick service was needed, but where it was a class of business that would stand longer service, they worked it by the southern gateway. (Folios 3010-11.) He further testified that the hop movement from Oregon points, as far as he was brought in contact with it, was by the O. R. & N. and the Short Line, and also by the Southern Pacific down to Sacramento, and thence east, the hops moving to Sacramento coming from Ogden east over the Union Pacific or the D. & R. G. (Folio 3014.) The more natural route for business from Chicago to the coast was by way of Ogden, and therefore it was, of course, the business of the Southern Pacific man not to offend the intermediate lines, and if they were caught moving a large traffic by way of New Orleans, they would apologize for it, as Mr. Knight said Mr. Niemyer did in case of a large movement of rails. (Folio 3022.) That, of course, in no way modifies the testimony of the great number of witnesses as to the effort of the Southern Pacific to move traffic by way of the south, where they could get it.

Mr. Persyn, manager of the shipping department of Sprague, Warner & Co., wholesale grocers in Chicago, one of the largest establishments in the United States, testified

that previous to the amalgamation of the two systems, Mr. Niemyer or his subordinates, solicited their orange shipments from California by way of New Orleans, claiming that the service was just as good as the Santa Fe, which line they were patronizing. This business was also solicited by the Union Pacific agency. (Folios 3085-6.)

On cross-examination it appeared that they at times moved canned goods from California to Memphis by way of the Southern Pacific and Illinois Central. (Folio 3090.) It will be recalled that Mr. Fish testified that business along the line of the Illinois Central was competitive business between the Union Pacific and Southern Pacific.

Mr. Cribben, of Cribben & Sexton Co., stove manufacturers of Chicago, in business for many years, testified that when the agencies were separate, he recalled solicitations of business by the Southern Pacific via New Orleans or Texas. The Union Pacific solicited by the other route. He remembers an occasion when Mr. Niemyer requested shipments to Portland by way of Sacramento. (Folio 3092.)

Mr. Barker, manager of the Chicago house of Jones & Laughlin Steel Co., Pittsburg, knew Mr. Knight and Mr. Niemyer when they represented the Union Pacific and Southern Pacific respectively in Chicago. They solicited his coast business, the Southern Pacific usually by way of El Paso and not by Ogden. (Folios 3114-15.)

Mr. Gallagher, contracting freight agent of the Soo Line and Canadian Pacific at Chicago, formerly chief clerk in the general freight office of the Union Pacific in Kansas City, testified that when the agencies of the Southern Pacific and Union Pacific were separate at Kansas City, traffic

moved over the Southern Pacific for California by way of their Texas junctions from Kansas City. It moved over the Frisco and the M. K. T. to Sherman and Dennison, which are junction points on the Southern Pacific, and are only about 600 miles from Kansas City. The Union Pacific were endeavoring to route the business via Ogden. (Folio 3120.) Mr. Gallagher testified to the fast train put on at one time for Portland business by way of Sacramento or Roseville Junction, and that there was competition between the Denver & Rio Grande, then working with the Oregon Short Line on the one hand, and the Union Pacific and Southern Pacific on the other. (Folio 3122.)

On cross-examination he testified that he understood the Southern Pacific were soliciting California business by way of the Texas junction at the time it had a separate agency in Kansas City. (Folio 3131.)

Mr. Richards, Traffic Manager of the American Radiator Co., and for twenty years previous to 1906 with the Illinois Central in different capacities, testified that when the Union Pacific and Southern Pacific were separate, traffic moved from Pittsburg territory, Ohio and Ohio River points, and in a small amount from Chicago to the Pacific Coast, by way of New Orleans, and during the winter months, there was a steady movement of beer from Milwaukee by that route. (Folio 3136.) He further testified that he remembered Train 51, and it ran to New Orleans in 51 hours, which was the reason it was called Train 51. This is the train that the witness Mr. Bolger spoke of, which carried a large amount of traffic. (Folio 3139.)

Mr. Wait, in charge of the freight department of Hibbard, Spencer & Bartlett Co., testified that business moved

to Portland over three different routes, first, the Ogden route and the O. R. & N., second, the Shasta route, third, the Northern Pacific and Great Northern routes, and the D. & R. G. handled some of this traffic. (Folio 3157.)

On cross-examination, he repeated that he made shipments to Portland by the Shasta Route. (Folio 3161.)

Mr. Hurlbut, Traffic Manager for the Wisconsin Pulp and Paper Mills, and formerly for many years in different capacities with the Illinois Central, from 1896 to 1900, General Freight Agent of the road, testified that some business moved from Chicago territory by the Illinois Central and Southern Pacific, but it was his recollection that there was no special effort to get that business because of the long route, but business from Cincinnati and Cleveland was solicited very strongly by his line, and they met the competition of the Missouri River gateway lines. (Folio 3173.)

Mr. Heinrichs, in charge of the traffic of P. Becker & Co., trunk and traveling bag manufacturers, shipped less than carload traffic by Illinois Central and Southern Pacific from Chicago. He testified that proper equipment was of great importance, and the road that could furnish him satisfactory equipment was apt to get the business. (Folio 3178); that when the Union Pacific and Southern Pacific had separate agencies, Mr. Niemyer solicited Portland business. (Folios 3181-2.) He moved business through the El Paso gateway and over the Shasta Route to Portland. (Folios 3187-8.)

Mr. Sage, in charge of the traffic of Fairbanks, Morse & Co., manufacturers and jobbers of gasoline engines, steam pumps, scales, windmills, etc., and formerly connected with

the Rock Island Railway in Chicago as freight solicitor, testified that he remembered at one time he had a route working business for Portland by way of the Rock Island, the D. & R. G. and the Southern Pacific. (Folios 3199-3200.) The testimony given by Mr. Stubbs, to which attention has been called in connection with the discussion of the Canadian Pacific differential, would apply to business in the interior with the same force and effect as the business from the seaboard.

Mr. Hastedt, now contracting freight agent of the Rock Island-Frisco line in Chicago, and who up to between three and four years ago always lived in St. Louis, serving in the office of the General Agent of the Union Pacific for eight years, previous to that with the Frisco in St. Louis, and who altogether has had about twenty-five years of railroad service in St. Louis, (Folios 3148-9), testified to the separate representation of the Southern Pacific and Union Pacific in St. Louis, and that the Southern Pacific worked very strongly for the El Paso route to the coast, and the Union Pacific were working business by the Missouri River gateway. (Folio 3150.)

Mr. Markham, after testifying to his long service with the Illinois Central, and that he remembered the acquisition of control by the Union Pacific of the Southern Pacific, testified as follows:

> "Q. Previous to that time, what was the attitude of the Union Pacific and the Southern Pacific toward each other, as to being competitors or otherwise, for transcontinental business?
>
> A. I should say they were competitors as all other independent lines were.

Q. For traffic originating in what territory were they competitors?

A. I should say on all traffic east of the Missouri River, and probably north of the Ohio. That is, I say in that territory it would be marked; not so marked, probably, in the territory south of the Ohio River and east of the Mississippi.

Q. For what transcontinental traffic were these lines competitors? How far north and how far south was the destination of this traffic on the Pacific Coast?

A. All the way from Portland to San Diego, I should think.

* * * * * *

Q. From your experience, which way did you find was the preferred route of the Southern Pacific from eastern territory, Atlantic seaboard territory, and say, Pittsburg, Cincinnati, and points there?

A. We found we could work it by the Southern Pacific better by New Orleans, that it was to the interest of the Illinois Central to take that business by the way of New Orleans, and they found the Southern Pacific very willing to aid them in all their traffic." (Folios 3681-2.)

He again testified, at Folio 3703:

"Q. Did traffic move east over the Southern Pacific from the Pacific coast by New Orleans and thence over the Illinois Central, when you were with that company?

A. Yes sir.

Q. What classes of traffic?

A. Fruit largely, in its season.

* * * * * *

Q. How far over the Illinois Central did that move? As far as Chicago?

A. I think we got some at Chicago; and a good deal of it would go to the eastern points via Cincinnati, Louisville, and those gateways."

Mr. Von Behren, manufacturer of vehicle wood stock, Evansville, Ind., who has been in business for thirty years, shipping his product all over the United States, testified that when the Union Pacific and Southern Pacific had separate soliciting agents, the Southern Pacific endeavored to route business to the coast by New Orleans, and that he frequently shipped by that route. The Union Pacific solicited the same business by Omaha, and he shipped that way. (Folios 3715-16.) He further stated that the Southern Pacific agent never mentioned Ogden to him or any route to the coast except New Orleans. (Folio 3720.)

Mr. Morrill, whom from 1887 to the end of 1893, was with the Southern Pacific or subsidiary lines at St. Louis, testified, (Folios 3723-4), that where the shipments were not controlled by some condition that forced them through the Missouri River, he endeavored to work his business by New Orleans, and if he could not get it by New Orleans, he had two or three routes through El Paso, or at La Grange, Texas, or Columbus, Texas. At times, where he was obliged to work with some other man and could not get a shipment by the south, he endeavored to route business by Ogden, but worked preferentially the other way. (Folio 3725.) It appeared that certain traffic located on industry tracks could not well be worked by New Orleans, but he was able to move traffic on the tracks of the Terminal Company and Belt Line by that route, and when he was working on traffic that was not on any private track, he endeavored to get the long haul by New Orleans. (Folio 3731.)

On re-direct examination, he testified at Folio 3734:

> "Q. If I understood you correctly, in answer to Judge Lovett, you said that that business was free to anybody who could get it, being on that ter-

minal line. You worked by way of New Orleans?
A. That was the unrouted business, yes sir."

At Folio 3735 he testified:

"Q. Was the Union Pacific agency, Mr. Aglar, soliciting business from that terminal line, too?
A. I imagine so, yes sir.
Q. And whatever business they secured they did not send by New Orleans, but by the Missouri River, isn't that true?
A. I would say so."
"Q. Where you found a shipment going to the Pacific coast that wasn't routed at all and you were able to get it, on the terminal line, then you sent it by New Orleans?
A. If I could control it, yes sir.
Q. Yes, if you could control it, and as to business that was where you could control it, you were competing with the Atchison and with the Union Pacific both, weren't you?
A. With all the other lines, naturally.
Q. You were competing with those two at least, weren't you?
A. Yes, sir." (Folios 3739-40.)

He answered a rather ambiguous question on re-cross examination, and to clear it up again, testified, (Folio 3741):

"Q. In the solicitation of business—independent, free business,—that could move any way and was not entangled in any of these ways you have stated you solicited that business by New Orleans, and the Union Pacific by their route? (Folio 3776.)
A. I solicited by New Orleans, yes sir.
Q. And they by their route?
A. Yes sir.
Q. And the Atchison by its route?
A. Yes sir."

Mr. Lincoln, Commissioner of the Merchants' Exchange Traffic Bureau, St. Louis, for many years in the employ of the Missouri Pacific, toward the last as General Freight Agent and Assistant Traffic Manager, testified that the Missouri Pacific had commercial agencies on the Pacific coast, and in all eastern points, and participated in Pacific coast business, and at Folio 3747 stated that their business reached San Francisco in connection with the Central Pacific, and Portland, Oregon, both by the Oregon Short Line and the Central Pacific, commonly known as the Shasta Route. He was also asked at Folios 3748-9, whether on business out of Pittsburg he met with the competition of the Sunset line of the Southern Pacific by New Orleans, and stated that he met it anywhere on and east of the Mississippi River, including St. Louis. Again, at Folio 3749:

> "Q. Did traffic move to the east from California by New Orleans as well as to the west?
>
> A. I would assume so, yes sir; for the territory, so far as it is controlled by the Southern Pacific Railway, their rails running to New Orleans. They would certainly solicit the business for the longest haul.
>
> Q. And into what territory did that traffic move from California by New Orleans?
>
> A. Why, it moved to all the territory east of the Mississippi River north of St. Louis, and business moved to Chicago that way.
>
> Q. So that movement was both ways?
>
> A. Both ways.
>
> Q. And the solicitation, or the effort to move it, so far as you observed it, was both ways?
>
> A. The effort would apply the same in each direction."

He further testified on cross-examination, Folio 3756, that prior to the amalgamation of the agencies, the Union

Pacific was actively soliciting California business by way of Ogden. And again on cross-examination, (Folio 3759):

> "Q. Did I understand you to testify that while you were connected with the Missouri Pacific you had moved business to Portland by way of Ogden and the Shasta Route of the Southern Pacific?
>
> A. Oh, yes, business has moved that way.
>
> * * * * * *
>
> Q. What was its character?
>
> A. I should say general merchandising business.
>
> Q. Was that the best route from this territory to Portland?
>
> A. I wouldn't go into the detail of answering that. I should have thought the Oregon Short Line was the better route; but of course, using the Oregon Short Line, the Missouri Pacific came in competition with the Union Pacific; and necessarily it worked, where it could not get business through the Ogden gateway, meeting the competition of the Union Pacific as a factor, we could get assistance from the Southern Pacific in the solicitation of business over their own rails."

On re-direct examination he testified:

> "Q. Judge Lovett just asked you, in directing your attention to the Portland business, whether the Union Pacific from the Missouri River to Ogden, was not competing with the Missouri Pacific and the Rio Grande, and you said yes, they were competitive lines.
>
> A. Yes, sir.
>
> A. Prior to the amalgamation the Southern Pacific was competing with the Short Line from Ogden to Portland likewise, wasn't it?
>
> A. It was." (Folio 3762.)

At Folio 3769, Mr. Lincoln testified that eastbound business from the coast was competed for by the different lines

east of Ogden, and also the Sunset Route of the Southern Pacific, which competed against all of them. On re-cross examination Mr. Lincoln testified at Folio 3776:

> "Q. In answer to questions by Mr. Severance, on your direct examination, you testified or answered affirmatively his question as to whether the Southern Pacific and the Oregon Short Line were not competing for Portland business, meaning, I suppose, business from Ogden?
>
> A. They were competing.
>
> Q. You said they were. Now what business were they competing for, Mr. Lincoln?
>
> A. Oh, they were competing for practically all the traffic that moved through the Ogden gateway. The Southern Pacific would compete as against the Oregon Short Line, and the Oregon Railroad & Navigation Co.
>
> Q. To Portland?
>
> A. To Portland.
>
> Q. Competing as between their connecting lines?
>
> A. The Southern Pacific on the one hand working with its connections; the Oregon Short Line with its connections.
>
> Q. The Missouri Pacific working with the Southern Pacific?
>
> A. The Missouri Pacific, until the Union Pacific influenced the movement of the business over the Oregon Short Line, could work with both. Thereafter it worked with the Southern Pacific, if it could not secure the business as against the Union Pacific and the Oregon Short Line."

Mr. West, Assistant General Freight Agent of the Missouri & Texas Ry. Co. at St. Louis, and who had been for twenty years with that company in different capacities at St. Louis and other points, testified that his road worked transcontinental business delivering the majority of the traffic to the Texas Pacific at Fort Worth, which company

in turn delivered to the Southern Pacific at El Paso, and in addition the M. K. & T. handled a great deal of business via San Antonio, delivering directly at that point to the Southern Pacific. He testified at Folio 3804, that when the Southern Pacific and Union Pacific were separately represented at St. Louis, the Southern Pacific solicited their business through New Orleans and through Texas junctions, preferably New Orleans. He further testified that the M. K. & T. handled business out of Chicago and Illinois points, and then said:

> "Q. Did you in your effort to route traffic to Texas junction points at any place meet with the competition of the Southern Pacific-New Orleans route?
>
> A. Oh, yes.
>
> Q. Whereabouts? In what territory?
>
> A. Oh, everywhere on and east of the Mississippi River.
>
> Q. And which way did the Union Pacific, when it was separate, endeavor to route its business from this locality?
>
> A. They worked their business through Omaha or Kansas City, and as far as our line was concerned, through Junction City, Kansas."

At Folio 3805 he said his line participated very largely at times in the movement of fruit to the east from California, receiving it from the Texas Pacific at Fort Worth. He explained that in addition to the good service there were greater possibilities of diversion in transit, if fruit was routed by the southern route, a great deal of fruit being sold while on the rail. When it is billed out from the points of origin, it is consigned to some particular place with the privilege of changing the destination en route, and the movement by the southern route enables the shippers to

reach a greater territory and a larger number of destinations by diversions, than when it is shipped through the northern gateways. On cross-examination Mr. West reaffirmed what he said about the competition with the New Orleans route, (Folio 3808):

> "Q. Did they (the Southern Pacific) ever place any obstacle in the way of your getting the business by way of El Paso?
>
> A. Yes, it was an obstacle, of course, for them to try to get it via New Orleans.
>
> Q. But did you ever know of them to try to get it by way of New Orleans when you had any sort of a call on it by way of El Paso?
>
> A. Well, when we were both soliciting the business—as frequently occurred, of course—the influence of the Southern Pacific representatives would be in favor of the New Orleans route on business originating in territory on and east of the Mississippi River."

He further testified, at Folio 3809, that he never knew of the Southern Pacific co-operating with the lines leading westerly to move business by way of Ogden.

Mr. Peachy, Traffic Manager of a small railroad near St. Louis, formerly for many years Assistant General Freight Agent of the Illinois Central at Chicago and St. Louis, testified that the Southern Pacific worked with the Illinois Central to secure business via New Orleans, and that previous to the time the Illinois Central was built into Omaha, his company met with the competition of the Union Pacific in that business, and also the Santa Fe. (Folios 3812-13.)

On cross-examination Mr. Peachy said that from Chicago territory the Southern Pacific, in addition to working

with the Illinois Central for traffic by way of New Orleans, also worked with the lines by Ogden, but on re-direct examination testified that previous to the amalgamation the Southern Pacific worked for the New Orleans route, and the Union Pacific exclusively by the Missouri River gateway, and the two lines were in active competition with each other in that way. (Folio 3818.) Mr. Peachy further developed the fact, at Folio 3819, that however the Southern Pacific may at times have waived its interest in the haul by the southern line and permitted the traffic to move by Ogden, the Union Pacific was always fighting for business through the Missouri River gateway, and therefore competitive with the Southern Pacific on business that the latter was trying to work by New Orleans.

Mr. Swingley, in the coal business at St. Louis, and up to recently the Traffic Manager of the St. Louis Car Co., manufacturers of street cars, automobiles, car trucks and railroad cars, testified that that company shipped its product to the Pacific Coast; that a great many street cars and interurban cars are so large that they require certain equipment and a certain large clearance; that they could not move by way of the Union Pacific and Ogden, but could move by New Orleans (Folios 3822-3.) This is one way in which competition between railroads is useful, to-wit: It induces the roads to vie with each other in furnishing satisfactory equipment, and have their permanent way in such condition that it can carry all classes of traffic.

Mr. Field, since 1905 Traffic Manager of the Wrought Iron Range Co. at St. Louis, the largest stove manufacturer in the United States, was for twelve years with the Illinois Central Railroad at St. Louis, during most of the

time as contracting freight agent, and was working Pacific Coast business by way of New Orleans. (Folio 3829.)

Mr. Hanson, Traffic Manager of the National Enameling & Stamping Co., manufacturers of sheet iron, galvanized iron, enamel ware, and similar products at St. Louis, since 1899, previous to that time for five years in the same position with the St. Louis Stamping Co., testified that he remembered that the Union Pacific and Southern Pacific agencies were separate, and that both the agencies solicited Pacific Coast business from him, and the Illinois Central at that time solicited Pacific Coast business via New Orleans, but has not done so for several years. (Folio 3835.)

Mr. Gesarich, with Moon Bros. Carriage Co., St. Louis, since 1892, the largest builders of high grade carriages in that city, testified, at Folio 3848, that when the Union Pacific and Southern Pacific had separate agencies, Mr. Aglar represented the Union Pacific, and Mr. Townsley represented the Southern Pacific. Those gentlemen solicited his business, the Southern Pacific representative endeavoring to route the business either by New Orleans or some Texas junction, and the Union Pacific by the Missouri River. He further testified (Folio 3853) that he had found in his experience that competition between lines had led to improvements in service, and that he was interested in the service.

Leslie Aglar, the son of the former Agent of the Union Pacific at St. Louis, who died some years ago, testified that he was employed in his father's office in 1899 to 1901. Their agency was soliciting coast business by way of Kansas City and Omaha, and that his father's agency covered

passenger as well as freight business, and that traffic was actively worked by the agency. (Folios 3859-60.)

Mr. Broderick, in the wire rope business at St. Louis, further developed the influence that equipment has in determining the route traffic may take. He testified that he had traffic routed by the consignees at San Francisco from St. Louis by the Illinois Central and Southern Pacific, and he was obliged to change the routing because the stuff required larger cars than the Illinois Central was able to furnish. The Wabash had built cars for the purpose of handling their traffic, and hence the business moved over that route. (Folios 3869-70.)

Mr. Feickert, Traffic Manager of the Lemp Brewing Company of St. Louis, testified that that company ships over all lines to the coast, naming the Iron Mountain, Texas Pacific and Southern Pacific route, the Santa Fe, the Rock Island, Colorado Midland, and Ogden route, Missouri Pacific, D. & R. G. via Ogden, the Missouri Pacific and the Wabash in connection with the Union Pacific, and on Portland business, Missouri Pacific, D. & R. G., or the Missouri Pacific, Wabash and Union Pacific, the C. B. & Q., in connection with the Northern Pacific, and the Great Northern, and also by the Canadian Pacific, which latter line was by Wabash, Iowa Central, and Minneapolis & St. Louis to St. Paul, thence by the Soo Line and Canadian Pacific route to Portland, shipments over it being at an equality of rates with the Union Pacific and the Great Northern and Northern Pacific. He states that these various lines successfully competed for business by their respective routes. (Folios 3874-5.) He further testified that when the Union Pacific and Southern Pacific were

separately represented at St. Louis, their coast business was solicited by these separate agencies. (Folio 3876.)

Mr. McCarthy, Traffic Manager of the Salt Lake Hardware Co., Salt Lake City, for the past six years, previous to that for many years in the railroad service, and who was contracting agent of the Union Pacific at Salt Lake from 1897 to 1901, testified, at Folio 3911, that at the time of a controversy between the Union Pacific and the Oregon Short Line, the competing lines into Portland were the Union Pacific and the Shasta Route on the one hand and the Short Line and the Rio Grande on the other. For the purposes of that competition, the Union Pacific ran a train from Omaha to Ogden in thirty-two hours, and that when he was in a hurry to move traffic into Salt Lake, he tried to get it on this Portland train. (Folios 3911-12.)

Mr. Babcock testified (Folios 3942 et seq.) that business moving from the east or from the central part of the United States passing through Ogden and Salt Lake City to Portland and Oregon points, and coming east from Portland and Oregon points, moved in connection with the Denver & Rio Grande for a long time via Ogden, Sacramento and the Shasta Route, and the Union Pacific business coming from the east or moving to the east from Oregon territory ordinarily moved through Granger and Pocatello by the Oregon Short Line. He further testified, at Folio 3944:

> "Q. Now what happened when the Oregon Short Line was in the hands of receivers?
>
> A. The Ogden gateway, so-called, was open to the Rio Grande line; then we were enabled to work Portland business by that route, which was the Short Line,

> although we did not desert the Southern Pacific route. They desired us to work with that road so far as we could; in fact, desired us to work altogether with it, but we worked with both lines."

On cross-examination, Mr. Babcock explained that the business that moved by the Denver & Rio Grande in connection with the Shasta Route to Portland, was not simply business originating in Salt Lake or Portland, or its vicinity, but it was through business with Colorado and beyond, chiefly from Chicago and the middle west, not Atlantic seaboard business, because the Southern Pacific took that by the Sunset Route, but this business from Chicago and the middle west came through Denver, and thence over the Denver & Rio Grande to Ogden, and by the Central Pacific and the Shasta Route to Portland. (Folio 3987.)

After repeating on cross-examination that at the time the Oregon Short Line road was open to the Rio Grande, and the latter worked business through Salt Lake and Portland by way of the Short Line, they did not desert the Southern Pacific altogether, but worked business both ways, counsel endeavored to show by Mr. Babcock that the reason they worked with the Short Line was that the Short Line was a shorter and better route, but he explained, at Folio 3989, that at the time of the break between the Union Pacific and the Short Line in the spring of 1897, the Short Line turned practically all of their business over to the Rio Grande road, which was the reason for working so strongly with that line, and he further testified, at the same folio, that he had never had any complaint of the service by the Shasta Route.

Mr. O'Reilly, for a long time in the employ of the Union Pacific at Omaha, Denver and Portland, testified that for

a time during the receivership, the Union Pacific had difficulty with the Short Line, and the divisions were taken out by Ogden. The Union Pacific worked its traffic into Portland through Ogden and Sacramento and the Shasta Route. The Short Line at that time worked with the Colorado lines. (Folios 4344-5.) During that period the Union Pacific and Shasta Route made a special effort in the matter of service. (Folio 4346.)

Mr. Burdick, who has been in the prune canning business at Portland since 1898, shipping all over the country, testified that the O. R. & N. and the Southern Pacific separately solicited his business previous to the merger, and if the Southern Pacific secured it and the destination was some place in the interior like Kansas City, they would move it by Sacramento and the Central Pacific, while, if it was going to the Atlantic seaboard, it moved Sunset. (Folio 4384.)

Mr. McCusker, for many years the contracting agent of the Southern Pacific at Portland, testified, at Folio 4487, with reference to the east bound movement of hops, that Cincinnati hops moved by the Sunset Route by New Orleans in connection with the Queen & Crescent or Louisville & Nashville, and that the traffic was solicited by his agency for that route, and that hops also moved to Cincinnati by the O. R. & N., the Short Line and the Union Pacific. Mr. McCusker also testified before the Interstate Commerce Commission in 1907, and his testimony is inserted in this record by consent at Folios 711 et seq. At Folio 712 he said:

"Q. Now during that time, Mr. McCusker, what were your duties?

A. As contracting freight agent, they were to solicit freight for the Southern Pacific both via the Sunset Gulf Line, the Sunset all rail and the Southern Pacific via Ogden and Sacramento.

Q. Now during those days prior to 1901, did you, in soliciting freight by way of Ogden, work in connection with any line leading east from Ogden other than the Union Pacific?

A. I worked with the Missouri Pacific, the Rock Island, Burlington and the Rio Grande.

Q. What road was your strongest competitor for business into Portland when you were representing the Southern Pacific alone?

A. We consider the Union Pacific and O. R. & N. the strongest competitors.

Q. What classes of goods did you solicit shipments of?

A. All classes of merchandise.

Q. And from what points?

A. All points east; the Atlantic seaboard, Chicago territory, Pittsburg territory, Missouri River territory.

Q. And in general who were the persons solicited for shipments, were they wholesale men here in Portland?

A. Wholesale men and retail men."

He further said that he solicited shipments out of Portland to points competitive with the Oregon Railroad & Navigation Co. At Folio 717 he said his sole duty was to get all the traffic he could over the rails of the Southern Pacific, and at Folio 718, he said Chicago business moved in those days, so far as the Southern Pacific share in it was concerned, via Ogden and Sacramento; that they would get the business at Ogden from the Rio Grande or the Union Pacific; that he was instructed to work with any lines to get the haul, and didn't care which way it moved so long as he got the haul from Ogden to Portland. He

further testified (Folio 726) that years ago there was competition in rates between the Southern Pacific and the O. R. & N and its eastern connections. At Folio 727 he spoke of the time when by the Sunset tariff into San Francisco and the combination on San Francisco to Portland, the Southern Pacific got an advantage of 10 cents a hundred on the published tariff; that they handled considerable business, both carload and less than carload on that rate. Then the tariffs were amended to correspond on all lines. At Folio 728 it appears that the competition continued by cutting rates up to 1901. That sort of competition was participated in by all the lines. At Folio 734 he was asked about the movement of Cincinnati common points business to Portland, and said it would move Queen & Crescent or Louisville & Nashville to New Orleans, then to Portland via Sunset all rail. That was the Southern Pacific solicitation. Some of it moved by way of Ogden when they could not get it the other way, and they would take the haul from Ogden by Sacramento to Portland. He said that considerable business came out that way; that it consisted of whisky, merchandise of different classes, canned goods, vehicles, and the general class of merchandise that would come from that particular territory.

Mr. McCusker further testified, at Folio 4490, about the time that trouble was on between the Union Pacific and the Short Line, as follows:

> "A. I don't recall how long ago that was, but there was a time for a few months, it may not have lasted more than two or three months, when the Union Pacific made extra time to Ogden, and the business that they controlled came by the Southern Pacific, Ogden and Sacramento, to Portland.
>
> Q. Do you remember what time that train made from Chicago to Portland?

A. Yes, it made exceedingly good time, for I recall one particular car that we put in here in seven days and a half from Chicago."

At Folio 4491 he was asked whether the solicitations of business by the Southern Pacific people applied from Pittsburg over the Sunset Route, and replied:

"No, I am not positive. I think there was some business for Pittsburg solicited via New Orleans.
Q. How about business from Pittsburg this way?
A. That came via Ogden as a rule.
Q. And the Shasta Route?
A. Yes, when I say Ogden, that was the gateway; Sacramento was not a gateway."

From this it clearly appears that the competition to interior points and from interior points to Portland by the Southern Pacific was active. After testifying to the change in the efforts to move hops since the merger, he further testified (Folio 4504) that Cincinnati is a pretty fair hop market, and that there used to be pretty active competition between the O. R. & N. and Southern Pacific for that traffic.

Mr. Newbegin, member of a firm having a large business in agricultural implements of all kinds, testified that previous to the amalgamation their traffic was routed by the Denver & Rio Grande and some connecting line to the east to Ogden, and then to Portland over the Southern Pacific by Sacramento. The traffic was solicited that way by the Southern Pacific, and originated in Missouri, Indiana, Illinois, New Jersey, Pennsylvania, Michigan, Minnesota, and different parts of the eastern states. (Folios 670-1.)

Mr. Honeyman, wholesale and retail hardware merchant, in business for many years in Portland, testified that their

goods originate in all the manufacturing centers in the country. Before the merger there was active competition between the soliciting agents of the Oregon Railroad & Navigation Co., the Northern Pacific, and the Southern Pacific, on shipments from the east, and the Southern Pacific solicitation included both the Sunset Route and the Sacramento route, and they shipped goods by way of Sacramento, and also over the Union Pacific, Short Line and O. R. & N. (Folio 684.) At Folio 689 he said that the Sunset Route used to make low rates into San Francisco, forced by steamer conditions to that point, and they used to take advantage of that by adding the steamer or rail local from San Francisco to Portland, which made a lower combination than the rate to Portland direct. He further testified, at Folio 691, that when all the roads into Portland were competing for business in the old days, nearly everything moved in at less than the published tariff on cut rates, each trying to get the business away from the other.

Mr. Ehrman, wholesale grocer, testified that the goods that he sells come from all points in the east, not only the seaboard, but middle states, and prior to the merger the solicitors of the Southern Pacific and O. R. & N. both solicited his business one against the other. (Folios 707-8.)

Mr. Wilde, formerly chief clerk of the general freight office of the Union Pacific at San Francisco, testified that the Illinois Central maintained an agency in San Francisco, soliciting business by way of New Orleans into the interior of the country in connection with the Southern Pacific. (Folio 4566.)

Mr. Elmore, the largest shipper of canned salmon on the Columbia River, testified that before the consolidation, his business was solicited by all of the transcontinental lines, to-wit, the Northern Pacific, the Great Northern, Southern Pacific and Union Pacific, and that the Southern Pacific shipments used to go by Sacramento to Ogden, and thence by the Rio Grande to Kansas City. They moved both ways, both by the Shasta Route and the Rio Grande, and the Union Pacific and the Short Line. (Folio 4601.)

Mr. Kollock, for sixteen years the agent of the Pennsylvania Railroad in Portland, testified to competition between the Southern Pacific and the O. R. & N. agents, previous to the merger, and that the Southern Pacific endeavored to route their traffic to the east either Sunset or by the Sacramento route; the O. R. & N. by their route. (Folio 4606.)

Mr. Crichton, of the Columbia River & Puget Sound Transportation Co., which company up to the merger interchanged business with the Southern Pacific, originating at, or destined to, points along the Columbia River, between Portland and Astoria in competition with the boats and rail lines of the O. R. & N., testified, at Folio 4611, that the salmon delivered to the Southern Pacific by his company was destined not only to points along the Atlantic seaboard, but to southern points like New Orleans, Memphis, also Cincinnati and Pittsburg.

Mr. Toll, for a number of years in the employ of the Southern Pacific, when he left in 1905 being chief clerk in the general freight office, testified, at Folio 4850, that the Southern Pacific business from the central states, such as Cincinnati and Pittsburg, and other points west of the

Atlantic seaboard, to some extent moved through New Orleans, some by El Paso, and some through Ogden in connection with the Denver and Rio Grande and the Union Pacific, and there was quite a large volume of business of all classes moving by New Orleans from Ohio and that region. Mr. Toll further testified that as to traffic moving to San Francisco from St. Louis, the Southern Pacific at San Francisco solicited the business by New Orleans, and the Union Pacific by Ogden, and that in his opinion the solicitation of these respective lines influenced the movement of traffic. (Folio 4860.) He further stated that business originating along the line of the Louisville & Nashville and the Queen & Crescent, was the subject of solicitation in San Francisco by the Southern Pacific agency, and the routing was in many instances controlled in San Francisco. (Folio 4861.)

Mr. Graham, formerly freight solicitor for the Southern Pacific at San Francisco,, after testifying to the solicitation of Atlantic seaboard traffic by the Sunset Gulf route, was asked, at Folios 4867-68, whether he solicited exclusively for that route, and he said that he did not, but that for Cincinnati and territory south of the Ohio River, he solicited Sunset all rail by New Orleans, and that they hauled whisky from Louisville manufacturers, also traffic from Detroit, and that the Union Pacific had a soliciting agency in San Francisco, and were actively soliciting the same class of traffic that they were trying to work by the Sunset Route. The Union Pacific had three or four men on the street.

Mr. Adams, now Traffic Manager of the Pioneer Fruit Co. at Sacramento, from 1891 until a year ago the Com-

mercial Agent for the Rock Island in San Francisco, stated that the Southern Pacific worked business south of the Ohio River and from Cincinnati, Louisville and similar points by New Orleans, and they also got some business from points north, although they were not as active in connection with it. (Folio 4872.)

The Union Pacific was very active in Chicago territory and all points east. They solicited Cincinnati business, but he did not believe they were getting a very large share of it. (Folio 4873.)

He further testified, at Folios 4876-7, that the Rock Island, the Union Pacific and other lines were competing with the Sunset Route by New Orleans, and the Sunset-Gulf Route. This competition included the Union Pacific and Southern Pacific, the Sunset-Gulf, Rock Island, and the Rio Grande, and that each one of the roads was a competitor of the other.

Mr. Loose, a very large shipper of dried fruits from San Jose, testified that when the Union Pacific and Southern Pacific were separate, the Southern Pacific endeavored to move its traffic to Pittsburg, Cincinnati and Louisville, by way of New Orleans; the Union Pacific by the Ogden gateway to all points east of the Missouri River. (Folio 4891.)

On cross-examination he testified that he had shipped dried fruit to Pittsburg previous to 1901, and was solicited by Southern Pacific solicitors with respect to those shipments by way of New Orleans, and not through any other gateway, and that he made shipments of considerable volume of dried fruit to that market. (Folio 4894.) He again stated, on cross-examination (Folios 4895-6), that there was a period when the Southern Pacific worked the Pitts-

burg territory by way of New Orleans, and that they would go up to Pittsburg over the Louisville & Nashville, or Queen & Crescent, or Illinois Central, and then over the Vandalia & Pennsylvania.

Mr. Clifford, now living at San Francisco, who was for a long time in the employ of the Union Pacific as General Agent at Cincinnati, General Agent at Butte, and General Agent at San Francisco, as well as in the general freight office at Omaha, testified that when he was in Cincinnati his territory covered the City of Cincinnati, part of Tennessee, Indiana as far north as and including Indianapolis, the gas belt, Muncie and Marion, and as far north in Ohio as Columbus and Cleveland and all of Kentucky east of the Louisville & Nashville Railroad, including Louisville; that he worked transcontinental traffic out of all that territory, both east bound and west bound. The traffic moving west to California points was general merchandise, such as buggies vehicles, machinery, whisky and tobacco; that he had under him five soliciting agents. The east bound traffic from California and Oregon points, consisted of dried fruit, canned goods, beans, and all commodities peculiar to the coast, including the movement of hops to Cincinnati from around Portland. (Folios 4898 to 4901.)

The Southern Pacific agency at Cincinnati at the time had covered about the same territory, with the possible exception of Tennessee, and endeavored to route transcontinental traffic by New Orleans. Mr. Clifford said he met the competition of Southern Pacific agents in Dayton, Springfield, Columbus, Indianapolis, therough the Miami Valley country, and the gas country, from which bottles, jars, and all kinds of glassware, moved to the coast; vehicles

moved from Columbus and from both Columbus and Springfield machinery was competitive; also manufactures out of Dayton. (Folios 4901-2.) He testified that years before when he was in the Union Pacific office at Omaha the Southern Pacific was routing its business, so far as they could control it, by way of New Orleans. (Folios 4904-5.)

On cross-examination he said that his service in this competitive territory in San Francisco, Cincinnati or the general offices at Omaha, covered about twenty-five years. (Folio 4911.)

Mr. Scott, of the Pacific Hardware & Steel Co., one of the principal concerns on the coast, testified (Folio 4920) that the goods they wholesaled came largely from the Pittsburg district and the seaboard, considerable from the middle west, Chicago district and that region, and as far west as St. Louis and Iowa; the great preponderance of it from Pittsburg or between Chicago, New York and the seaboard. When asked by what all rail routes his company has shipped, he replied:

"A. All the routes."

After stating that he had shipped lots of goods by the Union Pacific, he testified (Folio 4921):

"Q. Have you shipped from Pittsburg and Cincinnati and that vicinity by New Orleans also?

A. Yes sir.

Q. All rail?

A. All rail, yes sir.

Q. How many years ago did you make those shipments; has that been continued since you have been in the business, off and on, I mean?

A. Oh yes, more or less. At periods we have shipped a large quantity of goods over one route and then changed over to another."

Again, at Folios 4923-4, he testified as follows:

"Q. Previous to the time that the Southern Pacific and Union Pacific came under one domination, what was the attitude of the Southern Pacific people in the solicitation of freight, if you knew anything about it at that time?

A. Yes, I am somewhat familiar with it; the position of the Southern Pacific?

Q. Yes sir.

A. They were very anxious to get their business via that route, via New Orleans, and the Union Pacific was very anxious to get it by their route.

Q. Did you ever ship any goods from Chicago by way of New Orelans?

A. Yes sir.

Q. How did that move out of Chicago?

A. Illinois Central, as a rule, to New Orleans, and then from there by Sunset.

Q. How long ago was that?

A. Well, there never was any great tonnage moved that way, for the reason that we never bought a great tonnage in Chicago, and the products that moved that way were carloads of freight that came from Chicago territory, and almost any time when we were shipping by Sunset, we would ship cars over that route, a portion of them, not all."

Mr. Watkins, for forty-five years with W. W. Montague & Co., a large wholesale house dealing in stoves, ranges, tinware, plumbing goods, mantels, grates and tiling, at San Francisco, stated that their goods came from all points in the east—New York, Boston, Philadelphia, Pittsburg, Cincinnati, Chicago, Milwaukee and Louisville. After testifying that he shipped from Atlantic seaboard territory, both boat and rail and all rail, he further testified that a small portion of his traffic, such as sheet iron, moved by New Orleans from Pittsburg and Wheeling. (Folio 4948.)

Mr. Rulofson, from 1870 to 1904 connected with Baker & Hamilton, another large wholesale hardware house in San Francisco, distributing goods all over the Pacific Coast states and territories, and Hawaii, testified at Folios 5025-6:

> "Q. Previous to the union of the Union Pacific and the Southern Pacific, did any traffic move from Cincinnati and Pittsburg by New Orleans Southern Pacific, any of your traffic?
>
> A. Prior to 1901?
>
> Q. Yes.
>
> A. Yes sir.
>
> Q. What class of traffic?
>
> A. Heavy hardware, nails, and probably barbed wire. * * * I think there used to be a line called the Cannon Ball Line that shipped that way, and we used to ship some Queen & Crescent.
>
> Q. Queen & Crescent to New Orleans and Southern Pacific here?
>
> A. Yes sir."

Mr. Prentice, employed by the Southern Pacific Co. from 1878 to two and a half years ago, and now President of the Phoenix Desk & Chair Co. of San Francisco, testified that the Southern Pacific endeavored to secure the routing of business from Cincinnati by way of New Orleans, and a little business moved from Pittsburg; that the business moving from Cincinnati and vicinity embraced all classes. Mr. Prentice also spoke of the package car that Mr. Connor had out of Cincinnati. (Folio 5033.) At Folio 5040 Mr. Prentice stated that it was the practice when he found that traffic was moving from some of the eastern centers to the coast, to telegraph to the Southern Pacific representatives like Mr. Herring in Pittsburg, Mr. Niemyer in Chicago, and Mr. Connor in Cincinnati, giving information as to the name of the firm or corporation that con-

trolled the routing of such traffic, so that the eastern representatives could attend to the solicitation of this traffic.

Mr. Michaels, Vice-President of the Langley & Michaels Co., wholesale druggists, one of the oldest houses on the coast, it having been in existence since 1850, testified (Folio 5090) that they have shipped occasionally by New Orleans from Cincinnati.

Mr. Settle, Traffic Manager of the E. Clemens Horst Co., shipping hops from California, Oregon and British Columbia, including the Willamette Valley region, testified that they have shipped hops to St. Louis via Kansas City, and also have had cars go via New Orleans and the Illinois Central. They have also shipped hops to Cincinnati, which is a brewing town, by New Orleans and the Illinois Central, the Baltimore & Ohio Southwestern. He did not know about the solicitation of business, but he knew that hops moved by the Southern Pacific via Sacramento from the Willamette Valley previous to the amalgamation. (Folios 5094-5.)

Mr. Rosenberg, shipper of dried fruits, with his principal place of business in San Francisco, testified that he remembered the solicitation of traffic to the Atlantic seaboard by the Southern Pacific and Union Pacific previous to the time they came under one management, and said that the Southern Pacific solicited their business by the Sunset Route. He further testified (Folio 5125):

> "Q. Was that competition between these roads active or otherwise?
>
> A. Active, not so much on seaboard business as intermediate territory.

Q. What territory?
A. Chicago, Indiana, Ohio."

At Folio 5126, on cross-examination, he said, concerning these shipments to the interior:

> "Q. As to this so-called competition, you had in mind the Southern Pacific line by the south, and the line of which the Union Pacific is part, by the north? Is that the situation you had in mind?
> A. Yes sir."

Mr. Munroe, Freight Traffic Manager of the Union Pacific lines east of Green River, formerly of the whole Union Pacific system, in answer to counsel for defendants, gave certain reasons why the Union Pacific organization had never thought it was wise to work Union Pacific traffic to San Francisco by way of Portland, and said, at Folio 647, that to do so it would be necessary to have a differential to San Francisco, and they had never felt it wise to accord to San Francisco a lower rate than was given to Portland direct. He then made this significant statement:

> "We did not care to advocate what we thought an unnatural freight rate basis of adjustment by charging the Portland man for less service, more than we charged the San Francisco man for the greater when both competed more or less in the territory intermediate as between Portland on the north and San Francisco on the south."

That answer means this: That in the ultimate distribution of eastern freights to the consumer, the Portland jobber and the San Francisco jobber are competing in the same territory. The interest of the Union Pacific is to aid the Portland jobber in that competition, and in doing so to carry all the traffic possible from the east to Portland over

their own rails; the interest of the Southern Pacific being more strictly with San Francisco, is therefore entirely opposed to the interest of the Union Pacific, and the freight that the Southern Pacific brings into San Francisco to be in turn distributed by the San Francisco jobber, is competitive with the freight taken to Portland by the Union Pacific, for the reason advanced by Mr. Munroe.

Mr. Munroe further stated at Folios 660-1, that he realized that under what he called abnormal conditions, the Illinois Central and Southern Pacific by New Orleans, had taken business from Chicago.

He then testified:

"Q. What about the lines from Kansas City to El Paso?

A. The lines from El Paso are much more a competitor.

Q. They are competitive to the Union Pacific?

A. They are.

Q. Chicago traffic moves that way, doesn't it?

A. It does, and we recognize that competition as an active and controlling force.

Q. Then as to Chicago business, the Union Pacific on the one hand, and the lines made up from here to El Paso, and the Southern Pacific from there on, are competing lines?

A. They are.

Commissioner Clements: Isn't there some territory somewhere south of this where both of these lines would naturally be competing?

A. The line naturally falls about the Ohio River.

Commissioner Clements: Cincinnati is about on the dividing line?

* * * * * *

A. About on the dividing line.

By Mr. Kellogg: You call that a natural dividing line, do you?

A. I do.

Q. And business north of that line has at times moved via the El Paso gateway, and business south of that line via Ogden?

A. Occasionally.

Q. And Pittsburg would be pretty strongly competitive territory then, wouldn't it, as it is right on that line?

A. Pittsburg is very strongly competitive.

Q. As between the Southern Pacific and the Union Pacific?

A. As between all the gateways."

c. COMPETITION AS TO TRAFFIC BETWEEN THE ATLANTIC SEABOARD AND COLORADO AND UTAH COMMON POINTS.

A large traffic has always been competitive into and out of Utah and Colorado common points, between the Southern Pacific and Union Pacific, and their connections. This competition may be roughly divided into two classes; first, traffic moving from the Atlantic seaboard to Colorado and Utah common points by way of the Southern Pacific steamers to New Orleans or Galveston, thence by rail to Fort Worth over the Southern Pacific tracks, thence to Colorado over a connecting line, and from Colorado to Salt Lake City or Utah common points over the D. & R. G., the same traffic being solicited and moved in competition with the Union Pacific in connection with the Kanawha Dispatch, and other fast freight lines, so-called, operating in connection with the steamers from New York to Newport News or Norfolk. In addition to competition with the line formed by the Union Pacific and its connections through Norfolk and Newport News, over which traffic moved at the same differential below the all rail rate that was in effect by the Gulf Route, a great deal of traffic also moved from New York common points all rail over the Union Pacific and its connections, which was also competitive with the Gulf Route of the Southern Pacific. Some time after the acquisition of the control of the Southern Pacific by the Union Pacific, the traffic continued by boat to Galveston, Texas, and thence up into Colorado and Utah by rail, instead of moving to New Orleans and thence by rail. The same opportunities for competition still exist.

The second competition existing between the Atlantic seaboard and Utah common points is traffic moving easterly. A large traffic in wool was formerly fiercely competitive

from Utah common points to Boston, the great wool market in the country, the competition being between the Central Pacific line of the Southern Pacific, which took the traffic westerly to Sacramento from whence it moved by the Sunset Route to New York, or the Rio Grande working in connection with the Southern Pacific rail lines east of Fort Worth and their steamship line to New York, as against the Union Pacific and Oregon Short Line, and their connections, seeking to move the traffic easterly through the Missouri River gateways.

Mr. Stubbs, in his testimony before the Interstate Commerce Commission, which is copied into this record, testified at Folio 586, that a differential existed by the South Atlantic as well as the Gulf ports (the South Atlantic ports being the term usually employed in speaking of Newport News, Norfolk, Savannah and Charleston) through which ports traffic moves to the west from New York, boat and rail. We quote from Mr. Stubbs' testimony, (Folios 586-7):

> "Q. So that business by the Sunset Route is in competition with lines running west from New York and Pittsburg to the Colorado points?
>
> A. Yes, sir, the Union Pacific works business that way in connection with the Savannah route, taking it from the Savannah route from Kansas City.
>
> Q. And as to that business the Union Pacific does not have to have the Southern Pacific as a connection?
>
> A. No.
>
> Q. So that the Southern Pacific and Union Pacific are naturally competitive as to that business?
>
> A. Well, they as a matter of fact—the way the business moves you may say there is a measure of competition there but it would not necessarily fol-

low, because the Union Pacific can make a line via Galveston as well as the other.

Q. But it can also make a line via Kansas City and Council Bluffs?

A. It has a line that way.

Q. And using that line to Colorado points, it does compete with the Southern Pacific via New Orleans?

A. To-day, precisely as it always has done."

The all rail rates and the differential rates via the Gulf routes, the same applying by the South Atlantic ports between New York and Colorado common points, will be found on Complainants' Exhibits 81-C and 81-D, at pages 870 to 872. (These pages are not folioed.) Also in the rate cards introduced in connection with the testimony of Mr. McCarthy at Salt Lake City, Exhibit 151, Folios 3898 to 3900, and Exhibit 152, Folios 3904 to 3907; also Complainant's Exhibit 193, Folio 5582, and Exhibit 194, Folio 5585.

At Folio 5586 it was stipulated that the sea and rail rates to Utah common points through Norfolk, Virginia, Savannah and Brunswick, Georgia, and Charleston, South Carolina, are, and for at least fifteen years have been the same as through the Gulf ports.

On Complainant's Exhibit 201, Formulae 41 to 45, appearing at Folios 5644-5, there will be found the division of the through rate accruing to the various parts of the all rail and differential lines. From this it will be seen that on business moving through South Atlantic ports, the Union Pacific being the line from the Missouri River to Colorado, receives 48.79% of the through rate, and to Utah common

points it, of course, receives the additional haul from Colorado to Utah, which, as appears by Formula 45, is 62½ per cent of the current Missouri River-Utah common points rate.

On business from the Atlantic seaboard to Colorado via New Orleans, it appears by Formula 44 that the Southern Pacific would receive 58.2% of the through rate; on business moving through Galveston 36% from New York to Galveston, and 22.2% from thence to Fort Worth, if it moved over the Southern Pacific line. On Utah business the Southern Pacific received 37.92 per cent of the total through rate from New York to Utah common points. (Babcock Fol. 3953.) This latter rate was of course much higher than the Colorado rate so the actual revenue of the Southern Pacific was probably the same. On a large traffic these divisions clearly furnish a very substantial reason for active competition.

Mr. Morton testified with reference to this competition, at Folios 1371 to 1374. We quote from his testimony at Folio 1373:

> "Q. What was the nature of the competition that existed—say into Colorado common points between these different lines? How did they compete?
>
> A. Each tried to get the other's business.
>
> * * * * * *
>
> Q. You spoke of the Southern Pacific being both a competitor and a connection of the Union Pacific on transcontinental business. Now was it a connection as to Colorado common points business? They did not use the Southern Pacific line, did they, to get into Colorado common points?
>
> A. The Morgan line of steamers was sometimes used.

Q. No, I mean did the Union Pacific use the Southern Pacific in any way to get into Colorado?

A. No, I don't think they did.

Q. So that as to that business they were not connections but strictly competitors?

A. Competitors."

Counsel for defendants, appreciating the importance of this testimony, endeavored to show by Mr. Morton on cross-examination, that business taken to New Orleans or Galveston might move to Colorado points by way of Kansas City, and thence over the Union Pacific, but he was not very successful. We quote from Folio 1394:

"Q. Now that business from New Orleans or Galveston to Colorado points, might move very naturally to Kansas City, might it not, and then over the Union Pacific?

A. For Colorado.

Q. Yes.

A. That would be taking it out of the way.

Q. From New Orleans?

A. Well, not from New Orleans, from Galveston, yes, it could move that way. It could move from New Orleans to Kansas City and thence via the Union Pacific.

Q. You don't know whether it moved that way or not?

A. I could not tell whether any moved that way or not."

Mr. Hawley testified, at Folio 1416:

"Q. Now, Mr. Hawley, at the time you were agent for the Southern Pacific here at New York, were you working business into Colorado common points and Utah common points?

A. Yes, sir.

Q. And how did that traffic move?

A. Via the New Orleans gateway, the Morgan line.

Q. And from thence to Colorado by what route?

A. The Houston & Texas Central and the Colorado Southern, and at stated periods in connection with the Rock Island.

Q. The Houston & Texas Central delivered to whom?

A. The Southern Pacific.

Q. How far did that run?

A. From Houston to Fort Worth.

Q. How did you reach Houston from New Orleans?

A. Over the Morgan's Louisiana & Texas Railroad and steamship lines.

Q. Was that also a Southern Pacific line?

A. Yes, sir.

Q. Therefore, in competing for Colorado business and Utah business, you used the Morgan line to New Orleans and later to Galveston?

A. Well, to Algiers, which is opposite New Orleans.

Q. Then by the Morgan's Louisiana & Texas line, and the Houston & Texas Central?

A. Yes, sir.

Q. Both Southern Pacific lines as far as Fort Worth?

A. Yes.

Q. And then to Colorado and Utah by the lines leading to the northwest?

A. Yes."

At Folio 1417 Mr. Hawley testified:

"Q. As to that business into Colorado, were you competing with the Union Pacific?

A. Certainly.

Q. How was that?

A. Surely.

Q. And in reaching Colorado the Union Pacific did not use any portion of the Southern Pacific lines?

A. Reaching Colorado?

Q. Yes, they run over their own rails?

A. No, the Southern Pacific did not have any rails into Denver.

Q. Now as to Utah business, Utah common points, were you in competition with the Union Pacific as to them?

A. Yes.

* * * * * *

Q. Did any of your traffic into Utah common points, that was brought around through Texas move to Utah by the Denver & Rio Grande and the Rio Grande Western?

A. Oh, yes.

Q. Most of it, didn't it?

A. Yes, sir."

* * * * * *

"Q. Was the traffic from the east to Utah and Colorado common points of considerable volume?

A. Considerable, yes, sir." (Folio 1418.)

On cross-examination, counsel for the defendants endeavored to develop the fact that certain of this business moving to Colorado by the Morgan line and New Orleans, moved thence over the Texas & Pacific, which was not a Southern Pacific line.

Mr. Hawley said that that was not the fact, and testified:

"Q. Your recollection is that that business moved via the Southern Pacific lines—

A. Entirely so." (Folio 1429.)

Again, at Folio 1430:

"Q. Did any other line out of New Orleans than the Southern Pacific participate in that business?
A. No, sir."

He further testified on cross-examination, (Folio 1431):

Q. How did business to Utah points, which you testified to, by way of the Gulf, reach Utah? That is, over what lines from Denver or from New Orleans? Didn't it go over the Union Pacific?
A. Well, the Denver & Rio Grande, and we occasionally had divisions in the Union Pacific."

On re-direct examination he made the movement of this traffic to Colorado very clear, (Folio 1433):

"Q. So you moved it from New York to Algiers opposite New Orleans, thence by Southern Pacific rail lines to Fort Worth, and then turned it over to the line leading to Colorado?
A. Yes.
Q. And you did not move any of it to Galveston and turn any of it over to the other lines there?
A. We may have sent some freight by Galveston when we were running an irregular ship, delivering it to connecting lines at Galveston, but the running of ships to Galveston direct during that time or during the time I had charge of the traffic was only periodical; it was a very irregular service.
Q. So if there was anything of the kind, it was a very trifling amount, and you didn't put in through rates in connection with any line out of New Orleans except the Southern Pacific, spoken of?
A. That is the only line we were working for, yes."

At Folio 1435:

"Q. I think you testified to this before, I am not sure. Which way did most of the traffic move to

Utah common points that you got over that way? Over the Rio Grande or the Union Pacific?

A. I should say over the Rio Grande."

Mr. Throckmorton, being questioned with reference to the solicitation of traffic out of New York when he was with the Southern Pacific, testified, (Folio 1474):

"Q. Did you have to do with shipments to Colorado and Utah common points?

A. I did, yes, sir.

Q. What is the nature of the traffic that moves from New York to those places?

A. The same thing; generally dry goods, machinery and everything of that character.

Q. All classes?

A. All classes of goods, yes, sir.

Q. Is that quite a considerable traffic, or is it very light?

A. It used to be very spasmodic as I remember it, especially to Colorado.

Q. What about Utah?

A. Well, Utah was, I think, more steady than Colorado. Colorado, though, always used to slow up till about November or December, and then there would be a big rush of it, as I remember offhand.

Q. Take the year together in the aggregate, was it a large business?

A. Yes, sir, a pretty good business. We always carried some stuff out there."

On cross-examination, at Folio 1492, he testified that since the Galveston line was established, practically all of that traffic moved by Galveston, and if the Morgan line carried the traffic, it generally moved from Galveston by the Houston & Texas Central, which is a Southern Pacific line. If the Mallory Steamship Line took it, it would generally go over the Atchison. And he stated, as did Mr.

Morton, that it would be a roundabout way to take any of it through Kansas City.

Mr. Mesick, General Eastern Freight Agent of the Rock Island, testified to traffic moving by the Morgan Line to Galveston, thence by the Southern Pacific, Houston & Texas Central line to Fort Worth, thence into Colorado by the Rock Island, and that the Union Pacific was one of the Rock Island's competitors into Colorado common points, whether the traffic comes by the Morgan line or by Chicago. (Folio 1508.)

Mr. Smith, until recently General Agent of the Pennsylvania Railroad in New York, testified that the Pennsylvania line participated in the movement of traffic to Colorado common points all rail, and that business moved largely by these boats. (Folio 1522.) He further testified:

> "Q. Was that traffic to Colorado and Utah common points trifling in amount, or was it considerable in amount?
> A. Why, I never knew the figures, but it must have been important." (Folio 1523.)

Mr. Bogert, now the agent of the San Pedro road at Pittsburg, for about twenty-one years General Eastern Agent of the Alton at New York City, testified that the Southern Pacific boats took traffic out of New York for Colorado common points and Utah common points in connection with the rail lines, and that the Alton handled business into Colorado points in connection with the Union Pacific, and that both the Union Pacific and the Alton were actively soliciting that business. (Folio 2085.)

Mr. Murray, of the Aluminum Co. of America, with factories at various points in the country, including several in New York common points territory, testified that he had made shipments into Colorado common points by way of the Morgan Line and Galveston. (Folio 2261.)

Mr. McCarthy, Traffic Manager of the Salt Lake Hardware Co., and from 1897 until six years ago contracting freight agent of the Union Pacific and the Oregon Short Line at Salt Lake City, testified that previous to the merger, the Union Pacific and Southern Pacific and the Oregon Short Line had separate commercial agents in Salt Lake. He gave the names of the various agents, and then said, (Folio 3896):

> "Q. When you were at work for the Union Pacific, previous to the time that the control of the Southern Pacific was acquired by the Union Pacific in 1901, over what routes did you work traffic, so far as you could, from the Atlantic seaboard territory to Salt Lake?
>
> A. In all rail movement, that was a matter which was left to the choice of the consignee, in ocean and rail movement, the favorite line was the Kanawha Despatch.
>
> Q. Where does the Kanawha Despatch start and where does it end, so far as the Union Pacific is concerned?
>
> A. The business originates at New York and moves by steamer to Newport News; west, the route that we used was C. & O. and Big Four into Chicago, and there delivered to connections of the Union Pacific.
>
> Q. The connections of the Union Pacific, and delivered to the Union Pacific at Omaha?
>
> A. Yes, sir.
>
> * * * * * *

Q. At that time was the Southern Pacific engaged in soliciting shipments to Utah from Atlantic coast points?

A. Yes, sir, very actively.

Q. By what route?

A. By their Morgan Line by way of Galveston."

At Folio 3923, he corrected this statement, stating that he should have said Gulf ports, and that business also moved through New Orleans. At Folio 3897, he testified:

"Q. How did the traffic that the Southern Pacific was able to secure by the Morgan Line reach Salt Lake?

A. It moved north through Fort Worth, Colorado common points, up over the Colorado & Southern principally, I think, through Colorado common points, Rio Grande to Utah.

Q. Did the traffic that was secured that way, by the Morgan line, the Gulf Route, move over the Union Pacific?

A. No, sir.

Q. What was the state of affairs as between the Union Pacific agency and the Southern Pacific agency in those days as to competition for this traffic?

A. Oh, there was most intense rivalry for it."

At Folio 3902, after having identified the rate cards, Exhibit 151, heretofore referred to, which gave the rate that he mentioned in his testimony, he testified:

"Q. In soliciting business for the Union Pacific at that time from the seaboard, did you endeavor at any time (I mean previous to the consolidation) to work business by the Gulf Route?

A. No, sir.

Q. That route, you say, was in strenuous rivalry with you?

A. Yes, sir."

At Folio 3908 he testified that from his knowledge of the movement of freight, he would say that 70% of the traffic from Atlantic seaboard territory to Salt Lake moved by the water and rail lines previous to the amalgamation of the Southern Pacific and Union Pacific, at a conservative estimate, as against 30% moving all rail.

On cross-examination, at Folio 3919, he said that the connections of the Union Pacific, such as the Northwestern, the St. Paul and the Burlington, also solicited business by the Kanawha Dispatch, for Salt Lake City, and the Denver and Rio Grande got some of this business. At Folio 3920 he said he presumed that the Denver & Rio Grande worked as actively for that business as did the Union Pacific. At Folio 3921, he gave the names of the other part water and part rail lines between Salt Lake City and the Atlantic seaboard during that time, together with two that have since been established, one of which is the Central Savannah line, mentioned by Mr. Stubbs in his testimony, as operating in connection with the Union Pacific. On cross-examination, (Folio 3921) he said:

> "Q. Now you don't mean to be understood as testifying, do you, Mr. McCarthy, that during the time when you testified that this traffic was moving by way of Newport News, and when you were using this card introduced here as Exhibit 151, that the Union Pacific got none of that business by way of the Morgan Line?
>
> A. I never knew of a car moving via the Morgan Line in connection with the Union Pacific during my experience.
>
> Q. Never knew of it?
>
> A. No, sir.
>
> Q. Do you know why it didn't try to move it that way?

A. I think the Union Pacific naturally would want its long haul from the Missouri River in preference to taking the short haul from Denver.

Q. That you would understand to be the reason why the Union Pacific would not work with the Morgan Line?

A. I should think so.

Q. Don't lines sometimes take a shorter haul when they couldn't get the long one?

A. They have done it since the consolidation.

Q. Have they never done so before?

A. Not to my knowledge."

At Folio 3924 he was asked by what route the Morgan Line business now reaches Salt Lake, and answered:

"A. It moves via Galveston, Southern Pacific lines to Fort Worth, Fort Worth and Denver City and Colorado Southern. That which I moved has moved that way, and in connection with the Union Pacific principally.

Q. It has been moving that way right along, hasn't it, since 1901?

A. I think so. * * *

Q. And then that which the Union Pacific handled from the Atlantic seaboard by way of Newport News was carried to the Union Pacific at the Missouri River by its rail connections east?

A. Yes, sir.

Q. And it got the haul on it from the Missouri River to Salt Lake?

A. Yes, sir.

Q. And that which it gets now from the same territory comes to it by way of Denver, and it gets the haul from Denver to Salt Lake?

A. Moving via Gulf ports; yes, sir.

Q. And it also handles a good deal of business from the east which comes to it all rail from the Missouri River still, doesn't it?

A. I think so, yes, sir.

Q. Doesn't business move from the east through this territory by way of Savannah?

A. I understand it does, yes, sir."

It also appeared, at Folio 3926, that previous to the merger he was not advised as to whether the Union Pacific had any rates in connection with the Morgan Line by way of New Orleans.

Mr. Babcock, Traffic Manager of the Rio Grande Western from 1895 to July, 1901, previous to that General Freight Agent for the same company, and very familiar with the movement of traffic into Salt Lake City, testified (Folio 3942), after saying that he was familiar with the solicitation of business by the Union Pacific and Southern Pacific into Utah:

"Q. How was it as to the movement of Atlantic seaboard traffic? How was the business worked by the Union Pacific on the one hand and the Southern Pacific on the other, through their respective agencies, so far as they could handle it?

A. The Union Pacific so far as I knew, worked via the South Atlantic ports, and the Rio Grande worked in connection with the Morgan Line through New Orleans, and with the Morgan Line through Galveston.

Q. How was the competition for that business—active or otherwise?

A. Very active.

Q. What would you say, Mr. Babcock, as to the percentage of traffic reaching Salt Lake City from the Atlantic seaboard territory, that is, New York and common points territory between the all rail lines and the water and rail lines?

A. I never had exact figures upon it. I don't know that anybody ever did, but it was generally understood to be anywhere from 70% to 85%.

Q. By water and rail?
A. Yes, sir, that is, from the Atlantic seaboard territory."

At Folio 3953, Mr. Babcock gave the divisions of the Atlantic seaboard rate to Salt Lake by the Gulf Route, and by the South Atlantic ports routes. From this it appears that of the through rate on business moving by New Orleans, the Southern Pacific would receive 37.92%; the line to Colorado from Fort Worth 26.67%; and the Rio Grande system 35.41%. This was after the deduction of certain arbitraries for marine insurance. When traffic moved through the South Atlantic ports, he testified that the ocean and rail lines to the Mississippi River, were given 20.4% of the through rate; from the Mississippi River to the Missouri River by the Rio Grande route 17%, and the balance was subdivided; west of the Missouri River, Colorado 37.5%; and from Colorado to Utah 62.5%; that is 5/8 of the Missouri River rate accrued to the lines between Colorado and Utah, and 3/8 to the lines between Missouri River and Colorado. It appeared further (Folio 3954) that the Union Pacific allowed only 16% to the lines between the Mississippi and the Missouri Rivers, instead of 17% given by the Rio Grande. At Folios 3954-5, he gave very significant testimony illustrating the thoroughly antagonistic relations existing between the Southern Pacific and the Union Pacific at that time. The Rio Grande and the Union Pacific, of course, controlled the only routes into Utah. Mr. Babcock testified:

"Q. At the time you were working business with the Morgan and Mallory Lines (Gulf Route) did you ever have any conference with the Union Pacific officials with reference to getting a larger division of the rate allowed to the rail lines such as the

Union Pacific or the Rio Grande, as against the boat lines, such as the Morgan Line?

A. Why, Mr. J. A. Munroe was Freight Traffic Manager of the Union Pacific Railroad, and at various times suggested to me that while our lines were performing the same all rail service, whether the traffic moved all rail from New York, or whether it moved through the Atlantic or the Gulf ports, that we should have all rail revenue out of the traffic moving by the Gulf or Atlantic ports, and at these various times expressed the desire that I should join with him and the other lines in demanding that basis of division.

* * * * * *

Q. What attitude did your road take upon that proposition of Mr. Munroe?

A. Well, we never considered it favorably; we felt that it would have been an unfriendly act toward the Morgan Line and the Mallory Line, who had given us a very satisfactory amount of traffic, and we never took any action to that end."

Mr. Love, Traffic Manager of the Zion Cooperative Mercantile Institution, the largest establishment in Utah, handling all kinds of commodities, with a total rail tonnage of about sixteen thousand tons a year, receiving goods from all parts of the country, testified that their freight from the Atlantic seaboard reaches Salt Lake largely through the Gulf port lines, and further said:

"Q. Do you remember the time that the Union Pacific and the Southern Pacific had separate agencies here?

A. Yes, sir.

Q. Was your traffic solicited by those agencies?

A. It was.

Q. By what route did the Union Pacific solicit your traffic from the Atlantic seaboard?

A. They preferred the long haul route from the Missouri River by the Kanawha Despatch, the

Cumberland Gap Despatch, and I think there was one other water line operating at that time—I just don't recall the name. I think there were three water lines through the Atlantic portal routes at that time, which they used, but the Kanawha Despatch was the preferred line.

Q. Which way did the Southern Pacific agency solicit your traffic from the Atlantic seaboard?

A. By the Morgan line.

Q. In connection with what rail lines did that traffic move?

A. Well, our business was just a little bit different from that of other people. We always preferred to control the routing west of the Colorado junctions for local reasons, and we sometimes used one route, and sometimes the other, but as a rule, we used the Rio Grande route from west of Denver." (Folio 4045.)

He was further asked what percentage of the traffic of freight from New York and New York common points moved to Salt Lake boat and rail, and stated that he could only judge by the tonnage of his own establishment; that they never used the all rail lines unless on some shipments that they were in a particular hurry for, and that fully 90% of the seaboard stuff moves boat and rail. At Folio 4047, Mr. Love testified:

"Q. How was that competition between the Union Pacific and the Southern Pacific agencies here for that business? Was it an active competition or otherwise?

A. It was keen."

On cross-examination, he testified that for about a year past they had been shipping by the Kanawha Despatch and the Missouri Pacific out of St. Louis; prior to that time they used the Mallory Line and the Morgan Line largely by Galveston, but the service became very bad that way, so they had taken up the Kanawha Despatch; that he

had been using the Gulf Line since about 1892 or 1893, the traffic moved to Galveston or New Orleans from New York, and when out of New Orleans, by the Southern Pacific connections and Houston and Texas Central, and by way of Denver. He then testified, (Folio 4111):

> "Q. Did any of it come through Kansas City?
> A. No, sir.
> Q. Practically all of it that came through the Gulf, then, came by way of Denver?
> A. We did use another route at one time. We used the route via the Mallory Line to Galveston, M. K. & T. to Junction City, and then the Union Pacific in here.
> Q. Did you use that a good deal?
> A. No, not a great deal; we used that during war days, during railroad rate war days.
> Q. When was that?
> A. In the early nineties—or the late nineties, I mean to say. They were cutting rates a great deal."

He further repeated that the business by the Morgan Line and the Mallory Line came by Denver, and while they had shipped over the Union Pacific, they used the Rio Grande very much more from Denver, and never attempted to equalize the business between the lines, unless for some local conditions affecting them. (Folios 4111-12.)

It further developed on cross-examination that a through car had been established from Newport News to Salt Lake; that the Kanawha Despatch had daily boats out of New York, Philadelphia and Baltimore to Newport News; and they ran this Salt Lake car out of the latter point if they had 8,000 pounds of package business, commonly called shoestring business. This car comes into Salt Lake City about tri-weekly. (Folio 4113.) He reiterated on re-direct examination, that the Union Pacific, while soliciting boat and rail business, worked with the Kanawha Despatch, and

tried to route business that way, and that his business was solicited by Mr. McCarthy, when he was with the Union Pacific. (Folios 4116-17.)

Mr. Oglesby, at one time employed at Salt Lake with the Union Pacific, and from 1888 to 1907, the representative of the Rock Island there, testified to the separate agencies formerly maintained by the Union Pacific and Southern Pacific at Salt Lake, and at Folio 4167, stated that he knew Mr. McCarthy well when he worked for the Union Pacific, and knew Mr. Gray who represented the Southern Pacific, and that the competition between them for Atlantic coast business was very active, and that the Rock Island participated in that competition.

Mr. Stubbs when testifying for the defendants corroborated the testimony of the complainant, and stated that the Salt Lake agency of the Southern Pacific was seeking the business into Utah by the Gulf route, and the Union Pacific agency was seeking the business by that route. (Folio 6612.)

On being recalled to the stand, he advanced the theory (contradicting his direct statement at Fols. 586-7), apparently in the nature of a legal opinion, that there could not be competition between the Southern Pacific and the Union Pacific on Colorado and Utah business out of New York, because the Southern Pacific was the initial carrier, the Union Pacific the delivering carrier, and hence the competition would be between the Southern Pacific and the lines east of the Missouri River and between the Union Pacific and the connections of the Southern Pacific west and north of Fort Worth, and he said, at Folio 6695, when his attention was called to Mr. Hawley's testimony as to

competition between the Southern Pacific and Union Pacific for this business:

> "I do not think he properly conceived what the term 'competition' in the sense that we are using it here, meant. * * * I mean in the sense that the law uses it, sir."

When he was reminded that Mr. Hawley was a man of such intelligence that the Southern Pacific had retained him in charge of its business in New York for nearly twenty years, he gave him the following certificate of character:

> "Now as to Mr. Hawley,—he is a very able man, a very competent man, and he knows his business as well as any man in the country."

Then follows this testimony:

> "Q. Is it not a fact, Mr. Stubbs, that your agency here, under the leadership of Mr. Hawley, was actively soliciting business to Colorado by the Gulf Route?
>
> A. It is a fact.
>
> Q. Isn't it a fact that the Union Pacific at that time was engaged in actively soliciting that business in—you don't like the word 'competition,' but we will say as against the Gulf Route, trying to get it by the Missouri River?
>
> A. The Union Pacific always solicited business everywhere for its long haul, as every other line.
>
> Q. Then if the solicitation of business by the Southern Pacific by one route, and the solicitation by the Union Pacific for the business by another route, makes competition, they were in competition, weren't they—if that itself would make competition?
>
> A. If that would make competition, yes."

Mr. Hannaford at Folio 8055, when asked to define competition between railroads, said:

> "I think where two roads are soliciting the same business between the same points that they might be called competitors for that business."

Mr. Munroe, Freight Traffic Manager of the Union Pacific, when called by the defendant after having testified on cross-examination that what was formerly known as the Union Pacific, Denver and Gulf, now known as the Colorado and Southern, running from Denver to Fort Worth, was lost to the Union Pacific in 1893, said at Folio 6854:

> "Q. And therefore from December, 1893, the interest of the Union Pacific on business from New York common points, whether by broken water and rail lines or all rail, was entirely by the Missouri River, wasn't it?
>
> A. Yes. * * *
>
> Q. It is a fair statement, isn't it, that after you lost the control of the Southern you worked your business through the Missouri River?
>
> A. Yes.
>
> Q. And the Southern Pacific people worked theirs by the Gulf?
>
> A. Yes."

On his direct examination in answer to counsel for defendants he gave some interesting testimony with reference to this competition, and to the efforts made by the Union Pacific to work Colorado and Utah business by broken water and rail lines through South Atlantic ports in competition with the Gulf Route: (Folios 6809 et seq.)

> "From the year 1893 to 1898 the conditions all over the country were very bad commercially. During that period every merchant was seeking to re-

duce his expenses and increase his earnings in every possible way. Business was very poor. The differentials, therefore, appealed more strongly than ever before; and we noticed quite a material deflection of traffic theretofore moving all rail (which, by the way, paid the Union Pacific more money than the water and rail), from the rail lines to the water lines; and we felt that it was high time for us, in street parlance, to get busy and work a water line; and we put forth our efforts; * * * and we cast about for a new line. At that time the Ocean Steamship Company running between here (New York) and Savannah, and the Georgia Railroad from Savannah to Birmingham, made direct connection with the Frisco from Birmingham to Kansas City, and with our line to Denver, we thought we could develop quite a traffic. We were aware of the close relations at that time between the Frisco and the Rock Island. We conferred with the Frisco, and they were very alive to the situation and desirous of co-operating with us and raised the question whether we could successfully co-operate, and they said we could, and assured us that notwithstanding the Frisco relations with the Rock Island we would have their undivided support west of Kansas City. On that basis we got together and worked very hard and built up a very nice tonnage. * * * After we had gotten it going pretty well, the Frisco people underwent a change of heart and notified us that their relations with the Rock Island were such that they would have to work preferentially with the Rock Island as against the Union Pacific; would have to operate their through package cars Rock Island and not Union Pacific; would be glad to handle anything we might give them as far as Kansas City, and give it to us there, handling it in their Kansas City car. That convinced us that we could not afford to have a half-hearted partner, and that it meant the breaking up of the line; and we so accepted that situation and cast about and did make new alliances and were

successful in transferring a nice lot of our business from the old to the new line thereby created. * * *

Q. And because you did not want any half-hearted member of the through route you looked about for other alliances, and established another through route via the South Atlantic ports?

A. That is true, coupled with this thought—that we knew from experience that if they handled our business part way, it would only be a very short time before they would attempt to handle it the entire way, and we didn't think it wise that we should put our interests in their basket, so to speak, east of Kansas City.

Q. Now explain the details of that; why was it not wise, and how could they take advantage of you if you continued to do business with them?

A. We will suppose that Mr. A, living in Denver, was a regular patron of the Union Pacific west of Kansas City, and that we routed through him 500 tons of freight, if you please, within a given period from New York to Denver in connection with the **Frisco east of Kansas City.** They would participate in the revenue, of course; they would know where the business came from and to whom it was going. They would make a careful analysis of the business, and the first thing we would know would be their efforts applied to Mr. A to divert the business, not from their rails east of Kansas City, but to the Rock Island ones west thereof, and to cut us out of the business. In other words they would make their best efforts to wean away joint patrons and make them 100% patrons of the line in which they were more interested.

Q. Who controlled the routing of that traffic?

A. Very largely, consignees in Denver.

Q. And you worked the business up through solicitation with the Denver shippers?

A. The Union Pacific is a strong line in Denver, and its strength was recognized by the Frisco; hence the original arrangement. We worked it actively with the consignees. * * * We then

transferred our efforts from the so-called Savannah-Frisco line to the Cumberland Gap Dispatch, which consisted of steamship service from New York to Norfolk, and the Norfolk & Western and its connections to Kansas City; Union Pacific beyond. That line is still in existence and enjoying a very reasonable share of the traffic."

This testimony of Mr. Munroe's shows clearly the naturally competitive situation as between the Southern Pacific and the Union Pacific on Colorado and Utah business, and also makes clear the influence of commercial agencies in controlling the routing of business, and emphasizes the testimony introduced by the complainant to show the destruction of competition occasioned by the consolidation of the Southern Pacific and Union Pacific agencies at points where they were formerly in active competition.

Wool Traffic Eastbound.

As we said before, in addition to competition for traffic moving from the seaboard to Utah, an exceedingly strenuous effort was made by these respective lines to handle the traffic in wool and other products originating in the mountain country and destined to the east. The great wool market of the United States is at Boston, and wool moves there from all regions. The effort of the Southern Pacific was to move the wool from Utah, Nevada, Idaho, and Wyoming to Boston by way of California and the Sunset Route; that is, it would be taken west 700 or 800 miles, thence carried south by New Orleans and shipped to New York, and there delivered to a connecting boat or rail line for Boston. The Union Pacific organization, on the other hand, endeavored to route this business easterly through the Missouri River gateway, either loading it

directly on the Union Pacific, or more frequently on the Oregon Short Line, the subsidiary company of the Union Pacific. Even to the present time, tariffs are in by which wool can be moved by the Southern Pacific by way of California in competition with the all rail lines direct to the east from points as near to Ogden as Corinne, Utah, a station on the Southern Pacific only twenty or twenty-five miles west of Ogden. At Folio 3935, a stipulation was put in, giving the substance of a new tariff sheet of February 5th, 1909, effective March 17th, 1909, covering wool from Corinne, Utah, to New York and Boston common points, of 207½ cents per hundred by the Southern Pacific to California, thence Sunset and Gulf steamship lines. This tariff, as will be seen at Folios 3936-7, applies from all points on the Southern Pacific west of Corinne to New York and Boston common points territory. This rate on wool applies also all rail via Ogden, as appears by the Complainants' Exhibit 189, produced by Mr. White in connection with his testimony at Folio 5571. Mr. McCarthy testified that he was familiar with the efforts made to secure the wool shipments to the east previous to the merger, and that wool moving to the east originates at all wool producing points along the Oregon Short Line, on the Union Pacific east of Ogden, and on the Rio Grande south and east of Salt Lake, and that there is a territory lying between the Southern Pacific west of Ogden and the Oregon Short Line, in California and Utah, eastern Nevada, and southern Idaho, that produces a great deal of wool; that at the time the Union Pacific and Southern Pacific were competing with each other for business, the Southern Pacific would not allow other lines in this territory, but the Short Line worked the business by endeavoring to draw the sheep away from the vicinity of the Southern Pacific

and over to the Oregon Short Line, so that they might be sheared along that line. At Folio 3914 he further explained:

"Q. That is what I mean; that was a way of getting the shipment of the wool, wasn't it?

A. Yes, sir.

Q. The sheep were on a ranch or in between those two lines there?

A. Yes, sir.

Q. What I want to know is whether the Southern Pacific was competing for that business—the wool or the sheep—and the Short Line also?

A. Yes, sir.

Q. When the Southern Pacific secured that wool traffic, how did it move to the Atlantic seaboard?

A. I understood that it moved via the Gulf, via Galveston. It went west over the Southern Pacific, and east over the Sunset Line to Galveston.

Q. And when the Short Line secured it, how did it move to the east?

A. Moved directly east by the Union Pacific."

Mr. Babcock stated (Folios 3947-9), that the wool traffic from the region of Salt Lake City was a very important traffic, and that it originates in various parts of Utah, also Nevada, southern Idaho and Montana. He testified:

"Q. At the time the Union Pacific system was separate in management from the Southern Pacific system, what was the fact as to whether there was any competition for wool shipments out of any of this territory between those systems?

A. The competition in wool commenced very early in the season, before it was taken off the sheep's back.

Q. Explain that whole situation.

A. The Oregon Short Line people endeavored to attract the sheep away from the line of the Southern Pacific west of Ogden; on the part of the Union Pacific they tried to attract it away from us to Ogden by trailing the live sheep along into western Wyoming, and in southern Utah we did our part towards trying to attract sheep over on to our line, away from the Oregon Short Line and letting them be sheared on our line.

Q. When the Southern Pacific were successful in this effort to attract sheep and therefore wool,—which way did they move the wool to the Atlantic seaboard?

A. Usually, so far as my knowledge went, it moved via Sacramento and the Sunset Route, so far as they could control it. Occasionally they had rates in from some points in Nevada eastbound through Ogden, and some buyers, perhaps, insisted on it taking that route, and from some of the nearby points an occasional shipment would be made through Ogden.

Q. But you say that the bulk of it, when they could, they worked by the Sunset Route?

A. The bulk of it, as I understand, went to California, and thence by the Sunset Route to the Atlantic seaboard.

Q. When the Union Pacific was able to attract the sheep, which way did they move the wool?

A. Over the Union Pacific system direct.

Q. And which way did you move it when you got it?

A. Sometimes all rail, but quite largely by rail and ocean.

Q. Where would you deliver it to the ocean carrier?

A. At Galveston largely.

Q. What do you know about a tax levied by the state of Wyoming that used to be at times assumed in an endeavor to get traffic of this kind?

A. I always understood there was a tax per head on sheep brought into Wyoming from Utah or Idaho, and the Union Pacific people in their desire to attract the sheep over there, I understand, paid that tax, to get the sheep away from us.

Q. And also to get the sheep away from the Southern Pacific?

A. Yes.

Q. To what part of the country did most of that wool move, Mr. Babcock?

A. Boston, New England.

Q. Boston is the great wool market of the country, isn't it?

A. Yes, sir.

Mr. Love testified, at Folio 4049:

"A. We had some complaint from customers of ours in that part of the country regarding the rate on salt, and they complained that they were carrying these sheep men through the winter for supplies, and in the spring the railroad company were shipping up there and distributing it through their agents, and these sheep men would take the little cash they had and pay it out to the railroad company for salt; and I went to Mr. Eccles (the Oregon Short Line representative), and complained about the situation, and he said he had to do that in order to invite the sheep men to shear along his line in competition with the Southern Pacific Company."

The time that Mr. Love refers to was at the time of the competition testified to by Mr. McCarthy.

Mr. Oglesby, the Rock Island representative at Salt Lake, testified, (Folios 4167-9):

"Q. What did you know about the competition that existed prior to 1901 for wool shipments to the east from this region?

A. It was very active—very.

Q. How did the Southern Pacific endeavor to move the wool that they could secure?

A. The bulk of the wool on the line of their road moved by Sacramento, the Sunset Route and the Morgan Line.

(By mistake of the printer this reads in the record "our road" instead of "their road.")

Q. How did the Union Pacific move it?

A. The Union Pacific took it straight east and delivered it to its friendly connections, who had secured the wool by their own personal solicitation.

Q. And were you after the wool too?

A. Yes, sir.

Q. In connection with what road?

A. You mean here?

Q. Yes, sir.

A. Any one of them that the shipper preferred. You see we could take any stand at all; we were sort of free lances.

Q. You were working to get your part of the haul?

A. That was all.

Q. But of course your interest was opposed to the Southern Pacific because they took it the other way?

A. Unquestionably.

Q. What methods were adopted, if you know, to secure wool shipments?

A. Well, we had a good many; the principal one was that we were able to furnish a man to assist the wool buyer in this way: He would notify me at my office and say, 'I have some wool. If you can send a man to receive it, mark it, weigh it and load it, you can have it over your line.' I would send a man there. That was one of the methods; and there were other methods.

Q. Were there methods adopted to secure the driving of the sheep from one line to the other for shearing?

A. Well, we took no part in that, you know. It was done by the different lines here. These other lines did it—the Southern Pacific and the Oregon Short Line and the Union Pacific and the Rio Grande Western. They all pursued that course.

Q. They endeavored to get the sheep driven to their line?

A. Over to their line where they could shear; yes, sir.

Q. Was there a good deal of wool in this competitive territory where those methods were adopted?

A. Yes, sir, considerable."

On cross-examination, by the defendants counsel, Mr Oglesby was asked where that wool for which the Southern Pacific competed originated, and answered:

"A. Well, it would originate in between the territory north of the line of the Southern Pacific and south of the Oregon Short Line. They would endeavor to get the sheep over to their own line; that is the territory extending out, possibly, we will say, one hundred and twenty-five miles.

* * * * * *

Q. Wool originating in that territory the Southern Pacific sought to move by way of Sacramento and the Sunset Route?

A. Yes, sir.

Q. And the Oregon Short Line sought to move it east over the Union Pacific?

A. Yes, sir." (Folio 4170.)

Mr. Summerhays, of the Rowe, Morris & Summerhays Co., dealers in hides, wool, furs, plaster, hair, etc., with the principal market in the east, handling forty-five million pounds of hides and wool in a year, and who has been in business since 1883 at Salt Lake, testified, (Folio 4184): That when the Union Pacific and Southern Pacific had separate agencies, his business was solicited by them separately, and the Southern Pacific ordinarily endeavored to move business to the east by California. At Folio 4185 he gave testimony similar to that of the other witnesses as to the efforts made by the Short Line People and the Southern

Pacific to get the sheep sheared at points contiguous to their respective tracks. He also testified that in those days there was competitive solicitation for the hide business between the Southern Pacific and Union Pacific systems. (Folios 4185-6.)

Mr. McBride, agent of the D. & R. G. in Portland for the last seven years, and who for the five years immediately proceding lived in Butte, Montana, and prior to that in Salt Lake, where he was connected with the Union Pacific, the Chicago & Northwestern and the D. & R. G., part of the time traveling through into Idaho and Montana, soliciting traffic, (Folio 4373), said that he was familiar with the territory in southern Idaho, northern Utah, and Nevada, lying between the Oregon Short Line on the north, and the Southern Pacific on the south. He further testified as follows:

> "Q. When you were over in that country, how did the wool from that region move to the east, to the seaboard?
>
> A. That would depend on what line it was loaded.
>
> * * * * * *
>
> If it was loaded on the Oregon Short Line, it would move east all rail, and if loaded on the Southern Pacific, it would go via Sacramento and the Sunset Route.
>
> Q. Was there any competition in that wool business in the region between those lines?
>
> A. Yes, the competition, however, was when the wool was on the sheep's back.
>
> Q. To get the sheep driven from one place to another?
>
> A. In order to get the sheep sheared adjacent to the various lines.

Q. Was that an active competition or otherwise?

A. At times it became quite active, and other times not so much. It would depend a good deal on feed for the sheep en route going to the summer ranges; some seasons they would drive north, and some seasons they wouldn't go so far. It would depend a good deal on the spring feed en route.

Q. Did these two railroads, the Short Line and the Southern Pacific each have soliciting agents in that territory trying to get that business?

A. Yes, sir." (Folios 4374-5.)

He also testified that livestock moved out of that region both over the Oregon Short Line and the Southern Pacific; that it was all moving to the Missouri River packing houses all rail. If the Southern Pacific secured the traffic, they would deliver it at Ogden either to the Denver & Rio Grande or the Union Pacific, but the Short Line always delivered it to the Union Pacific except during the time that the divisions were out between those lines. (Folios 4375-6.)

On cross-examination he testified that while that competition for wool traffic was thus active, there were no divisions between the Southern Pacific and the Union Pacific or Rio Grande on that wool through Ogden, but that all the wool that was controlled by the Southern Pacific went to the east by Sacramento and the Sunset Route. (Folio 4379.)

At Folio 4381, he further testified that at that time a great many sheep wintered in what was known as the desert, west of Salt Lake, and in the spring of the year, as the shearing season approached, they would go to the summer ranges in Idaho, and when they started north the solicitation would commence to have them stop and be sheared somewhere near these respective lines.

Mr. Moses, a wool merchant in San Francisco for many years, says that most of his wool originates in California, some of it in Nevada and Oregon, and that it is his impression that his Nevada wool moves to Boston by the Sunset Route, from most of the way through Nevada, although he is not entirely clear as to whether some of it may not move the other way. (Folios 5105-6.)

Mr. Koshland, for many years in the wool business at San Francisco, buying and shipping to Boston, testified, (Folio 5113), that he buys wool in Nevada clear across the state, and that that mostly moves east Sunset, and in the last few years none of it has moved the other way, although some years ago it did. On cross-examination he states that at the time he moved wool eastwardly over the Union Pacific, joint rates were in between that company and the Southern Pacific. (Folio 5117.)

The defendants produced as witnesses two of their employees from Utah who disputed the testimony of these various disinterested witnesses of the complainant as to the competition on wool shipments from Northern Utah, Nevada and Southern Idaho, to-wit, Mr. Plaisted and Mr. Reeves. But these witnesses corroborated Mr. Babcock as to the competition for the wool traffic of Southern Utah At that time the Oregon Short Line owned the rails in Southern Utah now owned by the San Pedro line, and Mr. Plaisted testified, at Folios 7700 and 7701, that there is a large number of sheep shorn in southeastern and southwestern Utah along the lines of the San Pedro and Rio Grande, although the traffic is less in amount than it was in 1900 and 1901, and this business is competed for by those two lines of rails; and at Folios 7702 and 7703 he stated that

these competing roads maintained corrals built in a suitable manner for shearing sheep, and furnished free to the sheep men to induce the shearing of the transient herds moving across the tracks of these two lines from Central Utah to southwestern and southeastern Utah in moving from the winter to the summer ranges. At Folio 7708 he admits that in certain years previous to 1901 a great deal of this wool moved ocean and rail when the Rio Grande secured it. At Folio 7714 he states the amount of the wool traffic competitive between these two lines in Southern Utah is now about nine million pounds annually. Mr. Reeves on cross-examination at Folio 7723 testified that the Southern Pacific agency in Salt Lake worked with the Denver & Rio Grande in securing this business by way of Galveston in competition with the Short Line, which was part of the Union Pacific system.

d. COMPETITION AS TO TRAFFIC BETWEEN PORTLAND AND UTAH AND COLORADO COMMON POINTS, INCLUDING CERTAIN POINTS IN NEVADA.

There is a large traffic interchanged between Portland and Salt Lake and Utah common points. As to business between Ogden and Portland, it could be handled either by the Shasta Route of the Southern Pacific through Sacramento, or by the Oregon Short Line, and Oregon Railroad & Navigation Co., and such traffic is necessarily completely competitive between the Southern Pacific system owning the Shasta Route, and the Union Pacific owning the Short Line and the Navigation Co. We have heretofore called attention to an abundance of testimony showing that these respective lines were used as part of the through lines moving traffic between Portland and the east. In addition to this, the testimony shows that these lines were active competitors on business moving locally. It is true that the Shasta Route and Central Pacific Line of the Southern Pacific is longer, and climbs two mountain ranges instead of one, as is the case with the Short Line, but that is in no sense prohibitory, as has been developed by the testimony; and, as the Court knows, many lines are competitive where one of the competitors is at a great disadvantage, so far as distance or grades are concerned, and still they are able to compete on equal terms.

Mr. Babcock testified that as to traffic moving between Salt Lake City and Portland previous to the merger of the Southern Pacific and Union Pacific, the Rio Grande handled this traffic from Salt Lake City to Ogden, and there interchanged with the Southern Pacific-Shasta Route, except that when the Oregon Short Line was in the hands

of a receiver, the Rio Grande Western worked with both lines, but while they worked with the Short Line, they did not desert the Southern Pacific route. The Southern Pacific desired them to work with that route so far as they could, and, in fact, desired them to work altogether with it, but they worked with both lines. (Folios 3943-4.) Mr. Babcock also testified (Folio 3987) on cross-examination:

> "Q. Now the business from Salt Lake and Portland and the vicinity of Portland, was that the only business which the Denver & Rio Grande moved that way in connection with the Southern Pacific?
> A. No, through business.
> Q. Through business?
> A. With Colorado and beyond."

After defendants' counsel had called attention to the fact that the Shasta Route was a longer and harder route than the Short Line, Mr. Babcock testified, at Folio 3989, that he didn't recall that anybody ever lodged any complaint with him as to the time by the Shasta Route on such traffic as they handled.

It must be remembered that the distance from Portland to Salt Lake City is very great, even by the Short Line. It is about 900 miles, practically the distance between Chicago and New York, so that the movement of any traffic between these places is an important movement. It is by no means a short haul. The distance by the Shasta Route is only 400 miles further (Folio 3988), and as appears by the testimony, at Folio 3998, the distance to New York from Corinne, Utah, by the Union Pacific, the Northwestern and the Pennsylvania, is 2429 miles, while the distance to New York from Corinne, Utah, westerly over the Central Pacific, and thence around by the Sunset Route, is 4,775 miles; and still rates are equal on wool shipments,

as we have shown, and, in fact, most of the wool traffic along the Central Pacific line of the Southern Pacific moves that way.

Mr. Eccles, of Ogden, one of the most prominent men in Utah, largely engaged in lumbering in Oregon, ships his product from Hood River, which is 65 miles east of Portland, mostly into Utah and Idaho, and some into Nevada. That traffic moves to Nevada points solely by the Shasta Route, as no rates apply over the Short Line, although until within a year, it could be moved by the Short Line and Ogden, and thence west. (Folios 4010-11.) Thus this traffic is, by the consolidated management, forced west into Portland over the O. R. & N., and then around by the Shasta Route to points very close to Ogden.

Mr. Love testified that he handles Alaska salmon, sometimes through San Francisco, at other times through Portland. When it comes by Portland, it reaches Salt Lake over the O. R. & N., and through San Francisco by the Southern Pacific. (Folio 4048.)

Mr. C. E. Murphy, in the retail lumber business at Salt Lake City, testified that the Southern Pacific and Short Line agencies separately solicited business from his company before the agencies were consolidated, and that lumber at that time moved from Portland to Salt Lake both by the Shasta Route and the Short Line. (Folios 4309-11.)

Mr. Frank S. Murphy, wholesale lumberman at Salt Lake, wholesaling into Utah, Nevada and Wyoming, getting his principal supply of lumber from the vicinity of Portland, testified that at present his lumber all moves through

the Portland gateway over the O. R. & N. and O S. L.; that twelve or thirteen years ago he used the Shasta Route. He remembered when the Short Line and Southern Pacific had separate commercial agencies, and his business from Oregon was solicited by those agencies, the Southern Pacific by the Shasta Route and down over the Denver & Rio Grande from Ogden; the Union Pacific by the O. R. & N. and the O. S. L. (Folios 4324-5.)

Mr. Romney, in the wholesale and retail lumber business at Salt Lake for the last twenty years, testified that his lumber supply comes mostly from Oregon, considerable from the vicinity of Portland; that it now moves entirely over the O. R. & N. and Short Line, and formerly moved in part over the Shasta Route; that it is routed by the shippers as a rule. In his opinion, the shipments in many instances are slower than they were formerly. (Folios 4315-16.)

Mr. Adams, now the General Freight and Passenger Agent of the Spokane, Portland & Seattle Railroad, testified, at Folio 4416, that he remembered as a matter of common knowledge, that prior to the amalgamation of the Union Pacific and Southern Pacific interests, the lumber traffic moved from Portland to Colorado and Utah common points, both through Sacramento by the Southern Pacific, and by the O. R. & N. In 1902 the rates via Sacramento to Utah were withdrawn, and the rates applied only via Portland. The business was then solicited by way of Portland, instead of by way of Sacramento. (Folios 4416-17.)

Mr. McCusker testified (Folio 4486) that previous to the amalgamation, lumber moved from Portland to Salt

Lake usually over the Southern Pacific; that it also moved by the Short line and the O. R. & N., and that the traffic was the subject of competition at that time. He then testified:

> "Q. How was it as to Denver and Colorado common points?
>
> A. I think there was some business moved to Colorado common points. The lumber business I did not solicit, for the reason that arrangement was made with the mills as a rule. On some business I would see the mills. But I have solicited shingles that came from points on the Cowlitz River. I would solicit that from the Kellogg Transportation Company for Colorado points or Utah points. I am not positive about the Colorado points.
>
> * * * * * *
>
> Q. And did shingles move both by the O. R. & N., the Short Line and your route?
>
> A. Yes, sir.
>
> Q. And by Southern Pacific you mean what route?
>
> A. I mean by Sacramento and Ogden." (Folio 4487.)

Mr. Holman, who was connected for twenty-one years with a line of steamers running on the Columbia and Cowlitz Rivers, testified that they brought in shingles among other commodities, and what did not go to the local trade in Portland were shipped to Salt Lake and Denver over the O. R. & N. or the Southern Pacific, whichever the shipper desired. They moved both ways. They were handled by brokers in Portland, who would order the cars and give the routing to the railroad people themselves. (Folios 4591-2.)

Mr. Kelly, of the Booth-Kelly Lumber Co., a very large concern operating four mills in Lane County, south of

Portland, and whose testimony we will comment on in another connection, testified that he never had a very large business in Utah; that the Portland mills had that territory largely. (Folio 768.) Therefore, as it appeared by the testimony of the lumber men at Salt Lake that the bulk of the lumber shipped in there comes from Portland, it is apparent that this lumber traffic which was competed for by the O. R. & N. and the Short Line on the one hand and the Southern Pacific on the other, previous to the merger, was very important in amount, as it covered a very large part of the entire lumber consumed in the State of Utah aside from a great deal that went to Colorado. Mr. Kelly further testified, at Folio 777, that prior to 1901, when he routed lumber to Colorado by the Southern Pacific around by Sacramento, it moved from Ogden by the D. & R. G. and occasionally a car by the Midland.

Mr. Munroe, when called by the defendants, showed the value of the Shasta Route as a competitor of the Oregon Short Line by describing the competition made in connection with the Shasta Route by the Union Pacific at the time the latter company was in the hands of receivers, the Short Line receivership having been terminated and notice having been served on the Union Pacific receivers that it would demand a larger division of the revenue, coupled with the statement of its intention to open the Ogden-Provo gateways to the Rio Grande and its eastern connections; he said the receivers had been criticized by the Court for allowing to the Oregon Short Line as large a pro rate as had previously existed, and when a still larger division was demanded they put on a fast freight train from Council Bluffs to Ogden, making the time in 32 hours and 40 minutes running in connection with the Shasta Route of the

Southern Pacific. The result of this fast service over those routes resulted in the settlement of the differences between the Oregon Short Line and the receivers of the Union Pacific.

(Folios 6798 and 6799.)

Mr. Miller, the traffic representative of both the Southern Pacific and the O. R. & N., when called by the defendant, said (Folio 7509) that he did not know of lumber or other freight in any appreciable quantity moving to Ogden or Salt Lake from Portland by the Southern Pacific, but admitted that there was some movement to points on the D. & R. G. by that route But this testimony is unimportant in view of the direct evidence of dealers and Southern Pacific agents heretofore referred to; it further appeared by Mr. Miller's own testimony, Folio 7510, that while at one time the O. R. & N. had a rate in connection with the Southern Pacific to points west of Ogden, the same as the rate by the Shasta Route, those joint tariffs were cancelled, both systems being controlled by the same people in 1907, and that at the present time the lumber traffic from Portland and points south destined to any point on the Southern Pacific west of Ogden moves only over the Southern Pacific line by Sacramento or Roseville. The result of this to Mr. Eccles, as we have shown, is that he has to pay five cents over the Portland rate to move lumber from Hood River, a point east of Portland on the O. R. & N., to any stations along the Central Pacific line west of Ogden, as the traffic cannot go by the Short Line and thence west. It would seem idle for the defendants to argue that the Shasta Route in connection with the Central Pacific, is not in position to compete for Utah business, when having control of both lines, they force all the business up to the first station west

of Ogden by that route. At Folio 7512 Mr. Miller in response to his own counsel admitted that in 1898 seven per cent of all of the traffic from the east into Portland came by the Southern Pacific from Ogden through Roseville, in 1899 six per cent, and in 1900 six per cent. This is not simply a comparison with the Oregon Short Line and O. R. & N., but the percentage is based upon the whole movement by that line, the Northern Pacific, the Great Northern and the Sunset Route. He gives no figures as to the less than carload movement. He further stated on direct examination, Folio 7515, that the Willamette Valley finds its market for lumber in Utah, Colorado, Kansas, Nebraska and beyond. This traffic is, of course, competitive with that from Portland and points taking the Portland rate on the O. R. & N.

Mr. Miller, Folio 7531, admitted that the rates on lumber to Denver were the same at all times by the Southern Pacific Route to Ogden and the O. R. & N. and the Oregon Short Line, but he claimed that from 1897 until 1900 the rate to Salt Lake and Ogden was higher by the Southern Pacific than by the Union Pacific system. That he is mistaken about this is clearly shown by Complainant's Exhibit 192, which shows the tariff on lumber from Portland to Ogden and Salt Lake City by both routes was 37½c per hundred. That was changed on December 1st, 1900, by both routes to 40c a hundred, and remained at that figure until after the merger. The class rates were the same by both routes until May 15, 1901. The class rates by the Southern Pacific were cancelled as shown by this exhibit by Supplement 63 to I. C. C. tariff No. 1390. This, of course, was made after the merger when it was decided to force business by way of the O. R. & N. and the Short Line. There was a

misprint in this exhibit as to Class D. It is shown as 53c by the O. R. & N. and 63c by the Southern Pacific. All the other rates appear the same, and it is apparent that this is an error because of the relation Class D bears to the other classes. The fact that Mr. Miller was thus mistaken in his recollection about the lumber rate from Portland to Salt Lake and Ogden is further shown by his own figures, (Folios 7538-9,) in which he gives the movement of lumber to Utah and Colorado via Roseville for certain years up to 1897, in the latter year there being 1,157 carloads; he has consolidated figures for the movement of lumber from Southern Pacific points in Oregon to Utah, Colorado and California, in 1900 there being 6,578 cars, and in 1901 7,048. Of course if the rates were not uniform this large amount of traffic would not have moved in competition with the mills shipping over the O. R. & N. and Short Line. At Folios 7539 and 7540 he makes the erroneous statement in answer to a direct question, that the rate to Utah by the Southern Pacific was 40c per hundred, while the rate via the O. R. & N. was 37½c per hundred from 1897 to December 1st, 1900. The tariff Exhibit 192 (Page 3368 Record), as we have said, shows that on March 20, 1899, which was the earliest date given on this extract from the tariff, the rates were identical at 37½c.

Mr. Campbell, whose testimony was read into the record by the defendants, testified at Folio 8088, that lumber moved by both routes from Portland to Utah and points beyond; and in answer to defendants counsel, Mr. Campbell reaffirmed his testimony as to lumber moving from Portland to points east of Ogden by the Southern Pacific, and stated that it was chiefly destined to points reached by the Rio Grande roads. (Folio 8098.)

The law prohibits pooling, but in this instance, the management of the Southern Pacific and Union Pacific have gone far beyond a pooling of traffic moving over both lines; although the Southern Pacific is a common carrier, and although it owns a line between Portland and Ogden, it refuses to do any business over that line. It has taken out the rates and forced all this traffic which was formerly competitive, over the Oregon Short Line. At Folio 829, in connection with the testimony of Mr. McBride, there was introduced into the record a circular addressed to the agents of the Southern Pacific Company, Oregon lines and others interested, by Mr. Coman, the General Freight Agent, reciting that an understanding had been reached with the Rio Grande line to handle all business to and from points on the Oregon lines of this company interchanged with the Rio Grande Railway at Ogden via Portland and Huntington; and effective that day, the Sacramento route was closed for such business. The tariffs were amended in conformity therewith.

Mr. Miller testified fully about this matter. (Folios 843 et seq.)

From this testimony it appears that a treaty was made, by the terms of which traffic moving easterly from any point in Oregon north of Ashland, which is over 300 miles south of Portland, is to move north to Portland over the Southern Pacific line, and thence east over the O. R. & N and Oregon Short Line, and as part of that treaty no traffic is permitted to move to the east by way of Sacramento and Ogden. That line has entirely gone out of business, so far as business moving to Ogden and points east is concerned. This treaty gives the Southern Pacific on this

traffic its local rate into Portland, the O. R. & N. and Short Line and their eastern connections taking the balance. At Folio 855 Mr. Miller stated the exact arrangement that was made by which no traffic was to be permitted to move over the Southern Pacific line to Ogden. The arrangement between the Southern Pacific Company, the O. R. & N., the Short Line and Union Pacific companies, on traffic moving via Portland, is that the Southern Pacific shall receive for its haul to Portland, on traffic other than lumber, when destined to eastern points, 40% of the west of the Missouri River proportion of the through rate, subject to its local rate as a maximum. He said this arrangement was made between Mr. Sproule, Freight Traffic Manager of the Southern Pacific at San Francisco, and Mr. B. Campbell, Traffic Manager of the O. R. & N., both of whom were acting as subordinates of Mr. Stubbs. At Folio 857, he said that on lumber and its products the Southern Pacific received south of Portland 25% of the west of the Missouri River proportion of the through rate, subject to its local rates as the maximum, so that on its lumber business the Southern Pacific did not fare as well. While the management of these two lines has accorded this percentage to the Southern Pacific on the business originating on its own lines and which it is thus compelled to give up to its former rival, the Southern Pacific is utterly excluded from the competition that originally existed on shipments from Portland proper, where the great part of the lumber and other traffic originates. Counsel for defendants brought out with a great deal of pride, apparently, at Folio 869, that while the Sacramento route is closed, that merely involved a choice as to how the stuff should move from Portland to Ogden, and that after it reaches Ogden, it is as free to go over any route as it

ever was. As an interesting result of the working of this common ownership, we suggest that the Court read the whole of Mr. Miller's testimony (Folios 840 to 876). It shows how the entire business of the country has been parceled out between these former competitive systems by the traffic department in charge of both lines. The efforts of Mr. Miller to justify this statement are very interesting, and it might be said amusing. At Folio 860 he frankly admitted that in addition to the closing of the Sacramento gateway, the following agreement had been made:

> "Q. And so you gentlemen have parceled out the business of the country, have you, in that way; instead of competing for the business, you decided to have all the seaboard business, if possible, go by Sunset, and the other by Union Pacific?
>
> A. Yes, sir."

e. COMPETITION AS TO TRAFFIC BETWEEN SAN FRANCISCO AND PORTLAND.

The Southern Pacific is the owner of a line of railroad, as we have said, between San Francisco and Portland, commonly known as the Shasta Route. The distance between these points is in the neighborhood of 700 miles. The Oregon Railroad & Navigation Co. maintained, in connection with its lines of rail running from Spokane and Huntington to Portland, a line of boats from Portland to San Francisco. These boats carried a very large traffic, both passenger and freight, and were at all times, previous to the amalgamation of the Southern Pacific and Union Pacific, active competitors for business between Portland and San Francisco. The boats of the O. R. & N. on the Willamette River also brought into Portland commodities which were transhipped to San Francisco by the O. R. & N. boats. This traffic was competitive with the Southern Pacific rail line.

Mr. Montgomery, in charge of the traffic of the J. K. Gill Co. at Portland, testified that they buy goods in California, and that they come up from San Francisco sometimes by boat and sometimes by rail. (Folio 702.)

Mr. Ehrman, wholesale grocer, testified that they buy fruits and canned goods from California, and they have always come both ways, some by boat and some by rail. (Folio 708.)

Mr. McCusker testified, at Folio 726, that while he was not in the passenger department of the Southern Pacific, he knew there was competition on passenger business between San Francisco and Portland. He further mentioned

box shooks as a commodity which was solicited and moved both by the O. R. & N. and the Southern Pacific. (Folio 731.) He also instanced hides from the packing houses, which moved both ways to San Francisco, and were solicited by both lines. (Folio 732.)

At Folios 4483 to 4486 Mr. McCusker again testified with reference to the competition between the Shasta Route and the boat line, and particularly with reference to a war of rates lasting a part of two seasons, in which the rates got down to $2.50 and $5.00 by steamer, and $5.00 and $10.00 by rail, the $10.00 including Pullman berth; the boat rate included both meals and berth. During that war, freight rates between Portland and San Francisco by boat, went down to a dollar a ton, according to his recollection, and the Southern Pacific had in a rate of 12½ cents a hundred. At Folio 4484 he gave the following testimony:

> "Q. What was the reason that the Southern Pacific put in this very low cut rate at that time?
> A. To meet the competition of the boat lines."

He further explained that the cut rate by steamer was applied only locally between Portland and San Francisco, and that the Southern Pacific was obliged to put in its low rate to meet this competition, for the reason that traffic was being drawn to the ports from non-competitive points on the Southern Pacific, paying the local into San Francisco or Portland, and then moving by boat at a lower rate than the all rail rate.

Mr. Linn, Manager of the Oregon Furniture Manufacturing Co. at Portland, testified that previous to 1901 they shipped to San Francisco by both boat and rail; that he

preferred the rail, as it was more convenient. (Folios 749-50.)

Mr. Breyman, manufacturer of saddlery goods at Portland, procures his leather largely from San Francisco, and prior to 1901 there was competition for his shipments between San Francisco and Portland, between the Southern Pacific and the O. R. & N. boats. At that time he shipped largely by boat. Latterly, by rail altogether, on account of the very poor steamer service. (Folios 758-9.)

Mr. Jones, Freight Traffic Manager of the Southern Pacific at San Francisco, testified at Folios 1018-19, that there is an established differential at present between the boat line, which is now managed by Mr. Schwerin, and the Southern Pacific, and that whenever rates go up or down by one line, they automatically go up or down by the other. To show the state of mind of this prominent Southern Pacific official, it is interesting to observe Mr Jones' testimony in this connection (Folio 1019):

> "Q. So that if, as Mr. Schwerin testified yesterday, he found it necessary or advisable to advance the boat rate because the stevedores and longshoremen and the officers on his ships were demanding and receiving higher wages than they had theretofore received, your rail rates would go up automatically because of that fact, would they, because of this advance?
>
> A. Yes, sir.
>
> Q. Now, Mr. Jones, do you think that that is a fair proposition to the public, that because Mr. Schwerin has to charge higher rates because of increased cost of service, that your rail rates should go up without any corresponding increase in your expense?

A. Why yes, I don't see anything unfair about it."

Again, at Folio 1020:

"Q. Then, as I take it, Mr. Jones, the making of rates between here and Portland is something that involves no discretion on the part of the manager of the traffic department at all, but it is laid down as a general rule, and the rate clerk, any one of six or eight of them, wherever they happen to have jurisdiction, shoves the rate up and down automatically?

A. Unless he is instructed otherwise, that is the understanding. You see these rates are put in for the purpose of moving any traffic that may be tendered us. We have found by experience that it is better to have rates in force than to have our agents telegraphing us all the time for rates. Therefore they are fixed, as far as possible, and the basis is fixed."

The ludicity of this last answer, given by the naive Mr. Jones, and the manner in which he ignores the provisions of the Interstate Commerce Law concerning the publishing of tariffs as a reason for having fixed tariffs, is very striking.

Mr. Eccles, of Ogden, who, as we have stated, is largely engaged in lumber business in Ogden, testified, (Folios 4013-14), that he was familiar with the boat line that was maintained by the O. R. & N. between San Francisco and Portland, and traveled on it, and that he knew about competition between those lines in the days when the Southern Pacific and Union Pacific were separate. He testified that in that competition Mr. Campbell, General Traffic Manager of the O. R. & N. Co. in charge of the boats, put in a five dollar rate between Portland and San Francisco, including

berth and board, as well as transportation. The Shasta Route made a five dollar rate, including berth in a tourist car, and he traveled on both the lines during that time. That was going on for a long time and was advertised. He further testified (Folio 4014) that the O. R. & N. maintained light draft river steamers, and brought down grain and loaded it on their boats at Portland for San Francisco; that that came from territory also reached by the Shasta Route.

On cross-examination, at Folios 4040-42, Mr. Eccles again explained about this competition between the boat lines and the steamers and the classes of traffic that they hauled.

Mr. O'Reilly, who was in the traffic department of the Union Pacific and O. R. & N. at Portland from 1891 up to 1897, testified, (Folio 4334), that during the time of his employment he remembered the boat line run by the O. R. & N. between Portland and San Francisco, and the war of rates between that line and the Southern Pacific, which, according to his recollection, lasted for a year and a half, extending to both passenger and freight. Freight rates got as low as a dollar a ton on the boat line, and passenger rates got down to a five dollar fare. He also testified that the line of steamers run in connection with what is now called the Corvallis & Eastern Railroad, running from Yaquina Bay to San Francisco, participated in that competition, traffic moving by the rail line of the Corvallis & Eastern, then called the Oregon & Pacific, in connection with the Southern Pacific in the Willamette Valley and by the boat line from Yaquina Bay to San Francisco. He stated that the classes of traffic included in the competition between the Southern Pacific and the O. R. & N., and the

Corvallis & Eastern and connections, was south bound grain and potatoes, and north bound general merchandise. (Folio 4336.)

> "Q. During the time that you were connected with the O. R. & N., what classes of commodities moved between San Francisco and Portland both by boat line and Southern Pacific Railroad, the Shasta Route; what were the chief articles of commerce?
>
> A. The chief articles of commerce were grain and farm products generally, south bound, and merchandise, more particularly in the way of groceries, north bound.
>
> Q. Did it move both ways—both boat and rail?
>
> A. Yes."

Mr. O'Reilly further said, (Folio 4344), that at one time the O. R. & N. had three boats in this service, and that there was a four-day service; that is, a boat sailing every four days. That was afterwards changed to a five-day service. As shown by other testimony, at present there is only a seven-day service. On cross-examination, Mr. O'Reilly stated that the rate war between San Francisco and Portland between the steamboat lines and Southern Pacific, occurred during the time that Mr. McNeil was receiver of the O. R. & N., and he said:

> "Q. Do you know what the purpose of that rate war was?
>
> A. My recollection is that it was precipitated by the Southern Pacific, if I remember correctly, through a determination to compete for San Francisco and Portland traffic which previously they had engaged in." (Folio 4349.)

It appeared by the testimony that this rate war terminated, as all rate wars do, in a settled condition of rates, the boat line having a differential, as testified to by Mr. Jones. As to subsequent rates, Mr. O'Reilly testified as follows, (Folio 4362):

> "Q. Now after the settlement of this boat line and railroad rate war that you have spoken of, the boat line and the Southern Pacific each maintained their agencies here, didn't they, and were each soliciting business?
>
> A. Yes.
>
> Q. And endeavoring to get what business they could at the established rates?
>
> A. Yes.
>
> Q. That continued as long as you were connected with them?
>
> A. As long as I was in the service.
>
> Q. And in that way they were competing with each other for the business?
>
> A. Yes."

It further appeared by Mr. O'Reilly's testimony that the Willamette River boats that were formerly run in connection with the O. R. & N. rail and steamship lines in competition with the Southern Pacific for business originating in the Willamette Valley, have been withdrawn. They were in active operation up to 1901, and gradually sagged off until last fall, when they finally petered out. (Folio 4368.)

Mr. Ward, now General Agent of the Pacific Coast Steamship Co. at Seattle, and from 1894 to 1901, with the O. R. & N. at San Francisco, for the last three years of that time General Agent, testified at Folios 4387 et seq., with reference to the competition for different classes of

traffic carried on between the O. R. & N. boats out of San Francisco, and the all rail lines. At Folio 4390, he testified that after the war between steamers and the rail line between San Francisco and Portland, a differential was established of 6c a hundred on less than carloads, and 3c on carload lots. At that time the regular schedule for the ships was five days, and an additional freighter was run once in a while when cargoes were offered. Two ships were the regular steamers, and two others were held in reserve. He further stated, (Folios 4390-1), that this steamer and rail war lasted for about a year and a half, that the steamer rates got down to a dollar a ton weight or measurement, ship's option, possibly to 75c, on such commodities as salt, once in a while. The Southern Pacific rail rates were down to a basis of two dollars a ton, dead weight, which would be 10c a hundred pounds. The war extended to passenger as well as freight business. The O. R. & N. ships could carry between 200 and 300 passengers each. (Folio 4391.) He further testified at Folios 4392-3, that the war of rates was started by the O. R. & N. Co., and continued for some time before the Southern Pacific became involved in it. He then said:

> "Q. How long were the O. R. & N. fighting the other boat line before the Southern Pacific took a hand cutting rates?
>
> A. I am unable to give even an approximate estimate on that. I remember that we were fighting for quite a while before the Southern Pacific reduced their rate to the two dollar basis, and we fixed up the schooner lines, but the Southern Pacific still kept that rate in and we had some further touble with them."

He agreed with Mr. Eccles about the passenger rates that were in during that war, and further testified, (Folio 4393):

> "Q. Now during the time that that war was on between the steamship lines before the Southern Pacific got into it, do you know whether traffic moved by rail from interior points to San Francisco and thence up by boat?
>
> A. Yes, there was some of it, I expect, I know there was.
>
> Q. From Southern Pacific territory?
>
> A. Yes."

On cross-examination, further explaining about the differential that existed after the rate war, he stated that the steamer line had a rate of twelve dollars, first-class, including berth and meals, and the Southern Pacific a net rate of seventeen dollars, which included a Pullman berth, charging the passenger $25, and rebating him eight dollars at the end of the journey. (Folio 4396.) The reason for this rebate is apparent. The Southern Pacific wished to hold up its passenger rates to interior points, where they were not in competition with the boat, and hence charged the $25 rate to Portland, rebating eight dollars. At Folio 4397 he stated that the south bound cargoes consisted of Oregon and Washington produce, such as potatoes, grain, box shooks, and salmon. Mr. Ward further said (Folio 4404), that during his service, the time of the boats between San Francisco and Portland was from 55 to 60 hours, the passenger schedule by rail 36 hours, with a train a day each way, the boats having a five day service. He further testified (Folio 4405), that the heavier movement of freight was southbound, but the business northbound was higher class, so that the revenue was greater than on southbound business on an average.

Mr. Adams, General Freight & Passenger Agent of the Spokane, Portland & Seattle Railway, formerly Assistant General Freight Agent of the O. R. & N., and previous to that Traveling Freight Agent of that company, testified, at Folio 4413, that it was not his understanding that there was a fixed differenial previous to 1902 between the boat line and the Shasta Route, although there was a difference in rates, and the rail rates were higher than the water rates on the bulk of the traffic. At Folio 4414 he testified in reference to the O. R. & N. boats on the Willamette River, and the points they touched in common with the Southern Pacific Railroad, such as Corvallis, Albany, Independence, Salem and Oregon City, and at times places higher up the river than Corvallis. These steamers had a daily service and brought in farm products and paper from mills at Oregon City, a large quantity of which went on to San Francisco by the boat line. At Folio 4419 he states that he remembers a time when there was a three and four-day boat schedule, and that that was reduced to a five-day schedule, which continued as long as he was connected with the company.

It is admitted by the pleadings that the boat line formerly conducted by the O. R. & N. Co. is now conducted by the San Francisco & Portland Steamship Co., the stock of which is owned by the O. R. & N. Co., and Mr. Adams testified that that line has only an irregular service.

At Folio 4444, Captain Graham, who runs a line of boats on the Willamette River, testified that the output of the paper mills at Oregon City goes mostly to San Francisco, either moved by a small boat run in connection with the O. R. & N., which is the only boat they have left on the river to Portland, and thence by boat to San Francisco, or

taken across the river to a station called Pulp on the Southern Pacific, and moved to San Francisco by rail. It further appeared by Captain Graham, that even now flour is moved from Corvallis mills to San Francisco, part of it taken down to Portland by Captain Graham's boats, and thence moving by boat, and the balance moving to San Francisco by the Southern Pacific. (Folio 4448.)

On re-direct examination, speaking about the diminution of traffic on the river, he stated that in former days there was more effort made to get traffic to move out of the Willamette Valley by river; that the O. R. & N. were very active in endeavoring to get business to move that way. (Folio 4450.)

Mr. Sweek, now engaged in the salmon packing business, but who, from 1898, was for several years employed by the O. R. & N., and between two and three years of that time in the office of Mr. Campbell, the Traffic Manager, testified, (Folio 4461), that there was competition at the time he came to Portland, (1898), between the O. R. & N. boats, and the Shasta Route of the Southern Pacific on business between San Francisco and Portland.

Mr. Baumgartner, up to the present year, from 1898, Portland agent for the California & Oregon Coast Steamship Company, operating a line of freight steam schooners between San Francisco and Portland, testified that that company was organized in 1898, with one boat, and added about a boat a year until it had a fleet of nine steamers. In 1899 there was an agreement in force with the O. R. & N. by which the latter company subsidized the California & Oregon Coast Co. to maintain rates. (Folio 4508.)

This is especially important, in view of the fact that this was the only other regular line of boats running between these ports, and some attempt has been made in cross-examination to have it appear that the real competitor of the O. R. & N. was not the Southern Pacific, but this other line of boats. These boats it will be seen were not large fast passenger boats like the ones operated by the O. R. & N. but only steam schooners.

Mr. Baumgartner testified that the merchants of San Francisco and Portland both wholesaled into the Eureka and Coos Bay regions. The fact that they wholesale into the same territory furnishes a reason why rates from the east are maintained at the same figure into Portland over the Union Pacific system, and into San Francisco over the Southern Pacific system, as it has been necessary for these respective railway systems to place their consignees on an equality in the ability to distribute.

Mr. Hurlburt, in 1890 and 1891 Assistant General Passenger Agent of the Union Pacific at San Francisco, in which latter year he came to Portland as Assistant General Passenger Agent of the Union Pacific in charge of the O. R & N. lines, and when the latter company went into the hands of a receiver, in 1894, becoming General Passenger Agent under the receiver, continuing as General Passenger Agent after the reorganization until 1901, testified with reference to the situation when he was in San Francisco (Folio 4526):

> "Q. At that time, what was the situation as between the O. R. & N. boat line between Portland and San Francisco and the Southern Pacific line between Portland and San Francisco?
>
> A. The conditions?

Q. What were they doing? Were they each trying to get the business?

A. Sure."

He testified that when he was in Portland they were moving all the passengers they could get by the boats, and the Southern Pacific all they could get by the rail line at an agreed difference in rates; that the boats went every five days, which was a handicap as against the rail line, but the reduced rate at which they were able to do business in some measure compensated for the infrequency of the sailings as against the daily service. At certain seasons of the year they brought boatloads full of people. (Folio 4529.) He testified with reference to the rate war between the boat line and the Shasta Route (Folio 4536), making the interesting statement that rates got so low that it was cheaper to pay fare than to ride on a pass. At Folio 4531 he stated that after the rates were restored at the end of the rate war, there was no cessation in the efforts of his company and the Southern Pacific to try to influence passengers to take their respective routes to San Francisco and return; each was trying to get the business. At Folio 4532 he said that at the time he quit the service, in 1901, they could carry 300 cabin passengers on the Columbia, although 350 was allowed. There were also steerage accommodations for about 100 passengers, and on the State of California about the same number of passengers could be carried, and on the steamer Elder about 225. From April to November these boats ran full. (Folios 4532-3.)

On cross-examination he said that the opposition boats between San Francisco and Portland prior to 1901 were not real passenger boats, so he paid no attention to them from a passenger standpoint. His company maintained

agencies at Salem and Albany, routing passengers through on the Willamette River boats, and thence over the rail and boat lines of the O. R. & N. (Folios 4533-4.)

Mr. Kelly testified that he was in charge of the transfer of freight from the steamers and river boats to the cars and the delivery and receipt of freight on the docks at Portland for the O. R. & N. from 1894 to 1901. The Willamette River boats coming from Salem, Albany, Corvallis, McMinnville, and sometimes from as far as Eugene, brought in a great deal of traffic which was carried by the boat line to San Francisco. This traffic consisted of potatoes, onions, paper and some prunes. (Folio 4569.)

On cross-examination he testified that in 1895-6, there were three-day sailings between Portland and San Francisco, and from 1896 down to the time he left there were five-day sailings, and in some cases four days. (Folios 4571-2.)

On re-direct examination (Folio 4573) he says Portland has grown 100,000, and the territory tributary to Portland increased a great deal between 1897 and the present time, and there is a much larger volume of traffic now moving between Portland and San Francisco and in every other direction, and still the boats now run only every seven days, instead of every three or four days. This testimony indicates that less effort is being made to send traffic that way and more effort to send it by rail.

Mr. DuFlon, representative of some Calcutta and San Francisco jute houses, says he was in the steamboat business between San Francisco and Portland for about five years, beginning in 1892. He testified (Folio 4577) with reference to the rate war, saying that his line met the rate, and at the time it was fixed up he had a conference with

the representative of the O. R. & N., and made a contract to which the California & Oregon Coast Co. succeeded, being the subsidy contract referred to by Mr. Baumgartner. (Folios 4580-81.) That in those days the O. R. & N. made contracts with large shippers to handle all their business between San Francisco and Portland, and that all classes of traffic moved up and down by boat. The principal commodities moving up were salt and sugar, which was a very large business, California canned goods and leather. (Folio 4581.)

Mr. Paulsen, for ten years with the O. R. & N. Co. in the traffic department, from 1897 to 1907, testified with reference to the more frequent schedule of boats in former years, and to the rate war, and as to the commodities moving to San Francisco by the boat line, including box shooks from the factories in Portland. (Folios 4594-5.)

Mr. Connor, now in private business in San Francisco, and from July, 1894, to February, 1898, General Agent of the O. R. & N. at that city, testified very fully with reference to the origin and termination of the rate war between the O. R. & N. and the Southern Pacific, at Folios 4764-6. It appears that the other boats were cutting rates at the time he entered the service of the O. R. & N. in July, 1894, and he made special rates to take the traffic from them until the flat rate was established, first at $1.50, and afterwards at $1.00 a ton, weight and measurement. Mr. McNeill, receiver of the company, on visiting San Francisco, found that the steam schooners that were competing for the business needed some north bound cargo, on account of the weather conditions, as ballast for their boats. That resulted in the subsidy contract. While this fight was go-

ing on, the Southern Pacific Shasta Route had reduced its rates to 12½ cents per hundred, all classes, with two different rates on sugar and salt of 7½ cents a hundred, or $1.50 a ton. When the steamer lines had settled matters so that they were ready to advance or re-establish the old rate, they notified the Southern Pacific and the O. R. & N. river lines on the Willamette River. There were then certain negotiations between the Southern Pacific and the O. R. & N., which led to the Southern Pacific advancing its rail route to 51 cents, first-class, on less than carload lots, as against 45 cents for the boats, maintaining a differential between the rail and ocean line of 6 cents a hundred, and 3 cents a hundred on carloads, which differential was in existence when he left the company. He further testified that the only way he had of knowing about the amount of freight moving by the Southern Pacific was by having his solicitors go to the Southern Pacific freight sheds and watch the marks, and ways of hauling and one thing and another, and they would report at times carloads assembling in the Southern Pacific freight sheds, or cargoes of canned goods for Portland. This, of course, is the natural thing for competitors to do, and is like the efforts that Mr. Munroe testified he made to find out through his agencies what his competitors were doing, and what traffic they were taking.

At Folio 4768 he further explained about the situation that had existed as to competition between the O. R. & N. boat lines and the Southern Pacific, saying that there was competition between the boat lines and the Southern Pacific from the Willamette Valley into Portland, and some through to San Francisco: that is, freight was moving from San Francisco to Portland, and thence to destination in the Willamette Valley by boat in competition with the rail

line, and the differences that the Southern Pacific insisted on having adjusted related to that competitive traffic, and the railroad refused to raise its rail rates, so that the ocean rates could come up until they had made some kind of an agreement about the Willamette Valley traffic. What it was he did not know.

At Folios 4770-71 he testified that the O. R. & N. boats carried a very heavy passenger business during pleasant weather, and that they made efforts to get that business; that when he first joined the company three ships were being used, giving the three-day service. One was withdrawn, and the service was changed to five-day service. The Southern Pacific was running a passenger train a day between San Francisco and Portland. He testified to the cutting of the passenger rate by the boats, and also by the Shasta Route, and explained with reference to the railroad tickets:

> A. I remember the rate as it was cut was under the rebate system. A man would pay a regular fare, and on arrival at Portland would cash his rebate coupon, making the net rate less than the regular rate, which would prevent the scalping of the ticket or the use of it to intermediate points. The passenger had to go to Portland to get the benefit of the cut-rate."

He further explained, at Folio 4772, that this rebate was not in any way a secret one, but was a method employed by the Southern Pacific to protect their rates on interior business, where they did not meet the competition of the boats.

At Folio 4773 he testified that a good many of the commodities moving from San Francisco, the so-called California products, were not produced in San Francisco, but were brought in by rail lines or by Sacramento River water

lines, and moved to Portland over the steamship line. This traffic was strictly competitive with the Southern Pacific all rail route. Mr. Connor also testified (Folio 4774) that on the Southern Pacific tariff which was published at the time of this war, a notation appeared reading as follows, as near as he could recollect:

> "The rates herein named are not considered reasonable or fair, but are forced by unreasonable competition on the ocean, and will apply between or to and from points named only, and not to or from intermediate points."

Objections were made that this was not the best evidence, and two tariffs were procured from the Interstate Commerce Commission, being Complainant's Exhibits 184 and 185, appearing at Folios 5559 and 5560.

Exhibit 184 is the tariff effective December 1, 1895, applying both ways between Portland and San Francisco, being a flat rate of $2.50 a ton on the first four classes, and a rate of $2.00 a ton on the other six classes, and upon this tariff there is a note as follows:

> "These rates are not regarded as fair compensation for the service, but are forced by the excessive competition of ocean lines."

Complainant's Exhibit 185 superseded the tariff on Exhibit 184, and became effective December 15, 1895, and refers to north bound traffic only from San Francisco to Portland, and Albany, Oregon, and points between. Albany, it will be remembered, is about at the head of navigation to the Willamette River boats. This tariff contains an identical notation with the one just quoted. Both these tariffs are signed by Mr. Gray, the General Traffic Manager

of the Southern Pacific at San Francisco, by Mr. Rogers, Assistant General Freight Agent at Portland, and by Mr. Smurr, the General Freight Agent at San Francisco.

Mr. Connor, on cross-examination, testified that the 12½-cent rate by weight, put in during the steam and rail war, by the Southern Pacific, was even lower than some of the rates on the boat at a dollar, because the steamship rates were by measurement as well as weight. (Folio 4836.)

North bound the cargo carried by the O. R. & N. consisted of sugar, salt, canned goods, dry goods, general merchandise, and California products; south bound, of grain, flour and agricultural products, some lumber, some iron, paper and potatoes. He said they had a lot of paper from the Willamette mills. (Folio 4838.) It will be recalled that the testimony at Portland showed that this paper traffic was divided with the rail line.

Mr. Toll, for many years in the traffic department of the Southern Pacific at San Francisco, testified (Folio 4854) that the memorandum on the Portland tariffs, that the rates were unremunerative and were forced by excessive water competition, was dictated by Mr. Sproule. He testified, at Folio 4855, that there was a commodity rate on sugar; he thought possibly one on salt, but very few commodity rates between San Francisco and Portland.

Mr. Havens, Vice President of Murphy, Grant & Co., wholesale dry goods, at San Francisco, testified that they wholesale through California, Oregon, Washington, Idaho, Arizona, New Mexico and Nevada. At Folio 4918 he testified that on shipments to Portland their traffic during all his connection with the business, which was since 1878, has

moved boat or rail, depending on the way the customer ordered it routed, but it has moved both ways.

Mr. Cooper, Assistant Manager of the Pacific Coast Steamship Co., with which he has been connected since 1887, testified that the O. R. & N. boat service between San Francisco and Portland was formerly a sailing every five days. (Folio 4932.) At Folio 4934 he said that at the time of the rate war between San Francisco and Portland the rates were brought down to Puget Sound points over the Pacific Coast Steamship Co. on interior business; that is, the lines operating via Seattle and Tacoma had to equalize the rates via Portland, and the Pacific Coast Steamship Co. had to participate in that effort.

At Folio 4942, on cross-examination, he testified that the rates by water lines between San Francisco and Portland have been advanced during the last year or two.

Mr. McEwing, who was Soliciting Agent of the O. R. & N. in San Francisco from 1898 to 1901, said that the boat line had the best of it as to business between San Francisco and Portland; that the Southern Pacific got what they could. This was because of the differential rate. (Folio 5068.)

Mr. Michaels, of Langley & Michaels, wholesale drugs, who has been connected with the business since 1886, stated that formerly they shipped to Portland and Oregon points, and that traffic moved by both boat and rail, more largely by boat. Four or five years ago they used the rail more than the boat, because the service was better, and they got goods into Portland in about three or four days, while last year it would take two weeks. (Folios 5090-91.)

Mr. Rumpf, in charge of the traffic of the California Wine Association, testified (Folios 5103-4) that they had shipped to Portland both by rail and boat, although they have not shipped by rail for the last five or six years, and those shipments were made only when the consignee favored the all rail shipments.

Mr. Chapman, Traffic Manager of the Pacific Hardware Co. for the last two years, testified that now his company ships to Portland both by the Southern Pacific Railway and by the San Francisco & Portland Steamship Co., owning the O. R. & N. boats. (Folio 5164.)

Mr. Campbell, whose testimony was read into the record, although he stated that he did not regard the Southern Pacific and the boat line as competitors from Willamette Valley points because they did not make the same rates, when examined with reference to business between Portland and San Francisco, stated that the two lines were competitive. At Folio 8075 he testified that there was a large passenger traffic between Portland and San Francisco by the boats of the O. R. & N. Co., and also passenger traffic between the same points by rail. He then testified:

> "Q. And as to that business the line of steamers that was run by the O. R. & N. and the all rail route of the Southern Pacific were strictly competitors, weren't they?
>
> A. They were competitors."

He again testified, Folio 8107:

> "Q. Now, Judge Lovett was asking you if the matter of travel between San Francisco and Portland was not a matter of individual choice; that is,

as to whether passengers would go by boat or rail. Both lines were soliciting passengers, were they not?

A. Yes, sir.

Q. And got all the business they could?

A. Yes."

That the competitive business between Portland and San Francisco is very substantial is shown by the statistics introduced in connection with Mr. Stubbs at Folios 6659 to 6665, Defts' Exhibits 46 and 47. It is admitted that the Southern Pacific earnings on Exhibit 46 are estimated. This exhibit shows earnings of over $327,000 on local freight business between San Francisco and Portland divided about two-thirds to the steamship line and one-third to the rail line. Defendants' Exhibit 47, introduced in connection with Mr. Stubbs' testimony, at Folios 6661 to 6664, refers, as stated by Mr. Stebbins, the Auditor, at Folios 7667-8, to business between the Willamette Valley and San Francisco, and does not include any movement in or out of the Valley to points east, although the heading of Exhibit 47 is somewhat misleading. This exhibit shows Union Pacific earnings of a little over $120,000, and Southern Pacific earnings of a little over $146,000. On the exhibit it is shown as a little over $12,000 per month, which being multiplied into the year would make a little over $146,000. There is a deduction of $83,000 as a non-competitive, from the total of the Union Pacific earnings. This is explained by Mr. Stubbs at Folio 6662, as the business representing the tonnage to and from the paper mills at Willamette Falls, 15 miles above Portland, which he states are on the west side of the river and away from the reach of the railroad, and that the railroad has not been able to take any of that

business. That Mr. Stubbs is mistaken about this is shown by the testimony of Captain Graham, who operates a line of boats on the Willamette River, at Folio 4444. He testified, in answer to Mr. Cotton, counsel for the defendants, that this paper traffic was divided, some of it moving by boat to Portland, and thence by boat to San Francisco, the balance being taken across the river by boat to Pulp, a station on the Southern Pacific, and there loaded on the Southern Pacific trains and taken down that way.

Therefore, on defendants' own showing from these two exhibits we have a competitive business from between San Francisco and Portland, and San Francisco and the Willamette Valley adjacent to Portland, of nearly $600,000 a year, the exact figure being $594,151.74, of which $337,341.94 represents the O. R. & N. steamship earnings, and $256,809.80 represents the rail earnings. It will be remembered that this large total does not include the passenger traffic. Although the rates have since been increased according to the testimony, still, if computed upon the basis of rates put in force at the end of the steamship war, it is apparent that the passenger earnings by the respective lines amount to a very large sum. The testimony shows that previous to the merger the boats never ran less frequently than once in five days. They sometimes ran every three days, and at times every four days. It appears that from April to November, eight months of the year, the boats ran full and their capacity was from 300 to 350 first-class passengers, besides 100 steerage. Assuming that they ran, however, only once in five days in each direction, we would have twelve trips a month, six from Portland to San Francisco, and six from San Francisco to Portland, or in the eight months from April to November, 96 trips. Computed only at the 300 first-class passengers that would make a total

of 28,800 passengers during that period, which at a twelve dollar rate, which was the one fixed at the end of the steamship war, would produce a total revenue of $345,600. Making a most conservative addition to that amount for the first-class traffic during the balance of the year, and the steerage traffic during the whole year, would indicate a total passenger revenue accruing to the O. R. & N. boats of upwards of $400,000 per annum. Mr. Stubbs testified that the Southern Pacific ran two trains per day each way loaded to the guards. That would be a total of 120 trains per month, or 1,440 trains per year. A very small train loaded to the guards would carry at least 50 passengers, which would be a total of 72,000 passengers for the year. This is undoubtedly a very conservative estimate from the testimony. The rate of fare was then $18, which included a Pullman berth. Deducting from that $5 the value of the berth, according to the testimony, would leave a net revenue of $13 a passenger, or on 72,000 passengers we have total passenger earnings accruing from the Southern Pacific on business between San Francisco and Portland of $936,000 per year. This is no doubt an under estimate, in view of the testimony of Mr. Stubbs as to the way the trains were loaded. Adding to this $400,000 as the steamship earnings on passenger traffic, we have a total of $1,336,000 a year on this competitive business. The freight earnings shown above do not include any traffic destined to points beyond San Francisco on the south or beyond Portland on the north. In view of these figures, which are for the year ending June 30, 1901, it is hard to understand Mr. Stubbs' statement that the Southern Pacific had some years before competed for this business but had learned by experience that they could not do it. However, it appears by his cross-examination at Folios 6699 to 6701,

that he is not very clear about the competition having ceased, as he said that he would not desire to be understood as disputing the statements of soliciting agents that they had solicited this business, or of merchants who stated that their traffic had been solicited by these respective routes. At Folio 6702, he makes it pretty clear that he is merely advancing a theory. He admits that there are only the two routes between Portland and San Francisco; that he knew Mr. Hurlburt very well, and that Mr. Hurlburt had testified that the O. R. & N. boats with a capacity of 300 to 350 passengers ran full from April to November every five days; that then the Southern Pacific ran two through trains a day, and now three, and as Mr. Stubbs expressed it, all the engine could pull loaded to the guards. Still he thought there was practically no competition between the two lines. In this he differs from a great number of witnesses, including Mr. Campbell, defendants' witness, who was formerly Mr. Stubbs' assistant as Traffic Director of the consolidated lines. At Folio 6707 Mr. Stubbs admits that at the time of the steamship war the railroad rate between these points was put down to five dollars as an act of competition. Then after stating that the rail rates are now made irrespective of the ocean rates, when his attention was called to the testimony of Mr. Jones that the rail rates went up and down automatically with the boat rates, Mr. Stubbs admitted that Mr. Jones' testimony upon the question would be better than his; and the whole force of his declaration that there was no competition, is destroyed by the fact that he makes it apparent that he has some theory in his mind as to the meaning of the word "competition" as used in this law suit. At Folio 6708 he says:

"A. When I use the term 'competition' in all of this testimony, I am using it in the sense of a competition that is in restraint of trade. Remember that."

He does not anywhere define his definition, so we are left in the dark as to what particular theory he has in mind in giving testimony that apparently in places contradicts that of other witnesses. He repeats this statement as to the kind of competition he has in mind, whatever it may be, at Folio 6710:

"A. As I said to you, I am talking continually in this testimony with respect to competition that has the effect or might be reasonably supposed by a court or a jury to have the effect of restraining trade.

Q. Yes, I understood that was the sense in which you were using it. And it is your opinion that however much competition of one sort or another there may be, it is not that kind of competition?

9. That is what I mean."

With all his great talent, we doubt if Mr. Stubbs could explain how *competition* of any kind could restrain trade unless carried to such an extent by one of the competitors that it destroyed the other competitor, leaving the stronger with a monopoly. It is apparent that we will have to consider the testimony as to facts given by the witnesses, uninfluenced by Mr. Stubbs' legal conclusions.

Mr. Luce, General Freight Agent of the Southern Pacific, gave some testimony to the effect that his line did not solicit business to Portland. When his attention was called to the fact that Portland merchants had testified that their business was solicited by the Southern Pacific, he said he

did not doubt their statements. (Folio 7608.) The opinion of Mr. Luce, in any event, is of slight consequence compared with the direct testimony of witnesses and with the evidence offered by the defendants showing that, based upon freight earnings, about 43% of the entire business interchanged between Portland and the Willamette Valley on the one hand and San Francisco on the other, moved over the rails of the Southern Pacific.

Mr. McCormick, testifying with reference to passenger business, admited that he had never made the trip by boat, but said he understood that it was the worst trip on water except the one from Australia to New Zealand or from Havana to New Orleans, during the equinox, but that nevertheless, the steamship line carried a considerable business and the rail lines a good big business. (Folio 7813.) On cross-examination, Folio 7827, he said the scenery on the Shasta Route was thoroughly advertised to induce people to travel by that route, and that the boat line had scenery down the Columbia River, and sea weather outside.

f. THE SOUTHERN PACIFIC LINES AND THE O. R. & N. BOAT LINE, WITH THEIR CONNECTIONS, WERE IN ACTIVE COMPETITION FOR TRAFFIC BETWEEN SAN FRANCISCO AND POINTS IN MONTANA, IDAHO AND OTHER STATES.

Mr. Stubbs, in his interesting presentation of the Canadian Pacific differentials, which we have previously commented on, read from that argument, and testified concerning it, at Folios 3260 et seq., as follows:

> "Q. 'Well, will you read what you said at the bottom of page 94 beginning with the words, 'These American mixed rail and water lines?'
>
> A. (Reading): 'These American mixed rail and water lines do not exist merely on paper. They are open and in daily use, for both freight and passengers. They are effectively worked against the all rail lines for San Francisco trade with Oregon, Washington, Idaho, Utah and Montana. Some of them are preferentially worked for San Francisco's trade with St. Paul and Minneapolis and points further east—the Great Northern works them.'
>
> Q. That will do. Now take your statement there that 'These American mixed rail and water lines do not exist merely on paper, but are effectively worked against the all rail lines for San Francisco trade with Oregon, Washington, Idaho, Utah and Montana.' How was that mixed rail and water line made up that worked into Utah from San Francisco?
>
> Mr. Lovett: Worked into Utah from San Francisco?
>
> Mr. Severance:: Yes, from San Francisco. He said they worked in competition with all rail lines for San Francisco business into those various states.
>
> Witness: : I presume it was the Navigation Company's steamers to Portland, O. R. & N., Oregon Short Line.

"It moved by way of Huntington and Pocatello for one route, and I think our line was entirely that way."

He further said it was brought from San Francisco by boat, and if the traffic moved by Ogden it went by the Central Pacific and the Short Line. The first route gave the Union Pacific system the entire haul to such Montana points as Butte, reached by the Short Line; and the competitive line, made up of the Central Pacific and the Short Line, gave the long haul to the Southern Pacific with a short haul to the Short Line from Ogden.

Mr. McBride testified that for five years previous to 1892 he was in the railway service at Butte, Montana, with the Rio Grande. He was asked (Folio 4376) how San Francisco traffic reached Butte and that region, and testified that it was either via Ogden by the Southern Pacific and the Oregon Short Line, or via the O. R. & N. boats to Portland, and then by rail via Huntington, or via Spokane and the Great Northern. On cross-examination, he testified (Folio 4377) that the preponderance of the traffic moved by the Southern Pacific and the Oregon Short Line, and that the O. R. & N. moved theirs by boat from San Francisco, sugar and beans principally going by that route.

Mr. Ward, who was from 1898 to 1901 General Agent of the O. R. & N. at San Francisco, testified concerning this Montana traffic, at Folios 4388-9, that the Montana common points included Butte, Helena, Anaconda, Silver Bow, and that Great Falls took the Montana common point rate; that all of these points had a common rate from San Francisco. He was asked how the traffic moved to these various points, and testified:

"A. They moved over the O. R. & N. steamer lines, and thence over the O. R. & N. rail lines and their eastern connections; moved by the Pacific Coast Steamship Co. and the Great Northern and Northern Pacific through Puget Sound; moved via the Shasta Route and the Northern Pacific; by the Central Pacific to Ogden, and the Short Line."

He further testified that the traffic moving to Montana common points by these various routes consisted very largely of California products such as sugar, canned goods and dried fruit; that there was no differential in force as between the water and rail lines and the all rail lines; also that traffic moved at an equality of rates between Boise and Pocatello, Idaho, by both routes; that is, by Ogden, or by the boat line to Portland, and thence by rail.

It appears from this testimony that the Southern Pacific by way of Portland, in connection with the Northern Pacific, was in competition with the Union Pacific system of rail and boat lines, without either system using any part of the other, but Mr. Stubbs' statement, at Folio 3266, to which we have previously referred, shows that the line by Ogden and the Short Line is equally competitive, for, as he says, each through line is a unit regardless of whether part of it may be used in forming another through line, even if it be a rival through line, and he illustrates it by reference to this particular California traffic, which we again quote, as follows:

"A. (Reading). If the Oregon Short Line running from Huntington to Granger and to Salt Lake, were deprived of a connection for the purpose of making a through line to San Francisco, via Portland, with the Union Pacific at Granger, or with the Rio Grande Western at Salt Lake City, because those roads respectively had physical con-

nection with the Central Pacific at Ogden, the Oregon Short Line would be deprived of all opportunity to compete for a share of the San Francisco traffic."

This matter was gone into quite fully on cross-examination with Mr. Ward, and it was developed that the same through lines are still in existence handling that Montana traffic. On re-direct examination, at Folio 4403, Mr. Ward testified:

"Q. As you understand it, the Southern Pacific with its connections, is still a competitor of the O. R. & N. boat line and its connections for Montana business?

A. That is my understanding, yes, sir."

Mr. Adams, General Freight and Passenger Agent of the North Bank Road, at Folio 4418, when asked as to how San Francisco business moved to Butte and common points in Montana, answered:

"A. There were many different routes. After the rates were established via Ogden in connection with the Central Pacific and the Oregon Short Line, that route was opened; there was an all rail route via Portland and the Northern Pacific, and there were the water routes to Portland in connection with the O. R. & N. and the Northern Pacific through Wallula; the Great Northern through Spokane, and the Oregon Short Line through Huntington; there were also routes open by steamer from San Francisco to Puget Sound, and thence in connection with both the Northern Pacific and the Great Northern."

He said he was familiar with the business, and it was a very considerable traffic and actively competed for by those

different routes. He further said (Folio 4419) that there was a very considerable traffic actively competed for by the Central Pacific in connection with the Short Line and the O. R. & N. boat and rail lines into the territory between Huntington and Pocatello on the Short Line. On cross-examination, at Folio 4422, he was asked about the routes to Montana from San Francisco, eliminating the line via Ogden, composed of the Southern Pacific, Central Pacific division, and the Short Line, and stated that the routes that had always been open were first, the Shasta Route to Portland, thence from Portland over the Northern Pacific via Tacoma, the O. R. & N. boat line to Portland, thence to Wallula over the O. R. & N., thence to Montana via the Northern Pacific; third, the O. R. & N. boat line to Portland, thence to Spokane over the O. R. & N., and thence to Montana over the Great Northern. Also the two lines by boat to Puget Sound and thence to Montana over the Great Northern or the Northern Pacific, and that those routes were open during all the time that he knew anything of the history of the traffic from San Francisco to Montana common points.

Mr. Kelly testified that when he was on the dock at Portland freight was received from San Francisco over the O. R. & N. boat line going to Butte and other Montana points, consisting of sugar, canned goods and merchandise, that moved out of Portland by Spokane and the Great Northern, some of it via Wallula, Northern Pacific, and some via the Short Line and Huntington. (Folio 4571.)

Mr. Connor testified that when he was General Agent of the O. R. & N. at San Francisco, they carried traffic from San Francisco to Montana points in connection with their

northern rail connections, with which he had through rates and divisions, the Northern Pacific and Great Northern, and for some Montana points by the Short Line; that the traffic moved out of San Francisco by boat, and was transferred to rail at Portland. (Folio 4769.) He was then asked as to whether the Southern Pacific participated in that traffic, and replied:

> "A. It had a line via Ogden in connection with the Utah & Northern, and what amount of business they got that way I don't know, but I presume they got their share, because occasionally, now and then, we learned about a car going that way. Of course I tried to get any we could."

He further stated that the classes of business moving to Montana points from San Francisco consisted of nearly all the California products like wine, dried fruit, sugar, and canned goods, and that there was no differential in favor of the rail line. At Folio 4773 he was asked whether the solicitation of business to Montana points was active on the part of the various lines, and he replied that, generally speaking, he would say that it was, on an equality of rates, and the ocean line had to assume the marine risk on the ocean. While Mr. Connor stated that the Southern Pacific were attempting to route their business by Ogden, he said it could also go by way of Portland and the Northern Pacific, as they had divisions in by that route. (Folio 4832.) Mr. Connor further testified (Folio 4843):

> "Q. How about business to Montana points? You stated you were looking after that pretty carefully. What steps did you take to find out whether the traffic was moving by that route—the Ogden route, to Montana points?

A. Well, we would have a man go to the Southern Pacific freight sheds every day, maybe once or twice a day, meander around, and see what he could find out in the way of marks.

Q. And when he found stuff going that route to Montana, did he always know what those marks meant?

A. If we could not get it from the shipper, we would telegraph our connection at the other end of the line and get him to work on the consignee and try to get a routing order, * * * for subsequent shipments, or maybe this one, if they hadn't got too much of it hauled.

Q. Get it away from them if you could? That was what you were here for, wasn't it?

A. Practically.

Q. Did you find also that in those days the Southern Pacific agency here in San Francisco was on to its job too?

A. They were pretty active on that Montana business."

Mr. Toll, for many years with the Southern Pacific in San Francisco, was asked (Folio 4854):

"Q. What do you know about competition on Montana and Idaho business before the amalgamation?

A. The competition was rather keen on Montana and Idaho.

Q. How did the O. R. & N. move the traffic, and how did the Southern Pacific move the traffic?

A. The O. R. & N. from San Francisco moved traffic by boat from here to Portland, and then through by rail; to points reached by their own line it went rail from Portland. Their connection with the Northern Pacific was at Wallula, and the Great Northern at Spokane.

Q. How did the Southern Pacific move their business?

A. The Southern Pacific moved the business both ways, both by Portland and by Ogden, but the majority of the freight moved by Ogden.

Q. When it moved to Montana points by Portland, how did it proceed from there?

A. It proceeded from there either Northern Pacific or O. R. & N."

Mr. Clifford testified that previous to the amalgamation he was for some time the agent of the Union Pacific at Butte; that the Southern Pacific had a traveling freight agent there; that the Southern Pacific man was working east bound California traffic into Montana, and that the business from San Francisco to Butte was quite a tonnage; that sugar was one of the principal commodities moved from California; also canned goods, beans, dried fruit, citrus and deciduous fruits; that the competition for that business between the O. R. & N. and the Southern Pacific agencies was very active; that the preferential route of the Southern Pacific was by Ogden, but they also moved business via Portland by the Shasta Route, and the O. R. & N. worked by their boat line and the long haul to Huntington or Spokane. The divisions were in through all the various gateways during the time he was there. (Folios 4905-7.)

Mr. Cooper, of the Pacific Coast Steamship Co., testified that his company, in connection with the Northern Pacific and Great Northern, has, for the last fifteen years, participated in business from San Francisco to Montana points; that the lines that are competitive for that business are the Southern Pacific via Ogden, and the O. R. & N. line by the Portland gateway, and that it has moved by the Port-

land gateway both boat and rail and all rail, and the business has been solicited all those years. (Folios 4936-7.)

At Folio 4946, when asked whether business moved through the Portland gateway by the Southern Pacific, he answered:

"A. To a large extent, yes."

Mr. McEwing, now Traffic Manager of Dunham, Carrigan & Hayden, formerly solicitor on the street for the O. R. & N., from 1898 to 1901, testified that it was a part of his duty to solicit business to Montana points; that he solicited preferably through Spokane in connection with the Great Northern or the Short Line, by Huntington, or by the Northern Pacific by Wallula, and moved the traffic to Portland by the boat line; that the Northern Pacific was engaged in competition for that business, preferably by Tacoma or in connection with the O. R. & N. by Wallula, and the Southern Pacific by way of Ogden, and some business through Portland in connection with the Northern Pacific; that the nature of the traffic was California products, wine, canned goods, dried fruit, sugar and salt, principally, and that the competition between these different routes was an active one for the business on an equality of rates. Traffic destined to Boise was worked by the O. R. & N. by Portland, and by the Southern Pacific by Ogden. (Folios 5067-8.)

Mr. Rumpf testified (Folios 5102-3) to making shipments by these various routes to Montana, for the California Wine Association.

Mr. Wolff, for many years a dealer in canned goods and dried fruits on a very large scale, testified that he has

shipped canned fruits and canned salmon from San Francisco to Montana points; that the business now moves entirely via Ogden; that years ago, before the Southern Pacific and Union Pacific came under one management, the buyers used to favor shipments via Portland, thence over the Northern Pacific and the O. R. & N., but he always favored shipping by Ogden, as there would be no transfer; it would go through in the original car. (Folios 5121-2.)

Mr. Melvin, Traffic Manager of the California Fruit Canners' Association since 1906, testified that his association ships canned goods and dried fruit to Montana; that it moves by the Portland gateway and the Ogden gateway, and when it moved by the Portland gateway it moved both by the O. R. & N. and the Short Line, or the Northern Pacific, or by rail to Portland, and thence on by rail in connection with the O. R. & N. and the Northern Pacific; and they have also made shipments by Ogden; that the Union Pacific organization works both routes at present, by Ogden in connection with the O. S. L., and the Portland route in connection with the O. R. & N. (Folios 5138-39.)

Mr. Miller when called by the defendants testified that the all rail rates to Montana common points from San Francisco were the same as the broken water and rail rates. Mr. Luce testified (Folio 7600), that the Southern Pacific moved freight from San Francisco to Montana points, both via Ogden, Oregon Short Line and Northern Pacific, and Portland and the Northern Pacific, but mostly via Ogden and the Short Line. At Folio 7606 he testified:

> "Q. How was it as to the business for Montana? Did they (Southern Pacific) seek that out of San Francisco?

A. Yes.

Q. Actively?

A. I don't know as they did actively, but they sought that business, handled the business and handled a majority of the business through Ogden in connection with the Oregon Short Line."

Defendants' Exhibits 51-a, Folio 7647; 52-a, Folio 7649; Exhibit 255, Folio 8168; Exhibit 256, Folio 8170, show a total of about $150,000 of competitive freight business between San Francisco and Montana common points in which these respective lines participated. This is exclusive of business into points in Washington, Oregon and Idaho, as to which they competed for the haul between San Francisco and Portland.

g. COMPETITION AS TO TRAFFIC BETWEEN VARIOUS PORTS IN THE ORIENT AND POINTS EAST OF THE MISSOURI RIVER IN THE UNITED STATES.

Mr. Mahl, Comptroller of the Union Pacific and Southern Pacific lines, testified (Folio 425) that of the twenty millions capital of the Pacific Mail Steamship Co., the Southern Pacific Co. owns $10,010,000, just a majority; that these boats ply between San Francisco and Central America, China and Japan. Mr. Mahl testified (Folio 449) that all the stock of the Portland & Asiatic Steamship Co. belongs to the Oregon Railroad & Navigation Co.

Mr. Cornish said (Folio 494) that the Pacific Mail operates lines of steamers from San Francisco to China and Japan, and the Navigation Co. controlled by stock ownership the Portland & Asiatic Steamship Line, with ships running from Portland to the Orient. He then testified:

> "Q. If that company belongs to the Navigation Co., then the Union Pacific Co. has a through line of railway and steamships, through its stock ownership, from Council Bluffs and Kansas City to ports in the Orient via Portland, does it not?
>
> A. It would amount to that, yes.
>
> Q. And the Southern Pacific has a through line of transportation from New York via Southern Pacific and San Francisco to the Orient by steamship and rail?
>
> A. Yes, through their control of the Pacific Mail."

Mr. Stubbs testified that there was a line of steamships between Portland and Oriental points, first, that was run by outside parties, and that at the time he took office as Traffic Director and became connected with the Union Pa-

cific, the Portland & Asiatic Steamship Co. was organized and controlled by the Oregon Railroad & Navigation Co., and prior to that time, either private interests owned a line in connection with the O. R. & N., or the O. R. & N. Co., owned the Portland & Asiatic Steamship Co., which operated to Asiatic ports in connection with the Union Pacific. (Folios 527-8.)

Mr. Stubbs further testified with reference to this matter, at Folios 565-6. The steamship line that was run in connection with the O. R. & N. rail line to Portland, previous to the organization of the Portland and Asiatic Steamship Co. was called the Doddwell Line. One Mr. Graham had a suit concerning a proposed steamship line from Portland to the Orient, in which the O. R. & N. Co. was the defendant. Mr. Stubbs testified in that case. His attention was called to the testimony he there gave. It referred to a time previous to the amalgamation of the Union Pacific and Southern Pacific, when Mr. Stubbs was Vice-President of the Southern Pacific in charge of traffic. He admitted that he had testified in that case as follows:

> "A. I could hardly be any authority or advisor to him with respect to contracts for the steamship connection with the Oregon Railway & Navigation Company in the way of giving him information or advice, because that line was directly opposed to the interests I represented, and a competitor to the lines via San Francisco."

He also admitted that he had testified as follows:

> "A. I would undertake to say that it is very unlikely that he would have asked me about them or either of them. The relations of the Southern Pacific with the Pacific Mail, and the relations of

the O. R. & N. with the Dodwell Lines, because, as I have explained, the two lines were diametrically opposed to each other, and competing vigorously every day in the year."

After admitting that he so stated in the Graham case, he testified:

"Q. That is, that the Oregon Railway & Navigation Co. in connection with the Dodwell Line and the Southern Pacific and its line, were competing vigorously every day in the year.
A. That is, for Trans-Pacific business.
Q. For Trans-Pacific business?
A. Yes, sir, and they are doing it to-day.
Q. Then they are competitors, are they?
A. In that sense, yes."

Mr. Stubbs further testified (Folio 610):

"It is also a fact, just as I have explained to you, that the steamship line between the Orient and San Francisco, and the steamship line between the Orient and Portland, and the steamship line between the Orient and Puget Sound, competed for traffic from the Orient to all points in the United States."

An effort was made to minimize the business transacted by the Portland & Asiatic route, but it appears by the statistics prepared by Mr. Stebbins, covering the movement of traffic of various kinds, that quite a considerable percentage of the revenue received by the rail lines in connection with Oriental business accrues from business moving through Portland. For the purpose of aiding the court to determine the substantial character of the business which but for the amalgamation of the Southern Pacific and Union Pacific would have been competitive, statistics were prepared

by the General Auditor of the Southern Pacific and Union Pacific systems under the particular charge of Mr. Stebbins, Assistant to the General Auditor. It appears by Mr. Stebbins' testimony, at Folio 3042, that it was impossible to furnish statistics for the years 1900 or 1901, immediately prior and immediately succeeding the control of the Southern Pacific by the Union Pacific, because of the destruction of the Southern Pacific records in the San Francisco fire and of a considerable portion of the records of the Union Pacific Railroad Company by fire in the record room at Omaha in December, 1906. Requests had been made upon the defendants for the purpose of expediting the trial, to have these statistics prepared for 1900 and 1901, and also for one month in the autumn of 1906, and a month in the spring of 1907. The correspondence with reference to the preparation of these statistics will be found in the record, at Folios 3051-74, and it appears by the statements of counsel in the record, at Folios 3078-81, that it was assumed by all parties that the month of October and the month of April would be fair months to take as representative months Complainants' Exhibit 119 shows that for October, 1906, the Oriental business going via the Union Pacific and Southern Pacific line from the Missouri River, gave a revenue to the railroads of $39,087.82. The same month the Union Pacific system received a revenue of $6,483.04 on Oriental traffic moving through Portland. It further appears on the same exhibit that a rail revenue of $26,474.17 was received on Oriental traffic moving via El Paso and Southern Pacific; that of such revenue $3,179.13 accrued from traffic that passed through Portland, the remainder via San Francisco.

The business done during April, 1907, is shown on Complainant's Exhibit 121. From this it appears that the total

rail earnings on Oriental business via San Francisco in connection with the rail line of the Union Pacific and Southern Pacific to the Missouri River was $25,410.26, while the revenue of the Union Pacific system on Oriental business through Portland was $10,264.24. In addition, there were earnings via El Paso accruing to the Southern Pacific on Oriental business through San Francisco, $9,918.24. From this it appears that nearly 25% of the rail earnings on Oriental traffic for that month were on business moving through Portland. Therefore it cannot be said that the competition is not substantial, as the annual revenue is very considerable. It is understood, of course, that the traffic covered by these exhibits is all traffic to points east of the Missouri River gateway, so it could be moved through by either the San Francisco and Southern Pacific route, or the Portland Union Pacific route.

Mr. Munroe testified, at Folio 655, that the bulk of the outward bound tonnage of the Portland & Asiatic Co. ships was flour, and the inward tonnage consisted of products of the Orient, notably tea, rice, curios and silk, which is handled to the east over the Union Pacific system lines, and that had been the case for several years prior to 1901. The effort was made to send as much traffic as could be sent over that line, because the O. R. & N. owned the line.

Mr. Schwerin, who has been Vice-President and General Manager of the Pacific Mail Steamship Co. since 1893, and who is now in charge of all the steamship interests of the Union Pacific-Southern Pacific combination, testified, at Folios 2706-8, as to the ships in the Pacific Mail steamship service from 1893 on, and that they touched at Yokohama, Kobe, Nagasaki, Shanghai and Hongkong, and sometimes

at the port of Amoy, and that freight was brought from the port of Tientsin by coast steamers to Shanghai or Nagasaki. At Folios 2709-11 he gives the names of the agents of the Pacific Mail in the Orient. At Folio 2712 he explains that these agents in the Orient solicit freight and passenger traffic for the Pacific Mail ships, making through billings of commodities destined to points in the eastern portion of the United States. He further testified that the Occidental & Oriental Steamship Co., sailing out of San Francisco, had three ships, the Doric, the Coptic and the Gaelic; that while they were operated under a different management, the Pacific Mail Steamship Co. was its agent for freight and passenger business in the Orient. (Folios 2713-14.) At Folios 2720-21 it appeared that 50% of the stock of the Occidental & Oriental Steamship Co. had been owned by the Union Pacific, and 50% by the Pacific Improvement Co., which latter company was owned in equal proportions by the Estate of Governor Stanford, by the Crocker Estate, by Mr. Huntington and by Mr. Searles; that the Union Pacific afterwards acquired the outstanding stock in the Occidental & Oriental except the one-eighth owned by the Huntingtons, which is still outstanding. At Folio 2719 he testified that the Southern Pacific purchased the majority of the stock of the Pacific Mail in the fall of 1900; that it bought quite a block of it from Mr. Harriman and Mr. Hawley, that these gentlemen sold a block of it short to the Southern Pacific, then they went on the market, picked up the stock and made deliveries.

He further testified that the Canadian Pacific in 1893, when he came to the Pacific Mail, was operating a line of ships from Vancouver, competitive with the Pacific Mail, and with separate agencies in the Orient, and the Northern

Pacific Steamship Co. from Tacoma was operating a line in competition with his. (Folio 2723.) In 1899 a Japanese line commenced running to San Francisco, and the Pacific Mail took the agency of that line from its inception, and still has it. (Folio 2724.)

At Folios 2724 to 2726 he also spoke of the Standard Oil line of four ships taking oil to the Orient and bringing back freight in competition with the Pacific Mail and its allied lines and the Dollar Steamship Line loading lumber to the Orient, and competitors homeward on general traffic. The Dollar Line has separate agencies in the Orient. At Folios 2727-8 he spoke of the Japanese line in connection with the Great Northern from Seattle, competitive with his, and the Ocean Steamship Co. from Tacoma or Seattle, also competitive, and the China Mutual Steamship Co., also competitive. He then testified (Folios 2728-30) that the steamship line from Portland was established in 1896 or 1897; that it was first the Samuels & Samuels Line, succeeded by the Dodwell Line, and succeeded in turn by the O. R. & N., except for about three months intervening, when Mr. Graham had some ships running from Portland. At Folio 2729 Mr. Schwerin said:

> "Q. Did you regard the Dodwell Line as a competing line?
> A. Yes, sir.
> Q. And the Samuels' Line?
> A. Yes, sir.
> Q. And the Portland & Asiatic?
> A. Yes, sir."

He further said, at Folio 2730, that the boats of the Portland & Asiatic Co. are still running, and that since 1904 he has had charge of them; that up to 1904 this company had agents of its own in the Orient, soliciting traffic, per-

forming the usual duties of agents, but since 1904 the Pacific Mail has acted as the agent of the Portland & Asiatic. This necessarily eliminated the competition previously existing on inbound business.

Mr. Schwerin further testified (Folio 2751) that the traffic coming in over the Portland & Asiatic moves to the east over the O. R. & N. and Short Line and the Union Pacific. At Folio 2752 he was asked as to whether the character of the commodities imported through the Portland gateway and the imports through San Francisco are about the same, and replied:

> "A. As far as this Portland tonnage is concerned, with the exception of silk, silk piece goods, the rougher or common class of goods that go by tramp steamers rather than by mail and dispatch steamers, and excluding this local Oriental business which we have largely here in San Francisco, the general tonnage is about the same—matting, tea and curios."

He further testified that when the O. R. & N. boats to the Orient were independent of the Southern Pacific, that it was customary for the O. R. & N. boats from Portland to San Francisco to bring down Oriental traffic that came in by way of Portland, and deliver it in San Francisco, without extra charge, and he says the same thing is still done; that the same rates apply to San Francisco via Portland as to San Francisco direct. (This business through Portland is, of course, additional to that shown by Mr. Stebbins, which only covers traffic destined to points east of the Missouri River.) The freight to San Francisco is prorated between the San Francisco and Portland line, and the Portland and Asiatic on the basis of their respective

through rates. (Folios 2753-5.) This division is made by Mr. Schwerin acting for both parties, as he is the manager of the San Francisco and Portland line. It appears at Folio 2756 that at times this charge from Portland to San Francisco is not prorated on the basis of the locals, because the local rate might be too high in proportion to the trans-Pacific rate, and in that case Mr. Schwerin stated that he divided it like Solomon—cut a fair division to each. To show the way the affairs of these various allied lines are intertwined, we call attention to Mr. Harriman's testimony (Folios 1309-10) as to the Mongolia and the Manchuria, two large ships now operated by the Pacific Mail, costing something over five millions of dollars; they were bought and owned by the Oregon Short Line, which leases them to the Pacific Mail Steamship Co., the rental being fixed between Mr. Harriman, President of both lines, and Mr. Schwerin, Vice-President of the Pacific Mail. When Mr. Schwerin was testifying, he thought the ships belonged to Mr. Harriman personally, as the charter party of the ship was between the Pacific Mail and Mr. Harriman, and at Folio 2762 it appears that when he made the arrangement for the lease of the ships, he recognized Mr. Harriman as acting personally, and not as President of the Pacific Mail or in any other capacity.

Counsel for defendants brought out on cross-examination that the Portland & Asiatic line was started and is maintained because of the flour export traffic; that wheat is grown along the line of the O. R. & N. Railroad, and for the purpose of getting the haul on that wheat to Portland, where it is ground, it is necessary to maintain the steamship line to the Orient to carry away the output of the wheat, and that as an independent proposition, the steamship line is not a success. That, of course, is en-

tirely immaterial in the present case. Whatever may have been the reason for establishing the line or maintaining it, if it is, as seems to be admitted by all parties, a competitive line with the Pacific Mail line and the others through San Francisco, it is unlawful to consolidate the two. Even the Pacific Mail line, according to Mr. Schwerin, at Folio 2806, is run at a loss, which ran up to nearly half a million dollars in the year 1906, the year before he was giving his testimony.

At the same Folio (2806) he pretty well disposes of the claim set up in the answer, that the Portland & Asiatic is not a real line, and says that it has maintained a fairly regular schedule out of Portland, and the only time the schedule has varied has been when, at the earnest solicitation of Portland shippers it has sent one of the steamers off the regular route to some point like Kadodate or Newschwang. Mr. Schwerin, after explaining at some length about the securing of cargoes from the Orient to this country, summed the matter up very fairly at Folio 2814:

> "Q. Do I understand it that it is to be left to the discretion of your agents in the Orient as far as unrouted traffic is concerned, as to which way they will send it?
>
> A. The agent must use his own discretion to get the ships unloaded, and get as much competitive freight as he can get hold of.
>
> Q. That is, competitive as between your lines and outside lines?
>
> A. Yes, sir.
>
> Q. There is no competition between the Portland & Asiatic, the Occidental & Oriental, the Pacific Mail, and the Japanese Line, controlled by the Pacific Mail Steamship Co. but they are all four lines competing against the Great Northern and Canadian Pacific and other lines?

A. Well, you might describe it that way.
Q. That is about right?
A. About right, yes, sir."

It further appears by Mr. Schwerin's testimony (Folio 2716) that Mr. Hawley, when General Eastern Agent of the Southern Pacific, was the agent of the Pacific Mail Co. in New York from 1895 or 1897, until he left the employ of the Southern Pacific, and he was succeeded by Mr. Spence, his chief clerk, who also succeeded him as agent of the Southern Pacific. His agent at Chicago was Mr. Niemyer, the Southern Pacific representative at that place. It appeared further, at Folio 2717, that the Southern Pacific representatives acted for the Pacific Mail organization in Boston, Baltimore and Philadelphia, although the only two regularly appointed agents of the company were Mr. Hawley and Mr. Niemyer. They were contracting agents. (Folio 2718.)

Mr. Montgomery, Traffic Manager of the International Harvester Co., says their Oriental business moves through all the Pacific Coast ports, including San Francisco and Portland. (Folio 2954.)

Mr. Bihler, Traffic Manager of the Carnegie Steel Co., testified that at the present time their shipments to the Orient moved by the Suez Route, and at other times they have moved traffic by the Pacific Coast through Portland, Tacoma or Seattle, and not through San Francisco. (Folio 2072.)

Mr. O'Reilly, with the Union Pacific and O. R. & N. freight departments for many years, since 1891 living in Portland, testified that the first Portland steamship line was

the Samuels Line, established prior to 1894, and succeeded by the Dodwell Line, and then by the Portland & Asiatic, all running in connection with the O. R. & N., Oregon Short Line and Union Pacific. The general range of importations by these lines was tea, silk, matting and curios. (Folios 4338-9.)

He further testified that the Samuels and Dodwell Lines had agents in the Orient endeavoring to work business by the line through Portland, and that Mr. Cameron was sent over to the Orient as General Agent of the Portland & Asiatic Steamship Co. upon its organization, and the business moving from the Orient on the Portland & Asiatic boats secured by Cameron or the preceding organizations, came from the same ports from which the Pacific Mail steamers sail to San Francisco. Outside of the local flour traffic moving to the Orient by this line, cotton, railroad iron, and machinery from east of the Missouri River, and cotton from Texas, moved to the Orient. Cotton from Texas also moved by the Southern Pacific-Sunset Route to San Francisco, thence to the Orient. The iron and steel moving by this line came from Pittsburg territory. (Folios 4363-5.)

Mr. Sweek, in the traffic department of the O. R. & N. previous to and at the time of the organization of the Portland & Asiatic Steamship Co., testified that the steamship business was under the general charge of Mr. Campbell, Traffic Manager of the O. R. & N.; that the principal cargo brought from the Orient consisted of rice, tea, matting, lily bulbs, curios, silk, camphor, sulphur and jute. He also gave the ports of call in the Orient. (Folio 4457.) Mr. Cameron, the General Agent, was stationed at Hongkong, and had subagents working under him at different ports.

There were sailings about once a month the first year that the Portland & Asiatic was organized. (Folio 4458.) The traffic to the Orient consisted of flour, wheat, barley, machinery, tobacco, cotton piece goods, and various small items. The machinery originated at points east of the Missouri River, and moved over the Union Pacific. (Folio 4459.) The O. R. & N. agents in the east were agents of the steamship line, and in addition, the steamships had some traveling men through the east. (Folio 4459.) Cotton shipments to the Orient moving by this line came from different points, a great deal of it from Texas and the south central states. It moved from Texas to a connection with the Union Pacific either at Kansas City or Denver, and was then brought on by that line, the Short Line and the O. R. & N. Cotton also moved from those Texas points to the Orient by way of the Southern Pacific and the Pacific Mail and other steamship lines out of San Francisco. (Folios 4459-60.) Traffic from the Orient was billed through to points in the east. It was way-billed from Portland. The routing to the east was principally in the hands of the O. R. & N. They tried, as far as possible, to control it to facilitate the loading, sending cargoes out in train loads, making much better time by having it go in a bunch, if possible. These train loads moved over the Union Pacific. (Folios 4460-1.)

Mr. Stubbs, when called by the defendants, apparently contradicted the testimony that he had previously given as to the competition between the Portland and San Francisco route, by saying at Folio 6599 that the Union Pacific worked its Oriental business preferentially through San Francisco, and he gave a reason for that which will hardly hold water,

as was shown on cross-examination. We quote from his direct testimony:

> "A. It had its interest in the O. & O. Steamship Company, and the Union Pacific proper had a longer haul into Ogden than it would have had if it took it to Granger,—the Union Pacific proper."

On cross-examination (Folio 6618 et seq), he testified that the different steamship lines out of Portland handled their trans-continental business in connection with the O. R. & N., the Short Line and the Union Pacific. At Folio 6619 he gave this testimony:

> "Q. The O. R. & N., when they established a line to the Orient themselves, that is, the Portland & Asiatic, put a traffic man over there in charge of it, didn't they—to seek the routing of business this way—Mr. Cameron?
>
> A. I think so. That is my recollection, yes, sir.
>
> Q. And he was soliciting business for that line in connection with the rail lines of the Union Pacific and sub-lines to Portland in the same ports that the Pacific Mail organization was seeking business through San Francisco?
>
> A. I think so.
>
> Q. And you testified at one time, did you not, that that line through Portland was in active competition with the lines that you represented through San Francisco?
>
> A. I did, sir.
>
> Q. You still say that, don't you?
>
> A. Yes, in that sense."

It is very hard to see how this testimony of Mr. Stubbs on cross-examination can be reconciled with his statement on the direct examination to which we have just referred. At Folios 6621-2, his statement about the relative interest of

the Union Pacific in moving traffic through these respective ports was likewise contradicted by himself. He testified:

> "Q. Now, this is the fact, isn't it, that as to all Asiatic business that moves via Portland by the Portland & Asiatic or its predecessor lines, the Union Pacific as the owner of the Short Line and the O. R. & N., which in turn controls the Portland & Asiatic, has a through line of its own from Asiatic ports to the Missouri River.
>
> A. Practically.
>
> Q. Whereas if the business moves through the port of San Francisco, the Union Pacific itself had, as you say, a half interest in the Occidental & Oriental and the haul from Ogden to the Missouri River, but no interest in the haul from Ogden to San Francisco?
>
> A. That is right.
>
> Q. And if it moved by the Pacific Mail Steamship Company the Union Pacific had no interest in the business except such as it got for hauling the traffic from Ogden to the Missouri River?
>
> A. That is right, with respect to that particular movement."

At Folio 6623 he testified:

> "Q. Was there an attempt made to move business to the Orient by the Sunset Route, originating in Atlantic seaboard territory?
>
> A. Yes, sir.
>
> * * * * * * * *
>
> Q. Did cotton move to the Orient from Southern Pacific territory in Texas?
>
> A. Yes, sir.
>
> Q. Through San Francisco?
>
> A. Yes, sir.
>
> Q. And also through Portland?
>
> A. Yes.
>
> * * * * * * * *

Q. That cotton business to the Orient at one time was quite an extensive business, wasn't it?
A. Yes indeed.
Q. And all of the lines were seeking it?
A. All of them."

At Folio 7619, there is a summary introduced by Mr. Stebbins showing the total Oriental business through both ports for the year ending June 30, 1901, making a total of $372,857, of which $53,570 moved through Portland. This is admittedly only an estimate computed on the basis that 70% of the total tonnage moved east of the Missouri River over the Milwaukee and St. Paul and the Chicago & Northwestern roads. Averaging the earnings shown upon Complainant's Exhibits 119 and 121 for a year, would show total Oriental traffic in 1906 and 1907 a little over $700,000, and a comparison of these earnings with those for the year ending June 30, 1901, shows that the business has nearly doubled. *These figures include only the rail revenue of the two systems, and not the revenue of steamships on the Pacific Ocean, which is not shown in any exhibit.* (Folios 7664-5.)

From the testimony of these various witnesses, it appears that the Portland & Asiatic Co. and its predecessors maintained a line of ships with monthly sailings out of Portland; that the Union Pacific and the O. R. & N. organization throughout the east, together with certain special agents, were endeavoring to route all the traffic possible by Portland in direct competition with the ships of the Pacific Mail and other ships leaving San Francisco; that in addition to shipments of manufactured products from the East, cotton moved to the Orient from Texas and other southern points in competition with the Southern Pacific-Sunset Route and the Pacific Mail and the allied lines out

of San Francisco. There was, therefore, active, energetic competition for cargoes to the Orient. As to competition from the Orient, that is admitted. Separate soliciting agents were maintained in the Orient, traffic moved not only to Portland, but to San Francisco, being trans-shipped at Portland to the boats of the O. R. & N. Co., and delivered on the docks at San Francisco. The traffic moving through Portland went east over the Union Pacific system, business reaching San Francisco went east partly over the Southern Pacific.

We have previously commented on the relative importance of this business transacted through the port of Portland to that transacted through the port of San Francisco. This was shown by the statistics prepared by the defendants. All the competition between these two lines has been eliminated, as was frankly stated by Mr. Schwerin, now in charge of the boat lines.

RECENT EFFORTS OF THE UNION PACIFIC TO RENDER THE CONTROL OF THIS COMPETITIVE LINE LEGAL THROUGH LEGISLATION.

Mr. Kahn was produced as a witness on the part of the defendants, and gave testimony on March 7, 1910. He is again a member of the Board of Directors and Executive Committee of the Union Pacific. On cross-examination he was asked at Folio 7886, whether the Union Pacific or the Oregon Short Line or any one of those companies had acquired any Southern Pacific stock during the preceding ninety days. This question was renewed in different forms. Finally at Folio 7888, he asked leave to consider and take advice of counsel before answering. After some discussion the question was passed until after luncheon, when it was renewed, and he gave the following testimony at Folio 7901:

> "Q. Now I will ask you as I did before luncheon, whether since you returned to the Board and Executive Committee of the Union Pacific that company or the Oregon Short Line Railroad Company or the Oregon Railroad & Navigation Company, or anyone in the interests of those companies or any of them have purchased any Southern Pacific stock? * * *
>
> A. The only additional stock purchased was purchased, as far as I know, early in January * * * this year. Being 74,000 shares. These 74,000 shares were bought for the following reason— * * * 74,000 shares of Southern Pacific stock * * * common stock * * * These 74,000 shares were bought for the following reason: A bill (so we were informed) was introduced in Congress or contemplated to be introduced in Congress, which would give to those railroads that had 50 per cent of the holdings of another railroad (*competing or other-*

wise) the right not only to retain that 50 per cent, but if they so chose, to purchase the balance, in addition to the 50 per cent, whilst railroads that had less than 50 per cent had no such assurance. Thereupon, upon the advice of Judge Lovett, it was deemed in the best interests of the Union Pacific that its holdings of Southern Pacific stock should be increased to a total of 50 per cent of the entire outstanding amount of the Southern Pacific stock. A few weeks afterwards Judge Lovett advised the Executive Committee that the terms of the bill as he had understood them, had been changed, or were going to be changed, and that the provision to which he referred and which was the reason for the purchase of additional Southern Pacific stock would not go into the bill, and Judge Lovett advised in consequence that the purchase of additional Southern Pacific stock be stopped at once, and it was stopped on the same day, and no more stock has since been acquired. * * *

Q. How many additional shares would it have been necessary to purchase to accomplish the acquisition of 50 per cent of the stock at the time that purchase was undertaken in January?

A. We would have required, roughly speaking, 154,000 shares."

Could there be a more complete confession of guilt than this? If the roads were not competing it required no legislation to permit the purchase of any amount of the stock. Their control was absolute; they did not need any more stock for that purpose, but with Southern Pacific stock selling at above 130 they proposed to spend about twenty millions of dollars in anticipation of this legislation, which if enacted, would have rendered legal the ownership of the stock of a competing line of railroad. They actually did invest about ten million dollars of the money of the stockholders of the Union Pacific before they became satisfied

that the legislation would not pass, and therefore the purchase of the stock would not avail them. It would seem to require a great deal of courage after this confession to assert that these parties did not know and fully appreciate that these lines of railroad, as the testimony so clearly demonstrates, were competing lines.

THE POSSESSION OF A THROUGH LINE FROM THE MISSOURI RIVER TO PORTLAND WITH THE ADDITIONAL STRENGTH GIVEN BY THE BOAT LINE FROM THERE TO SAN FRANCISCO, MADE THE UNION PACIFIC SO POWERFUL IN MAINTAINING AND CONDUCTING THIS COMPETITIVE STRUGGLE FOR BUSINESS THAT THE SOUTHERN PACIFIC WAS HELPLESS TO DESTROY THAT COMPETITION SIMPLY BY THE OWNERSHIP OF THE LINE FROM OGDEN TO SAN FRANCISCO OVER WHICH THE TRAFFIC SECURED BY THE UNION PACIFIC ORDINARILY MOVED.

This is a fact that has at all times been recognized both by the Union Pacific and Southern Pacific companies, and has also been clearly established by the testimony in this case. Complainant's Exhibit 16 is a part of the records of a directors' meeting of the Union Pacific Railroad Company under date of August 29, 1899, at which the acquisition of the stock and bonds of the Oregon Short Line and Oregon Railroad & Navigation Co. was approved. We have heretofore called attention to the remarks of the late defendant Harriman as Chairman of the Executive Committee, with reference to the purchase of said stocks. We again quote from this address (Folio 103):

> "He stated that the acquisition of the Navigation preferred stock and the Short Line B. bonds on the basis indicated would secure the control of the Navigation property and complete the extension of this company's (the Union Pacific) system to the Pacific coast."

At that time the conspiracy afterwards formed to monopolize the Trans-Missouri traffic had not been formed, and therefore the resolution for the acquisition of the control of those two lines by the Union Pacific was approved in a resolution in the preamble of which, (Folio 105), appears the following language:

> "WHEREAS, the lines of railroad of said Oregon Short Line Railroad Company and said The Oregon Railroad & Navigation Company constitute extensions and auxiliary lines of the railroad of this company, and are not parallel or competitive therewith." etc.

Thus it appears that the Union Pacific and the defendant Harriman at that time appreciated that the system of the Union Pacific was complete and its strength and power was determined by the extension of its line to the Pacific coast by procuring the control of these lines which were neither parallel nor competitive with it. Previous to the receivership of the Union Pacific the Short Line and the Oregon Railroad & Navigation Co. in the nineties, the Union Pacific controlled the Short Line and the Navigation Co. This control had been lost by reason of the separate receiverships and reorganizations, and it was merely to reinstate itself as a through line to the Pacific Ocean that the securities were purchased pursuant to the resolution above mentioned. That the Union Pacific, by reason of being a through line from the Missouri River to the Pacific Ocean was a competitor of not only the Southern Pacific Sunset Route, but the Central Pacific, was thoroughly recognized by the Central Pacific and by the defendant Southern Pacific Company, and that fact was put down in black and white in the lease of the Central Pacific to the Southern

Pacific in 1885, which has been introduced in evidence by the defendants in this case as Defendant's Exhibit 40. (Folio 6460.) The preamble of this lease, so far as material, is as follows:

> "THAT WHEREAS, part of the through business heretofore done by the Central Pacific Railroad Company's line from Ogden to the waters of the Pacific, has been diverted by the Northern Pacific, Atlantic and Pacific, and Atchison, Topeka and Santa Fe railroads; and
>
> WHEREAS, the Union Pacific Railroad Company has secured the control of the road known as the Oregon Short Line and thereby secured an outlet to the Pacific other than over the Central Pacific Railroad, and thus in that respect placed itself in opposition to the interest of the Central Pacific, and
>
> WHEREAS, it now appears that the through business hitherto done by the Central Pacific Railroad will thereby be further diverted, and that it is not only to the best interests of but absolutely necessary that the Central Pacific Railroad Company, in order to maintain itself against these diversions, should be operated in connection with a friendly through line to the waters of the Atlantic; and
>
> WHEREAS, the said Southern Pacific Company has a line of railroad under its control for a period of ninety-nine years extending continuously from the Pacific ocean to the Atlantic ocean;
>
> * * * * *
>
> AND WHEREAS, the said Southern Pacific Company is willing to enter into an agreement with the Central Pacific Railroad Company whereby its line and the line of the said Southern Pacific Company shall be operated so as to secure their just rights to each without the one gaining any benefit or advantage at the expense of the other, and whereby the Central Pacific Railroad Company may for a long term of years be assured of protection against

the diversion of its traffic and be relieved of the disadvantages flowing from lack of harmonious connections," etc.

We thus have not only the recognition by the statement of the defendant Harriman and the resolution of the board of directors of the Union Pacific Company that the possession of the Short Line and the Navigation Co. by the Union Pacific made a complete system reaching the Pacific Ocean, but we have the declaration of the other defendant, the Southern Pacific, that this through line was one which would divert traffic and would render the Central Pacific helpless unless it was tied up with another line that could protect it as against the lack of harmonious connections. Naturally, while the Union Pacific and the Central Pacific were connections, and while they necessarily would interchange a vast amount of business, they were not harmonious connections. They were opposed in interest, and the possession of this through line to the Pacific Ocean put in the hands of the Union Pacific a weapon which it could use with effectiveness in carrying on its competition against the Southern Pacific. So that, aside from the testimony of the expert railroad men, to which we will now call attention, we have here a declaration to that effect by both the Union Pacific and the Southern Pacific systems.

Through rates are fixed in conference and before the merger the Union Pacific and Southern Pacific each had an independent voice in making the same.

It appears by the undisputed testimony in this case, and is a matter of common knowledge, that the railroad rates to and from competitive points must of necessity be uniform unless, by reason of some physical disadvantage of one line as against another, they operate under differentials. Those differentials, however, are established for the

purpose of equalizing the advantages and disadvantages of the two lines in handling traffic, so that the two transportation systems can compete for business upon equal terms; and it is only in case of rate wars that this rule is departed from. Differentials exist by agreement as to passenger business, as is well known, between points in the west and New York, certain lines being known as standard lines and others as differential lines. This is occasioned by the fact that one line is able to give quicker and better service. Therefore the other lines cannot compete for the business unless they are permitted to handle traffic at a lower rate. A marked example again of differentials is found in the business conducted by rail and lake as against the all rail lines from the east and the west. In the argument of Mr. Kerr, concerning the Canadian Pacific differentials, which by consent was put into the record, there is a discussion of the lake and rail rates as compared with the all rail rates, and the amount of the differentials is shown in the tables appearing at Folios 3368, 3369, 3370. Not only are differential rates thus put in by agreement, but all rates are in effect fixed by conference. Mr. Stubbs, being examined upon the subject of transcontinental rates, testified as follows, (Folio 3332):

> "Q. As a matter of fact, the rates for many years have necessarily been made by conference of the different lines interested, haven't they—the only way they could be equalized?
> A. Always."

It appears without dispute, and is shown by the tariffs introduced in evidence, that the various lines unite in the publishing of tariffs through associations. Mr. Morton, on cross-examination, testified at Folio 1391, that it was

absolutely necessary, if the rates are lawful, that they should be the same by all practical routes, and while he testified that in general the California rates suggested by the Southern Pacific were adopted, he gave the reason for that at Folio 1401, as follows:

> "The Southern Pacific officials were on the ground. They were in intimate, close relationship to the receivers and shippers of goods, and they had a bigger interest in California than anybody else, and naturally the other railroads bowed to and favored them in regard to what should be done out there."

But he also said in connection with the same matter, at Folio 1391:

> "When I say that the Atchison and the Southern Pacific were always regarded as the rate-making power, so far as California rates are concerned, of course I take into consideration the fact that the rates to the Pacific coast are generally the same, and that the rates made by the northern routes—the northern transcontinental lines, the Canadian Pacific, the Great Northern, the Northern Pacific *and the Oregon Railroad & Navigation Company, are taken* into consideration, of course."

He testified again:

> "We have never published rates that have not been by agreement of all other railroads or by understanding after discussion." (Folio 1403.)

And again:

> "Q. Now in the traffic meetings that have been held since the days when the pool went out of business existence, when questions of policy were up for

consideration, or questions of rates, were not the Union Pacific and the Sunset Route competing with each other often times?

A. Frequently." (Folio 1399.)

It must be remembered that there are many rates to points in the interior, as to which the Southern Pacific is compelled to unite with other lines, which have an equal voice in the making of rates, so that necessarily transcontinental rates are matters of conference and agreement.

Mr. Hawley testified, Folio 1435:

"Q. Now you stated in answer to Judge Lovett, that the Union Pacific could not make a through rate without the concurrence of the Southern Pacific. Isn't it a fact that the transcontinental rates were made as a rule at meetings in which all the roads were represented?

A. By agreement, yes.

Q. And the Union Pacific was represented separately from the Southern Pacific?

A. Yes, sir.

* * * * *

Q. Now in fixing transcontinental rates, were all the lines through to the coast considered as factors in arriving at a proper rate?

A. Yes, sir.

Q. That would include the Canadian Pacific, the Northern Pacific, the Great Northern, the Union Pacific to Portland, and all the lines down?

A. There were joint tariffs issued to which all lines were parties.

Q. In the matter of fixing rates, were the boat line by Panama and the ships around the Straits of Magellan at times factors?

A. They were factors, yes."

At Folio 589, Mr. Stubbs, testifying before the Interstate Commerce Commission, (his testimony being inserted in this record by consent), stated in answer to Commissioner Clements with reference to this transcontinental business, that they were published by a joint common agency that represents all the transcontinental lines.

Influence of Portland Route on Transcontinental Rates.

Mr. Gothlin, a member of the Railroad Commission of Ohio since August 1st, 1906, and immediately previous to that Traffic Manager of the National Cash Register Co. of Dayton, Ohio, and before that for many years in the railroad service, testified, at Folio 2441:

> "Q. What is your opinion as to the influence that the Union Pacific, considered apart entirely from the Southern Pacific, would legitimately have in the fixing of transcontinental rates to California points, San Francisco, by reason of the possession of a through rail line to Portland in connection with the boat line from there to San Francisco?
>
> A. Well, I see no reason why, if the Union Pacific were a separate and distinct organization, and had an active and vigorous management, they could not practically dictate to the Transcontinental Association any policy that they might see fit to adhere to strictly; that is, they could at least be in position not to be dictated to, not coerced into anything that they did not care to admit."

Mr. Gothlin was cross-examined at great length upon this question by defendants' counsel, and adhered to his opinion and gave excellent reasons for it. Counsel for defendant endeavored to show by Mr. Gothlin, as he did by other witnesses, that in case the Union Pacific should see fit to work business to California by way of Portland in opposition to the Central Pacific, that eastbound business

might be diverted by the latter line at Ogden to the Rio Grande, and thereby greater loss be inflicted upon the Union Pacific than it would be able to inflict upon the Southern Pacific. This is really entirely beside the question, but he made an answer which was somewhat further developed upon re-direct examination, which seems conclusive upon that point. We quote from cross-examination, Folio 2448:

> "Q. Now as against a line of that sort, (the direct all rail line), that direct short rail line, don't you think that the Union Pacific would inevitably lose vastly more in that controversy by that diversion of traffic than it could possibly gain by the use of the route by way of Portland? Now you have some knowledge of traffic, of course. Would not that be your opinion?
>
> A. My experience of rate wars is they are senseless anyway, and the management does not care how much they are losing. Their object is to hurt the other fellow. And undoubtedly the Union Pacific could inflict more damage upon the Southern Pacific, I believe, than it could possibly receive, if the question were one that they felt justified extreme measures of that kind.
>
> Q. Do you think that the Union Pacific could inflict more injury on the Southern Pacific in that controversy than it would receive by the diversion of the traffic from it?
>
> A. I think the experience of rate wars will show that the smaller line can always hurt the larger line in a larger ratio than the damage to itself. The Southern Pacific, you know, has more interests than the line from Ogden to Frisco; they have the interests of the long haul line from New Orleans, and I do not have much doubt but that the Union Pacific could, if it saw fit to take drastic measures, arrange rates so that from this whole territory the New Orleans route would get scarcely anything." (Folio 2448.)

On re-direct examination, he went into this particular question as to relative loss a little more fully. We quote from Folio 2466:

> "Q. And what you meant was that if the rates were brought down by the Union Pacific competition, it would bring them down all along the line, and therefore it would cut the rates on all the Southern Pacific through business by New Orleans? Is that what you meant?
>
> A. Yes, sir; with the further idea that from a large part of this territory the distance via New Orleans is so much greater that the shrinkage would be felt a greater deal more; it would reduce the rate per ton per mile so much more than by a shorter line."

That the rates would thus be brought down all along the line was testified to by Mr. Stubbs. When he was being examined with reference to his argument concerning the Canadian Pacific differential of 10%, and had stated that there were eight mixed rail and water lines entitled to a like differential, if one was accorded the Canadian Pacific, six of those mixed rail and water lines being from the Missouri River by way of Portland to San Francisco, he read into the record from that argument, the following language:

> "Introduce differential rates with any of the American lines, and it must be manifest to any practical railroad man who knows the interdependence of these rates and these lines, that they will operate exactly as a cut rate. Let the rate be cut on the Great Northern, and it goes down to the Gulf of California." (Folio 3268.)

He then testified:

> "A. That is to say: if one of these mixed lines claimed a differential, then there were so many

other mixed lines that could be created, that they would immediately come in and demand a like differential and would so involve the whole traffic that there would be nothing left for the all rail lines. It would disorganize the whole situation. It would shatter the whole rate fabric. That was the contention; that was the gist of the argument there.

* * * * *

Q. And that is still your view just as you expressed it here?

A. Yes, I think so. (Folios 3269-70.)

* * * * *

A. Today with the enforcement of the law, the general, (I think universal) observance of the law, if those conditions were created, the moment the Canadian Pacific put in a 10% differential, all the other lines would meet it openly.

* * * * *

Q. Then, the necessary effect in your judgment, of putting in such a rate as the Canadian Pacific had in at that time would be to cause a reduction of the published rates by competitive lines?

A. Oh, but worse than that. It would eventuate in destructive rates—a war of rates that would be quite as much damaging, if not more, to the commercial communities than to the railroads. If one line started out to put in lower rates than its competitor, or its numerous competitors, and would put in a lower schedule, the other lines would meet it; then the original line would go lower; that would be met; it would go lower still, and that would be met, until rates became beyond the power of the average line to carry for any great length of time." (Folio 3271.)

It will be seen that Mr. Stubbs had no doubt that all these transcontinental lines were *competitors*. He so characterizes them in this answer.

On re-direct examination, after stating that the Union Pacific never had anything to complain of in the divisions agreed upon between it and the Southern Pacific, he testified as follows:

"Q. The Southern Pacific never attempted to force upon them a division which you would say was unfair?

A. If you mean what you ask me, I will say no.

Q. Unfair to the Union Pacific?

A. No.

Q. If such an attempt had been made, and as a matter of retaliation the Union Pacific had taken advantage of its Portland boat line and had cut the rates, then as I understood you to testify this morning, that would have resulted in cutting rates all along the line, over all routes, as you said in your usually eloquent—

A. Well, whether I said so or not, I say so now.

Q. That would have involved a loss to the Southern Pacific of its rates on the enormous traffic going over the Sunset route, would it not? That is true, if it was cut all along the line?

A. Why, if it was cut it would be cut everywhere, yes.

Q. It would hurt the Southern Pacific on its Sunset business, and would hurt it on its proportion of the through business it did from Ogden west, wouldn't it? That is apparent, isn't it? That is obvious, isn't it?

A. Yes, as compared with normal conditions, of course." (Folios 3321-22.)

When we consider in this connection the testimony of Mr. Hawley, that the Southern Pacific Sunset Route at times did as high as 85% of the transcontinental business from the Atlantic seaboard to San Francisco, (Folio 1419), it is obvious what a weapon, both in the matter of rates and divisions, was possessed by the Union Pacific in having a through line to tidewater at Portland. That the Southern

Pacific respected and appreciated this power of the Union Pacific is again demonstrated beyond controversy by the very significant admission made by Mr. Stubbs when he was on the stand. At Folio 3320 he was being examined with reference to the divisions of the through rate between the Union Pacific and the Southern Pacific. The division of the Missouri River rate to San Francisco had been from the beginning 54% to the Union Pacific and 46% to the Southern Pacific. Mr. Stubbs testified as follows with reference to that:

> "Q. And that division was always apparently satisfactory to both companies, wasn't it? Not that you would not have liked to have more, but didn't you treat that as a fairly satisfactory division, being practically on a mileage basis?
>
> A. No, I wouldn't say that; but I suppose it makes no difference how it is. I always held that it was a wrong division. The cost of the service west of Ogden was such that it ought to be more.
>
> Q. Because it was more expensive west of Ogden?
>
> A. *Yes, it was not satisfactory. However, it was all we could get at the time.*"

If the Union Pacific was bottled up at Ogden, to use an expression that is much favored by our learned opponents, why was it that the Southern Pacific could not get more, if Mr. Stubbs, its Traffic Manager, felt that it was entitled to more? There is no question that he is right, and that the expense of transporting traffic over the difficult mountain grades in the Sierra Nevadas and hauling it over deserts, where coal and water are scarce, is much greater than over the comparatively level line of the Union Pacific with its adequate coal supply, but the division was all the Southern Pacific could get at the time, as Mr. Stubbs puts it, and the

reason for that is that the Union Pacific, having its line to the coast and its boat line to San Francisco, was in such a commanding position that the Southern Pacific had to accord it not only fair treatment, but what he regarded as more than fair treatment, for the moment the Southern Pacific attempted to exact an unfair division of the through rate or insisted upon putting in a through rate unsatisfactory to the Union Pacific, the latter company could retaliate at once by putting in a lower rate by rail to Portland or boat and rail to San Francisco and causing this enormous loss to its competitor.

Mr. Markham, assistant to the Vice President of the Missouri Pacific Railroad, at St. Louis, with thirty-five years' experience as a railroad man, many years with the Illinois Central, and whose great ability in traffic matters is recognized throughout the western railroad world was examined upon this subject. (Folios 3684-85):

> "Q. Now, I will repeat my question that I asked before, as to what influence was possessed by the Union Pacific Railroad in transcontinental rates by the possession of this line from Omaha to Portland over its own rails and those of its subsidiary companies, the Oregon Short Line and Oregon Railroad & Navigation Company and the boat line from Portland to San Francisco?
>
> A. It would have an influence on the rates.
>
> * * * * *
>
> Q. Why? How could that influence be used?
>
> A. Because it could make what rate it desired from Omaha to San Francisco."

On cross-examination defendants counsel drew out from Mr. Markham that the route by Portland was a few hundred miles longer than the direct all rail line.

On re-direct examination attention was called to the fact that the Sunset boat and rail route from New York to San Francisco is much longer than the all rail line, and still, as shown, the long route carries the most business. Attention was also called to the Panama Route, which is very much longer, and the Tehuantepec Route, which, as is the Panama Route, is not only much longer than the all rail routes, but much longer than the Sunset Route, and still they both participated in and competed for transcontinental traffic. (Folio 3697.)

He then testified as follows:

> "Q. Judge Lovett brought out from you the fact that in case of difficulty between the Union Pacific and the Southern Pacific, the Southern Pacific could send its unrouted traffic east from Ogden over the Denver and Rio Grande. Assuming that the Union Pacific was an independent line and able to take care of itself and do business as an independent line, what do you think would be the effect on the Southern Pacific—Ogden Route, their Ogden line, if they attempted to divert all their traffic eastbound to the Denver & Rio Grande at Ogden assuming the Union Pacific was free and independent and owned the lines that it did own?
>
> A. I think that it would result in a disastrous war of rates.
>
> * * * * * *
>
> Q. And in that war of rates, would the Sunset Route necessarily be drawn in if it desired to continue to participate in the business?
>
> A. Yes, sir." (Folio 3698.)

On re-cross examination counsel for defendants attempted to establish that by reason of the fact that the Union Pa-

cific received its traffic at Omaha from other lines, it would be impossible for it to cut the through rate, but that was easily answered by Mr. Markham, Folio 3709:

"Q. But right there: The Union Pacific could not cut the through rate legally without the concurrence of its connections, could it?

A. Judge, there is the power it would have to make its rate from Omaha irrespective of what the others do, * * * and make it on the sum of the locals.

* * * * * *

Q. Don't you think if the Union Pacific were to attempt a rate war under those conditions that it would be about as suicidal as—

A. Oh dear yes.

Q. You don't believe for a moment that any sane railroad man would attempt a thing of that sort seriously, do you?

A. Not unless the provocation was great. Of course if the Southern Pacific did not deal with it fairly at Ogden, there would be no other alternative left." (Folio 3710.)

* * * * * *

"Q. Those disastrous consequences which the Union Pacific would suffer, would not reach the Southern Pacific very much, would they, because the transcontinental rates could be held up? The Union Pacific could not affect the transcontinental rates?

* * * * * *

A. I don't think they could be held up. The other line of the Southern Pacific could not afford to ignore the amount of business that the Union Pacific could take by the other route, by the Portland route.

Q. From where?

A. From Omaha and points east. You see I am going on the idea that this is life and death, because with such giants it would amount to that.

Q. Do you think that the Union Pacific by cutting the rate and trying to handle it on a local from the Missouri River by way of Portland to San Francisco as against the work of all the other lines could make any considerable impression on the transcontinental rates?

A. I do, sir.

Q. Do you think it woud get any business of any consequence?

A. Yes, because the rates from the Missouri River are so very high that it could cut a great deal and still have a margin."

Again Mr. Markham said, at Folio 3702:

"Q. Then you think that the Union Pacific has always been very influential in controlling the transcontinental situation in the west, do you?

A. Yes, sir. It has been influential; the importance of the line and the personality of the officers."

Mr. Lincoln (Folio 3781) testified:

"Q. Wouldn't you consider the position of that route (Union Pacific route to San Francisco by Portland) of value in case the Southern Pacific should endeavor to make unreasonable demands as to divisions from the Union Pacific, in view of the fact that rates could be put in there which would go all along the line, and cut the Sunset rates and everything else. I mean as a retaliatory measure?

A. It would be valuable in that way only."

On re-cross-examination (Folio 3784) he testified:

"Q. Even if it were not a friendly connection, do you think the Union Pacific might attempt to use the Portland gateway as against the Southern Pacific at Ogden?

A. If it were not getting a fair share of the business through the Ogden gateway.

Q. You think it would attempt to use the Portland gateway?

A. I think it would, yes."

Mr. Babcock gave some very significant testimony on this subject, at Folios 3945-6:

"Q. Will you state your opinion, from your knowledge of the traffic, as to the value, if any, of that boat line in connection with the Union Pacific in any controversy which might arise between the Union Pacific and Southern Pacific as to divisions on California business?

A. It must have had a very commanding effect.

Q. For what reason?

A. Because it gave them a line of their own directly into San Francisco, water and rail. It enabled them to make such rates as they might see fit.

Q. Assuming that they took advantage of the dominant position which they possessed by reason of having this boat line as you have stated, and reduced rates by that route, what would have been the effect upon rates generally in Trans-Missouri territory?

A. Why, all rates would have had to work to whatever basis they established. If they lowered the rates, it would have had the effect of requiring a lowering of rates generally."

On cross-examination counsel for defendants succeeded in bringing out from Mr. Babcock direct testimony that the Southern Pacific management appreciated the strength of the Union Pacific in possessing this Portland line. (Folios 3968-9.)

"Q. If it were to attempt to move business by way of Portland and the boat line, it would have it farther from San Francisco when it got to Portland than at Ogden, wouldn't it?

A. Still, it would be a very practicable route.

* * * * * *

Q. Why?

A. Well, there is scarcely between any two competing points—it is rarely ever the case that the different lines competing for the traffic are lines of equal distance. For example, the distance of the Rio Grande and Burlington route from Ogden to Omaha is more than 300 miles greater than the distance via the Union Pacific from Omaha to Ogden, and yet the Rio Grande route has always done a very satisfactory share of the business. But there is an indirect benefit to the Union Pacific interests in that route via Portland in the influence it exerts over the friendly attitude on the part of the Southern Pacific toward the Union Pacific route—I speak of the old conditions—and I believe that it was so used, for the traffic manager of the Southern Pacific essentially admitted that to me.

Q. When?

A. Shortly after the lines went into the hands of receivers in 1893.

Q. Who, what traffic manager?

A. Mr. Charles F. Smurr, Freight Traffic Manager.

Q. Unfortunately he is dead, isn't he?

A. Yes, very unfortunately. He was the one that I dealt with entirely at that time. * * * I have talked on the same matter to Mr. Richard Gray. Unfortunately he is not now living, but if I may make an explanation: I had felt for a long time that the Southern Pacific Company in California was unduly (as we thought) aiding the Union Pacific in its through traffic originating in California and going east as against the Rio Grande route, and had complained of that to Mr. Smurr who was then

the Freight Traffic Manager, and the man with whom I dealt almost wholly; but they either evaded or would never admit it. And I charged them with using this Oregon line—that the closing of it had the effect of bringing about their friendly influence towards feeding the Union Pacific as against us. After the Union Pacific line was broken up by the receivership and the Oregon Short Line was operated independently of the Union Pacific and the Navigation Co., being over in California, Mr. Smurr asked me in a bantering way what I was there for. I said, 'I am over here as usual to visit you fellows —I know you.' He said, 'Well, I don't care what you do as long as you don't hurt us.' 'Of course,' he says, 'there was a time when the Union Pacific had that water line via Ogden and we had to look out for ourselves.'"

Mr. Severance: "Via Ogden or via Portland?

A. Via Portland, that was the conversation, and in that way I held that he admitted to me that they did use that line to influence the routing of California freight by the Union Pacific as against the Rio Grande.

* * * * * *

Q. When was that?

A. In the autumn of 1893, according to the best of my recollection.

* * * * * *

Q. Did they ever operate it with through traffic? That is the point; did the Union Pacific ever operate it with through traffic to California?

A. I think it is a matter of common knowledge that they did.

Q. From points east of Ogden?

A. Yes.

Q. That they used that line for California business?

A. That was the general understanding during the administration of Mr. T. J. Potter, as in charge of the Union Pacific road particularly."

Again Mr. Babcock testified, on re-direct examination, at Folio 3999, after having his attention called to Mr. Hawley's testimony that over 50% of the traffic from New York common points, and at times as high as 80% of the traffic from New York City proper had moved by the Morgan line:

> "Q. Suppose the Union Pacific in a quarrel with the Southern Pacific, they being independent, should use that boat line by Portland, which counsel has examined you about, in connection with its rail line, cutting rates that way, that is reducing rates that way, what would be the effect on the rates over the Sunset Route and the Gulf lines to California points?
>
> A. Break them down.
>
> Q. So that the Southern Pacific had a good deal at stake, had they not, in maintaining rates?
>
> A. More than any other line.
>
> Q. Isn't that the reason why you say that the possession of the route to tidewater with the boat line gave the Union Pacific such commanding influence?
>
> A. That is the main reason."

And again, on re-cross-examination (Folio 4004):

> "Q. I would like you to specify the instances and the means for which the Union Pacific could or might naturally use that power?
>
> A. They simply had that route at their disposal, and if occasion arose through any cause, if they found it necessary to use it, it was there to be used.
>
> Q. Against the Southern Pacific?
>
> A. Yes, sir; against the Southern Pacific, or if you please, against the other competitors—the Atchison, or the Northern Pacific, or any other route competing for California business. It gave them a through line under their own control, and thereby gave them a bulwark of defense for their traffic—their proportion of the traffic—against their competitors."

And again at Folio 4006:

> "A. They had that power, to use it at any time they saw fit, and all the other lines recognized that, and it was a very effective force in creating and maintaining respect for the Union Pacific on the part of all the other lines.
>
> Q. In what way did they use it? How did they recognize it?
>
> A. *Because they knew they had a line of their own. They were in a position to make any rates they saw fit, if they cared to exercise that right arbitrarily, and their making the rate would fix the rate for all the other lines.*" (Folio 4006.)

Mr. Stuyvesant Fish, for many years President of the Illinois Central Ry., testified, (Folios 1816-17), that for the purposes of competition it would be feasible to work San Francisco business over the Union Pacific to Portland, and thence down by boat.

Mr. Buchanan, a very intelligent traffic man who has charge of the freight department of the Proctor & Gamble Co. of Cincinnati, probably the largest manufacturers of soap and similar products, in the United States, was examined at considerable length on the various issues in this case After testifying at Folios 2356-60, that the transcontinental rates are made by the Transcontinental Association, chiefly by the Southern Pacific, Union Pacific and Santa Fe, and that they are the same by all roads, he said that the ownership of the through line to Portland by the Union Pacific, together with the boat line from San Francisco, would enable it to exercise influence in the adjustment of rates to California.

Mr. Knight, from December, 1888, to September, 1901, the General Agent of the Union Pacific at Chicago in charge of freight and passenger business, testified at Folio 3015, that the possession of the all rail line of the Union Pacific to Portland, and the boat line to San Francisco, was valuable as a good means of requiring fair treatment.

Traffic has at times moved to San Francisco from the east by way of Portland. While it was not usually essential or for the interest of the Union Pacific to work traffic by way of this Portland boat line, for the reason that its ownership was sufficient to insure fair treatment of its traffic by the Ogden Route, and its competition for business could be carried on more successfully as against the Sunset Route by working business by the direct line, still there were instances when it seemed to the interest of the Union Pacific management to move business that way, and some traffic was actually taken by that route.

For instance, Mr. Fowler, formerly General Agent of the Union Pacific at Philadelphia, testified, (Folio 2107), that in 1888 and the fore part of 1889, the Union Pacific business moved, to a large extent, for San Francisco via Portland, and by boat from Portland down to San Francisco, and that he was actively soliciting business for San Francisco, for that route at that time, and succeeded in routing a good deal of business that way, mostly drygoods

Mr. Wentz, who was the Commercial Agent of the Rock Island in Chicago for many years, and worked business in connection with the Union Pacific to the coast, testified that while he did not solicit business by the Portland route, he recalled at one time business moving that way, and he knew that that route was always open. (Folio 2851.)

Mr. Brolin, of the Skandia Furniture Co. of Rockford, Ill., stated on cross-examination that he recalled shipping that way occasionally. (Folio 2894.)

Mr. Montgomery, Traffic Manager of the International Harvester Co. in Chicago, stated that at one time there was some competition by this route, but he did not think it was very important (Folio 2959.)

Mr. Cribben, a stove manufacturer in Chicago, stated that their representative in San Francisco, wrote them about the route, and that a rate had been made that way, but they did not use it. This was in 1893 or 1894. (Folio 3093.)

Mr. Ryan of the Union Wire Mattress Co., Chicago, testified that his company had shipped by that route, as the adjustment of rates at that time was such that they could get traffic into San Francisco cheaper by that route. (Folios 3102-3104-3105.)

Mr. Rulofson testified to a shipment of wagons from Kenosha, Wis., by that route. (Folio 5025.)

Mr. Lent, Traffic Manager for a large number of shippers, testified at Folio 2175, that he had sent some nails and wire to San Francisco by way of Portland and the boat line.

Mr. Gano, of Cincinnati, for several years previous to the merger, employed by the Union Pacific at Cincinnati, testified that passenger business was routed to San Francisco by rail to Portland and thence by boat. (Folio 2314.)

Mr. Boltz testified, Folio 2579, that to the best of his recollection there was an arrangement whereby business moved for a certain period by the Union Pacific, Short Line and steamer lines via Portland for California points He had been agent of the Milwaukee and St. Paul in Cleveland, and working with the Union Pacific on transcontinental business. He also said that the Portland route was as feasible as the route by the Canadian Pacific and thence by boat from Vancouver to California. (Folio 2593.)

That the route was not impracticable was stated by Mr. Stubbs when under examination by counsel for defendants. We quote from Folio 3293:

> "Taking the experience during the last ten and a half years since this argument (on the Canadian Pacific differentials) was made, hasn't it been demonstrated that the Canadian Pacific route and the other routes by way of Puget Sound or Portland and water down to San Francisco, are impracticable at equal rates for the business between San Francisco and the east.
>
> A. I don't know that I should want to use the term 'impracticable:' to be accurate I should prefer to say that they were inefficient and uninviting routes, and would not take the business as against other routes all rail and the Sunset."

Mr. Stubbs, in his argument concerning the Canadian Pacific differential, treated this matter very fully, and in his examination reaffirmed the statements that he had thus made with reference to this line. At Folios 3280, et seq., Mr. Stubbs read into the record approvingly certain of these statements. Referring to the Canadian Pacific he said:

> "We aver that it does not introduce any necessary element of helpful competition which promises a freer and fuller exchange of commodities between San Francisco and its eastern markets of supply and consump-

tion. A single glance at the map will prove that San Francisco is served by a sufficient number of independent American lines, not only to handle all her freight, but to do so if it were increased many times over its present volume. I refer to these lines out via Portland, Seattle and Tacoma; out via San Diego, not touching the Central Pacific, besides the Central and Southern Pacific lines, and added to these the Pacific Mail Steamship Co., the original line, in connection with the Panama Route and the vessels of Cape Horn.

* * * * * *

The history of the operation of these lines proves beyond question the impossibility of any combination without the competition of the Canadian line which would not be possible with it. The public interest is fully protected in this respect by the natural, uncontrollable competition of the American lines, so that the Canadian line cannot find any substantial foundation for its claim of right to share in this traffic in the assertion that its services are necessary or desired by San Francisco merchants either to move the traffic or maintain helpful competition."

At the time Mr. Stubbs made this statement in 1898, the conspiracy charged in this complaint had not been formed. The lines leading out to Portland from the Missouri River and thence to San Francisco by boat were independent and free from the domination of Mr. Stubbs or the Southern Pacific organization. It has been demonstrated that this "uncontrollable competition" is quite largely subject to control, and it has been controlled by the unification in ownership and management of the lines wholly or partially dominated by the Union Pacific organizations.

When called as a witness on behalf of the defendants Mr. Stubbs presented an argument at Folios 6576 et seq, to show that the Union Pacific would have been foolish to have worked the Portland route, and that in such case

it would have been possible for the Southern Pacific to inflict some damage upon the Union Pacific by way of retaliation. In view of the statements made by Mr. Stubbs at other times, as disclosed by this record, and considering his relation to this case, and his responsibility in part for the existing situation, we will in all kindness omit any comment upon this testimony.

Mr. Munroe, testifying for the defendants, said in response to defendants' counsel at Folio 6803:

> "Q. A great deal has been suggested in this case to the effect that the possession of this boat line from Portland to San Francisco was a great big club which could be used to enforce more favorable terms from the Southern Pacific. I would like your judgment as to the effectiveness of that club.
>
> A. There might be that view taken of it, but the fact of the matter is, as far as divisions, joint, as between the Southern Pacific and Union Pacific, they were on a basis as originally established when the roads were opened in 1869; and we never felt that they were unjustly excessive as far as the Southern Pacific was concerned; and we saw no necessity of swinging a club when there was no injustice to be removed, and we were satisfied to have the divisions remain as they were. We did not have any differences."

While Mr. Munroe went on and further explained why it would be unprofitable, as it undoubtedly would have been unprofitable, for the Union Pacific to have actively worked the Portland line, as it was not as good a route as the direct line, still, it will be observed that he by this testimony concedes that the opinion of the various witnesses who testified to the value of this route to the Union Pacific in insuring fair treatment from the Southern Pa-

cific, is a reasonable view; and further he emphasizes the fact which Mr. Stubbs testified to when called by the complainant as we have shown, that the divisions between the Union Pacific and Southern Pacific were fair and they had no differences to adjust. All the complainant claims in this case for the Portland route so far as California business is concerned, and all that the witnesses for the complainant have testified to, is that the possession of a through route to the coast at Portland insured a continuance of the fair treatment always extended to the Union Pacific by the Central Pacific line, so that the Union Pacific was at all time in position to carry on the vigorous competition shown to have existed between it and the Sunset Route. Again at Folio 6863, Mr. Munroe testified:

"Q. The Southern Pacific controls business, and did when they were competing with you, from the east—control tonnage from Pittsburgh by New Orleans, from Cincinnati by New Orleans, and you had other tonnage that moved from the same region over the Union Pacific? Is that true?

A. Oh, yes; they had business and we had business.

Q. You both had business and both were trying to get business, weren't you?

A. Yes.

Q. Both trying to get all the revenue you could?

A. Yes.

Q. And if the transcontinental rates were cut it would have been a cut on all the rates from east of the Missouri River to the coast, naturally, wouldn't it?

A. Yes.

Q. And the result would have been, if you got into this war of rates, that you would both have suffered very severely, isn't that so?

A. Undoubtedly.

Q. And so long as your relations were satisfactory, your revenues were kept up, the rates were maintained, your divisions were fair, there was no occasion for you to get into that war; isn't that true?

A. That is true."

Mr. Stubbs testified at Folio 6641, after saying that rates were fixed in conference and that all the transcontinental lines unite in a common tariff, as follows:

"Q. Now, in fixing that through rate, the lines to the north Pacific points are considered, are they not? Their views are considered?

A. I think that they are members of the Association now.

Q. And their views are considered, and they all have a vote on the question?

A. Naturally. * * *

Q. And those towns out there, like Portland, San Francisco and Los Angeles—we will take Portland and San Francisco first—are wholesaling into the same territory to a large extent, are they not?

A. To some extent. Not so much so to-day as they were formerly.

Q. And that is one reason for keeping the rates to the coast uniform, is it not?

A. I think it has its influence.

Q. So that all of these things, that is, the interests of all these communities and the interests of the various transcontinental lines are all considered when you come to make up a schedule of rates?

A. The representative at these meetings, of every road that is a member of the Association, has his opportunity to express his views and his judgment about it, and his desire, and if it is a question that is found necessary to put to a vote, he has an opportunity to put his vote."

Mr. Fee, Passenger Traffic Manager of the Southern Pacific, testified that transcontinental fares from Chicago and the East to California via St. Paul, Portland, and via the Union Pacific, Huntington and Portland, the ocean and the Shasta Route, are practically the same as via Omaha, Ogden and the Southern Pacific direct, with the exception that the 30-day one-way rate stop-over ticket and the round-trip transcontinental excursion rates, were somewhat higher than the direct line rates. That situation has prevailed since 1887. He stated that about 4% of the through passenger business from the East to California is carried via Huntington and Portland via the Union Pacific, and about a half or a third as much over the Rio Grande and Short Line. (Folios 7833-4.) A small amount of the transcontinental round trip business is handled by the Ocean Line between Portland and San Francisco. (Folio 7831.)

It would seem that nothing more need be said in support of the proposition that the ownership by the Union Pacific of a through line to the coast put it in a position to maintain its independence as a strong competitor for all business that it might seek to move over its rails.

THE FACT THAT BUSINESS IN LARGE QUANTITIES WOULD MOVE AT A REDUCED RATE FROM THE EAST BY WAY OF PORTLAND WAS CLEARLY DEMONSTRATED BY THE SUCCESS THAT ATTENDED THE CANADIAN PACIFIC FOR A SERIES OF TEN OR ELEVEN YEARS IN HANDLIN . A LARGE VOLUME OF BUSINESS TO SAN FRANCISCO FROM THE ATLANTIC SEABOARD AND INTERIOR STATES.

The Union Pacific was in a better position, if anything, to go into a competition of this character than was the Canadian Pacific. The line from New York and Boston to San Francisco by way of Portland and the boats was a little shorter than the Canadian Pacific Line to Vancouver, and thence to San Francisco by steamship. The Canadian Pacific, however, made such inroads on business and created such havoc in the rate situation by insisting upon doing business by this route at a less rate than that charged by the American lines, that the latter put forth every effort to have it discontinued, and finally induced the Canadian Pacific to submit to an arbitration to determine whether or not it should be accorded a differential. In this arbitration, as we have heretofore stated, Mr. Stubbs was the chief spokesman for the American lines, and he was fully examined with reference to the Canadian Pacific differential which had been frequently mentioned in the testimony previous to the time he was called as a witness. This testimony will be found at Folios 3241 to 3332, and is immediately followed by the full report of this arbitration, which, in connection with Mr. Stubbs' testimony, was inserted in the record by consent of both parties. To this we call the special attention of the court, for it shows the view of experienced, able traffic men upon the competitive conditions existing in the Trans-Missouri territory up to within about two

years of the formation of the conspiracy set forth in the complaint. It is a most luminous exposition of the whole subject, as it existed at that time: The comparative strength and efficiency of the different lines, the manner in which transcontinental rate associations had operated, the methods adopted to maintain rates, the fact that a subsidy had been granted to the Panama Route, (which as we have shown is on the west side of the Isthmus, made up of the Pacific Mail Steamship line, the majority of the stock of which is and for about ten years last past has been owned by the defendant Southern Pacific Company,) and that in 1896 when it was attempted to reorganize the Transcontinental Association, it was essential to make a new contract with the Panama Route and to come to an understanding with the Canadian line and to do this it was necessary to have the unanimous ratification of the American lines, and the deal failed solely because the Union Pacific receivers declined to join in it. (Folios 3247-48.)

At Folio 3443 the court will find in Mr. Stubbs' statement the boundaries of what is known as the Transcontinental Association territory, namely, San Francisco on the west, and on the east what he speaks of as the Missouri River line. He said:

> "It means that any business to or from San Francisco which passes this line—crosses it en route, is subject to the Transcontinental Association, or was when it was alive, and is now subject to this controversy no matter whether it originates in Florida or in Maine, or in the Province of Quebec, or whether it originates on this line—whether it originates on it or goes across it from any of these points—to or from San Francisco—it is the subject of this controversy."

Mr. Stubbs, with his usual clearness of statement, explains in his argument, Folios 3480 to 3494, the likeness of the lines to San Francisco made by the Great Northern, and the Northern Pacific to Puget Sound points, and thence by steamship and the routes from the Missouri River to Portland, and to San Francisco by steamship, on the one hand, to the line of the Canadian Pacific by rail to Vancouver, and thence to San Francisco by steamship, on the other, contending successfully before the arbitrators that these lines being equal and not merely on paper, as he puts it, were as much entitled to do business at a differential rate below the all rail lines, as was the Canadian Pacific.

Mr Kerr, representing the Canadian Pacific, gave the history of the Canadian Pacific differential, which shows the dealings of the American lines with each other and with the Canadian line, beginning at about the middle of Folio 3341 on page 2048, and concluding at Folio 3350. From this it appears that the Canadian Pacific maintained a lower rate than the all rail lines from about December, 1887, down to the making of the award of the arbitrators holding that that line was not entitled to a differential, which award is dated October 19th, 1898, Folio 3677. Therefore the differentials continued for a period of about eleven years. During the first part of this period a differential computed in a certain number of cents per hundred pounds was conceded to the Canadian Pacific by the all rail lines. Later the Canadian Pacific adopted independently the practice of charging ten per cent less than the transcontinental rates. We have deemed it important to introduce testimony with reference to the Canadian Pacific differentials because of the similarity between its line and that of the Union Pacific to California by way of Portland, to show that the Portland

route is a feasible one, that business could be moved by that route in a substantial volume, and that the talk of the Union Pacific being bottled up at Ogden is an absurdity. Mr. Morton testified at Folio 1374:

> "A. The Canadian Pacific was an active competitor for business from all the eastern portion of the United States for San Francisco at one time and operated on a differential rate.
>
> Q. How did they handle the traffic, to what points?
>
> A. They took it up via Winnipeg and out to Vancouver, and from there I think it went down by boat to San Francisco."

Mr. Hawley testified, at Folio 1415, that the Canadian Pacific maintained a differential and handled business to some extent for California.

Mr. Allen recalls that traffic moved on the Canadian Pacific to San Francisco from New York and that the New York Central participated in some of it. (Folio 1515.)

Mr. Johnson, Traffic Manager of the Heinz Company (57 varieties), at Pittsburg, formerly for several years agent in San Francisco of the Chicago Great Western Ry., testified that when he was living in San Francisco traffic moved to that city by the Canadian Pacific via Vancouver and the Pacific Coast Steamship Co. (Folio 2050.)

On cross-examination, he said that the volume of traffic moving that way was quite large during the time of the differential. (Folio 2055.) A great deal of dead freight was routed that way over the Great Western from Chicago to Minnesota Transfer. He knew of lots of 400 or 500 cars of certain commodities like tin plate. (Folio 2056.)

He estimated that 50 or 60 carloads a month moved by that route over the Great Western to Minnesota Transfer, and thence by the Canadian Pacific during the entire time that he was in San Francisco. (Folio 2057.)

On re-direct examination, he testified that in addition to the 50 or 60 cars a month moving over the Great Western to Minnesota Transfer for transportation by this route, traffic was moving over the other lines from Chicago to St. Paul in the same way. (Folio 2059.)

On re-cross-examination (Folios 2062-3), he said the Rock Island, the St. Paul, the North-Western and the Burlington worked business by that route as against the all rail route, because if they had not, they would have lost the business on account of the differential being in.

Mr. Ogden, in charge of the traffic of Jones & Laughlin, of Pittsburg, the largest steel manufacturers in the United States outside of the Steel Corporation, testified, at Folio 2143, that his company shipped a considerable amount of traffic to San Francisco by way of the Canadian Pacific and the boat lines during the time of the differential.

Mr. Blair, Secretary of the Nile Tool Works Co., of Hamilton, Ohio, the largest manufacturer of machine tools and heavy machinery in the United States, remembered making a shipment to the Mare Island Navy Yard in San Francisco Harbor by way of the Canadian Pacific and the boat line when the differential was in. (Folio 2422.)

Mr. Gothlin testified that when he represented the Wisconsin Central he secured a shipment of 30 or 40 cars of wire from Pittsburg to San Francisco by the Canadian Pacific and the boat line. (Folios 2438-9.) On cross-exam-

ination, Mr. Gothlin testified that the Wisconsin Central joined with the Canadian Pacific and put in oil rates to enable the independent oil men in Pennsylvania to get into San Francisco. This was about 1887 or 1888. (Folio 2458.)

Mr. Rheinstrom, distiller, shipping to the west from Cincinnati, and also shipping fruits from California to the east, testified to having shipped both ways by the Canadian Pacific and the boat line. (Folio 2479.)

Mr. Coakley, Division Freight Agent of the American Steel & Wire Co., for many years in the traffic business, either with railroad or shippers, testified that quite a large volume of business used to move from Pittsburg to San Francisco by the Canadian Pacific and the boat line when the differential was in. The character of the traffic was general, consisting of iron, steel and merchandise. (Folio 2556.)

Mr. Boltz, Traffic Manager of the National Petroleum Association, which consists of over 30 independent oil refiners, of whose traffic he has charge, testified that he had known of considerable business moving via the Canadian Pacific Vancouver route to San Francisco in the old days by reason of the differential rate in effect. (Folio 2575.)

Mr. Rand, in the employ of the Lake Shore Railroad at Cleveland, and for some time prior to the merger in the employ of the Union Pacific as freight solicitor, testified to shipments moving to California by Vancouver and the boat line. He recalls carloads of sewing machines going by that route. (Folio 2628.)

Mr. Brolin, Secretary and Treasurer of the Skandia Furniture Co., Rockford, Illinois, very large manufacturers of household furniture, shipped some traffic by the Canadian Pacific and the boat line when the differential was in. (Folio 2893.)

Mr. Philipp, of Milwaukee, President of the Union Refrigerator Transit Co., testified that the brewers in that city shipped bottled beer to San Francisco by the Canadian Pacific under this differential rate, and that San Francisco was the great distributing point for beer on the coast. (Folio 2909.)

Mr. Knight, from 1888 to 1901 General Agent of the Union Pacific at Chicago, testified that a great deal of business moved by the Canadian Pacific route during the existence of this differential; that it consisted of sugar and pork in barrels and boxed stuff of all kinds. (Folios 3018-19.) On cross-examination, he was asked how this traffic moved, and answered:

> "A. Why, it went through St. Paul over the various lines. I have known of their going to Kansas City and moving quite large shipments out of Kansas City up by way of St. Paul and then taking it up over the Soo Line by way of Minot and out over the Canadian Pacific, and then down to San Francisco by boat." (Folio 3032.)

Mr. Ryan, in charge of the traffic of the Union Wire Mattress Co., Chicago, shipped to San Francisco by the Canadian Pacific at the differential. (Folio 3101.)

Mr. Wait, in charge of the shipments of Hibbard, Spencer & Bartlett Co., Chicago, one of the largest hardware

concerns in the country, shipped to California by the Canadian Pacific route via Vancouver, part of the traffic originating at Chicago and the east. (Folio 3159.)

Mr. Wilmore, Traffic Manager of the Sefton Manufacturing Co., Chicago, manufacturers of all kinds of paper goods, testified that he had shipped to California by the Canadian Pacific-Vancouver route, the traffic being delivered to the Soo Line at Minnesota Transfer. (Folio 3165.)

On cross-examination it appeared that these shipments were made within the last few years at the *same* rates as the direct lines. (Folio 3166.)

Mr. Jennings, Manager of the Transportation Department of the American Cottonseed Oil Co., the largest concern of the kind in the United States, and formerly Traffic Manager of the N. K. Fairbanks Co., which is now a subsidiary company of the American Cottonseed Oil Co., testified that he used to send traffic, such as soap, from St. Louis to San Francisco by the Canadian Pacific and the boat line from Vancouver. (Folio 3186.) It is an important matter to recall that so anxious were the American lines to do away with the Canadian Pacific differential that after the differential in its original form of a difference in cents per hundred pounds had been in force for about three years, an agreement was made by which the Canadian Pacific agreed for a year to put in the same rates as the transcontinental rail lines, being paid a cash subsidy of $500,000 a year by the American lines for so doing, with the understanding that there was to be credited upon that subsidy all revenue received by the Canadian line upon this class of business. Stubbs' testimony (Folio

3252). Kerr's statement upon the arbitration (Folios 3384-5.)

Mr. Connor, who was for several years Freight Traffic Manager of the Pacific Coast Steamship Co., the line of ships over which the Canadian Pacific traffic has always moved to San Francisco, and who, as we have shown, has had great experience in traffic matters on the coast, testified that transcontinental business moved to San Francisco in connection with the Pacific Coast Steamship Co. over all three northern lines, to-wit, the Canadian Pacific, the Great Northern, and the Northern Pacific, at an equality of rates. It consisted of general merchandise from the far east, Missouri River points and the east, and flour and grain from western points on those lines. He also remembered the time that the Canadian Pacific had a differential on San Francisco. (Folio 4775.)

Mr. Adams, for many years Commercial Agent of the Rock Island in San Francisco, found the Canadian Pacific moving traffic during the existence of the differential. (Folio 4884.)

Mr. Clifford testified that he knew that for years a great traffic came into San Francisco by the Canadian Pacific-Vancouver route in connection with the Pacific Coast Steamship Co. (Folio 4912.)

Mr. Cooper, Assistant Manager of the Pacific Coast Steamship Co., who has been connected with that company in different capacities for many years, testified that transcontinental freight had moved by his line in connection with the Great Northern and Northern Pacific to some

extent. He was then examined with reference to the situation at the time of the Canadian Pacific differential, and said he was with the Pacific Coast Steamship Co. during quite a number of years while that rate was in effect. He stated that they carried an average of 300 tons or so every five days by that route, consisting of miscellaneous merchandise originating practically everywhere east of the Missouri River. (Folio 4936.) This is certainly quite an important traffic, and it should be recalled that this differential was taken out eleven years ago, and since then the largest development in the history of the west has taken place.

Mr. Rulofson, who was for many years with Baker & Hamilton, wholesale hardware merchants at San Francisco, testified on cross-examination, that they moved some of their shipments by the Canadian Pacific route when the differential was in, although they did not like to encourage the differential. (Folio 5026.) It appears by the arbitration that the merchants in San Francisco did not like to have this differential in because of the fact that the rates were demoralized by it; that is, apparently the all rail lines were cutting rates under the published tariff because of the existence of this differential, in order to hold their business, and the merchants had no assurance that they were on a parity with each other as to rates.

Mr. Rumpf, in charge of the traffic of the California Wine Association, with a tonnage of 1,500 cars a month, testified that they shipped over all lines, and when the differential rate was in, they shipped considerable traffic moving to various points in the east by that route. (Folios 5100-5101.)

An attempt was made upon the cross-examination of Mr. Markham and others to have it appear that if the Union Pacific should engage in a war for California business to maintain its position as against an unfair exaction of the Southern Pacific, it could not rely upon its connections East of the Missouri River to join in the same. We have before called attention to the fact that Mr. Markham stated that the Union Pacific was perfectly able to defend itself, as it could do business, if necessary, on the sum of the locals. The experience of the Canadian Pacific, however, shows that it would never have been necessary. There are so many lines of railway operating East of the Missouri River boundary each seeking traffic, that it would be an impossibility to unite them in any scheme to assist the Southern Pacific, their common competitor, against their friendly connection, the Union Pacific. It appears by the testimony which we have analyzed, that during all the years that the Canadian Pacific maintained its differential it was hauling a large traffic from the interior of the country as well as from the Atlantic seaboard, and was operating in connection with many of the lines in the central part of the country, shipments moving up from all over the Mississippi Valley even from St. Louis to Winnipeg, and thence west to Vancouver and down to San Francisco. The matter of railway competition cannot be determined by any theory. The lower court disposed of this case upon a theory adopted by it that the Union Pacific was in no position to protect itself. Not only do substantially all of the witnesses disprove this theory, but the practical experience in railroading disclosed by the Canadian Pacific differential, running over a period of eleven years, is conclusive upon the subject. The Canadian Pacific Railroad was a foreign road. It was subject to all the delays

and difficulties attending the shipments of merchandise out of the United States, and again into the United States through the custom houses. It did not reach any of the Atlantic seaboard cities in the United States over its own rails, much less any of the cities in the interior of the country South or East of St. Paul, where it may fairly be said to have penetrated by its control of the Soo Line so-called. But all of the roads leading up to St. Paul were carrying traffic and turning it over to the Canadian Pacific, as they would have been delighted to have carried traffic to Omaha and turn it over to the Union Pacific under like conditions. It was a physical impossibility for the Union Pacific to be excluded from the California traffic. The Southern Pacific would not only have lost the business it was carrying at remunerative rates from Ogden to San Francisco, but its revenue upon traffic moving over its long line from New York and from New Orleans would have been so shot to pieces that there would have been a speedy ending to any effort to "bottle up" the Union Pacific at Ogden, to use the expression of some of the witnesses, which was adopted by the trial court.

THE PURPOSE AND EFFECT OF THE CONSOLIDATION OF THE TRAFFIC DEPARTMENTS HAS BEEN TO DESTROY COMPETITION.

Mr. Miller testified that the duties of a general freight agent are to look after freight traffic, and that the business is solicited under his instruction. He makes the rate, and is generally responsible for freight traffic conditions. He further testified:

> "Q. And it is the duty of a general freight agent, is it not, to secure all the business he can and get all the revenue he can for his road, so long as it is done in a proper manner?
>
> A. I think so.
>
> * * * * * *
>
> Q. So you owe to the O. R. & N. the duty of securing all the business and traffic you can for it, and to the Southern Pacific of securing all the business and traffic you can for it?
>
> A. Yes, sir." (Folios 840-1.)

This definition of the duties of a general freight agent will probably be concurred in by any expert railway traffic official. Hence, if the functions of the traffic director, who is the real freight traffic manager, and the so-called freight traffic managers who report to him, and the general freight agents, some of whom report to the traffic director, and some of whom report to the so-called freight traffic managers as to a portion of their business, are consolidated in the manner stated, and if the duty of the general freight agent is to have the business solicited, and if the general agencies which are in active and personal touch with the solicitation, are consolidated, as has been done in the case of the Union Pacific and the Southern Pacific, with rare

exceptions, it is apparent that competition between competing lines so put under a common management, is eliminated. A fanciful idea has been born out of the necessities of this extraordinary situation, to the effect that competition can go on just the same, even though there is a common head to the various parts of the system, which were formerly in competition. Of course, that is absurd on its face, but in the case of the Union Pacific and Southern Pacific systems, the farce of maintaining separate commercial agents who come in immediate contact with the shipper, has been abandoned, except in the case of New York City and San Francisco, and those offices, as we will show by the testimony, have practically been consolidated because of the instructions given as to the way business should be worked.

Mr. Justice Peckham, in the opinion in the case of *Joint Traffic Association v. United States*, 171 United States, 505, called particular attention to the provision in the agreement there under consideration, by which separate traffic agencies were to be discontinued, and a common agency established, as showing clearly the intention of the parties to the agreement to eliminate competition.

Mr. Hawley, who is conceded to be one of the most expert traffic men in the United States, testified (Folio 1418):

> "Q. What change, if any, was made in the traffic organization of the Southern Pacific in the east after the purchase of the stock of the Southern Pacific by the Union Pacific?
>
> A. With respect to agencies?
>
> Q. Yes, sir.

A. I think there was a pretty general consolidation of the agencies with the exception of New York; that was not consolidated.

Q. Why was not that consolidated, if you know?

A. I think I had as much to do with that as anybody. I opposed it.

Q. You opposed the consolidation?

A. Yes.

Q. But outside of New York the agencies were consolidated?

A. Yes.

Q. From your knowledge what was the effect of the consolidation of those agencies on the competition formerly existing between the two lines?

A. It eliminated it to a very great extent.

Q. What are the objects of maintaining the commercial agencies of transcontinental lines here in the east?

A. The principal object is to secure business, I suppose." (Folio 1418.)

He further testified, when asked as to the methods of obtaining business, that it was by personal solicitation as well as by correspondence. (Folio 1419.)

Mr. Hawley is a man of great ability, as is shown by his rise in the railroad world. He had strength enough in the organization to prevent a consolidation of the agencies in New York while he was representing the Southern Pacific, and apparently it was only through his intervention that the scheme of an absolute consolidation everywhere failed, and the fact that the consolidation in New York was stopped only by Mr. Hawley is very significant evidence of the intention of the promoters of the merger under discussion to wipe out all semblance of competition everywhere.

Mr. Throckmorton testified at Folio 1468, when asked as to the service soliciting agents performed for shippers:

"A. If they are good soliciting agents they take care of his business for him as much as they can; they explain the movement of the freight, give him the best routes; the best rates, and look after his business in general and keep him posted as to any changes in rates.

Q. Trace freight?

A. Yes, sir, and take care of his claims for him. I always regarded him as practically the agent of the shipper. You are paid by the railroad, but you would not get any business unless you were the agent of the shipper. Try to give him the best information and the best rates possible."

On cross-examination, he said it was also the duty of a soliciting agent to cultivate connections for the interchange of business, practically reciprocate. On re-direct examination, he stated that the lines between the Missouri River and Chicago have commercial agencies both on the Atlantic and Pacific Coast, and the Union Pacific agencies worked with those commercial agents exchanging traffic, which it was able to secure east bound, as against the Sunset Route in exchange for traffic moving to the west. (Folio 1495.)

Mr. Chumasero, in charge of the traffic of the Royal Baking Powder Company, which, of course, is a great shipper, testified, when asked how the soliciting agents endeavored to get his traffic:

"A. Well, the main factor now is the service, the length of time, the general handling of the goods, the condition in which they arrive, and the *personality of the soliciting agent.*

Q. All of those elements enter into the securing of traffic?

A. All those elements; yes, sir." (Folio 1498.)

If the personality of the soliciting agents is an element, is a factor, of course the consolidation eliminates that factor.

Mr. Allen, General Eastern Freight Agent of the New York Central, testified to the fact that traffic was often secured by swapping carloads of unrouted business with connections. (Folios 1513-15.)

Mr. Johnson, Traffic Manager of the Heinz Co., Pittsburg, and previously for a long time in the railroad service, testified (Folios 2051-52):

> "Q. You had some experience in soliciting traffic and you are having some experience now in having trraffic solicited. What are the principal efforts that are put forth and what are the advantages that are offered by freight solicitors in endeavoring to get business generally?
>
> A. The expediting of shipments; prompt care of the same; tracing, in case of delays; advising dates of delivery.
>
> Q. Is anything done in reference to claims for damages?
>
> A. Yes, the prompt settlement of claims is a very important item."

The absurd position in which soliciting agents are put by this consolidation was developed in the testimony of Mr. Bogert, the agent of the San Pedro line in Pittsburg. Mr. Herring, formerly the agent of the Southern Pacific, competing with the Union Pacific for coast business, since the consolidation has been a joint agent. Mr. Bogert testified as follows (Folio 2079):

> "Q. Do you come in contact with Mr. Herring and his assistants in the solicitation of business?
>
> A. Yes, sir.

Q. How is that?

A. We ask his assistance; we don't need it entirely, you know.

Q. You ask his assistance in routing business?

A. Yes, sir.

Q. That is, you ask his assistance as the agent of the Union Pacific?

A. That is all.

Q. And you endeavor to get Mr. Herring to forget for the time being that he is agent of the Southern Pacific?

A. That is the idea.

Q. And simply be agent of the Union Pacific with you, is that right?

A. Well, he acts quite neutral.

Q. That is, as I understand it, Mr. Herring routes, we will say Union Pacific business out of here, and he is quite neutral between you and the Southern Pacific beyond Ogden and Salt Lake?

A. I think so.

Q. Who is there here, then, that is looking after the business that Hawley used to try to send by New Orleans and the south?

A. I assume it is being done in Mr. Herring's office."

He further testified that they also show neutrality as between his route and the Sunset, and do not try to get business away from them. A half interest in the San Pedro road being owned by the Union Pacific, of course Mr. Herring, as a Union Pacific agent, could not refuse to lend his assistance to secure the routing of traffic by the Union Pacific and the San Pedro. On the other hand, Mr. Bogert thinks some one in Herring's office is looking after the interest of the Sunset Route, but the latter does not try to get any business away from the San Pedro, and Herring does not try to route business through Ogden to Los Angeles in opposition to or in competition with the San Pedro.

although if the business moves over the San Pedro from Salt Lake, the Southern Pacific, for which Mr. Herring is also agent, gets no part of the revenue.

At Folio 2080 he testified with reference to the duties of the soliciting agents, that he thought the shippers liked to see as many people in the field as possible to keep competition rife, to make time, insure good facilities and prompt settlement of damages.

Mr. Henry, Traffic Manager of the Standard Sanitary Co., formerly with Pressed Steel Car Co. and American Window Glass Co., in charge of traffic, testified, at Folio 2099, speaking of various soliciting agents trying to work business to the coast by New Orleans, said:

> "A. We give them some business that way on account of our friendly feeling toward the representatives here."

At Folio 2101 he said:

> "The personality of a representative nowadays has considerable influence in securing business; that is, his activity in showing his disposition to do what he can to facilitate your shipments and your business in general, in small ways which he can within the law."

Mr. Henry testified that at present Mr. Herring and his assistants solicit freight both by Union Pacific and Southern Pacific, and never intimate to him that they have any preference.

Mr. Fowler, who has been in the railroad service at Pittsburg and Philadelphia for many years, testified at Folio 2109, that the principal elements that entered into

the solicitation of the business were the personality of the gentlemen soliciting the business, and the service they were able to render, such as securing through cars, close connections, and through trains on the different roads that carry the business, time in delivery, keeping track of the shipments in the way of tracing them, and keeping shippers posted as to the movement from time to time, looking up rates and examining tariffs, which are very complicated.

Mr. Fowler said (Folio 2113), that there is now no competition between the Union Pacific and the Southern Pacific at Pittsburg.

Mr. Parr, of the Diebold Safe & Lock Co., speaking of the manner in which soliciting agents get business, testified (Folio 2125):

> "A. One thing is personality—that is—friendship—an agent who has been calling on us for many years. That is one thing. And another thing is that they look after the shipment, trace it, follow it up, and advise us when it leaves the different junction points; that is, when we are in a hurry for a shipment; and we consider that quite a favor."

He further said that the more efficient a man was in doing that, the more inclined he was to give him the business.

Mr. Townsend, the Traffic Manager of the National Tube Co., who is a friend of Mr. Herring, testified, when asked if there is now any competition between the Union Pacific and Southern Pacific for transcontinental business at Pittsburg:

> "A. Well, I suppose not. One through line." **(Folio 2134.)**

On cross-examination, at Folio 2136, he testified that the representation of soliciting agencies in Pittsburg is a good deal bigger than it used to be. In the last five years there have been over ten new agencies established there. At Folio 2138 he was asked by defendants' counsel as to the effect of the solicitation upon the routing of traffic, and replied:

> "A. The result is that we would naturally give the new routes a chance, give them some business. If they make good, we give them some more. Some of them have."

On re-direct examination, Mr. Townsend testified (Folios 2139-40) that he was not aware of any other instance except the Union Pacific and the Southern Pacific where agencies that were formerly competing with each other have been consolidated. He further said that the Pittsburg district originates more tonnage than any other district in the United States.

Mr. Ogden, Traffic Manager of Jones & Laughlin Steel Co., after testifying, as we have before shown, that prior to 1901 the Union Pacific and Southern Pacific agencies in Pittsburg were competing for business, testified (Folio 2145) that now Mr. Herring represents both lines, and that he and his assistants call on Mr. Ogden for business and they do not give any preference of one line over the other. He was then asked what services soliciting agencies performed for shippers, and replied:

> "A. Why, it is the personality of the agent who calls on them, and the services that he has to offer in behalf of his company, such as the tracing of freight, investigation of claims, loss, overcharge

and damage, the taking up of the questions of irregularities, if there are any, or, you might say, too high classification of material before the classification committee, have his company take them up, give attention to them and see if they cannot be corrected, and better equalization of classification in rates of the different commodities.

Q. Mr. Ogden, from your experience, which has been very considerable, apparently, do you regard these agencies as useful to their lines in getting traffic?

A. A very important adjunct to the railroad.

Q. They secure the routing of a great deal of traffic, do they not?

A. Yes, sir, they are a great help to the shippers."

On cross-examination, counsel for defendants tried, without success, to develop from Mr. Ogden, that there was no reason why the Union Pacific and Southern Pacific should maintain separate agencies, but Mr. Ogden said:

> "A. I am for the agents; I want to see all the agents in Pittsburg I possibly can." (Folio 2147.)

He further said, on re-direct examination (Folio 2152), that if one agency was working for the Sunset Route and the other agency working the Union Pacific, it would make a difference in the distribution of traffic. On re-cross-examination, he developed the fact that in the case of large manufacturers, the routing of traffic was sometimes determined by the question as to whether the solicitor's road was buying from the manufacturer. (Folios 2153-4.) He further developed this idea on re-direct examination. (Folios 2156-7). On further cross-examination (Folio 2161) he testified:

"Q. What do you mean, then, by saying that if they bought more from you, you would give them more by way of New Orleans?

A. We could do that, but at present they are hooked up with the Union Pacific, and we consider that one line to the Pacific coast, to San Francisco."

And again he said (Folio 2164):

"A. Of course if the Southern Pacific would come to us and demand of us, on account of their purchases, that we ship via New Orleans, it would have to have consideration at our hands; they could do that to-day.

Q. But they are satisfied now, you mean, with your shipments by way of Ogden?

A. Yes, sir.

Q. It is immaterial to them whether you ship by way of Ogden?

A. It is immaterial how we send it to them."

Mr. Lent, Traffic Manager for a large number of shippers in Pittsburg territory, testified (Folio 2174), speaking of soliciting agents:

"A. The solicitation on their part seems to be more in the matter of advocating the service that the road is capable of giving, and supplying rates and tariffs, and giving such information as helps the shipper out on matters that the shipper cannot have as intimate a knowledge of as the agent.

Q. Do you regard these agencies as efficient and useful to railroads in securing business?

A. Yes, sir."

He further said that personal friendship for the agent entered into the matter of securing business. (Folio 2175.)

On cross-examination of this witness, counsel for defendants developed the fact that there is still competition through the agency of the Santa Fe. On re-direct examination, he testified as follows (Folio 2184):

> "Q. Suppose the Santa Fe should be represented by the same man that represents the Southern Pacific and Union Pacific; suppose Mr. Herring should spread himself out a little further, and take in the Santa Fe; can you then see how there would be any competition in these through routes to the coast between the Santa Fe and the Southern Pacific and the Union Pacific?
>
> A. The competition would be eliminated.
>
> Q. Therefore, when Mr. Herring takes in two of those three routes, competition is eliminated between those two and only exists between the two together and the Santa Fe?
>
> A. That is correct."

Mr. Snape, Routing Agent for large pottery works at East Liverpool, Ohio, says that since 1901 Mr. Herring solicits their traffic, but expresses no preference between the routes. (Folio 2198.)

Mr. Watson, in charge of the traffic of the Earthenware Co. at East Liverpool, Ohio, for many years, produced a form of routing card now used by Mr. Herring, which is introduced as Exhibit 112 (Folio 2208). This carries upon the heading the names of the three lines making up the Union Pacific system, also the Southern Pacific Co., the Houston & Texas Central Railroad, and the San Antonio & Aransas Pass Railway, which shows that Mr. Herring not only represents the consolidated Union Pacific and Southern Pacific, but also the Texas lines of the Southern Pacific, which are ostensibly run separately. Exhibit 113 is

the card of the Traveling Freight Agent, which carries the names of the Union Pacific system and the Southern Pacific. (Folio 2209.)

Mr. Crowley, of the Carnegie Steel Co., testified (Folios 2238-9) as to the efforts made by freight solicitors to get business, that they called on the shippers regularly and looked after the details of freight rates and offered them any assistance they could in looking after material en route, so that it gets to its destination in proper time; trace the shipment, and in his opinion the personal relations between the solicitors and shippers has its effect in getting business for the roads, and it is a useful adjunct to a railroad in getting business, to maintain commercial agencies.

Mr. Thomson, a great friend of Mr. Herring, and Traffic Manager of the Oil Well Supply Co., after having stated some of the things that were done by commercial agents for the shippers, testified (Folio 2273):

> "Q. You regard a man in Mr. Herring's position as very useful to the shipper, do you not—commercial agents?
>
> A. I should say so; if you would get in the business for a little while, you would very soon find out.
>
> Q. That is what I understand; they are very useful, and as far as you know, the various lines have independent solicitors, independent agencies, most of them?
>
> A. Yes."

He then enumerated the Canadian Pacific, the Great Northern, the Northern Pacific, and the Santa Fe as having separate agents, and added that Mr. Herring solicits

just as strongly from him to-day for the Union Pacific as he did prior to his taking hold. At Folio 2275, after speaking of the kindly smile worn by Mr. Herring when he called on him for business, he said that sometimes when he had a lot of shipments to make, Mr. Herring said he wanted to get them by the Union Pacific; sometimes he said he wanted to get them by Southern Pacific, and then testified:

> "Q. Does he try at the same time to get them for both the Union Pacific and the New Orleans route?
> A. No, sir, he couldn't very well."

Mr. McGrew, in charge of the traffic of the Standard Underground Cable Co., after stating that they formerly shipped all rail by New Orleans, but stopped about five or six years ago, was asked (Folio 2280) how he happened to do that, and answered:

> "A. Well, one of those psychological events, perhaps.
> Q. Who happened on the ground at the time that psychological phenomenon occurred?
> A. Everything seems to be blamed on Mr. Herring.
> Q. Then the diversion was because of the difference in the attitude of Mr. Herring, was it not? Instead of wanting to send the stuff by New Orleans, he wanted to send it by Ogden?
> A. I think mainly so."

On cross-examination, he stated (Folio 2282) that Mr. Herring indicates at times a preference for shipments by way of Omaha and Ogden as against New Orleans.

Mr. Gano, who has been in the railroad service in a traffic capacity, after testifying to the former competition

that existed out of Cincinnati, and that Mr. Connor now represents both lines, testified, at Folio 2302, that the signs displayed by his office in the windows embodied all the various companies, including the steamship lines out of San Francisco, as well as the Portland & Asiatic Co. At Folio 2312, he gave similar testimony as to the functions and usefulness of the commercial agents, to that given by other witnesses.

Mr. Williamson, Commissioner of the Receivers' & Shippers' Association at Cincinnati, also testified, at Folio 2326, as to the usefulness of soliciting agents to shippers and their ability to procure business for their companies.

Mr. Buchanan, Traffic Manager of the Ivory Soap people, Proctor & Gamble Co., testified that since Mr. Connor has represented both lines in Cincinnati, he didn't think he discriminated between the routes. At Folio 2346 he said that a man of Mr. Connor's character, actively engaged in working for a line of railway, is able to get a considerable amount of business through his personal standing and personal solicitation.

On cross-examination, he was asked whether he would be in a better situation if the Union Pacific and Southern Pacific were separately represented, and in reply said he would like to know who would be back of the agent—how far they would be separate above him. (Folio 2348.)

On re-direct examination, he spoke of the fact that in addition to services like tracing cars and getting cars, he has discussed with Mr. Connor the matter of rates, payment of claims and classifications and contemplated changes in rates. (Folio 2349.)

At Folio 2351 he testified:

"Q. Now, Judge Lovett endeavored, I judge by one of his questions, to get you to testify that you don't think that your company or any company would be any better off with a separate representation of roads, but you did not seem inclined to wholly agree with that. You are not of the opinion, are you, that it would be as well for the shippers if all the transcontinental lines from the Missouri River to the coast had one set of officers and representatives?

A. No, sir."

On re-cross-examination, at Folio 2352, he repeated that he did not believe it would be a good thing for competing lines to be consolidated and have one agent, and then, at Folios 2353-4, he testified as follows, in answer to counsel for defendants:

"Q. In other words, let us assume that the Union Pacific does not own any stock of the Southern Pacific, and that it is entirely separate in its ownership and management from the Southern Pacific, and that it has its own representatives here in the field, we will say, as it had before, and the Southern Pacific has its representatives?

A. Own separate higher traffic officials?

Q. All the way through—separate organizations. And it may be that two men can do the work better than one. So my question is not as to the number of men, but as to whether they represent the two interests separately?

A. Separate organizations from a traffic standpoint at least?

Q. Yes.

A. I think I understand your question. I think we would prefer the separate organization.

Q. Why, Mr. Buchanan?

A. I think a shipper in a case of that kind, where there are two separate and distinct systems, would stand a better chance of getting liberal, reasonable

rate-legislation than they would from the one organization.

Q. Are you keeping in mind in that answer the physical connection and location of the Union Pacific with reference to the Southern Pacific?

A. Yes. That would be perhaps less so with them than with some other systems, but I think even with them my answer would be it would be better that they be separate.

Q. Isn't it true there cannot be any competition between the Union Pacific and Southern Pacific line west of Ogden?

A. Well, now, perhaps you or Mr. Stubbs can answer that better than I.

Q. Well, do you know of any?

A. I should think there was and could be again more competition between the Ogden route and the Southern Pacific direct."

Again at Folios 2356-7:

"Q. What I am trying to develop, Mr. Buchanan, really, is any reason that you may have, not generally as between competing lines, but as between the Union Pacific and the Southern Pacific, considering their relations at Ogden—how a shipper could be any better served by two men representing the two companies separately than by two men representing them jointly.

A. Well, I don't know that the shipper here would be particularly benefited by Mr. Connor representing only one road. But I am not prepared to say that the shipper would not be better off if the Union Pacific and Southern Pacific had separate traffic organizations.

Q. But are you prepared to state in what respect he could be better served by separate traffic organizations?

A. I think he would be better served; he would be less likely to have unreasonable rate legislation, unreasonable advances, unreasonable rules and

> regulations. I think that he would be apt to get a fairer, quicker hearing on a matter of that kind than if they only had one."

Being pressed for a further answer, he testified (Folio 2358):

> "A. Well, I will have to reiterate what I have said. I think where there are strong systems that are separate the shipper stands a better chance—I think it is obvious that he would even with the best intentions on the part of the traffic managers of the larger systems—that he stands a better show of getting a fairer hearing on any question that he will bring up, less chance of an unreasonable rate, or unreasonable rules and regulations."

Mr. Buchanan represents one of the greatest shippers in the United States. If such a shipper as that would be better off with separate representation and active solicitation of business by rival lines, how infinitely more is it to the advantage of the small shipper who has to depend on the railroad agent for all of his information, and whose means do not permit him to maintain a traffic manager? As to such shipper, the more competition the more service he will receive, because through giving this service as an act of competition, the railroads get their business.

Mr Keavy, Commissioner of the Indianapolis Freight Bureau, with long railroad experience, testified to the competition that exists in solicitation and the kind of service that is rendered; that the service takes into account not only the dispatch of traffic, but the facilities for getting information promptly, treatment of questions like claims, supplying cars, particularly in times of congestion.

He further testified that the personality of the general agent or soliciting agent he had known in many instances to be of great potency and influence in securing business. (Folio 2375.)

Mr. McDowell, of the Atlas Engine Works, testified (Folios 2383-4) that no preference was expressed by Mr. Connor in his agency as to the routes since the consolidation; that it was his experience that the personality and ability of the soliciting agent has a great deal to do with securing business. (Folio 2384.)

Mr. Barker, Traffic Manager of Atkins & Co., saw manufacturers at Indianapolis, a large concern, testified that Mr. Connor, in soliciting business, expresses no preference for one route over the other, and makes no endeavor to route the traffic one way or another. (Folio 2388.)

Mr Bean, of Thomas Manufacturing Co., manufacturers of agricultural implements at Springfield, Ohio, testified (Folio 2391) that since the consolidation the representative of Mr. Connor's agency does not express any preference as to routes, and, being asked in what way he regarded the freight solicitors as of value to railroads, he said:

> "A. Well, I think that they are important in the sense that they bring you in direct contact with the railroad. You have that personal contact that is always effective in business transactions. And then they are generally men who are looking out for the interest of their lines, and in that way trying to benefit the shipper all they can, in the way of good service and in many ways they are very useful to both sides; and in fact, we could not get along very well without them.
>
> * * * * *

Q. Are they useful in the way of getting business for the railroads?

A. Decidedly—decidedly.

Q. What is the important element in competition between railroads, to your mind?

A. The rates being equal, I think the first element is service; that is to say, the line that seems to be freer and in position to carry your freight with the best dispatch, particularly when you are in a hurry; they would be more apt to get the business. But all conditions being equal, I think the personnel of the solicitor has considerable to do with it." (Folios 2391-2.)

He further testified that he formerly shipped via New Orleans, but of late has not shipped much of anything that way. During that period, when Mr. Connor represented the Southern Pacific alone, he had a good chance and got the business in many cases, as they aimed to divide their business between all the lines. (Folios 2392-3.)

Mr. Nichols, Traffic Manager for the Long & Allstatter Co., manufacturers of agricultural implements at Hamilton, Ohio, produced the cards of Mr. Connor and Mr. Lister, Traveling Freight Agent, working under Mr. Connor. They are introduced as Complainant's Exhibits 115 and 116. On the face of Exhibit 116 are the names of the Southern Pacific and Union Pacific companies, and on the reverse side is a map which shows in heavy type the Union Pacific, Southern Pacific, and the San Pedro road, and in lighter type a few of their connections, among others the lines leading from El Paso to Kansas, and from Denver southeasterly to Fort Worth. (Folio 2407.) He was also asked his opinion as to the usefulness of freight solicitors to shippers, and testified:

"A. Well, they can assist you in getting your stuff through; furnish you special equipment, quote you rates; things along that line.

* * * * *

Q. And by reason of being useful to shippers they are able to get business for their lines?

A. Yes, sir." (Folio 2408.)

Mr. Blair, of the Nile Tool Works Co., Hamilton, Ohio, testified that Mr. Connor and his assistants, when calling on him and soliciting business, expressed no preference between the two routes. When asked as to the usefulness to railroads of freight solicitors and commercial agencies, he replied:

"A. I believe they are a very useful adjunct to a railroad. They do the railroads a good deal of good in soliciting their business, and they also do the shippers some good, * * * by way of looking after shipments after they are started, tracing them, hurrying them forward to their destination, reporting arrivals."

He further said, assuming that rates were equal, that competition for business depended a good deal on the personality of the solicitor; also the matter of service and equipment. (Folios 2422-3.)

Mr. Gothlin, Railroad Commissioner of Ohio, for nine years General Agent of the Wisconsin Central at Cincinnati, four years of that time representing both the Northern Pacific and the Wisconsin Central jointly, testified as to the great value to the railroad of local representatives like Mr. Connor, by bringing the railroad in direct contact with the shipper, showing them how to route their business, and further said:

"A. Now, in my own experience, it was frequently possible for me to furnish equipment to shippers, and I think that is the experience of a great many of the western agents. They take upon themselves the burden of securing the equipment. * * * At one time the road that I represented had furniture equipment—that is, suitable for bulky freight, such as buggies and furniture. Take the Big Four Railroad, for example; I had an arrangement—and I think many of the other western agents also had—with Mr. Cavanagh, Superintendent of Car Service, to keep a certain number of those cars in Indianapolis, and on my order he would send them to Cincinnati or Columbus or any other place where we wished to load them, and have them there promptly, thus relieving the initial line agent of any bother or worry, and also the shipper, which was considered quite an advantage to the shipper." (Folios 2433-4.)

He further said that that was of assistance in securing business, because if he got the car he got the business. He detailed certain other services that he had performed for shippers, enabling him to get business for his line; for instance, the East Liverpool potteries are located at a noncompetitive point on the Pennsylvania Lines, and they ship all over the west, and they wanted to be in a position to know what the rates were. He and one or two other soliciting agents prepared sheets showing all the western towns of any size in alphabetical order, and the through rates made up by combining the Pennsylvania rates to Chicago or the river, plus the rates beyond, on commodities in less than carload lots, so they would have those rates before them. The shippers considered that quite an advantage and it secured for the agents a good deal of business. As new tariffs came out, the sheets were changed. The National Tobacco Works of Louisville became one of his best

patrons, and he secured other business by being able to secure prompt refund of the revenue tax on tobacco shipped through Canada, through a series of tracings by which he was able to advise them very promptly of the delivery to the passing of the boundary. Through arranging that, he secured their business steadily for years without further solicitation.

By tracing shipments from Middletown, Ohio, and keeping shippers posted promptly, he secured practically all of the competitive business in his territory. (Folios 2434-6.) He also instanced the fact that Mr. Connor rendered him legitimate service at the time he (Gothlin) was Traffic Manager of the National Cash Register Co., by taking up through his superior officer, with the Transcontinental Association, the matter of a change of rates, in consideration of which he gave the business to the Southern Pacific. He said he thought that the location of commercial agencies in the eastern field by transcontinental lines was a valuable method of securing business for those lines, and also of value to the shippers, as it gave them a friend at court. (Folios 2436-7.)

Mr. McGuffey, with the Proctor & Gamble Co., says that some commercial agents are of assistance to shippers:

> "If we are discussing any rate matter, we call in one of the commercial agents, if he is a live man, and talk the matter over with him and make it plain to him, and get him to put it up to his people for us."

He further testified:

> "Q. Now when you were connected with the freight department of the Queen & Crescent, did you learn, or have you since learned, what service, if any, the

soliciting agents performed for small shippers? You have a large organization, I suppose—Proctor & Gamble, but in the case of small shippers, what service can they reasonably and properly perform?

A. I think they would perform a good deal of service for a small shipper. They are supposed to post him as to what the rates are. They could not do that for us. * * * We take care of that ourselves. We have a large traffic department, with tariff files, and we generally post them as to what the rates are.

Q. But in the case of a small shipper, the contrary would be true, wouldn't it?

* * * * * *

A. In the case of the small shipper, his only method of tracing a car is to go to the soliciting agent of the road, unless the general freight office of the road happens to be in the city where he lives." (Folios 2488-9.)

Mr. Shewalter, in charge of the traffic of Mast, Foos & Co., manufacturers of windmills and pumps, at Springfield, Ohio, testified that since the agencies at Cincinnati were consolidated, no preference is expressed between the New Orleans gateway and the Union Pacific. (Folio 2500.)

The same testimony was given by Mr. Cory, in charge of the traffic of James Leffel & Co., manufacturers of water wheels, steam engines and boilers. (Folio 2504.)

Mr. Marshall, Traffic Manager of the Pioneer Pole & Shaft Co., the largest manufacturers of buggy poles and shafts in the United States, at Piqua, Ohio, testified that since the consolidation of the agencies, the soliciting agent expresses no preference between the Sunset Route and the Union Pacific route. (Folio 2508.) He further said that he felt that the more competition there was between lines,

the more activity there would be to give good service, in order to get the business. (Folio 2512.)

Mr. Blum, for a long time Traffic Manager of the Globe-Wernicke Co., Cincinnati, the largest manufacturer of sectional bookcases and cabinets in the world, testified that since the consolidation, the Cincinnati agency has been impartial between the Union Pacific and the New Orleans route. (Folio 2514.)

Mr. Hedges, of the Peruna Co., Columbus, Ohio, testified that the representative of the joint agency is impartial between the two routes in his solicitation. (Folio 2523.)

Mr. Pursel, in charge of traffic of the Armleder Wagon Works, Cincinnati, testified that the representative of the joint agency solicits his business, but expresses no preference between the New Orleans and the Union Pacific route. (Folio 2539.)

The same testimony is given by Mr. Berndt, Traffic Manager of the Andrew Jergens Co., manufacturer of soaps, perfumes, etc., at Cincinnati, (Folio 2542.)

Mr. Coakley, Traffic Manager of the American Steel & Wire Co., at Cleveland, says that in soliciting most business at the present time, the joint agents aimed to get the long haul by Omaha. If they cannot get it that way, they take whatever haul they can get. (Folio 2557.)

Mr. Coakley further testified as to the value of soliciting agents on transcontinental lines, and that he considered them very valuable and of considerable benefit to the com-

pany that he represents, as they furnish him rate advices, keep him posted on contemplated changes in classifications, in which he is interested, and expedite the movement of traffic, and he regards them as of value to the railroads in securing business for the lines they represent. (Folios 2557-8.) That the reason why business moves in greater volume through Omaha and less through the New Orleans gateway at the present time is because the agent tries to move the business that way. (Folio 2566.)

Mr. Boltz, Traffic Manager of a large number of oil refineries, known as the National Petroleum Association, with headquarters at Cleveland, the refineries being located in the states of Pennsylvania, Ohio, New York, Kansas, and the Dominion of Canada, said the joint agent solicits his business but does not express any preference between the New Orleans and Omaha gateways. (Folio 2573.) He further testified, in answer to a question as to the desirability of transcontinental lines seeking business in his territory to the coast, maintaining soliciting offices:

> "A. I should say that it was the wise thing for them to do, for the reason that a line which is represented in a certain city or district is, unquestionably, able to secure a greater volume of business for their line than if they were not so represented.
>
> Q. And if two lines are in competition with each other for business, and one line has a local agent and the other has not, is not the latter line at a disadvantage in securing competitive traffic?
>
> A. I should so consider it, most certainly."

When asked what services were performed for shippers by soliciting agencies, he replied:

"A. Why, it is frequently the case that shippers desire certain business transported with as little delay as possible. In that case the local representative endeavors to trace the cars through, sometimes by wire, but in every instance endeavors to hasten the delivery of the shipment with as little delay as possible. It also occurs at times that when changes in rates are pending, local representatives have knowledge of changes that have become effective, and give the information to the shipper, who avails himself of the opportunity to ship during the time when the rates are most advantageous.

Q. What effect does the performance of these services have upon the ability of the soliciting agents to get business from the shippers?

A. Well, a good live wire would naturally secure a great deal more business than one who did not give attention to the detail of the movement of the business and endeavor to give the shipper all the information he could, concerning changes in rates, and so on." (Folios 2576-7.)

Mr. Boltz also gave testimony with reference to a new rate adjustment made on petroleum by the Transcontinental Traffic Association in April, 1906, mentioning the names of some of the representatives of the different lines who were present, and stated that as he understood it, Mr. Luce represented both the Union Pacific and Southern Pacific lines, although Mr. Munroe was in Chicago at the time, and perhaps represented the Union Pacific. (Folios 2586 et seq.) He further said that Mr. Connor had always assisted him in any way he could in tracing cars and anything of that sort, and then gave the following testimony:

"Q. Then, the only change in the situation, so far as Mr. Connor is concerned, that you have observed, is that formerly he tried to send his business via New Orleans, and now he is indifferent as to whether it goes via New Orleans or Omaha?

A. Yes, sir.

Q. He is no longer competing for coast business, as between the Southern Pacific and Union Pacific?

A. No, sir." (Folio 2591.)

Mr. John F. Ryan, Traffic Manager of the National Supply Co., manufacturing oil and gas well supplies, testified that since the consolidation of the agencies, his business has been solicited by Mr. Choate, of Detroit, and in soliciting business he makes no distinction between the two routes, and there is nobody in the Cleveland district at the present time, since the agencies were consolidated, conducting the competition, which was formerly conducted by Mr. Connor and the other people. (Folio 2607.) In the old days, when competition was active, more traffic moved by New Orleans than at present. (Folio 2608.) On cross-examination he said that this traffic was not moving by New Orleans because it is not solicited, and if that line was now represented by a solicitor working exclusively for that line, more business would move by New Orleans at the expense of the Union Pacific-Ogden line and the Santa Fe. (Folio 2611.)

Mr. E. D. Ryan, Traffic Manager of the Milburn Wagon Co., of Toledo, Ohio, testified that his business is solicited by Mr. Choate, of Detroit, by way of Omaha or Kansas City, but if he learns that shipments are going via El Paso, he tries to get them by New Orleans. (Folio 2614.)

Mr. Kleuter, Traffic Manager of the Gendron Wheel Co., at Toledo, testified that Mr. Choate, of Detroit, solicits his business without discrimination between the two routes. (Folio 2622.)

Mr. Henderson, Traffic Manager of the White Sewing Machine Co. at Cleveland, testified that while they used to send business by New Orleans, none of it now goes by that route, but most of it goes by Omaha, some of it still by El Paso, but in soliciting traffic the joint agency does not discriminate between the Southern Pacific and the Missouri River gateways. (Folios 2638-9.) When asked as to his opinion about the value to railroad companies of local soliciting agencies, he said:

> "A. Why, I think if the line is represented by a local man, there is a better chance of getting business.
>
> Q. What can these local men do in the way of securing business? How do they get it?
>
> A. Oh, they assist in getting equipment, looking after forwarding and making up a report passing points, and such as that.
>
> Q. Is it your experience that the active solicitation of local men does secure business?
>
> A. Yes, sir." (Folio 2640.)

He further testified (Folio 2642) that, while the joint representatives were very active in soliciting business for the consolidated system, that they do not solicit for the Union Pacific as against the Southern Pacific as they did in the old days when they were competing with each other.

Mr. Norvell, Traffic Manager for Park, Davis & Co. of Detroit, the largest manufacturing pharmacists in the country, says his business is solicited by Mr. Choate, and that he does not discriminate as between different parts of the system made up of the two lines. (Folio 2651.)

Mr. Gordon, Traffic Manager of the Anderson Carriage Co., of Detroit, testified that Mr. Choate solicits his busi-

ness, but does not discriminate between the two routes, and that so far as the representative of those lines is concerned, there is now no competition for business at Detroit. (Folio 2655.)

Mr. Evans, Traffic Manager of the Sherwin & Williams Co., manufacturers of paints, varnishes and oil at Cleveland, testified that at the present time he is inclined to think Mr. Connor would like to see the business go through Omaha. (Folio 2664.)

Mr. Hart, Traffic Manager of the Gresselli Chemical Co. of Cleveland, manufacturing chemists, with plants at various cities, says that now Mr. Connor and his assistants, he thinks, prefer to take traffic by way of Omaha, and that he quit routing through New Orleans for no special reason, except that at the time the Southern Pacific was represented separately Mr. Connor solicited for it, and his personality had something to do with getting the business that way, and when Mr. Connor's personality was switched from the Southern Pacific route, at least partially, the traffic went with it, whereas in the old days it went both ways, and was about evenly divided. (Folios 2667-8.) He further testified that he regarded freight solicitors as of considerable importance to their roads in getting business, and they are also of service to the shippers in getting tariff quotations, getting the tariffs themselves, and assisting in helping the freight through when shippers are in a hurry for it.

Mr. Wilkison, in charge of the traffic of Chandler & Price Co., the largest manufacturers of printing presses and printing machinery in the world, says that no distinction

is now made in the solicitation of the business by the joint agency; that the agent is satisfied that if it moves either Union Pacific or Southern Pacific via New Orleans. (Folios 2673-4.) He further says that, in his opinion, free traffic in the hands of the consignor moving out of Cleveland can be influenced as to the direction it will move by the personal solicitation of traffic solicitors; that he believes in local representatives, and that he believes they will secure business for their lines.

Mr. Stewart, Traffic Manager of the Standard Sewing Machine Co. at Cleveland, said Mr. Hild, the representative of the Southern Pacific and Union Pacific system, whose card appears as Complainant's Exhibit 116, Folio 2677, solicits his traffic, but he does not solicit for either the Union Pacific or Southern Pacific one as against the other. He further testified that, in his judgment, the movement of traffic is affected by the solicitation of business; that the solicitors succeed in getting the business, and from the standpoint of the railroad represented, it is valuable to have traffic solicitors in the field. (Folios 2678-9.)

Mr. Peck, Traffic Manager of the Brown Hoisting Machinery Co., manufacturers of ore and coal handling machinery, of Cleveland, says that his business is solicited by the joint agency, but he never knew them to discriminate between the southern line and the Union Pacific line. He regards soliciting agents as useful to railroads in securing traffic; they endeavor to facilitate the movement of traffic, make it quicker; shippers can keep in touch with the movement by calling them up on the telephone quicker than they can by outside offices. Also on rates and tariffs and getting general information that shippers might want through the

local offices, and in consideration of performing those services, he feels like giving them business. (Folio 2701.)

Mr. Wentz, for many years the representative in Chicago of the Rock Island road, testified that competitive traffic is largely secured through the personality of the agents, and the time in which it can be delivered and the prompt adjustment of claims is a consideration. When asked as to the necessity of railroads maintaining commercial agents to compete for traffic in the competitive territory, he replied:

> "A. The road which kept the solicitors on would get the greater portion of the business, all other things being equal. There is no doubt of that."

He further said that agents look after the interests of shippers in a great many ways; sometimes the shippers want a particular tariff, and the solicitors will wire on and get it for them. The solicitor will take an interest in the settlement of their claims, and frequently help to get equipment set for the business. (Folios 2836-7.)

Mr. Evans, of Peoria, Ill., Traffic Manager of the Kingman Plow Co., testified:

> "Q. Does the Southern Pacific solicit that business now?
> A. Not as Southern Pacific business exactly.
> Q. The joint agency?
> A. The joint agency solicit it.
> Q. Which way do they solicit it? This joint agency solicits by the Union Pacific as I understand you.
> A. That is their preference." (Folio 2882.)

At Folio 2883, he further said that they solicit for the long haul represented by the joint agency, that is, the Union Pacific and Southern Pacific together.

Mr. Younge, Traffic Manager of the Wilson Interest, distillers, wholesale grocerymen and packing houses at Peoria, says the joint agency call on him now and solicit business by Kansas City and Omaha gateways. (Folio 2927.)

Mr. Montgomery, Traffic Manager of the International Harvester Co., says that while he cannot say positively, he would say that the joint agency since the amalgamation, has solicited their business generally any way they could get it, but perhaps without any special partiality. (Folio 2957.)

Mr. Bell, Traffic Manager of the Crane Co., of Chicago, states that since the consolidation, Mr. Niemyer has solicited business from Pittsburg, Cincinnati and Chicago, and his attitude is neutral as between the two routes. (Folio 2972.)

Mr. Bell further testified that shippers are influenced by the service they can get, since rates are made uniform over all lines, and that business is undoubtedly influenced by the personality of the man in charge of the traffic. (Folio 2980.)

Mr. Ginz, for a long time Traffic Manager of the South Bend Chilled Plow Co., of South Bend, Indiana, testified that after the amalgamation the joint agency solicited their traffic by way of the Union Pacific and stated to Mr. Ginz that the fast service that he had formerly enjoyed by way of the New Orleans route, had been abandoned, and that

better time would be made over the Union Pacific than over the Southern Pacific. He states that nobody has called on him working for the Southern Pacific route since the amalgamation. (Folio 2986.)

He further made another very significant statement, which is, that the Illinois Central has not actively solicited business to the coast by way of New Orleans for about three years. That is an interesting circumstance in view of the readjustment of the traffic situation that has been going on resulting from the conspiracy complained of. (Folio 2990.)

It appears in Harriman Exhibit 2, Folio 1264, that on August 9, 1906, the Union Pacific Railroad purchased between 29% and 30% of the capital stock of the Illinois Central, which the defendant Kahn stated, (Folio 2039) amounts to practically a dominating interest. While there is no direct evidence of the traffic relations between the principal officers of the Illinois Central and the Union Pacific, still, if not only the Southern Pacific solicitation from certain territory to the coast by way of New Orleans has been withdrawn, but if in addition about three years ago the Illinois Central solicitation was likewise withdrawn, it seems fair to assume that the purchase of this dominating interest, as it was called by Mr. Kahn, may have been effective in increasing the monopoly of the Pacific Coast business from certain territory, endeavored by these defendants to be handed over to the Union Pacific.

Mr. Holderness, in charge of the traffic of the Bain Wagon Co., of Kenosha, Wis., testified that the Illinois Central representative used to solicit his business to the coast by New Orleans; that he now calls on him, but

does not solicit coast business, and the consolidated Union Pacific-Southern Pacific Chicago agency solicits business exclusively by the Ogden gateway at the present time. (Folio 3000.) On cross-examination he repeated that formerly he sent shipments by way of New Orleans to California through the solicitation of the Illinois Central representative; that this was previous to the merger. (Folios 3002-3.)

Mr. Knight, for a long time General Agent of the Union Pacific in Chicago, testified that a general agent is brought in personal contact with manufacturers and shippers of various kinds, men who want to ship and open up new territories, if they can get satisfactory rates established, and that it is and was during his experience, part of the function of a general agent to make recommendations as to changes of rates, and as a rule such recommendations led to readjustments in rates. (Folio 3025.)

He further testified, (Folio 3026):

> "A. Well, those recommendations would usually come up—they would be made a file of, pending a meeting of the association. For instance, if it is a transcontinental proposition, why, the recommendations, together with all the necessary data, would be sent to the traffic manager, and he would put it in his file for the next transcontinental meeting; and there it would be presented to the meeting for action, and if it was a worthy proposition, why of course it carried. Some of those matters, too, were sometimes matters of classification, and then the recommendation and all the files would go to the chairman of the classification committee, for action at the next meeting of the classification committee, which was tri-annually."

He was asked whether he frequently had occasion to make such recommendations, and replied:

> "A. Oh, with the growth of the West, with the new commodities and new manufacturing interests springing up, why, as they appeared, those things were required." (Folio 3026.)

Mr. Dutton, for many years Traffic Manager of Kelly, Maus & Co., wholesale hardware, Chicago, speaking of routing most of his business to the coast by the C. B. & Q. in connection with the D. & R. G., for the reason that the General Agent was a personal friend, said:

> "A. If a certain agent is a personal friend of yours and he can get the goods to destination, you would naturally give him the benefit of it—at least I do. All things being equal, you understand—rates and everything else." (Folio 3109.)

Mr. Barker, Chicago Manager of Jones & Laughlin Steel Co., Pittsburg, testified that after the consolidation of the agencies, a solicitor asking for business gave Mr. Barker to understand that it made no difference what way it was routed, so long as it went over the Southern Pacific line or the Union Pacific. (Folio 3116.)

Mr. Sage, in charge of the traffic of Fairbanks, Morse & Co., Chicago, testified that in his opinion soliciting agents can help a shipper materially, if they are posted on tariffs, rates, time, etc., and all that tends to help get business for their road. They are a help even to large shippers maintaining traffic departments, and are quite valuable to small shippers. When two lines are in a position to compete for business, one of them maintaining a soliciting agent in a

large place like Chicago, and the other having no soliciting agent, the one maintaining the solicitor will get the most business. On cross-examination he emphasized this, testifying as follows:

> "Q. Most all railroads maintain solicitors, don't they, Mr. Sage?
> A. Yes, sir, I think so, so far as I know.
> Q. And always have?
> A. As far as I know, yes, sir.
> Q. You would regard that as pretty good evidence that they serve some useful purpose, wouldn't you?
> A. I surely do, yes, sir." (Folios 3201-2.)

Mr. Stubbs, in his statement before the Board of Arbitration on the Canadian differentials, made a strong statement as to the value of soliciting agents. As we have said, when discussing the Canadian Pacific differentials, there was one year that the American lines paid the Canadian Pacific $500,000 subsidy to induce that company to maintain rates, with the agreement that all revenue actually received on transcontinental business by the Canadian Pacific should be applied in dimunition of the amount so to be paid Mr. Stubbs, in his argument, suggested that during that year the Canadian line sat still and didn't work to get business out of San Francisco. He read in evidence at Folio 3264. what he had said on that subject, as follows:

> "I submit, where would the Union Pacific that makes in connection with the Central Pacific the shortest and most direct line, that is the oldest line to San Francisco—where would that company be to-day if their agencies were to carry out the program indicated for his agencies by Mr. Kerr in that testimony? Would it get any business that was competitive as between themselves and the Santa

Fe or the Missouri Pacific or Burlington or Rio Grande or Rio Grande Western roads? In three months, notwithstanding all its natural advantages, more than 50 per cent of its business would leave its rails; if it would get anything at all that possibly could go over another route."

Mr Stubbs was then asked if anything had occurred since 1898 to change his view of the usefulness of agents in getting competitive business, and to that he answered, "Yes." When asked to explain, he merely stated that it was a pretty strong statement, and probably he would not have made it if he had been in any other position than that of advocate trying to make things as strong as possible. After that explanation, he testified:

"Q. Assuming, Mr. Stubbs, that you were carried away a little by your enthusiasm when you put it as high as 50 per cent, it is your opinion, is it not, that where business is competitive, soliciting agencies are of great value in securing business for the lines that they represent?

A. Yes, sir."

Naturally it was somewhat embarrassing for Mr. Stubbs to be faced with a statement of the character that he had made, in view of the fact that he is the head of the traffic bureau of these various lines, and has consolidated the agencies at practically all points where competition formerly existed. But when the question was put squarely to him as to the great value of soliciting agents in securing competitive business, he testified to their value. (Folios 3264-5.)

Mr. Markham testified, (Folio 3685):

"Q. From your experience, what is your opinion as to the desirability of railroad lines which are

competitive with each other, maintaining soliciting agencies to get traffic?

A. I think it is all-essential.

Q. Assuming that two roads are competitive, and one of them maintains a soliciting agency and the other does not, what, in your opinion, would be the effect on the movement of traffic?

A. The line that did not would be at a disadvantage."

Mr. West, Assistant General Freight Agent of the M. K. & T. at St. Louis, testified, (Folio 3807), that since the consolidation of the Union Pacific and Southern Pacific agencies at St. Louis, and at other points, he had not observed any preference shown by the joint agency as to the direction in which transcontinental traffic should move, whether south or north, so long as they got a haul out of it, but that they have competed against outside lines.

Mr. Swingley, for a long time the Traffic Manager of the St. Louis Car Co., testified at Folios 3825-26, that he was a personal friend of the former General Agent of the Union Pacific at St. Louis, and that that friendship influenced him to some extent in giving the Union Pacific the business. He then testified:

"Q. What is your opinion from your experience in the traffic business, as to whether business is influenced by the personality of the general agents or soliciting agents?

A. It has been my experience that personality has a great influence, provided conditions are any way equal.

Q. If they are anywhere nearly equal, or substantially equal?

A. Yes, sir.

Q. It is your opinion, then, that soliciting agents are of value in securing business for their companies?

A. It is; that is my opinion."

Mr. Hanson, Traffic Manager of the National Enameling & Stamping Co., after having testified that his coast business was formerly solicited by the Illinois Central via New Orleans, testified that at present they are not soliciting anything that way, and do not call on him any more. (Folios 3835-6.) This evidence is cumulative to that given by Mr. Ginz

He further testified that the joint agent of the Southern Pacific and Union Pacific now solicits coast business by their joint line, namely, through Omaha or Kansas City, but is not particular what route he gets it by. (Folios 3837-8.)

Mr. Feickert, Traffic Manager of the Lemp Brewing Co., said that the joint agency in St. Louis expressed no preference as to whether the business should go via Omaha or El Paso. (Folio 3876.)

Mr. McCarthy, Traffic Manager of Salt Lake Hardware Co. said their business is now solicited from the Atlantic seaboard by the Morgan line to Galveston, Southern Pacific lines to Fort Worth, and thence by connection to Denver, and by the Union Pacific and from interior points through Kansas City or Omaha by the Union Pacific (Folio 3910.) On cross-examination an endeavor was made to develop that this joint agency is soliciting for the long haul and the most revenue. Mr. McCarthy testified that that was true, but they treated both systems as one, and the long haul from the Atlantic seaboard was by way of the

Gulf and Fort Worth, whereas if he was representing only the Union Pacific, the long haul that the solicitor would work for would be from the Missouri River. (Folio 3927.)

Mr. Stubbs when called by the defendant, after testifying that transcontinental rates are made by the Association, each line having a vote, said: (Folios 6643-4.)

> "Q. Now, the fact that the rates are determined this way in conference, and are uniform, outside of whatever friction may exist in the meetings, fixing the rates, reduces the matter of competition very largely, does it not, to a question of service and solicitation—seeking to get the business by giving good service, by settling claims promptly, and doing other things?
>
> * * * * * *
>
> A. Well, they certainly are elements, and important elements; but whether there were all or not I wouldn't want to say."

We have already in connection with the discussion of Colorado and Utah common points business called attention to Mr. Munroe's testimony (Folio 6809 et seq.), as to the power of competitive railroad organizations in controlling and securing business. Mr. Hannaford testified, (Folio 8042): that the Northern Pacific Railway Company maintained general agents and commercial agents at large points like Chicago, Pittsburg, New York, Philadelphia, Boston, Buffalo, and that their function was to represent the Northern Pacific Railway and get all the business they can that the road is able to carry, and route it over that line. He then testified:

"Q. Now, do your agents meet any competition at such places and in the same line with agents of the Southern Pacific and the Union Pacific?

A. Yes, sir.

Q. And at some places you meet an agent who represents both the Southern Pacific and the Union Pacific, don't you?

A. Recently.

* * * * * *

Q. Now, those commercial agents that are kept at these different points throughout the country are a great assistance, are they not, to the lines they represent in securing the routing of traffic over those lines?

A. Why, we feel so, yes, sir.

Q. And that is the reason you keep them there?

A. Yes, sir."

At Folio 8043 he says that the winter tourist business is an active competitive business solicited by the Southern Pacific line and the northern lines.

AFTER THE PURCHASE OF THE CONTROL OF THE SOUTHERN PACIFIC BY THE UNION PACIFIC, NOT ONLY WERE AGENCIES CONSOLIDATED AND THE COMPETITIVE EFFORTS OF SOLICITING AGENCIES WITHDRAWN, BUT THE AGENTS OF THE TWO SYSTEMS WERE INSTRUCTED TO HANDLE TRAFFIC IN A WAY TO PRODUCE THE MOST REVENUE FOR THE CONSOLIDATED SYSTEM.

We have already, in connection with the discussion of the attitude of the consolidated agencies, called attention to some of the testimony indicating that the two systems were to be treated as one, but in addition to the new attitude assumed by the solicitors, the testimony shows that the common traffic officials at once made arrangements and issued orders to unify the two previously competing organizations, for the purpose of routing the traffic so as to produce the most revenue for the consolidated lines.

Mr. McCusker testified that some time after Mr. Stubbs took charge of the traffic of all the lines the agents at Portland were called in to a meeting by Mr. Campbell, General Freight Agent of the O. R. & N. It will be recalled that Mr. McCusker was a Southern Pacific official, but he says of this meeting:

> "We were told to solicit Atlantic seaboard business via Sunset; that is, certain business where the local to New York would not be too great; and other business west of there, while I was not told to actively solicit that, at the same time I was told to influence it via the Union Pacific."

He said the same instructions were given to the O. R. & N. representatives at that time. He further said that the reason was that they wanted the most revenue for the

least service. They did not want to perform the long service for the same revenue that they could get for the short service, and they wanted the freight from the territory that would give them the best revenue for the system.

The Ogden gateway was then closed to business for Portland via Sacramento, and they arbitrarily diverted freight by the Short Line. The divisions were changed in some way, and the instructions were not to solicit any business via Ogden; that is, via Sacramento. Anything west of the Atlantic seaboard was to come Union Pacific, Short Line and O. R. & N. and not by Sacramento. (Folios 722-724.)

The above testimony was given by Mr. McCusker in the winter of 1907, before the Interstate Commerce Commission. He was recalled at the time the testimony was taken in this case in Portland, and at Folios 4493-4 was examined again with reference to this matter, and among other things said:

> "A. I mean that the O. R. & N. people—Mr. Morse had his instructions to solicit New York business or Atlantic seaboard business via Sunset while he was an O. R. & N. man and I was still a Southern Pacific man, and I had instructions to influence any other business west of there by Union Pacific."

On cross-examination he said that the O. R. & N. line between San Francisco and Portland had their agents and were constantly soliciting for the boat, while he continued actively soliciting for the railroad; that each was expected to look after his own business, but in addition to that there were opposition boat lines, and if he heard of business that was going to move by boat that he could not get by rail, then he was to notify the O. R. & N. boat line of the business.

Mr. McCusker further testified at Folio 4504, that after receiving these instructions he abandoned his endeavor to work business from Cincinnati to Portland by the Sunset Route, and that hops moving to Cincinnati were not longer solicited by the Sunset, but went Union Pacific.

The fact that this change did not take place immediately after Mr. Stubbs' appointment as Traffic Director July 1st, 1901, but was delayed for some time, was because of his illness. Mr. Stubbs testified at Folio 543, that his office did not become organized and effective until perhaps late in 1902, because of his illness, as he was very ill. In connection with Mr. McBride's testimony at Folio 829, as we have before stated, will be found the circular letter sent out by the General Freight Agent of the Southern Pacific Oregon lines, under date of September 1, 1902, closing the Sacramento-Ogden route, and directing that agents will not accept for shipment via Sacramento, any business when routed via Ogden east in connection with the Union Pacific or Rio Grande roads.

Mr. Jenkins, who was with the O. R. & N. up to about 1904, when asked what instructions or directions were given after the merger, as to the solicitation of traffic, said:

> "A. Well, the impression we gave was that it was desirable that Atlantic seaboard business should move by Sunset Route if possible. If not, handle it by Union Pacific."

As to shipments originating west of the Atlantic seaboard, he said they were to move by the Union Pacific if they could get them that way. Mr. Jenkins came off the street and went into the office, and Mr. McCusker was to solicit for both lines. (Folio 824.)

Mr. Miller, at present General Freight Agent of the O. R & N. and of the Southern Pacific lines in Oregon, said he was a party to the negotiations that led to the closing of the Sacramento route, but he did not know with whom Mr. Coman, who issued the circular, conducted them. (Folio 843.) The arrangement was that business from Ashland north, should move to and from the east via Portland; that is, over the Southern Pacific, the O. R. & N. Short Line and Union Pacific. We have heretofore referred to this testimony more in detail in connection with the discussion of another phase of the case.

Mr. Kelly, a lumberman connected with the Booth, Kelly Lumber Co., operating four mills along the Southern Pacific, from 120 to 145 miles south of Portland, and shipping all over the United States except a small part of New England and the South, at Folio 763 testified that previous to 1901, everything that they shipped went south via Sacramento and Ogden. Now it all goes north via Portland and Ogden on account of the rates being withdrawn and shipments all diverted by Portland. (Folio 766.) All their shipments to Utah and Colorado points were thus diverted, amounting to about ten millions of feet a year. (Folio 768.) The change in rates and the movement of traffic has given them new territory and taken away some that they had. He prefers to sell at San Francisco and California, but the traffic is now forced another way, although the best of lumber going to California is two dollars a thousand higher than lumber going east. (Folios 768-9.) Prior to 1901 probably more than 80 per cent was sold in California and Arizona. (Folio 770.) He further lost territory into which he used to ship between Sacramento and Ogden, because of the raising of his rates across Ne-

vada. (Folio 776.) California rates were about to be raised again at the time he testified two years ago, by an advance from $3.10 to $5.00 a ton. Thus by manipulating the rates and diverting the shipments, this large manufacturer was compelled to find a new market, establish new connections, and give up dealing with the people with whom he had formerly dealt.

Mr. Markham, who was for fifteen years ending in 1903, in the traffic department of the Illinois Central, was asked whether there was any difference in the westbound movement of transcontinental traffic originating at points north of the Ohio River in Ohio, Indiana and Illinois, as between the Ogden Route and the New Orleans Route after the amalgamation of the control of the Union Pacific and Southern Pacific, and testified:

> "A. The Illinois Central tried to move that by the New Orleans route, but it oftentimes found that it was desired to route it by the Ogden route. Of course, in working with the Southern Pacific in such cases, if the Southern Pacific controlled it, it would move it one route or the other, according as it felt would pay the most money, I suppose.
>
> Q. Did any facts come to your knowledge indicating a disposition on the part of the joint agency of the Southern Pacific and the Union Pacific to divide that traffic on geographical lines?
>
> A. Yes, sir, there did.
>
> Q. Where was the line?
>
> A. Our soliciting men told us, as I recollect it now, a line drawn northeast from Cairo to some point on Lake Erie. All south of that line would go by New Orleans and all north of that line by the Ogden route. * * * After the joint control." (Folios 3704-5.)

Mr. Throckmorton was asked whether after the Union Pacific acquired its interest in the Southern Pacific, any instructions were given him as to working for any other route than the Sunset Route after that time, and replied that he believed there were some general rate divisions shown showing the amount that accrued to the lines west of Omaha and the lines west of New Orleans, and as he remembered, they were practically the same; that is, that the Union Pacific and Southern Pacific together received about the same revenue that the Southern Pacific did from New Orleans. (Folio 1470.)

Mr. Sweek testified that he was present at the meeting of the soliciting agents of the Southern Pacific and O. R. & N., called by Mr. Campbell and mentioned by Mr. McCusker in his testimony, and he names the various individuals present at Folios 4462 to 4464. The list seems to include most of the Southern Pacific, O. R. & N. and Union Pacific representatives in Portland territory, as well as Mr. Wilde, Chief Clerk of the General Agent of the O. R. & N. in San Francisco. He said Mr. Campbell called these gentlemen together to give instructions in regard to soliciting business. He was asked to give the substance of these instructions, and replied:

> "A. The substance was that we were to work friendly with the Southern Pacific representatives; to work for—in fact, as nearly as I can express it, the whole system then, the Southern Pacific and Union Pacific and Oregon Short Line and O. R. & N. were considered a system, and the idea in working business was to work for the greatest revenue for the system—for that system of roads."

He further said that Atlantic seaboard business was to go by the Sunset Route as far as possible, without antago-

nizing anybody, and business west of Pittsburg and Buffalo north of the Ohio River was to move by the Union Pacific via Omaha.

He further said that Mr. Campbell had at that time a letter from Mr. Stubbs the Traffic Director; he, Sweek, had seen this letter, and it contained in substance the instructions which were given to which he testified. He was then asked:

> "Q. After that time, when those instructions were given, what was the situation in Portland as to competition continuing between the O. R. & N. and the Southern Pacific?
>
> A. Well, we were not working against each other; we were working friendly with each other. We were working—
>
> Q. According to instructions?
>
> A. Yes, certainly, we followed instructions."

He said they continued to do so until he left the service of the company in 1905. (Folios 4465-6.)

Mr. Wilde testified that he was present at the meeting of the commercial agents called by Mr. Campbell, as the representative of Mr. Schumacher, the General Agent of the O. R. & N. and Union Pacific at San Francisco. Wilde was his chief clerk. When asked to state as nearly as he could recall, what Mr. Campbell said at the time, he replied:

> "A. The discussion in a general way was with regard to closer relations between the Union Pacific and Southern Pacific. * * * We were instructed to work with the Southern Pacific more closely and harmoniously than we had done in the past.

Q. You hadn't been over harmonious in the past, had you?

A. Not particularly so among the solicitors." (Folio 4559.)

He further said that business from the Atlantic seaboard zone was to move Sunset, so far as practicable, and all the business was to move Sunset or Union Pacific as seemed to be most advantageous to the system, taken as a whole; that some seaboard business had to be worked Union Pacific, because it might be controlled to some extent by the Trunk Line connections, and it would not be policy to work against them. And again, that if it was more profitable to move business through a certain territory by the Union Pacific, they were supposed to use their efforts first in that direction. If the Southern Pacific would earn more money they were not supposed to make very strenuous efforts to get it; and if the Sunset Route was after business that could be moved by that route, the Union Pacific officials were supposed to keep their hands off and let them have it if they could get it. (Folios 4559-62.)

Mr. Crichton produced a letter, Complainant's Exhibit 161, from Mr. Markham, General Freight & Passenger Agent of the Southern Pacific at Portland, under date of August 13, 1901, cancelling the arrangements between the Southern Pacific and the Columbia River & Puget Sound Navigation Co. for interchange of business originating at or destined to Columbia River points reached by the steamship line. (Folio 4613.) This arrangement had been in force since 1894, the steamship line competing with the O. R. & N. boats.

Mr. Toll, connected with the Southern Pacific for a long time in different capacities, in 1901 handling the correspondence regarding the solicitation of freight, under Mr. Sproule, Freight Traffic Manager, testified that after the amalgamation of the Southern Pacific and Union Pacific, he prepared a statement showing the earnings of the lines west of New Orleans versus west of Omaha, from what was known as the Central Freight Association territory, which took in the lines practically west of Pittsburg and east of Chicago and St. Louis. This was prepared under the direction of Mr. Sproule, and sent to the different soliciting agents. The purpose of it was to show by which gateway the greatest revenue would accrue to the Harriman interests taken as a whole, and the Union Pacific and Southern Pacific were taken as a unit. This table was sent to the soliciting force, both on the coast and in the east, and instructions were issued in connection with that sheet, to the representatives, to endeavor to secure the traffic via the route that would afford the greatest revenue to the Harriman interests. (Folios 4850-51.) He was then asked:

> "Q. Now, how did those figures actually work out, in securing this result of the highest revenue for the Harriman lines? How about northern Ohio and Chicago, Indianapolis, St. Louis and such towns?
>
> * * * * * *
>
> A. My best recollection is that from the Ohio River points, Cincinnati and Louisville proper, the greater revenue was afforded by the New Orleans gateway, and north of the Ohio River there was greater revenue via Omaha." (Folios 4852-3.)

On cross-examination, he testified concerning the route taken by the bulk of the business previous to the amalgamation, and was then asked:

> "Q. The conditions, then, as to the movement of that freight north and south of the Ohio River are substantially unchanged, were they not, prior and subsequent to 1901?
>
> A. With the exception that the New Orleans gateway did handle a portion of the traffic from points north of the Ohio River." (Folio 4859.)

On re-direct examination, he testified:

> "Q. Did you mean to testify in answer to Mr. Dunne that there was no difference in the movement of traffic by reason of the elimination of this competition?
>
> A. Well, as I explained to him, I thought there was a slight difference in the freight from Central Freight Association territory, and a larger portion now comes through the Omaha gateway, whereas it was actively solicited before through the New Orleans gateway."

He defined the Central Freight Association territory as lying east of Chicago and East St. Louis, and west of Buffalo and Pittsburg, and north of the Ohio River. (Folios 4860-61.)

Mr. Clifford, General Agent of the Union Pacific in San Francisco for five years beginning in 1901, stated that he had had in his office a copy of the division rate sheet showing the revenue accruing west of Omaha and New Orleans, with instructions that business be solicited through the gateways giving the Harriman lines the most revenue. (Folio 4905.)

Mr. Prentice, for many years District Freight & Passenger Agent of the Southern Pacific at San Francisco, testified that Mr. Sproule called the traffic soliciting agents together in San Francisco after the merger of the Union Pacific and Southern Pacific, and gave certain instructions as to the method in which business should be solicited, calling in Mr. Gray from Salt Lake, and others, about fourteen in number. The instructions he gave them were very general, but he called attention to the fact that Mr. Harriman had purchased an interest in the Southern Pacific Co., and mentioned the fact that the Union Pacific had agents located in all the principal cities of California, as well as eastern agents, and left the impression on Mr. Prentice that he was rather to refer these matters to their representatives in San Francisco; and in explanation of this reference of matters to the Union Pacific agents, said that in soliciting business at San Francisco for the Southern Pacific Co., he left the routing very largely blank, and put the Union Pacific agent or representative on to the fact that the person had freight to ship. He then testified:

> "Q. At this meeting which Mr. Sproule called, in which he referred to the fact that Mr. Harriman had acquired an interest in the Southern Pacific, was anything said about the territory in which business might originate which you were to call to the attention of the Union Pacific agencies, as you have said?
>
> A. No, sir, because all the officials, those who were at the meeting, were familiar with that matter, and in my opinion it was not necessary for Mr. Sproule to call their attention to that. They were familiar with that work." (Folios 5034-37.)

The effect of amalgamating the agencies and issuing the instructions which were sent to the solicitors made every

Southern Pacific agent, in fact a Union Pacific agent, and in addition to eliminating the competition between those systems tended to monopolize in the hands of the Union Pacific a large part of the business that had formerly been competed for on even terms by the Union Pacific and the Rio Grande and its connections.

PREVIOUS TO THE ACQUISITION OF THE CONTROL OF THE SOUTHERN PACIFIC BY THE UNION PACIFIC, AS TO SUCH BUSINESS AS THE SOUTHERN PACIFIC COULD NOT GET BY ITS OWN ROUTE TO THE EAST BY NEW ORLEANS, AND WHICH HAD TO MOVE BY OGDEN, THERE WAS AN ACTIVE COMPETITION KEPT UP BETWEEN THE UNION PACIFIC AND THE RIO GRANDE, BUT THIS COMPETITION ON THE PART OF THE RIO GRANDE WAS SUBSTANTIALLY DESTROYED THROUGH THE JOINT EFFORTS OF THE UNION PACIFIC AND SOUTHERN PACIFIC AGENCIES.

Mr. Jeffery, the President of the Denver & Rio Grande, after stating that he remembered the fact of the purchase of the Southern Pacific stock by the Union Pacific and the changes made in the organization of the companies in a general way, was asked if he knew what effect, if any, did that amalgamation of authority have upon the Denver & Rio Grande, and answered:

> "A. It gradually eliminated the free interchange that there was between the Southern Pacific and the Denver & Rio Grande system at Ogden, and at Salt Lake City to an extent.
>
> Q. In what way was that elimination brought about?
>
> A. Why, the common control of the Union Pacific, Southern Pacific, and Oregon Short Line, working for the common interest of the properties named, would inevitably reduce the interchange with the Denver & Rio Grande system, a competing line from Denver to Salt Lake City and Ogden, and competing via its eastern connections from

Missouri River points and Chicago and St. Louis, and so on.

Q. What difficulty, if any, did the Denver & Rio Grande find in securing eastbound business by reason of that change?

A. The eastbound business was gradually diverted from the Denver & Rio Grande." (Folios 1831-2.)

He further testified that for a great many years his company had maintained commercial agencies at San Francisco, Los Angeles, and Portland, to solicit and route business via the Rio Grande system and its eastern connections, and the consolidation has stimulated them to even greater efforts than before; nevertheless, the eastbound tonnage delivered by the Southern Pacific is less than it was before the Union Pacific took control of the Southern Pacific, although the business from the coast in general is much greater. He further testified that his road formerly did considerable business in and out of Portland and tributary territory; that it was a diversified traffic—lumber in very considerable quantities, some sheep, cattle, wool, fruits, hops, some Oriental traffic, and at one time they got Oriental traffic by way of San Francisco, but now share in it very slightly.

The Oregon Short Line does not maintain divisions except to a very limited extent; most of them have been withdrawn, while prior to 1901, before the merger, Ogden was a free and unrestricted gateway. (Folios 1832-4.)

On cross-examination, he was asked a question by defendants' counsel, as to whether in effect the difference did not lie in the fact that prior to 1901 the Southern Pacific as between the Rio Grande and the Union Pacific was impartial, and since 1901 it has preferred the Union Pacific with unrouted traffic. He then testified:

"Q. Such business as your agents on the Pacific coast or elsewhere can have routed over the Southern Pacific and your line, the Southern Pacific as a rule respects that routing, doesn't it?

A. No, as a rule they don't.

* * * * * *

Q. Are you sure about that, Mr. Jeffery?

A. Yes, I have had a good many reports on that subject.

* * * * * *

Q. Now, what you really meant by your other answer was that the Southern Pacific agents would really work against the agents of your system in favor of the Union Pacific; is that true?

A. Yes, very actively.

Q. In other words, the Southern Pacific and Union Pacific would work together?

A. Yes."

He further testified that the Western Pacific Railroad is being built because the construction was made necessary by the changed attitude of the Southern Pacific toward the Rio Grande, which he attributes to the control of the Southern Pacific by the Union Pacific. (Folios 1835-7.)

On re-direct examination Mr. Jeffery said that the Sacramento gateway from Portland having been taken out, whatever traffic his agent is able to get at Portland must come over the Short Line, and that most of the divisions have been taken out with the Short Line. He then gave the following testimony:

"Q. Well, then, if the competition of the Southern Pacific line around by Sacramento, with the Oregon Short Line, has been removed, and if your divisions then with the Short Line have been taken out, how can you get any business out of Portland?

A. We don't get much.

Q. They wiped you off the map, then, as far as Portland is concerned, practically?

A. Oh, we come up smiling. We are still on the map, but we don't— * * * do much business." (Folios 1847-8.)

And again, he testified:

"Q. Now, in addition then, to practically taking away your business in Oregon, by reason of the Southern Pacific agents in California working for the Union Pacific, your ability to compete with the Union Pacific has been diminished?

A. Very greatly." **(Folio 1850.)**

Mr. McCusker, testified that previous to the merger on shipments through Sacramento and Ogden, he was under no instructions to favor one line as against the other. So long as he got the haul he worked with all lines. That was done with the consent of his superiors. (Folio 719.)

Mr. Lochman, a large hop shipper of Salem, testified before the Interstate Commerce Commission that he formerly shipped a great deal by the Rio Grande lines and the connecting lines east; that since the merger he has made efforts to route cars directly from Salem by the Rio Grande *without success, as the agent in Salem notified all parties that in order to ship by the Rio Grande lines, it would be necessary to secure Rio Grande Cars, and in their absence traffic had to go either Union Pacific or Southern Pacific.* (Folios 738-9.)

Mr. Kelly, the lumberman, testified that railroad ties, the lowest grade of forest product except mining timber, and which can be transported in any kind of a car, while

long timber requires special cars and which is easier to handle, by a rule that was put in by the Southern Pacific, takes a rate of $5.00 a ton to San Francisco or Bay Point, while a piece double that length or any other length of common timber would be carried at $3.10 a ton. The effect of this was that his company could not make deliveries of any ties in San Francisco or in territory where the Western Pacific was trying to buy ties. (Folios 765-766.)

Mr. Kelly further testified that prior to 1901, when he was routing south to Colorado by the Southern Pacific around by Sacramento, lumber moved from Ogden over the D. & R. G. and occasionally a car by the Midland; and the Denver business now goes by the Union Pacific; that in former years they sold a good deal of material to the Denver & Rio Grande, and it is the practice to always try to give traffic to the various roads and get some of their purchasing agent's business in that way, but they cannot sell to the Rio Grande any longer because of the fact that they cannot give them any traffic. (Folio 777.)

Mr. Kelly further testified:

> "Q. Mr. Cotton asked you whether you had lost any business by reason of the rate adjustments; do you know of any that you have lost other than the traffic in ties to the Gould people aside from your California and Arizona business and Sacramento points east?
>
> A. No, only this Rio Grande business; we used to have lots of that; we had both for the Rio Grande Western and the Denver & Rio Grande; but of late years we haven't had that." (Folio 779.)

He then testified further with reference to the rate put in on ties, saying that the Western Pacific wanted to buy ties delivered at Stockton, which is practically a Bay point.

but he cannot get in there on account of their raising the classification of ties. He said:

> "A. The tie is just as cheap a commodity as goes, and usually moves just the same as other lumber, and other roads shipping out on eastern shipments don't make any distinction between plain lumber and rough lumber. It goes so much a ton anyhow."

He further said that that distinction between ties and other timber is not made in shipping from Portland east over the Short Line, but only from Oregon down to California; that he had sold the Western Pacific a lot of ties, supposing that a tie was rough green common lumber, and shipped a great many of them and "got stuck," as he expressed it, for $2,200 on them. (Folios 779-81.)

The treatment of the Rio Grande is also illustrated by the performances of Mr. Meyer, Car Service Agent of the Southern Pacific and O. R. & N. at Portland. It was apparently made so hot for him that he took back his action gradually. (See Folios 800 to 804.) As will be seen, he first issued a circular to agents, dispatchers and conductors, that until further notice they should not permit any cars to load with D. & R. G., R. G. W. or Western Pacific material shipments or *commercial lading*, except cars belonging to those lines, or that route that way. A few days later he amended this by permitting commercial business to be loaded by the Rio Grande the same as before. On August 15th he modified the circular again, so that the prohibition should apply only to O. R. & N., O. S. L., U. P. and S. P., and other cars belonging to the Harriman lines, which he directed must not be used on shipments of R. G.

W. and R. G. and Western Pacific Ry. Co. material. On the 29th of August he took back the whole of the first circular. It is interesting to read the excuses and explanations made by Mr. Meyer for this proceeding.

Mr. McBride, General Agent of the D. & R. G. at Portland, testified (Folio 827) that in the year 1900 his line secured in round numbers 27,000 bales of hops, or the equivalent of 320 carloads from the Willamette Valley, of which about 280 cars went by Sacramento and Ogden, and about 40 cars came by Portland, the O. R. & N. and Short Line. In the year 1902, one year after the so-called consolidation, he secured less than 30 carloads of hops from the same territory, all of them moving O. R. & N. and Oregon Short Line.

By this will be seen the effect that the Union Pacific control has on business formerly moved by the Southern Pacific out of this territory.

Mr. McBride further testified that traffic moving to the east from Ashland, which is 340 miles south of Portland, and all intermediate points, is moved by way of Portland, O. R. & N. and O. S. L. (Folios 827-8.) At Folio 833 he told of the efforts that were made to get this circular of Mr. Meyer's rescinded.

Mr. McBride further testified that the agents of the Southern Pacific in the Willamette Valley look upon the Rio Grande as a competitor, and that these local station agents are the persons to whom the shippers have to apply for cars. (Folio 838.)

Mr. Jones, Freight Traffic Manager of the Southern Pacific, showed the appreciation that a Southern Pacific education gives a man of the duties of a railway company to the public. His attention was called to this performance with

reference to railroad ties sold by Mr. Kelly, and he was asked if he could explain the reason why they should take a higher rates that the same kind of lumber which was 16 feet long instead of 8 feet long, and he said that it would depend upon the conditions and circumstances surrounding it. When asked what circumstances, he replied:

> "A. Well, there might be conditions and circumstances that would control the movement of ties. For instance, a road might want the ties for its own use. * * *
>
> Q. That is, the railroad might make that kind of a rate so as to prevent some other railroad getting ties from a particular region?
>
> A. No, sir, it does not prevent them, because there is a rate on them.
>
> Q. It makes it more expensive?
>
> A. Yes, it makes it more expensive."

When asked if he thought it was a fair way for a public service corporation to deal with a manufacturer along its line, because they might want the ties themselves, he replied:

> "A. I think it is a fair thing for anybody to take care of himself first." (Folios 1022-23.)

Mr. Shotwell testified in the winter of 1907, before the Interstate Commerce Commission at San Francisco, that he had been for fourteen years the representative of the D. & R. G. at San Francisco; that his line was doing less than 50% of the business then that it was in 1901, for the reason that the Southern Pacific devoted their efforts to securing the business by the Union Pacific; that before 1901 the attitude of the agents of the Southern Pacific toward his company and the Union Pacific, was neutral; that the change in the attitude of the agents of the South-

ern Pacific was gradually becoming more noticeable up to the time of his giving testimony. (Folios 975-6.)

Mr. Hanley, living at Burns, Oregon, 150 miles from a railroad, who has been for thirty years in the cattle business in that country, testified that they have to drive their cattle either to Ontario on the Oregon Short Line, or to Winnemucca, Nevada, on the Southern Pacific. It is 250 miles to Winnemucca; 150 miles to Ontario. He was formerly able to ship cattle from Ontario over the Short Line, and thence over the Rio Grande into Colorado, but the Ogden gateway was closed, so far as the Rio Grande was concerned, three or four years ago. (Folio 4655.) He then testified further:

> "Q. Previous to that time did you have a market for any of your cattle along the line of the Rio Grande south of Salt Lake?
>
> A. Yes; we sold a good many cattle in Colorado. The fact of it is some years ago we probably sold the biggest part of our cattle, especially cow cattle. The Colorado ranges bought a good many cow cattle—cows and calves.
>
> Q. Why was Colorado a better market for cows than the region further north, along the Union Pacific?
>
> A. The Northern country is a special steer country. The further north you go the less success they make of breeding, and the bigger success they make of making prime cattle, good enough to go to the best markets in the country. * * *
>
> Q. What effect on your business did the closing of the Ogden gateway to the Rio Grande have?
>
> A. Well, of course it had the effect of cutting us out of that much territory, and of course we couldn't ship anything into that country. * * *

Q. Did you have regular points to which you shipped in Colorado?

A. Why, not specially so, but in around Rifle and Grand Junction, along in about that part."

(It will be remembered that that is a part of Colorado not reached by any line except the Rio Grande.)

"Q. What was the extent of your shipments of cows down there previous to the time that you were put out of that business?

A. That would be pretty hard to testify to, as to any number, without going a little bit into our records. Some years we would ship a great many cattle down that way. Mr. Parsons has taken a good many steer cattle there himself. He bought from Oregon for a good many years, and supplied his own ranches, and he handled mainly steers, and I suppose some years he had as many as 10,000 cattle go down in Colorado, and from that up.

Q. And that is a business that is now closed to you?

A. No, we couldn't ship anything into Colorado by train now.

Q. What effect did that have on your business in dealing in cows?

A. Well, of course that cut our cow market to a considerable extent."

Mr. Hanley had previously stated that his Ontario shipments in association with Mr. Parsons, who was his partner, ran from 10,000 to 25,000, and sometimes 30,000, cattle a year. (Folios 4655-58.)

It is a pretty serious affair to absolutely deprive a man conducting a business of such an extent of his market. That is a direct result of the consolidation of the Short Line and the Southern Pacific. No one will suggest for a moment that if the two lines had not consolidated the

interchange of business at fair rates between the Denver & Rio Grande and these two lines, on either of which he might have shipped under competitive conditions, would not have continued.

On cross-examination it is attempted to be shown that he might ship into these Colorado points by paying the combined local rates, but he testified that the combination of locals would be so great that he could not afford to ship. (Folio 4682.)

Of course, the only reason that can be advanced for destroying this business of Mr. Hanley is to force the movement of cattle east over the Union Pacific to the packing houses along the Missouri River or on the ranges in Wyoming, which, as he has said, is not a good market for the type of cattle that he formerly sold in Colorado.

THE TRAFFIC AFFECTED BY THE PURCHASE OF THE CONTROL OF THE SOUTHERN PACIFIC BY THE UNION PACIFIC IS ENORMOUS IN AMOUNT.

The gross *freight* revenue of the Union Pacific and Southern Pacific systems for the year ending June 30, 1901, was $81,640,068.80. The gross *freight* revenue of the systems for the year ending June 30, 1907, was $132,537,293.37. Thus the revenue for the earlier year was, in round figures, 61½% of the revenue for the latter year. (Complainant's Exhibit 214 p. 4972 Vol. 11.) In order to show the extent of the transcontinental business of these two systems, certain statistics were prepared and introduced as Complainant's Exhibits 119 and 120, printed opposite page 1872, Volume 4. Defendant also introduced certain statistics upon exhibits which are hereinafter referred to in detail. These latter covered some items of transcontinental business, but included also competitive business other than transcontinental, such as, among others, the local business between San Francisco and Portland, San Francisco and the Willamette Valley, Portland and Utah common points, and Atlantic seaboard and Colorado and Utah common points. Owing to the destruction of Southern Pacific records in the San Francisco fire, and of certain of the Union Pacific records in a fire in the offices of that company at Omaha, it was impossible to make up complete statistics for transcontinental business during the year ending June 30, 1901. By agreement between the parties the figures were prepared for October, 1906, and April, 1907, two fairly representative months. These figures include the whole of the transcontinental freight traffic by both roads, and the rail proportion of Oriental traffic, but do not include the revenue to the ships

upon the Pacific Ocean. Treating the two months in question as representative and multiplying their totals as shown upon Exhibits 119 and 120 by six to arrive at a year's revenue, we have a total of $26,808,092.58, as the total freight revenue on such transcontinental business for the year ending June 30, 1907. Applying the same percentage to this as to the total earnings of the two systems as shown by their annual reports, to-wit, 61½%, we have as the result, total freight earnings on transcontinental business on both systems for the year ending June 30, 1901, about $16,486,976.93.

The defendants introduced in evidence certain statistics partly obtained from connecting roads, partly estimated, and in some cases, in the light of other testimony in the case, clearly incorrect, for the purpose of minimizing, if possible, the amount of business competitive between the two systems, other than the traffic to California points competed for by the Sunset Route as against the Union Pacific-Ogden Route. These figures, however, show a very large business in the aggregate at the time of the merger, which has greatly increased since that date owing to the unprecedented growth of the West. Therefore, even if the figures given were correct and complete they would show but a fraction of the business now conducted over lines that are naturally competitive, and in the transaction of which neither system uses any part of the lines of the other. The following summary of the figures shown upon the *various exhibits introduced by the defendants* shows the vast amount of such competitive business.

Asiatic business, Defts' Exhibits 45-b and 45-c, Fols. 7617 to 7619, including only Southern Pacific proportion

of business through San Francisco, for the year ending June 30, 1901 ... $200,442.00

This includes the business of the Southern Pacific moving through Ogden as well as by the Sunset Route, for the reason that the same is not separated in the figures presented by the defendants, but the exhibit does not show what proportion, if any, of this business moving by Ogden went over the Denver & Rio Grande east of that point. It does not include the Union Pacific revenue on business moving through the port of San Francisco.

Traffic between San Francisco and Portland locally for the year ending June 30, 1901, Defts' Exhibit 46, Fol. 6659 ..... 327,742.35

Traffic between San Francisco and the Willamette Valley for the year ending June 30, 1901, Defts' Exhibit 47-a, Fol. 7629..... 266,649.39

On the exhibit there is a deduction of $77,169.79 as non-competitive. This deduction is a mistake. It was explained by Mr. Stubbs at Folio 6662, as tonnage from the paper mills at Willamette Falls, which he stated were away from the reach of the railroad. Captain Graham, who operates a line of boats on the Willamette River, testified at Folio 4444, in answer to counsel for defendants, that this paper traffic was divided, some going by boat to Portland, thence by boat to San Francisco, and the other being taken across the river by boat to Pulp, a station on the Southern Pacific.

Lumber and other traffic from Portland to Ogden and common points and beyond via the Southern Pacific, the D. & R. G., and via the Union Pacific system, shown on Defts' Exhibit 48, Fol. 6667, being six months in 1900 and 1901, and therefore doubled to make a showing for the year 240,832.08

Traffic to and from Portland and Atlantic seaboard, Pittsburgh and Ohio River common points, (with Chicago, Mississippi River and Missouri River common points territories added), via Sunset and via Union Pacific-Granger Route for fiscal year ending June 30, 1900, is shown on Defts' Exhibit 49, Fol. 6670 et seq..... 648,049.94

Traffic to and from Portland and the Atlantic seaboard, Pittsburgh and Ohio River territories via Southern Pacific and Rio Grande for the year ending June 30, 1900, Defts' Exhibit 50-a, Fol. 7642..... 26,452.11

This does not include any traffic secured by the eastern representatives of the Southern Pacific moving to Ogden by the Union Pacific and thence to Portland over the Southern Pacific.

Hops and wool to the East from Portland for the year ending June 30, 1900, Defts' Exhibit 51, Fol. 6677, moving by O. R. & N., Union Pacific, Southern Pacific and Rio Grande, and the Sunset Route..... 14,497.41

This does not include the wool or hop traffic from the Willamette Valley.

Traffic between San Francisco and Montana and Idaho points, including east-

ern Oregon, Washington and British Columbia, served by the Northern Pacific and competed for, for the service between San Francisco and Portland by the Southern Pacific and O. R. & N. Co., for the year 1900 as to the Southern Pacific, and the year ending June 30, 1900, as to the O. R. & N., Defts' Exhibit 52, Fol. 6681... 52,076.01

Traffic between Atlantic seaboard territory and Colorado and Utah common points via Southern Pacific and Gulf ports via Union Pacific all rail and via Union Pacific and South Atlantic ports for year ending June 30, 1900, as to Southern Pacific, and for Union Pacific computed from figures for October, 1906, and April, 1907, the result of those two months being multiplied by six, Defts' Exhibit 53, Fols. 6685-6..... 995,261.59

To get at a more accurate result and to be entirely fair to the defendants, we should reduce the Union Pacific business shown upon this exhibit to 61½% thereof, as the figures are computed on the same basis as the entire transcontinental earnings, namely, as of October, 1906, and April, 1907. This would reduce the total earnings covered by said exhibit, to about $699,491.13.

Traffic between points in the Willamette Valley served by Williamette River boats, (excluding Portland), and New York, Boston and common points territory, Pittsburgh, Buffalo and common points territory, Cincinnati, Detroit and common points ter-

ritory, and Chicago common points territory moving Sunset Route, for the year ending June 30, 1900, Defts' Exhibits 55-a and 55-b, Fols. 7656-7.. 38,839.78

This is erroneous, as it is much less than the hop traffic alone, as we will show later.

Freight traffic between points in the Willamette Valley, (excluding Portland), served by Willamette River boats moving over the Southern Pacific and Rio Grande to and from the East, for the year ending June 30, 1900, Defts' Exhibits 252-3, Fols. 8159 to 8162..... 9,361.79

These figures are clearly erroneous, for the total movement shown out of the valley from all points including those not served by the Willamette River boats, is only $13,569.97, as shown by Defts' Exhibit 252, which would cover a very small portion of the hop crop alone that moved Southern Pacific and Rio Grande.

Freight traffic between points in the Willamette Valley (excluding Portland) served by Willamette River boats, New York and Boston common points, Pittsburgh, Buffalo and common points, Cincinnati, Detroit and common points, Chicago and common points, Mississippi River and common points, Missouri River and common points, via the Union Pacific system for the year ending June 30, 1900, Defts' Exhibits 250 and 251, Fols. 8147 to 8158..... 22,066.25

This makes a total of $2,546,270.70 after making the deduction above stated on Colorado and Utah traffic. Of this total of upwards of two and a half million dollars, $1,586,790.96, as shown by defendants' Exhibits, is on business other than transcontinental business. Adding that amount to the $16,486,976.93, the total transcontinental business, as hereinbefore stated, we have a total competitive freight business of $18,073,767.99, for the year ending June 30, 1901. It will be observed that in handling the traffic set forth upon defendants' Exhibits just above analyzed, (the revenue from which amounted to over 14% of the total earnings upon all the traffic covered by the allegations in the complaint), the two systems were entirely separate. In transporting this business neither of the roads used any of the rail or boat lines of the other, and there is excluded from this not only the enormous California traffic, but also other traffic that is clearly competitive, as for instance, the business into Montana moving by the Southern Pacific to Ogden, and thence over the Short Line, which was sharply competitive as against the boat line of the O. R. & N. and the rail lines of that company, although the Short Line is also owned by the Union Pacific interests. This was shown by the testimony of Mr. Connor and others. There has been excluded all traffic from the Willamette Valley except that from stations common to the boat line and the rail line, although Mr. Stebbins admitted that he did not know whether the production of this country might not be tributary to stations on the separate lines, although not reached by boat. It seems apparent also that Exhibit 252, showing the freight traffic moving from points in the Willamette Valley by the Southern Pacific and the Rio Grande is erroneous, as the hop traffic alone far exceeds the total given. There is a separate schedule, Exhibit 51, as we

have shown, which gives the revenue on hops from Portland proper, but there is no separate schedule giving the revenue on hops from the Willamette Valley, but Exhibit 252 purports to give the total movement on freight traffic from points in the Willamette Valley over the Southern Pacific and the Rio Grande. Mr. McBride testified at Folio 827 that in 1900 the Rio Grande secured from the Willamette Valley in round numbers 27,000 bales of hops, or the equivalent of 320 carloads, of which about 280 cars went by Sacramento and Ogden. That these figures are undoubtedly correct is shown by Mr. Miller's statement when testifying for the defendants, that in 1900 the Southern Pacific movement of hops from the Valley via Sunset was 47,000 bales, and via Ogden 22,000 bales, which latter would be nearly the equivalent of the 280 cars testified to by Mr. McBride. Mr. Miller testified (Fols. 842-3), that the rate on hops to the East was $1.50 a hundred, of which the Southern Pacific received 60c a hundred for the haul from the Valley to Ogden. At Folio 7548 he said that hops weighed from 180 to 185 pounds to the bale, and in 1900 about 80 bales made a carload, which would be in round figures 15,000 pounds to the car, corresponding to Mr. McCusker's statement at Folio 4714. Applying these earnings of 60c a hundred to carloads of 15,000 pounds, we would have $90 per car as the Southern Pacific revenue from the Willamette Valley to Ogden; and on 280 cars, the movement testified to for 1900 by Mr. McBride, corroborated as we have shown by Mr. Miller, the total revenue would be $25,200 on hops alone; while, as we have shown by the note to the figures from Exhibit 252 in the schedule, the total movement for all classes of traffic, which of course would include fruit and wool and anything else shipped from all points competitive or otherwise in the Willamette

Valley over the Southern Pacific and Rio Grande amounted to only $13,569.97. The probable explanation of this mistake is that the Auditor of the Rio Grande in making up the figures omitted the hop traffic, assuming that it would be put in a separate schedule, as was done in the case of that traffic moving out of Portland proper. Whatever may be the explanation, the mistake is apparent. It is also apparent that there is a mistake in Defendants' Exhibit 55-b, (Folio 7657), giving the total freight traffic from points in the Willamette Valley, excluding Portland, via the Southern Pacific-Sunset Route for the year ending June 30, 1900. This statement shows total revenue from all points whether competitive with the Willamette River boats or otherwise, of $92,739.60. Mr. Miller testified (Folio 7547) that in the year 1900 47,000 bales of hops moved from the Willamette Valley by the Sunset Route. Computing these at the minimum weight stated by him of 180 pounds to the bale we have a total weight of 8,460,000 pounds, which at $1.50 a hundred, the through rate to the East, all of which would accrue to the Sunset Route, made a revenue on hops alone of $126,900. The statements as to O. R. & N. earnings made by defendants are rendered doubtful as to accuracy by the figures shown on the annual reports of this company. (Complainant's Exhibit 213, Fol. 8272.) Nor do defendants' Exhibits include the large traffic in wool, hides and other commodities eastbound out of Utah and Idaho, which moved both West to Sacramento, and thence East by the Sunset Route, and also in connection with the Rio Grande by the Gulf Route in competition with the direct line to the East over the Union Pacific.

It must be remembered also that these figures, vast as they are, do not include any passenger traffic whatever.

We have heretofore shown that the passenger earnings competed for by the Union Pacific boat line and the Southern Pacific rail line between Portland and San Francisco, even when the rail traffic is estimated at what is probably not over one-half of its actual amount, aggregated over $1,300,000 a year at the low rates prevailing previous to the merger. This passenger traffic which defendants' own witnesses testified was competitive was wholly ignored by the trial court in its computation of earnings on competitive traffic. At the request of the complainant the defendants made up certain statistics covering *transcontinental passenger traffic* for the months of September and December, 1900, and September, 1906, and March, 1907. These statistics cover traffic moving to and from the East, and divided as between California, Portland and the Orient, California also including Nevada points, for which the rates are the same via the direct line of the Central Pacific and by the Southern Pacific Sunset, and points in Oregon South of Portland, except on the Willamette River North of Harrisburg formerly reached by the O. R. & N. Co.'s boat lines. Portland includes points on the Willamette River North of Harrisburg, and the oriental business includes all movements to or from China, Japan, the Philippines and Hawaii. These figures are shown on Complainant's Exhibits 123, 124, 125 and 126, Volume IV, page 1872. That this business was actively competitive is shown by many witnesses. Disregarding Southern Pacific earnings on everything except passenger traffic moved by the Sunset Route, and adding together the two months of 1900 and multiplying by six to secure approximate figures for the year, it appears that the revenue of the Union Pacific system for the year 1900 on transcontinental passenger traffic was about $1,137,878.46, and the revenue of the

Southern Pacific Sunset Route on transcontinental business for the same year computed in the same way was $596,092.32. These tables, Exhibits 123 and 124, are incomplete so far as the Southern Pacific lines between Ogden and San Francisco and Ogden and Portland are concerned. They do not show the passenger traffic handled by the Southern Pacific West of Ogden in connection with the Rio Grande. The latter is and always has been a strong passenger route because of the great scenic beauties of the line, and as stated by Mr. Stubbs and others, has always had through cars in connection with the Southern Pacific. That business was, of course, competitive, with the Union Pacific, and there is no showing as to the traffic moving to and from East of the Missouri River by the Southern Pacific, Rio Grande and Eastern connections into Portland, or into any other coast points. As showing the great increase in transcontinental passenger traffic due to the development of the West since 1900, a similar computation made by the use of Complainant's Exhibits 125 and 126 showing transcontinental passenger traffic for September, 1906, and March, 1907, discloses that the Union Pacific system transcontinental passenger revenue for the year, based upon those months, amounted to $2,141,711.58, very nearly double the revenue for the year preceding the merger, and the transcontinental passenger revenue of the Sunset Route for the later year computed in the same way, amounted to $1,566,126.30, or over two and three-quarters as much as the revenue for the earlier year. When it is recalled that all the transcontinental railroads united in selling round trip tickets good one way westbound and another way eastbound, and that the Southern Pacific was, as we have shown by the testimony, energetically by every means known to passenger traffic men, endeavoring to

route its passenger traffic by New Orleans, the Union Pacific on the other hand endeavoring to route traffic by its line, the two competing with each other as strongly as any two transcontinental lines, (Mr. Morse, formerly General Passenger Agent of the Union Pacific, Fol. 2871; Gano, Fols. 2291 to 2301; Smith, Fol. 2416; Hawley, Fol. 1419; Paul Morton, Fols. 1379 & 80; Hurlburt, Fols. 4526, 4530 & 31, 4537, 4539, 4540; Lang, Fols. 5054, 5058, 5059; Guyett, Fol. 5060; Hannaford, Fol. 8043,) we have here presented a tremendous competitive business. Mr. Hawley said that the competition as to this business was very active and involved the entire Eastern passenger business to the coast; Paul Morton that it included both first-class passenger traffic and emigrant passenger traffic. The San Francisco witnesses testified that the competition on eastbound business was equally active. In spite of the millions of dollars involved in this competition on transcontinental passenger business, it was entirely ignored by the trial court in making its computations of the amount of competitive traffic.

Aside from the Union Pacific portion of the Utah and Colorado common points business from New York, which was computed by the defendants in their Exhibit No. 53 on the basis of the figures for October, 1906, and April, 1907, the record for 1900 having been destroyed by fire, all of these figures as to freight earnings relate to the period ending June 30, 1901, June 30, 1900 or December 31, 1900.

This combination of rail and water lines continues, and unless dissolved by the judgment of this court will continue perpetually. Already the development of the west has been such that it is unquestioned that these figures represent but a fraction of the competitive business of the

character covered by these tables, and that business will continue to increase to such an extent that no one today can prophecy its amount in the future. It is probably a conservative estimate that the transcontinental business formerly competed for between the Sunset Route and the Union Pacific Route added to the other competitive business shown upon certain of these schedules, would now amount to about thirty millions of dollars per annum. Certainly such vast traffic, naturally competitive between these two systems, is sufficient in amount to cause the courts jealously to protect it from any acts tending to eliminate competition as to it, or tending to monopolize in a single corporation and its officials the power to control the same.

So long as the business is substantial in amount it is immaterial, as Judge Hook pointed out in his dissenting opinion, what percentage this competitive business may bear to the total earnings of the two companies. The destruction of competition, for instance, between Portland and San Francisco, or between Portland and Salt Lake City, should not be passed over and endorsed by the court merely because the Union Pacific may secure large earnings upon its local business in the state of Nebraska, or because the Southern Pacific may earn large sums of money between El Paso and New Orleans or locally in California. These great territories in the West, where the rapid development of the country is taking place, are entitled to be protected against monopoly, irrespective of whether that monopoly is created by the consolidation of two lines serving only that portion of the United States, or serving other portions in addition.

PURSUANT TO THE CONSPIRACY CHARGED IN THE COMPLAINT, THE UNION PACIFIC ACQUIRED A MAJORITY OF THE STOCK OF THE NORTHERN PACIFIC FOR THE EXPRESS PURPOSE OF CONTROLLING THAT LINE AND INDIRECTLY CONTROLLING THE CHICAGO, BURLINGTON & QUINCY, BOTH OF WHICH ARE COMPETITORS OF THE UNION PACIFIC.

Almost contemporaneously with the acquisition of the Southern Pacific, carrying with it the Panama Route, the defendants proceeded through their fiscal agents, Kuhn, Loeb & Co., to acquire the stock of the Northern Pacific Railway Co. This stock was purchased in the market, and the contest for the control of that company brought about the famous Northern Pacific panic of May, 1901. The firm of Kuhn, Loeb & Co. bought this stock and turned it over to the Union Pacific in large blocks, beginning April 15, 1901 with 100,000 shares of preferred and 150,000 shares of common stock. (Kahn, Fols. 2006-9-10.) They continued to purchase and turn over large blocks, as shown by letters passing between the fiscal agents and the chairman of the executive committee, and the same correspondence also discloses sales to the fiscal agents of the balance of the bonds of the 100,000,000 issue. (Fols. 2013-14-17-18.) The defendant Kahn expressed his pleasure at the dexterity with which his firm had purchased this Northern Pacific stock, in the following language:

> "I may say we did pretty well in buying the Northern Pacific stock, because we bought about seventy millions of it before anybody had any idea we were doing it." (Fol. 2024.)

In the aggregate there was purchased a clear majority, and as defendants supposed, the control. (Testimony of Harriman, Fols. 5152, 5158.) This stock, having been acquired by the Union Pacific, was, like the stock of the Southern Pacific, turned over to the Short Line, and the securities of that company were issued for it, partly to the public and partly to the Union Pacific.

Complainant's Exhibit 63, Folios 467-8, gives the details of the transaction, showing that the Short Line turned over to the Union Pacific certain purchase money certificates in cash, and assumed certain indebtedness. That was afterwards funded finally into the shape of Oregon Short Line Railroad 4% refunding bonds. (Complainant's Exhibit 71, Folio 482.) The Northern Pacific Railway Co. and the Great Northern Railway Co. had jointly just before this, bought the capital stock of the Chicago, Burlington & Quincy, a large railway system *admittedly competitive with the Union Pacific,* although the latter fact seems to have been overlooked by the learned judge who wrote the opinion of the majority of the court below. The utter recklessness with which the defendants pursued their course of violating the Anti-Trust statute, which had been begun by the purchase of the Southern Pacific stock, is shown by their own admissions. We quote from the testimony of defendant Kahn, (Fol. 2020):

> Q. You knew at the time you bought this stock of the Northern Pacific and turned it over to the Union Pacific, of which you were an executive committeeman, that the Northern Pacific and Great Northern had jointly acquired the Burlington?
>
> A. Yes.
>
> Q. You knew that for a large part of the distance traversed by the Union Pacific, it was an

active competitor with the Burlington, didn't you?
* * *

A. Yes.

Q. You knew that on transcontinental business, the Northern Pacific was a competitor with the Union Pacific, didn't you?

A. Yes.

Q. You knew that?

A. Yes.

Q. Will you explain to me, then, why knowing those facts, and of course knowing the law, being a banker, you sought to acquire the control of a competing line in violation of law?

A. To begin with, knowing the law, being a banker, there is a difference between a banker and a lawyer, and a difference between a banker's understanding of the law and a lawyer's understanding of the law, sometimes. I mean that in this sense, that the banker is not competent to judge of the niceties of the Interstate Commerce and anti-trust laws.

Q. Did that occur to you in connection with the matter?

A. It did to such an extent that it was a factor in determining the risk we ran. We bought the Northern Pacific stock *at a very great risk, legal and otherwise.*"

The defendant Schiff also testified that at the time of this purchase he knew that the Union Pacific and Northern Pacific were competing for business to the coast by way of Portland. (Fol. 1803.) Below we show by reference to the testimony of many witnesses that these two defendants were not mistaken in stating that a violation of the law was being perpetrated by this acquisition. The subsequent history of this Northern Pacific stock all appears in the litigation that came to this court entitled *Harriman v. Northern Securities Co.*, 197 U. S. 244. While Mr.

Kahn was right in extolling the cleverness of his firm in purchasing this enormous block of stock without the public being advised of the fact, they made one mistake, namely, they only secured a minority, although nearly a majority, of the common stock of the corporation, which had the right under the charter to pass a vote for the retirement of the preferred stock. Finding themselves in that position they joined with other parties in another violation of law, to-wit, the Northern Securities Co., putting into that company the bulk of the holdings of the Northern Pacific they had thus secured. They were induced to do this solely because the majority of the common stock which controlled the company was held by parties adverse to the Union Pacific. After the declaration by this court that the Northern Securities Co. constituted a combination in violation of law, the stocks of the Northern Pacific and the Great Northern Railway Companies held by that corporation, were distributed pro rata among the owners of Northern Securities stock. During the progress of the formation of the Northern Securities Co. the preferred stock of the Northern Pacific had been retired and an equal amount of common stock had been issued in its place, so that the Northern Securities Co. was the holder of substantially all of the stock of the Northern Pacific, it being of one class. Therefore, if the defendants could have secured, upon such distribution, Northern Pacific common stock of the same par value as both the common and preferred stock they had thus purchased, they would have been placed in control of the Northern Pacific. The Union Pacific organization, persisting in its desire and intention to obtain control of another transcontinental line and to absolutely shut the door at Portland, objected to the plan of distribution proposed which left them in a minority in both the

Northern Pacific and Great Northern. Their protest being unheeded, they brought the suit in the Circuit Court of the United States for the District of New Jersey entitled Harriman et al. against Northern Securities Co., to which we have above referred. The suit was brought in the name of Mr. Harriman and an associate, as they held the Northern Securities stock as trustees for the Oregon Short Line. This court, in a unanimous decision, speaking through the late Chief Justice, said:

> "It is clear enough that the delivery to complainants of a majority of the total Northern Pacific stock and a ratable distribution of the remaining assets to the other Securities stockholders, would not only be in itself inequitable, but would directly contravene the object of the Sherman Law and the purposes of the government suit. The Northern Pacific system, taken in connection with the Burlington system, is competitive with the Union Pacific system, and it seems obvious to us, the entire record considered, that the decree sought by complainants would tend to smother that competition."

The last effort so made to further monopolize the transportation business of this great western territory through the control by defendants of the Northern Pacific Railway system, thus failed, but it was through no lack of effort upon the part of the conspirators that it failed. That the Northern Pacific and the Union Pacific were competitors for transcontinental traffic is conclusively shown by the testimony.

Mr. Morton testified, after speaking of the Southern Pacific and the Santa Fe:

> "Q. In addition to the transcontinental lines that you have already mentioned, what other transcontinental lines were there prior to 1901?

A. There was the Northern Pacific and the Great Northern and the Canadian Pacific.

Q. What lines were in competition at that time for the transcontinental business?

A. They were all more or less in competition with each other." (Folio 1368.)

Mr. Hawley testified:

"Q. What lines of transcontinental railroads were there say, in the year 1900, or up to the purchase of the Southern Pacific stock by the Union, which you recall, in the spring of 1901—what transcontinental lines were there competing for the through business to the coast?

A. What do you term transcontinental lines?

Q. West of the Missouri River lines.

A. The Union, the Atchison, the Texas & Pacific, and the Southern Pacific?

Q. And the northern lines?

A. The Northern Pacific and the Great Northern. (Folio 1413.)

Mr. Stubbs testified:

"Q. Will you tell me whether the Pacific lines, the Northern Pacific, is competing with the Union Pacific and Southern Pacific, and how they do compete for transcontinental business?

A. Why, I think so.

Q. How do they do it?

A. In every known way.

Q. Name them, we want to find out.

A. They do it through their officers, they do it through service, they do it through their soliciting agents, and they do it in a thousand and one ways.

Q. And you do it in the same way as against them?

A. Yes.

Q. You do it yourself by looking after the general traffic, don't you?

A. Yes.

Q. And your assistants do it by looking after the Union Pacific and Southern Pacific?

A. Yes.

Q. And your general freight agents do it by looking after the Union Pacific and Southern Pacific?

A. That is, you are speaking now about our competing with the Northern Pacific?

Q. Yes.

A. Yes.

Q. And your soliciting agents throughout all the United States, where they are after traffic, are hustling against the Northern Pacific?

A. I think so." (Folios 553-4.)

Mr. Hahn, of Portland, testified that goods for his store from the east came over the Union Pacific, Southern Pacific, Northern Pacific and Great Northern. (Folio 666.)

Mr. Honeyman, another wholesale merchant, testified (Folio 684) that prior to 1901 there was active competition at Portland between the soliciting agents of the O. R. & N., the Southern Pacific and the Northern Pacific, and that his business moved over all those lines; also the Great Northern.

Mr. Hall, of the Honeyman Hardware Co., testified that his business is solicited by the Northern Pacific as well as the other lines. (Folio 693.)

Mr. Gill gave the same testimony. (Folios 697-8.)

Mr. Montgomery, of the Gill Co., gave the same testimony. (Folio 702.)

Mr. Ehrman gave the same testimony. (Folio 708.)

Mr. McCusker testified that shipments from the Willamette Valley were solicited by the Union Pacific, Northern Pacific and Great Northern. (Folio 714.)

Mr. Smith, formerly General Agent of the Pennsylvania in New York, testified that freight moved from New York to Portland prior to 1901, over the O. R. & N., the Northern Pacific, the Great Northern and Southern Pacific. (Folio 1521.)

Mr. Banham, of the Otis Elevator Co., said their Portland traffic moves by the Northern Pacific or the Union Pacific. (Folio 1739.)

Mr. Gregory, Traffic Manager of the Central Foundry Co. and its subsidiaries, said their business to the North Pacific Coast is solicited and moves over the Great Northern, Northern Pacific and Union Pacific. (Folio 1753.)

Mr. Henry, of the Standard Sanitary Manufacturing Co., formerly with the Pressed Steel Car Co. and the American Window Glass Co. testified business to Portland goes by the Northern Pacific, Great Northern or Union Pacific. (Folio 2096.)

Mr. Paar, of Diebold Safe & Lock Co., same testimony. (Folio 2122.)

Mr. Townsend, Traffic Manager of National Tube Co., same testimony. (Folio 2131.)

Mr. Ogden, of the Jones & Laughlin Steel Co., same testimony. (Folio 2142.)

Mr. Lent, Traffic Manager for a number of shippers at Pittsburg, said the Union Pacific and Southern Pacific, Northern Pacific, Great Northern and Santa Fe all had soliciting agents in Pittsburg. (Folio 2174.)

Mr. Gano, Freight Solicitor of the Union Pacific in Cincinnati, testified that the Northern Pacific had a soliciting agency and was very actively competing for Portland business out of Cincinnati. (Folio 2318.)

Mr. Buchanan gave the same testimony. (Folio 2340.)

Mr. McDowell, of the Atlas Engine Works, in Indianapolis, same testimony. (Folio 2383.)

Mr. Bean, of the Thomas Manufacturing Co., farm machinery, Springfield, Ohio, said Portland business is solicited by the Northern Pacific and the Union Pacific, and moves both ways. (Folio 2393.)

Mr. Mayer, of the Mosler Safe Co., same testimony. (Folio 2401.)

Mr. Smith, formerly solicitor of the Union Pacific at Cincinnati, testified business into Portland was competed for against him by the Northern Pacific and Great Northern. (Folio 2412.)

The following witnesses also testified to the competition between the Union Pacific system and the Northern Pacific:

Mr. Gothlin. (Folios 2439-40.)

Mr. Shewalter, of Mast, Foos & Co., Springfield, Ohio. (Folio 2500.)

Mr. Cory, of James Leffel & Co. (Folio 2503.)

Mr. Blum, of the Globe-Wernicke Co. (Folio 2514.)

Mr. Vosmer, formerly with the Globe-Wernicke Co. (Folio 2518.)

Mr. Hedges, of the Peruna Co. (Folio 2522.)

Mr. Doyle, of the Fay & Egan Co. (Folio 2526.)

Mr. Berndt, of the Andrew Jergens Co. (Folio 2543.)

Mr. Freiberg, a distiller at Cincinnati. (Folio 2550.)

Mr. Coakley, American Steel & Wire Co. (Folios 2558-9.)

Mr. Boltz, of the National Petroleum Association. (Folio 2573.)

Mr. E. D. Ryan, of the Milburn Wagon Co. (Folio 2615.)

Mr. Rand, formerly Union Pacific solicitor at Cleveland. (Folio 2628.)

Mr. Longacre, Atlantic Terminal Line, an association of manufacturers. (Folio 2633.)

Mr. Rushforth, of the Tyler Wire Works. (Folio 2645.)

Mr. Gordon, of the Anderson Carriage Co., Detroit. (Folio 2656.)

Mr. Evans, of Sherwin & Williams Co., Cleveland (Folio 2660.)

Mr. Wicks, of the Erie Iron & Steel Co. (Folio 2699.)

Mr. Peck, of the Brown Hoisting Machinery Co., Cleveland. (Folios 2700-2701.)

Mr. Wentz, formerly Rock Island Agent at Chicago. (Folio 2832.)

Mr. Evans, formerly with the Great Northern at St. Paul. (Folio 2885.)

Mr. Brolin, Skandia Furniture Co., Rockford. (Folios 2892-3.)

Mr. Evi, Traffic Manager of Deere & Co., Moline (Folio 2897.)

Mr. Jilson, of Emerson Manufacturing Co., Rockford (Folios 2916-17.)

Mr. Younge, Acme Harvester Co., Peoria. (Folio 2928.)

Mr. Montgomery, International Harvester Co. (Folio 2956.)

Mr. Bell, of the Crane Co. (Folio 2972.)

Mr. Morrison, formerly agent of the Chicago, Milwaukee & St. Paul at St. Paul. (Folio 3025.)

Mr. Cribben, stove manufacturer at Chicago. (Folio 3092.)

Mr. Barker, Chicago representative of Jones & Laughlin. (Folio 3115.)

Mr. Wait, of Hibbard, Spencer & Bartlett Co., Chicago. (Folio 3157.)

Mr. Wilmore, Sefton Manufacturing Co., Chicago. (Folios 3164-5.)

Mr. Heinrichs, of Becker & Co., trunks, Chicago. (Folio 3177.)

Mr. Sage, of Fairbanks, Morse & Co. (Folio 3198.)

Mr. Field, of the Wrought Iron Range Co., of St. Louis. (Folio 3828.)

Mr. Gesarich, Moon Bros. Carriage Co., St. Louis (Folio 3848.)

Mr. Schoenhard, Charter Oak Stove & Range Co., St. Louis. (Folios 3864-5.)

Mr. Broderick, of Broderick & Bascomb Rope Co. (Folio 3870.)

Mr. Feickert of Lemp Brewing Co., St. Louis. (Folio 3874.)

Mr. Muehlberg, Traffic Manager Anheuser-Busch Co., St. Louis. (Folio 3881.)

Mr. Reicke, stove manufacturer, St. Louis. (Folio 3885.)

Mr. O'Reilly, formerly with the Union Pacific at Portland. (Folio 4340.)

Mr. Burdick, shipper of dried prunes, Portland. (Folio 4384.)

Mr. Adams, General Freight Agent of the North Bank Road. (Folio 4430.)

Mr. Hurlburt, formerly Passenger Agent of the Union Pacific, Portland. (Folio 4528.)

Mr. Harrison, Vancouver & Lewis River Transportation Co. (Folio 4586.)

Mr. Elmore, shipper of canned salmon. (Folio 4601.)

Mr. Crichton, of the Columbia River & Puget Sound Transportation Co. (Folio 4615.)

Mr. McGuire, wholesale paper, Portland. (Folio 4622.)

This testimony could have been multiplied indefinitely In view of the admissions of the defendants and their officials and of the uncontradicted testimony of all these shippers and railroad men, it is difficult to understand why in their answers, the defendants have denied the competition between the Union Pacific system and the Northern Pacific. Upon this question, as well as the competition between the Burlington system and the Union Pacific, we might well be content to rest upon the decision of this Court in the case of *Harriman v. Northern Securities Co.*, where it was directly decided, but so long as the issue was tendered, we felt it our duty to prove this competition beyond controversy.

The excuse now given by the defendants for the purchase of the Northern Pacific stock is additional proof of the reckless manner in which they proposed to and did violate the anti trust statute. It appears from the testimony of the defendant Schiff that Mr. Harriman and himself had conferences with Mr. Hill, who dominated the Northern Pacific and Great Northern purchase of the Chicago, Burlington & Quincy, at which conferences demands were made that the Union Pacific should have an interest in this purchase, and when asked what interest the Union Pacific had in what was done with the Burlington, he said:

> "While it was to some extent a sharp rival, it was always able to get along with it, but the managers of the Union Pacific did not know, with two new interests coming into that territory, what might become of the Burlington and what *havoc might be played with existing competitive conditions which were entirely satisfactory.*" (Fol. 1802.)

And the defendant Kahn testified:

> "Mr. Harriman felt that, with Mr. Hill the controlling factor in the Burlington, the situation would be changed very much, to the detriment of the Union Pacific. *He knew that there was competition between the Union Pacific and the Burlington;* he might have preferred if there had not been any at all, but he knew that could not be, and he preferred to 'bear the ills he had rather than fly to others that he knew not of,' especially when the dispenser of those ills was a man at one time so little friendly to him as Mr. Hill. * * * In March, 1901, if I remember the date rightly, the acquisition by the

> Northern Pacific and Great Northern of the Burlington was definitely announced. Prior to that time there had been repeated approaches made by the Union Pacific interests to obtain from the new owners of the Burlington some kind of recognition in the way of binding arrangements which would protect the Union Pacific against the dangers which it foresaw from hostile control of the Burlington. Those approaches and efforts on the part of the Union Pacific finally came down to a request for a third or a half interest in that purchase, so that the Union Pacific interests could be in a position to watch and see that their own interests were not sacrificed, and this request on the part of the Union Pacific was finally flatly and definitely refused, and they were told that no kind of participation in the purchase could be given to them. Thereupon the Union Pacific interests served notice that they considered that a hostile act, and that they would have to take such measures as seemed to them best to protect their interests." (Folio 7872.)

What better evidence could be offered as to the intent on the part of these defendants to eliminate and control competition in transcontinental traffic, than this? The claim asserted at some places in the testimony that the purchase of the Northern Pacific was an entirely separate and distinct transaction from the Southern Pacific purchase and not pursuant to any general scheme or intent to monopolize business in the transcontinental territory, is negatived by the testimony of the defendant Kahn when testifying in answer to his own counsel. He stated that at the time the hundred million convertible bond issue was made, the first forty millions of which were issued for the specific purpose of purchasing the Southern Pacific stock, the balance being eventually used in payment for the Northern Pacific stock, the very fight that ensued within a few weeks

was in contemplation. After stating that one reason for issuing the hundred million of bonds when only forty million dollars were immediately needed, was that it was a measure of convenience, he proceeded:

> "That was the first reason. The second was that at that time there were reports,—very definite reports—that the Hill interests were going to acquire the Burlington. Mr. Harriman was quite clear in his mind, and so were we all quite clear in our minds that if the Burlington were acquired by interests antagonistic to the Union Pacific, one of two things would happen; the Union Pacific would go and ask for representation for a share in that purchase, so as to leave the existing situation as between the Burlington and the Union Pacific undisturbed. If it got it, well and good. If it did not get it, it would fight—it would protect itself as best it could against what it considered a danger, and for that purpose money was required to face a situation which in Mr. Harriman's mind it was quite clear would lead to one of two things: either he would be given a share in the Burlington, in which case he would need money to pay for his share; or he would not be given a share in the Burlington, in which case he would fight, and for fighting he would not know exactly what way and where the fight would take place, how he would use his money, but he knew he would use his money for attack and defense, and when a man prepares for such a fight, or makes such a fight, what he needs is brains and courage and money." (Folio 7868.)

Thus, according to defendant's own story the Union Pacific prepared itself at the time of the Southern Pacific purchase, with funds with which to fight for the acquisition of a further monopoly, and with those funds it purchased the control of the Northern Pacific Railway Com-

pany. That these transactions were substantially contemporaneous is shown by the fact that the meeting of the board of directors of the Union Pacific Railroad Company, at which the issue of the hundred millions of convertible bonds was authorized, was held on February 20, 1901. (Complainant's Exhibit 17, Fol. 110.) Defendant Kahn testified that towards the end of February, 1901, he was at the Hot Springs, Virginia, and received a letter from his partner, defendant Schiff, telling him that he had exhausted all efforts to bring about a recognition of the claims of the Union Pacific to be allotted a share in the purchase of the Burlington, and that the protection of the Union Pacific could only be brought about, as far as he could see, by purchasing a control of the Northern Pacific, which owned one-half of the Burlington stock. (Kahn, Fol. 7875.) But that is not all. It was no new thought on the part of the Union Pacific to procure control of the Burlington. The latter is a great system of railways. It has its Western terminus at Denver, at which point it connects with the Denver & Rio Grande, and was thus in position to form part of a powerful competitive line with the Union Pacific. It appears by the testimony of Mr. Kahn that in 1900, Mr. Harriman and his associates received information that the people who were then in the active control of the Burlington, mainly New England people, were thinking of retiring from the active management. He then says:

> "Mr. Harriman with our knowledge entered into negotiations with them for the purchase of their holdings, which, if I remember rightly, amounted to something like ten or fifteen per cent of the total of the Burlington stock."

He says these negotiations continued throughout 1900, and that the relations between the Union Pacific and Bur-

lington, so far as they were competitive, were "actively competitive, but they were fairly competitive." (Fols. 7869 & 70.) *No fears of a Northern invasion prompted this action, as the Northern Pacific-Great Northern purchase of the Burlington was not proposed until months later.* It is very significant that there is no pretense that the Union Pacific merely wanted to acquire ten or fifteen per cent of the stock of the Burlington road as an investment, but the defendants wanted to buy the stock of the persons then in control of the property, so that the competition between the two systems might not be increased. On cross-examination Mr. Kahn says that it was proposed to buy the holdings of Mr. Perkins, the then President of the C. B. & Q., and his immediate associates. (Folio 7912.) With all his cleverness Mr. Kahn was unable to explain away this dominating desire for power and control which animated the Union Pacific in these negotiations.

Thus, when fully considered, it will be seen that the excuse given for the Northern Pacific purchase, instead of aiding the defendants in their attempt to deny an intention to violate the law by restraining competition in transcontinental railway traffic, conclusively establishes that such intention and desire existed.

At Folios 5648-9 it is stipulated that the Union Pacific and Oregon Short Line have disposed of all of the stock of the Northern Pacific Railway Co., and the Great Northern Railway Co., formerly owned by them, and that at that time, neither of said companies owned, directly or indirectly, any stock of either said Great Northern Railway Co. or the Northern Pacific Railway Co., and that the Southern Pacific Co. and the Oregon Railroad & Naviga-

tion Co. have never owned any stock in either the Northern Pacific or the Great Northern.

We have demonstrated that these lines are competitors of the Union Pacific, and being such competitors, it is the contention of the Government that it is unlawful for the Union Pacific to own any stock in said lines. We have shown by the testimony that the stock of the Northern Pacific was purchased for the purpose of securing control and with knowledge that such purchase was unlawful. The evidence with reference to the Northern Pacific is, therefore, in the highest degree material as tending to prove the allegation of the formation and extension of a conspiracy to monopolize the transportation business in the transcontinental territory; and because the defendants have disposed of their stock, the proof is none the less important. And the Government is entitled, under the rule laid down in the Trans-Missouri case. to have an injunction against the re-acquisition of stock in such competitive lines although pending the trial the defendants have sold their stock.

THE OWNERSHIP OF HALF OF THE STOCK, AND THE CONTROL OF THE DEFENDANT SAN PEDRO, LOS ANGELES & SALT LAKE ROAD, BY THE DEFENDANT OREGON SHORT LINE, IS ANOTHER RESULT OF THE CONSPIRACY COMPLAINED OF, AND IS UNLAWFUL.

Previous to the construction of what we will term the San Pedro road, transcontinental business to southern California had moved Sunset or by Ogden in connection with Central Pacific and the Southern Pacific lines leading to Los Angeles from Sacramento and San Francisco. As to traffic between Utah points and both Northern and Southern California the Southern Pacific had a monopoly. It is true a line into California might have been made over the Rio Grande to Colorado, thence South to the Santa Fe, and by that route to California, but it would hardly be claimed to be a feasible route. Therefore the Southern Pacific had a substantial monopoly of all that business. To Southern California this was a rather roundabout route from Utah, and as a result there had been a great deal of agitation for a direct line from Salt Lake to Los Angeles. The distance from Salt Lake to Los Angeles is about the same as from Salt Lake to San Francisco. It appears by the time table put in by defendants' counsel in connection with the cross-examination of the witness Moore, (Folios 4269-71), that by the San Pedro route it is 781 miles from Salt Lake City to Los Angeles. The distance from Ogden to Salt Lake City is 37 miles. Therefore the distance from Ogden to Los Angeles over the San Pedro road is 818 miles. It appears by the testimony of Mr. Babcock, (Folio 3961), that the Southern Pacific mileage from Ogden to San Francisco is 786 miles, or 823 miles from Salt Lake.

Thus traffic moving to Los Angeles by the Southern Pacific-Ogden route would have to be moved between 300 and 400 miles farther than by the direct line, Sacramento being 90 miles East of San Francisco, and therefore a few miles less than 700 from Ogden, and the distance from Sacramento to Los Angeles being between 400 and 500 miles. This is not in any sense, however, a prohibitory difference so far as competition is concerned, as it is only about the same difference as that between the Union Pacific and the one made up of the Burlington and Rio Grande from Omaha to Salt Lake, and those lines are active competitors. The Union Pacific system through the ownership of the Oregon Short line reaches Salt Lake; the Denver & Rio Grande with its Eastern connections also reaches Salt Lake. Therefore, an independent line of road from Los Angeles to Salt Lake would be in a position to interchange business freely with the two lines leading to the East, and the Southern Pacific being controlled by the Union Pacific, such independent line would be in a strong position to conduct in connection with the Rio Grande, an active competition on Southern California transcontinental and local business and in connection with the Santa Fe which it crosses, it could maintain a competition between Salt Lake and San Francisco, and divert a great deal of traffic that had previously moved by the Sunset Route of the Southern Pacific, as well as by the Ogden Route in connection with the Union Pacific.

UNION PACIFIC TOOK NO STEPS TO CONSTRUCT LINE TO LOS ANGELES UNTIL INDEPENDENT ROAD WAS ASSURED AND UNTIL AFTER ARRANGEMENT WAS CONCLUDED TO PURCHASE SOUTHERN PACIFIC STOCK.

It appears by the testimony to which we will call attention in detail, that previous to the projecting of the line of the defendant San Pedro, Los Angeles & Salt Lake Railroad Company by Senator Clark and his associates, no move had been made by the Union Pacific to fill this gap, although the Oregon Short Line owned lines of road in southern Utah, including a line from Salt Lake to Milford, which is now a part of the main line of the San Pedro road, 207 miles in length, and had an option upon a line built by Mr. Eccles and his associates from Milford to Uvada, 76 miles more, making a total mileage of 283 miles. Some time after the late defendant Harriman became the dominating factor in the Union Pacific, Mr. Gibbon, then General Counsel and Vice President of the Los Angeles Terminal Railway Co., which eventually became a part of the San Pedro road, of which he was also later on General Counsel and Vice President, went to Seattle to see Mr. Harriman and endeavored to induce him to extend the Union Pacific line to Los Angeles, but there was no result from this conference. (Fols. 5439-40.) Nor, in fact, was any move made by the Union Pacific organization to build to Los Angeles in opposition to the line of Senator Clark and his associates until after the Union Pacific had acquired control of the Southern Pacific or the negotiations had proceeded to an extent that rendered it certain that such control would be secured. It is important, in considering the situation with reference to these roads, to keep the dates in mind. It appears by the testimony of Mr. Love that he was a member of the State Senate of Utah, elected

in the fall of 1900 for the session beginning in January, 1901. Previous to the meeting of the legislature in January, he was called upon by the general counsel of the Union Pacific, Mr. Pierce, who presented to him a bill amending the corporation laws of Utah, and explained that the Union Pacific was going to reorganize or change its organization in some way and desired to have some additional legislation (Folio 4069), and that it involved the payment of $25,000 of fees to the State by the corporation. (Folio 4076.) This bill presented by Mr. Pierce, was passed by the legislature and approved January 18, 1901. Certain other legislation was also passed at the same session at the instance of the Union Pacific, as shown by the testimony of Mr. Lawrence, another state senator, who was present at the interview between Mr. Pierce and Mr. Love. Mr. Lawrence testified that they met Mr. Pierce at his hotel in Salt Lake early in January to go over a measure that he desired to have passed. He explained to them that it was proposed to increase the capital stock, and that there would be a state fee of 25 cents on every thousand dollars worth of stock. This would make a fee of $25,000, as testified to by Mr. Love, on the hundred million increase in capitalization of the Union Pacific in the spring of 1901. Mr. Lawrence testified as follows:

> "Q. Now, Mr. Lawrence, there seems to be a bill here, chapter 2 of the Laws of 1901; another one relating to railroad corporations as chapter 3 (chapter 2 was approved on the 18th of January and chapter 3 on the 4th of February); and a third law, chapter 26, which relates to railroad corporations, and was approved on the 7th of March, which, among other things, repeals the law approved on the 18th of January, and the law approved on the

4th of February. Will you state the history of that legislation as you recall it?

A. I will say that the railroad law of this state, from 1897 practically, has undergone a very rapid evolution, as shown by the work of that session. The first two measures that were passed in the early part of the session were repealed by the third, under the pretence of codifying the railroad law of the state; but in comparing the bill with the existing law at that time we found some changes and some new legislation in it. But these two earlier measures were passed at the urgent request of the representatives of the Oregon Short Line and the Union Pacific Railroad companies.

Q. What about the third one?

A. It is the same way." (Folios 4162-3.)

It thus appears that early in the year 1901, for the purpose of acquiring stocks, it was desired to have the powers of the Union Pacific and the Oregon Short Line or any other railroad organized under the laws of Utah, amplified. The capital of the Union Pacific was increased $100,000,000, so as to make possible the issuance of $100,000,000 of convertible bonds. Mr. Harriman testified (Folio 1290):

"Q. What is the basis upon which you capitalized the Union Pacific Railroad Company?

A. I didn't capitalize the Union Pacific Railroad Company.

Q. You added $100,000,000 of convertible bonds, did you not?

A. Yes, for a specific purpose.

Q. What was that purpose?

A. To purchase the Southern Pacific and Northern Pacific."

He further stated that when they decided to issue these convertible bonds, they had in mind simply the purpose

of acquiring Southern Pacific stock, and afterwards acquiring Northern Pacific stock. (Folios 1263-4.)

There is no suggestion anywhere in the testimony that any part of this hundred million dollars was to be used to build to Los Angeles. This latter was an undertaking of such magnitude that the financing of the same would necessarily have received careful attention if any such line had been in contemplation. As we have said, the distance from Salt Lake to Los Angeles is 781 miles, and from Milford, (207 miles South of Salt Lake), which was the furthest point to which the Union Pacific rails then extended, it was 574 miles. And after purchasing the line built by Mr. Eccles and his associates from Milford to Uvada, 76 miles more, there still remained to be constructed 498 miles to Los Angeles. It appears by the testimony that even the old grade built twelve years before, which we will hereafter discuss, only extended an additional forty miles. Therefore it was necessary to entirely construct a very long mileage, much of it very expensive, through mountain canyons, and still, so far as appears from any records or from the testimony of any witness either on the part of the plaintiff or the defendant, no move had been made by these wise financiers in control of the Union Pacific to raise the vast sum of money necessarily demanded. This would seem conclusive evidence that no such construction was then in contemplation.

Until the Union Pacific secured control of the Southern Pacific, it was naturally for its interest to have the independent line built. Its construction involved no outlay on the part of the Union Pacific. Every pound of freight that could be diverted from the Sunset Route through the Salt Lake gateway would be the subject of competition between the Union Pacific and the Rio Grande, and the Union Pa-

cific would have at least an equal opportunity to get it, but after the control of the Southern Pacific was secured so that the Union Pacific organization controlled not only the Sunset Route but the Ogden Route, it appeared essential to the continuance of its partial monopoly on the transcontinental business and its absolute monopoly of the traffic between Utah common points and California that any new line constructed into that territory should be controlled by it. By exercising control over the Southern Pacific, it became a preferential route and could largely monopolize the traffic by discriminating against the Rio Grande. If a new line should be built to Salt Lake, there connecting with the Rio Grande as well as the Union Pacific, its ability to monopolize the transcontinental business would largely be gone, because the natural action to be taken by such new and independent line would be to ally itself, perhaps, more strongly with the Rio Grande than with the Union Pacific. These facts should be borne in mind in considering what was done in connection with defeating the construction of the independent line proposed to be built by Senator Clark; and these considerations absolutely tally with the attitude that had been assumed by the Union Pacific and its lack of action in connection with the line to Los Angeles until after the control of the Southern Pacific had been secured.

THE SAN PEDRO WAS PLANNED AS AN INDEPENDENT ROAD. THE UNION PACIFIC COMMENCED THE CONSTRUCTION OF A PARALLEL LINE ONLY AFTER THE BUILDING OF THE INDEPENDENT LINE WAS ASSURED.

Mr. Eccles testified that about 1890 a line of road had been projected down into Nevada from Milford across the desert to the head of the canyon that runs down to the Meadow Valley Wash; that the grade was completed to the head of the canyon, most of the grading done down the canyon, and the tunnels all built and timbered nearly to the Meadow Valley Wash. Mr. Eccles further said that in 1898 he and his associates built what was called the Utah & Pacific, being a line from Milford to Uvada near the state line. He then testified:

> "Q. What was done with that work which had been graded up there and the tunnels, and all that, between the time of their construction and the time you built the Utah & Pacific?
>
> A. It was abandoned, and the understanding was that they were not going to do any more with it."

That is, from 1890 to 1898, nothing has been done with this projected line of road. (Folios 4015-16.) He further testified, at Folio 4019, that in building the Utah & Pacific line, he utilized that old grade and right of way. He purchased steel from the Oregon Short Line, and made certain other arrangements with it, and the Oregon Short Line having at a foreclosure sale acquired whatever rights the old corporation had, that had graded this abandoned line and dug the tunnels, he gave the Oregon Short Line an option, running for five years, to purchase the line of the Utah & Pacific. This contract appears in the record at Folios 4022 to 4034 inclusive. It was not even pretended,

as will be seen by Article 5 of this contract (Folio 4026), that the Short Line had a title to this old grade, but it was apparently claimed that they had some rights to it, for the language used is not that of a grant, but simply that it, the Short Line, would waive, in favor of the Utah & Pacific, any rights which it might have to that railway grade from Milford southwesterly for a distance of not less than 75 nor more than 85 miles. It was apparently considered by the Short Line as of slight importance. Mr. Eccles further testified (Folio 4017) that he remembered when it first became public that Senator Clark and his associates proposed to build the San Pedro road, or a line of road from Salt Lake to Los Angeles, and that up to that time the Short Line had not exercised its option or taken over this property, but that a man he afterwards learned represented the Clark interests was negotiating with him to purchase it, and a month or two later the Short Line exercised its option. (Folios 4017-18.) He further testified that the Short Line exercised its option early in the year 1901. Mr. Kelly fixed the exact date as April 9, 1901. (Folio 7980.) It appears by the testimony of Mr. Whittemore, who was counsel of the San Pedro road, that a hearing was had in the land office at Carson, Nevada, on the 11th of March, 1901, between the Utah & California Company, which was the corporation under which the San Pedro Co. was then conducting its operations on the one hand, and the Short Line on the other, and as late as that time testimony was offered that it was the purpose of the Oregon Short Line to complete its road *down into Nevada on the line of the old grade which ran down to the head of the Meadow Valley Wash, and from thence a branch up to Pioche.* (Folios 5400-1.) This old right of way was the subject of litigation in the land office and in the courts, as

shown by Complainant's Exhibit 170, Folios 5176 et seq.; Complainant's Exhibit 171, Folios 5206 et seq.; Complainant's Exhibit 172, Folios 5239 et seq.; and Complainant's Exhibit 173, Folios 5298 et seq.

Shortly after, when it was apparent that the Clark road was going on to California irrespective of the ownership of this old grade, the Short Line put its men at work surveying in the Meadow Valley Wash towards California.

In the litigation a restraining order was issued on the 27th of April, 1901, in favor of the Utah, Nevada & California Railroad Co., which was controlled by the Oregon Short Line, restraining the San Pedro Co. and its associates from interfering with this old grade and its tunnels from Uvada about 40 miles southwesterly to a point called Clover Valley Junction, and thence by a branch to Pioche. (See Complainant's Exhibit 175-A, Folio 5333.) Later on, when the Oregon Short Line or its sub-company attempted to interfere with the work of the San Pedro at Clover Valley Junction and through the Meadow Valley Wash, to a point near the Nevada and California state line, it was likewise enjoined. (Exhibit 175-C, Folio 5339.) A suit was also brought in the state court of Nevada by the sub-company of the Short Line in May, 1901, to set aside a tax title covering this grade and these tunnels claimed to be owned by the San Pedro. (Complainant's Exhibit 176, Folios 5348 et seq.) An answer was filed in that suit, which appears as part of the same exhibit. (Folios 5379 et seq.) That cause was pending until after the settlement between the Short Line and the San Pedro roads in June, 1903, when the answer was withdrawn and judgment went in favor of the plaintiff, setting aside the tax title. (Folios 5392 et seq.)

Mr. Gibbon, who was the originator of the San Pedro road and its Vice-President and General Counsel for a long time, was asked when he first became associated with Senator Clark in the enterprise, and testified that he thought his first meeting with him was as early as 1899. Mr. Gibbon then said:

> "At that time I was vice president and general attorney of the Los Angeles Terminal Railway Company, which owned some railroad property in southern California and a line extending from Los Angeles to San Pedro Harbor and quite large holdings on the harbor at that place, in real estate. My stockholders, who were St. Louis people principally, had asked me long before that to do anything I could toward promoting a line of railroad to Salt Lake City which would connect with and use their terminals in Los Angeles and on the harbor and their lines in southern California. I had seen numbers of people in fact during a period of several years in the effort to promote the building of this line from Los Angeles to Salt Lake, to take over and use the terminal properties of these St. Louis people. These properties were held by a California corporation known as the Los Angeles Terminal Railway Company, which I had organized for them in 1891. In pursuing this effort to organize a corporation for that purpose and interest capital, I first brought the matter to the attention of Mr. Ross Clark, who resided in Los Angeles, and whose office adjoined mine in the building we had offices in. Knowing that he was looking for investments and that his brother was also a very wealthy man and looking for investments in Southern California, and had investments here, through Mr. Ross Clark the matter was brought to the attention of his brother, and through him, later on, I met Senator Clark, and we took up the matter of his becoming interested in a company which would build a line of railroad from Los Angeles to Salt Lake City,

> Utah, and would take over the properties owned by the St. Louis people or by the Los Angeles Terminal Railway Company, which the St. Louis people were the stockholders of." (Folio 5434.)

He further testified that by the autumn of 1900 the matter had taken such shape that Senator Clark had determined to take the leading part in organizing a proposed corporation to build the line of road. It was to first take over the properties of the Los Angeles Terminal Railway in California, the principal properties of which were terminals in the City of Los Angeles and on San Pedro Harbor, and to build a line of railroad from Los Angeles to Salt Lake City. The other gentlemen associated in this enterprise with Senator Clark and himself were Mr. Ross Clark, Mr. Kerens of St. Louis and his associates, who were interested in the Los Angeles Terminal Railway, and later, Senator Kearns of Salt Lake City and his partner, Mr Keith. (Folios 5435-6.) He also testified that he was authorized by his associates to apply to the City Council of Salt Lake to secure a concession for terminal purposes of what was known as Pioneer Square in that city, the same being a public common. He testified:

> "Q. Did you make any representations on behalf of your associates or yourself to the city council in connection with that application, as to the intention of your associates and yourself to construct an independent line of road?
>
> A. I did; I represented to the city council of the city of Salt Lake, and also to other parties there with whom I was brought in contact, prominent citizens, etc., that it was the intention of the people whom I represented, principally the gentlemen I have named, to organize a corporation for the purpose of constructing an independent line of rail-

road from the city of Salt Lake to the city of Los Angeles or between those two cities.

Q. By an independent line you mean one not affiliated with any other?

A. While it might be affiliated with others in traffic matters, yet not in any sense under the control of any existing line.

Q. And that was the intention of the promoters?

A. That was the intention of the promoters, as I understood it.

Q. The Southern Pacific Company was here at that time and had been for many years?

A. Oh, yes, certainly.

Q. And had a line of road leading up to Ogden?

A. Yes.

Q. Was it the intention of these gentlemen whom you have mentioned to build a line which should be a competing line with the Southern Pacific?

A. It was, as expressed by them and myself." (Folios 5436-7.)

A petition to the Mayor and City Council for the grant of that Square was presented on September 25, 1900. A copy of this petition will be found at Folios 4055 et seq., as Complainant's Exhibit 154. The defendant Clark, under date of October 2, 1900, presented to the Mayor and City Council of Salt Lake a petition urging the granting of the former petition, which was signed on behalf of the promoters of the line by Mr. Gibbon. (Folio 4058.) On October 23, 1900, a committee of the Council, to whom had been referred the said petition, reported that two public meetings had been held for its consideration, and they submitted a form of ordinance vacating the said tract as a park, which ordinance was adopted and approved by the Mayor on November 17, 1900. (Folios 4059-60.) Some question being raised about the authority of the City Council to grant the use of this tract at the instance of the pro-

moters represented by Mr. Gibbon, the Legislature of Utah passed Chapter 49 of the Laws of 1901, authorizing them to grant the use of such property, the same being qualified, however, by an amendment or proviso requiring the question to be submitted to a vote of the people. This act was approved March 14, 1901. See testimony of Love, and copy of the act, Folios 4062 to 4064. In securing the passage of this legislation it was again represented to the legislature that the road would be an independent road. (Love's testimony, Fol. 4065.)

After testifying to certain surveying done by the old Union Pacific Railroad Company, in 1890 or 1891, and to the securing of certain rights under an organization of which the old Union Pacific Co. was the beneficiary, Mr Gibbon testified:

> "About that time they were building—certainly were surveying down through Nevada, and about that time they built the line, I think south of Milford, and did some grading and tunnel work in the state of Nevada, which was intended to be used by that line that was projected to Los Angeles.
>
> Q. That was 1889 or 1890, according to the testimony, when the tunnel work was done in Nevada. After they did that work in Nevada, did the Union Pacific interests, so far as you know, make any move toward building a line to Los Angeles from Salt Lake until after your project was publicly announced?
>
> A. None that I know of, and I think I would be entirely safe in saying none. The Adams control of the Union Pacific went out at that time, and *we heard nothing about any further proposition to extend the line to Los Angeles until after we organized the San Pedro, Los Angeles & Salt Lake Railroad Company in 1901.*

Q. You mean the San Pedro, Los Angeles & Salt Lake Railroad men got their scheme under way?
* * *

A. I don't know that we heard anything about it until after the corporate organization was perfected. I don't now recall that we did. Possibly they had shown some disposition before that time, but it was about that time I will say. Certainly there was nothing heard about it until after the announcement was made that the present Los Angeles road would be organized." (Folios 5438-9.)

Mr. J. Ross Clark, who is the Vice-President of the San Pedro Co., said that his brother and himself bought a half interest in the Los Angeles Terminal Co. in July, 1900. (Folio 1034.)

After testifying to certain work that was done toward the construction of the line in the early part of 1901, he was asked whether at the time he started the surveys and did that work it was the intention of himself and his associates to build an independent line from Los Angeles and San Pedro through to Salt Lake City, and he said it was their intention to build a line of their own to be controlled by themselves. (Folios 1038-9.)

Mr. Kerr, now in railroad service, but for a long time the railroad editor of the Salt Lake Tribune, testified that he wrote an interview with Mr. Gibbon, published in the Salt Lake Tribune of September 17, 1900, which was a truthful statement of Mr. Gibbon's declarations to him. (Complainant's Exhibit 155, Folios 4137 et seq.) He said at Folio 4138 that Mr. Gibbon stated thus publicly that the line would be an independent line, and among other things said:

> "No other corporation has a dollar or will have a dollar in it and a new line will be built right through to Salt Lake. The money with which to build the line is all subscribed and the important things now to be accomplished are the organization of the company and the securing of franchises."

Mr. Kerr also testified that an interview with Mr. R. C. Kerens, which appears in the record, Complainant's Exhibit 156, Folios 4142 et seq., correctly stated what Mr. Kerens said to him for publication. This was published in the Salt Lake Tribune September 19, 1900. In this interview appears the following:

> "It will be an absolutely independent line, Mr. Kerens reiterates, and has no connection with any other corporation beyond the expected traffic arrangements which may be made in the future, or trackage rights in California which may be economical or necessary. The line itself, however, is to be operated and owned as an independent Salt Lake-Los Angeles line, and those two cities will be greatly benefited by its construction, as Southern California is the Mecca for tourists, and San Pedro is the coming port on the Pacific."

He also testified that Complainant's Exhibit 158, Folios 4148 et seq., was a truthful report of the statements made and a speech delivered by the defendant W. A. Clark, published in the Salt Lake Tribune, October 3, 1900. At Folios 4149-52 it will be seen that defendant Clark said that the railroad would be built within two years, and "it will be an independent line in every way, and will be built by the most direct route." In the course of his remarks Senator Clark made the following pregnant statement:

"Less than 800 miles away as the bird flies, yet more than 1,500 by any rapid means of communication, lies another city, neat as a new pin and beautiful as a flower, Los Angeles, the metropolis of southern California. In many respects these two cities are similar, but have resources of a different character. Although so near they are comparatively strangers to each other. They are separated by a narrow strip of arid waste whose desolation and silence the *strong arm of monopoly* has not hitherto permitted to be broken by the whistle of the iron horse. This should no longer be. The time has come when these two people, looking over the intervening desert, should stretch out their arms in friendly greeting, one to the other, and say, we will join you and break down the barrier that has so long separated us and hereafter form forces in the march of progress and destiny. When this takes place the Los Angeles and Salt Lake Railway will be an assured fact."

In view of subsequent events, this bold defiance of monopoly by the defendant Clark, seems highly amusing. In the same speech, Senator Clark, at Folios 4154-5, calls attention to the splendid harbor of San Pedro, upon which the Government is spending millions of dollars, and that that result was obtained after a struggle for many years between San Pedro and Santa Monica, mainly through the influence of his friend and colleague, Mr. Gibbon; and he pointed out the possibility of commerce with foreign ports which might assume proportions of great magnitude. This is also an interesting statement in view of the fact, as will be seen by further testimony, that the San Pedro Company has not been permitted to enter into any arrangements with steamship lines in competition with the Pacific Mail and its allies, although the opportunity was offered to do so.

Senator Kearns of Salt Lake, still a director of the San Pedro road, testified (Folio 4229):

> "Q. When that road was projected by Senator Clark and his associates, and when this corporation was organized, was it the intention of you gentlemen who were associated together to build it as an independent line of road?
>
> A. That was my understanding, yes, sir."

After testifying that he had procured for the use of his company some old surveys from Salt Lake in a southwesterly direction towards Los Angeles, and that engineers were immediately put to work, among whom he mentions Mr. McCartney (Folios 4229-30), he testified at Folio 4231:

> "Q. At the time you procured this survey, Senator Kearns, had you any knowledge that the Oregon Short Line were contemplating building a line down there? Had they done anything publicly to indicate it?
>
> A. At that time my attention was not called to it and I didn't know anything to that effect, no.
>
> Q. You didn't know of anything of the kind, if they had any such intention?
>
> A. No, sir."

There can be no doubt that this testimony shows clearly that the San Pedro road was projected as an independent line in which no other railroad corporation should be interested, and that it was proposed by Senator Clark and his associates to break up the monopoly that had so long existed in connection with traffic between Salt Lake and Los Angeles.

TESTIMONY AS TO CONSTRUCTION WORK BY SAN PEDRO AND EFFORTS OF OREGON SHORT LINE TO PREVENT THE SAME, INCLUDING PARALLELING OF LINE.

Mr. McCartney, a civil engineer, testified that he had had to do with the survey of what is now the San Pedro road, under three different companies, the first survey being in 1889 and 1890, from Milford, Utah, to the Nevada-California state line. This work was done for the Oregon Short Line and Utah Northern Railway Company. Construction was started about January 1, 1890, and continued until October 14, 1890. During that time the greater portion of 115 miles from Milford, Utah, to Caliente, Nevada, was graded, and 73¼ miles of track was laid. In addition to the grading from Milford to Caliente a 30-mile branch from Caliente to Pioche, Nevada, was partially graded, but no track was laid. October 14, 1890, work was stopped and the 73¼ miles of track was subsequently pulled up. (Folios 4957-8.) Mr. McCartney testified that he next saw the grade in 1896, when he went over the whole of the 115 miles to Caliente and the greater portion of the branch. He was then in the employ as chief engineer of a corporation called the Utah & California Railroad Co., organized to build a road from Utah to California. Of this road, Mr. George Q. Cannon, of Salt Lake, was the President, and various other citizens of that city were officers and directors. The first thing he did after being appointed chief engineer of that company was to go to Omaha and interview the receivers of the Union Pacific, and request their notes and maps, and he also desired to find out whether the receivers were friendly to the enterprise inaugurated by these gentlemen in Salt Lake. They expressed themselves as favorable, and the chief engineer of the Union Pa-

cific was instructed to furnish Mr. McCartney with copies of all maps, profiles and notes. These papers were paid for by the Utah & California Railway. A survey party was organized, and the survey was made over this old grade, but in August, 1896, the enterprise was abandoned. (Folios 4958-60.) On March 26, 1901, under the employ af Mr. J. Ross Clark and Mr. Whittemore, an attorney of the San Pedro road, he started to survey from the point where the old grade crossed the Utah-Nevada line, about 75 miles from Milford. Previous to that he had done some work in connection with the old surveys and papers, his work beginning about January 1st. The survey reached Caliente April 2nd, and then turned by the old grade toward Pioche, reaching the head of Condor Canyon in the open country on April 7th. On April 8th he started a survey down the Meadow Valley from Caliente, there being no grading at that time south of Caliente. The survey was continued until July 10th, when it reached the Nevada-California state line. Construction work was started along the old survey. The Oregon Short Line contested the right of the San Pedro road, and secured a decision in its favor in the court at Carson City, Nevada. *Mr. McCartney was then ordered to make a survey through some other pass, so as to get over the rim of the Salt Lake basin without touching any of the old grade, and a line was located through a pass called Miller's Springs, but little grading was done on that line, and all of it in the vicinity of Caliente. This new line was termed by Mr. McCartney a side hill line as against a drainage line.* After the location of the line from Caliente southward down the Meadow Valley, construction work was commenced at Caliente on May 6, 1901. On May 14th, another camp was put in fourteen miles south of Caliente, and May 23rd a contract for sixty

miles southward from Caliente was let to Deal & Mendenhall, contractors, and their forces were scattered at various places over this 60 miles. This work was stopped November 9, 1901. It consisted of grading, no trestles having been built, and no track laid. November 5th to 7th there was a conference at Salt Lake between the representatives of the Oregon Short Line and the San Pedro road, at which it was agreed that a joint survey might be made through the Meadow Valley Canyon, so that each company should peaceably build its own line, the agreement being that the lines should be located not less than twenty feet apart. This joint survey was completed in the spring of 1902, and later in that year Mr. McCartney received orders to disregard both the lines and put in a final location on the best line the country afforded. That was done, and a grading contract was let, the line was graded and the track laid. (Folios 4962-5.) These two surveys were made not only through the canyon, but clear across the desert to the vicinity of the California line. (Folios 4965-6.) Mr. McCartney testified that his recollection was that the San Pedro Company up to the time work was stopped in November, 1901, had spent in the neighborhood of $100,000 on grading work under the Deal & Mendenhall contract. (Folio 4967.) *During the time that the surveying work was going on in Nevada, a line was also being surveyed out of Salt Lake City, to come down and connect at Modena, Utah, with the line designated as the side hill line.* (Folio 4968.) ***At the time Mr. McCartney started surveying on March 26th, the Short Line had no surveyors at work, and he did not see any until May, when he saw them in the Meadow Valley below Caliente.*** The road from Milford to Uvada, built by Mr. Eccles and his associates, was still run by these gentlemen independently. The Short Line did not take it

over until April 9, 1901, as we have shown. In surveying the line from Caliente southwesterly, Mr. McCartney paid no attention to the old survey of 1890. (Folio 4984.)

Mr. Whittemore also testified that a line of location was made from Salt Lake southwesterly for a considerable distance, and *also said that the line surveyed down to Caliente, while a more expensive construction than the old grade of the Oregon Short Line, avoided all tunnels; that it was a feasible route; in fact, a better route than the other.* (Folio 5345.) On cross-examination, Mr. Whittemore testified that he was employed by the promoters of the Salt Lake road somewhere along in September, 1900; that he procured the rights of the Utah & California Co., which had filed maps and profiles under the act of March, 1875, in the land office at Carson City. (Folio 5399.) He also detailed the litigation between the Utah & California, which was controlled by the San Pedro promoters, and the Utah, Nevada & California Co., controlled by the Short Line from March 11, 1901, on for several months. (Folios 5401 et seq.) On April 5, 1901, he was advised by wire that a decision of the local land office had been rendered in favor of the San Pedro as to the old grade, and he thereupon went down to Uvada at once, expecting the Short Line people would be on hand. He took possession of the grade with men and teams. The Short Line moved down on them with ties and material, and for some time the San Pedro people were resisting the construction in various ways, claiming to be in possession under the Utah & California, and the Short Line claiming the possession and occupying it by laying tracks. (Folios 5415-17.) A large amount of right of way had been secured over land owned by private individuals, by the San Pedro road southwesterly from Caliente, as shown

by the affidavit of Mr. Bracken, (Complainant's Exhibit 174, Folios 5321 et seq.), which by stipulation was received as proof of the facts therein stated. Mr. Whittemore testified to the acquisition of these rights of way through the Meadow Valley Wash southwest from Caliente, and that they had started the construction of a grade from Caliente running southwesterly for some distance, and placed a barricade at the dividing line between this new grade and the old grade leading down to Caliente from Uvada, which had been in dispute between the Short Line and the San Pedro roads. The Short Line in the meantime was laying rail on this old grade, and when they reached this barricade, they ran their track-laying machine through it, and started to lay track on the grade that had been constructed by the San Pedro. Thereupon affidavits were submitted to the United States Circuit Court in Nevada in the same suit in which the San Pedro had been enjoined from interfering with the Short Line's possession of the old grade, and an injunction was granted to the San Pedro restraining the Short Line or its sub-company from interfering with it in the location or construction of its railroad from the point where this new grade commenced through the Meadow Valley Wash to the Nevada-California line. (Folios 5330-31.)

This injunction was obtained on the 9th of August, 1901, and at that time surveying crews of the San Pedro were at work in the field. After obtaining this injunction, the work of constructing grades and completing the location of the line of railroad into California was proceeded with by the San Pedro Co., and the work of the Utah, Nevada & California below Caliente was suspended. (Whittemore, Folio 5343.) At this time the San Pedro had invested a large sum of money in the enterprise, as appears by the

testimony of J. Ross Clark. Mr. Clark was examined (Folios 5424 et seq.) with reference to the facts stated in an affidavit that he had made in June, 1901, to be used in the suit in the federal court at Carson City, and, as will be seen, he reaffirmed all the facts stated in said affidavit. From this testimony it appears that there had been paid in to the corporation at that time $2,501,600; that the authorized capital stock was twenty-five millions, which was finally issued; that the corporation had acquired terminal railroads at San Pedro and Los Angeles, and also secured lands for terminal facilities in the City of Los Angeles aggregating about 100 acres in extent. Mr. Clark testified that they had paid about $100,000 for those terminals. (Folios 5424-5.) He also testified that the Los Angeles Terminal Railway property at San Pedro included about 1,200 acres of land, 100 acres of it on the shores of San Pedro Bay, with three miles of water front, giving the corporation much the largest harbor water front on the harbor of San Pedro. (Folio 5426.) They had also expended then more than $500,000 in cash in buying rails, cars, steam shovel, right of way in Los Angeles and between Los Angeles and Riverside, and had contracted for about 8,000 tons of steel rails, some of which had been delivered. (Folios 5426-7.) That the company had adopted plans and specifications for laying a main track line between Salt Lake City and the Bay of San Pedro, of rails to weigh not less than 75 pounds per yard, upon a thoroughly well ballasted track, so that its line when completed, would make and constitute a high-speed through line between Salt Lake and the Bay of San Pedro, and that the plans and specifications so adopted would result in the corporation, when its line was completed, operating the best

constructed line of railroad west of the Rocky Mountains. Mr. Clark testified with reference to such plans:

> "Q. Did those plans and specifications which you mention in your affidavit contemplate a through line to be constructed by you to Salt Lake City?
> A. I think so."

He further said that the corporation had surveyed 110 miles of its proposed main line extending from the city of Los Angeles toward the city of Salt Lake, had definitely located 90 miles of the same, had secured nearly all the right of way for 30 miles thereof, extending from the city of Los Angeles eastward toward Salt Lake, and was then engaged in securing said right of way with all convenient dispatch, and would continue the work of securing the same. The 90 miles reached about to the summit of Cajon Pass. (Folios 5427-28.) He further stated in said affidavit, and testified that the corporation had purchased 50 ballast cars, one steam shovel, an unloader, and in addition several hundred freight cars, and had actually begun the work of construction upon the new portion of its main line extending between the city of Los Angeles and the city of Salt Lake, and proposed to continue the construction of the same as fast as the said line was located and the right of way therefor secured, and that it had also ordered 300,000 ties, a large number of which had been delivered, and was engaged in placing almost daily orders for material and equipment for its proposed line of road; that the surveyors of the corporation since the same was organized and up to the 21st of June, 1901, the date of the affidavit, had surveyed about 140 miles of the line west from Salt Lake City, and extending through a portion of Lincoln County, Nevada, and that the said corporation had in the

field actively engaged in carrying out the work of surveying and locating its proposed line, four complete surveying parties. (Folio 5429.) Then follows this very significant statement, which Mr. Clark said was true:

> "That the stockholders of said corporation are men of large means, and affiant says that he verily believes that they have all entered upon the organization of the prosecution of the purposes for which said corporation was organized in good faith and with an honest intention of completing the acquisition and construction of the said main line of railroad and the branch lines thereof which the said articles of incorporation authorize the said corporation to acquire, construct and operate."

He further said that as second vice president of the corporation he had been put in immediate charge and supervision of the work of acquiring, constructing, and equipping the lines of railway which the said corporation was organized to acquire, construct and equip, and therefore had intimate and thorough knowledge of the matters and things contained in the affidavit. (Folio 5430.) From this testimony it appears that the San Pedro road was, even in June, 1901, very far from a paper corporation, but that it was being actively constructed, large sums of money had already been expended and wealthy men were behind the enterprise with the intention of constructing this proposed independent competing line.

Mr. Moore, a civil engineer of Salt Lake, testified that he was employed as locating engineer of the San Pedro; that he was engaged early in 1901; that he began work at Uvada, and worked south through the canyons and the Meadow Valley Wash toward the California state line,

and then returned to Salt Lake, and conducted a series of surveys from that city to Modena and the state line; that those surveys connected with the survey made from Uvada down, practically at Modena, which is 276 miles from Salt Lake. A portion of that distance, there was only one line surveyed, and further on two or three experimental lines. The survey from Modena to Salt Lake was finished the latter part of 1901; that there were several parties of engineers at work surveying toward California, or coming from California, all under the personal charge of Mr. Moore. This work was under way when he came to the road in 1901, and those surveying parties reached a point of connection with the surveys made under his direction, so that there was a complete line finished through in 1902. (Folios 4253-54.) Mr. Moore further testified that shortly after he went to work below Uvada, the Short Line construction and track-laying parties appeared there, and the Clark interests had grading outfits below Uvada arriving there about the same time that he did with his surveyors. He was asked what was done by the respective gangs of the two companies, and testified:

> "A. So far as I observed, the Oregon Short Line were pushing their track forward and we were doing what we could to prevent their coming on, and were gradually falling back until the track reached Caliente."

The San Pedro Co.'s graders were working further down on new work. He further states that barricades were put in the tunnels and wire fences were erected by his people and taken down by the Short Line people, and there was some gun play, although no one was hurt, and there were sheriffs of two states at Uvada, and county attorneys, and

that this kind of trouble lasted for a couple of months. (Folios 4256-7.) The surveying work was mostly ahead of this trouble, projecting new lines down the Meadow Valley Wash. It will be remembered that the old grade, which was claimed by both parties, ended at the head of the Meadow Valley Wash at Caliente. Finally a truce was arrived at, and a joint survey was made Mr. Moore testified:

> *"We received instructions to go on jointly and locate a line under certain conditions which were fixed in an order from Carson City. The old surveys crossed and re-crossed a good many times, but the survey which was conducted jointly was at no point nearer than twenty feet from center to center of the track, and did not cross in any case."*

Mr. Moore further testified that those two lines so run *were feasible routes through the canyon, although expensive, but they could have been constructed.* (Folio 4258.) The single line finally adopted after the amalgamation followed the original survey in a general way.

On cross-examination, Mr. Moore testified that the line from Salt Lake to Caliente surveyed by the San Pedro people, which did not infringe upon the right of way claimed by the Short Line out of Caliente, was twelve miles shorter than the Short Line, and while there was a greater rise and fall in grade, there were no tunnels, and the maximum grade was one per cent. (Folio 4264.)

Senator Kearns testified that on one occasion previous to the amalgamation he went down to Caliente, and at that time both the Short Line people and the San Pedro people had gangs of men down there at work building a railroad; that there was considerable grading; he didn't know just

how much, but it was visible below Caliente in the Meadow Valley Wash. (Folios 4232-3.)

Mr. Gibbon, in his testimony before the Interstate Commerce Commission, which by stipulation is made part of this record, testified quite fully with reference to the warfare between the San Pedro and the Oregon Short Line companies at Folios 1155 et seq. (There is a misprint in this testimony at Folio 1159 in two places, where he spoke of the Nevada-Utah state line. It appears in the record as the Nevada-*California* state line.) After detailing the construction of the old grade back in 1890 or 1891 by the then Union Pacific interests, he testified that after the San Pedro was organized, it became a race as to who should be possessed of that grade and the tunnels and also the right of way which had previously been surveyed by the subsidiary company of the Union Pacific ten or eleven years before. The right of way had been sold for taxes; the San Pedro secured the tax title. The Short Line secured what rights there were, if any, in the old company that had originally surveyed through the Meadow Valley Wash; the San Pedro secured a right of way from private parties, each side secured everything in the nature of legal rights that they could; both went in with construction forces, and they came very near having bloodshed. There were some clashes that might have been very serious. Finally each side secured certain injunctions. After they were obtained Judge Kelly, then counsel of the Union Pacific, and Mr. Gibbon had a conversation in court, in which they agreed that whichever party won under the United States law with reference to the occupancy of canyons, the other side could force its way through, but it would result in the first line being crossed a number of times. Therefore they agreed

on a written stipulation providing for the joint survey to locate two lines. And those surveying parties went to work; but pending the final conclusion of that work and the vesting of the title in each of the contesting companies' interests, the arrangement was made which resulted in the joining of the two interests and the building of the one line of road. (Folios 1161-4.) At the time this stipulation for the two surveys was made it was still the intention of the San Pedro people to build a line through to Los Angeles from Salt Lake, and at that time, his associates were led to believe that the Oregon Short Line interests also intended to build a through line, and the result would have been, if there had not been an amalgamation, that two lines of road would have been built through. (Folio 1164.)

UNION PACIFIC SECURES HALF INTEREST IN THE SAN PEDRO WITH TRAFFIC AND OTHER AGREEMENTS RENDERING IT PRACTICALLY A SUBSIDIARY.

Mr. Gibbon testified that at the time the scheme of building the San Pedro road was inaugurated, they expected to depend chiefly on through business, and to handle business both in connection with the Rio Grande Western and the Union Pacific, but the expectation of doing business closely with the Union Pacific was destroyed, for the reason that it appeared to them that any interests that were interested in the Southern Pacific would have to build a line for the protection of the business that had been going, before that time, through the Sacramento gateway for southern California. (Folio 1166.)

Mr. Gibbon further testified:

> "Q. At the time you initiated the road, you expected to have the two connections; that is, you hoped to have them?
>
> A. Yes, sir.
>
> Q. You did not learn that you would be compelled to make your connections solely with the Rio Grande, or work solely with the Rio Grande, until the Oregon Short Line had waked up and commenced to try to get possession of this old grade, did you?
>
> A. Well, we probably did not have the matter brought to our attention, that what we had hoped would be a connection would probably be a rival." (Folio 1167.)

This testimony bears out the suggestion above made, that the construction of this line was something not contemplated by the Union Pacific until the conspiracy was inaugurated which had its first step in the acquisition of the

Southern Pacific, and the Union Pacific having become interested in the Southern Pacific, projected this line to protect the Southern Pacific and the traffic that had been going over that line by the Sacramento gateway. The result was the usual one, namely, a consolidation and combination; the late defendant Harriman, the Union Pacific Railroad Co. and their associates, made it clear that the second line would be built, and the San Pedro road possibly rendered unprofitable. Mr. Gibbon, when asked who initiated the negotiations leading up to the contract of July 9th, 1902, attached to the petition herein as Exhibit A, said that it was a mutual thing—the outgrowth of the negotiations with reference to running the two lines through the canyon. Senator Kearns, still a director of the San Pedro, said that he was present on one occasion with Mr. Kelly, then representing the Union Pacific, Mr. Gibbon, and Mr. Bancroft in New York, but he had most of his conferences with Mr. Clark, who acted in the negotiations through Mr. Gibbon as solicitor. The negotiations lasted during a period of several months. When the negotiations were opened, Kearns approached Senator Clark to urge him to make terms. He then testified as follows:

> "Q. What was Senator Clark's attitude when you approached him and urged him to make the deal?
>
> A. He was not at all anxious at that time.
>
> Q. How long before he became anxious, or did he ever become anxious?
>
> A. He said he wanted to go along a while yet. I told him that he had a good deal more money than his associates, or at least I thought he had. * * * From a financial standpoint it didn't appear to me that there was anything left to be done, only to put one—

Q. You felt satisfied, did you, that if two lines were built through to Los Angeles, they could not be financially successful?

A. I didn't care to put any more of my finances into it—my small pile." (Folios 4234-5.)

He further testified:

"Q. When you went into this enterprise with Mr. Clark and others, you did not share in the feeling that you afterward had, that the line would not be profitable, did you?

A. No, sir; I wouldn't have gone into it if I had.

Q. No; that is what I thought. You didn't do it for your health?

A. No, not exactly.

Q. You were feeling well?

A. Yes." (Folio 4237.)

* * * * * *

Q. You felt that two lines through there would be not only expensive to construct but also to maintain and operate?

A. Well, I didn't want it with my money.

* * * * * *

Q. Then it became necessary for you to consider whether you wanted to build a line of railroad practically from Los Angeles through to Salt Lake, practically parallel, and certainly parallel and competitive as to every bit of business it would carry?

A. At that stage in the proceedings, when they began to parallel each other, I knew what it meant from a financial standpoint, yes; and I considered, with many of them, selfishly, that it was ruination to me if I continued, or with the interest I had in there, not to me personally, and I so prevailed on my associates." (Folios 4245-47.)

J. Ross Clark testified that the negotiations resulting in the contract Exhibit A lasted several months, and he does not know which side initiated them. (Folio 1041.) Up to

the time that these negotiations were commenced, Mr. Harriman or his companies had no interest whatever in the San Pedro road. (Folio 1042.)

When the consolidation of the interests took place the Short Line put in its old line from Salt Lake City to Uvada. The testimony makes it very clear that the Union Pacific had not intended it as a part of a trunk line. Mr. Moore testified that he was with the road until about the time it was completed; that he re-located about 75 miles of the line between Salt Lake and Uvada, which was taken over from the Short Line at the time of the amalgamation; that the rails on that line were only 52 pounds, and had to be taken out and 75-pound rails substituted. The grades had to be broadened, as the old roadbed could not sustain the ballast that had to be put on; that previously it was only ballasted with natural earth from along the line; when reconstructed it was ballasted for the most part with rock ballast. (Folios 4259-60.) The whole thing was very well summed up by the testimony of Mr. Whittemore at Folio 5423:

> "Q. Well, the fact is that you had two very lively, energetic railroad companies at work constructing lines from Utah to California, hadn't you?
>
> A. For a while, yes.
>
> Q. And after they had proceeded for a time with that construction they were amalgamated into one company?
>
> A. Yes."

We have thus detailed at length the foregoing facts showing that the Clark road was initiated and proclaimed to the world as an independent enterprise; that it was particularly a competitor of the Southern Pacific; that no other line of road was to have any proprietary interest in it; that the

Oregon Short Line and its predecessors for eleven or twelve years, had made no move whatever to build to Los Angeles; that although the road was projected in 1900 and steps taken to procure terminals in Salt Lake, nothing was done toward constructing the Short Line until after the acquisition of the Southern Pacific by the Union Pacific; that the latter company, for the purpose of completing its monopoly, proposed to wreck the independent enterprise or force it to terms. If the San Pedro road had been in the hands of men of less financial responsibility, who could not have raised money to build the line through, it is practically certain that after throttling the enterprise, preventing the construction of the road, the Union Pacific would have stopped at the end of the old grade in Nevada, but Senator Clark and his associates were men of such vast wealth that it was not possible to prevent the line from being built. Therefore defendants did the next best thing from the standpoint of this conspiracy to monopolize the traffic of the west, and consolidated the two lines in process of construction into one line under agreements tying the Clark road hand and foot, preventing future competition and making it part of the Union Pacific system. The contracts were of such an astounding character that Senator Clark and his associates, if they were going to pretend to any semblance of independence, could not have consented to them. As a matter of fact, the net result is that the Clark people were permitted to own one-half the stock, finance one-half the enterprise, and occupy some official positions in the road to save their faces, while the Union Pacific gobbled up the line.

THE CLARK-HARRIMAN AGREEMENT EXHIBIT A.

JULY 9, 1902.

This agreement, which is attached to the petition, as will be seen, provides in substance for the sale by Clark, representing himself and his associates to Harriman as trustee, of an undivided half interest in the San Pedro enterprise, as represented by the stock of that company, of a construction company and certain terminal companies; that the shares of stock so sold to Harriman, together with those remaining in the possession of Clark and associates, were to be trusteed for a period of ten years after the opening of business of the San Pedro road, during which period neither party should in any manner dispose of his interest in the said stock without the consent of the other party, nor dispose of the same *at any* time without giving the other party the right to purchase such holdings so offered for sale on as favorable terms as the same were offered for sale or agreed to be sold to any other person or company. (Article 1 of Exhibit A, pages 28 et seq.) So that not only were Clark and his associates absolutely prevented from selling any interest for ten years, but they were compelled to sell to the Short Line or Harriman at any time thereafter. As Senator Clark represented not only himself but his associates, and as it is inconceivable that all of the said associates or even Clark himself, would desire to perpetually retain this stock, it was an inevitable result from this agreement that the Short Line would at a very early date be possessed of not simply one-half, but of a majority or the whole of the stock of the San Pedro Co.

Exhibit B, attached to the petition at pages 88 et seq., is a stock trust agreement entered into on the 7th of June.

1903, between Clark, representing himself and his associates, Harriman as trustee, and the Farmers Loan & Trust Co., the depository of the stock. This provides by Article 4, pages 52, 53, for certificates of interest to be issued against all the shares of stock of the company deposited with the trustee, and endorsed upon the same there is to be a form of assignment, but it is expressly provided that no such assignment shall become effectual to pass any title to or right or interest in the certificate or in the shares of capital stock upon which it is based, until there shall have been endorsed in writing thereon a consent to the assignment signed by both Clark and Harriman. Thus no associate of Senator Clark can dispose of his interest without the consent of Harriman or his successor, and of course, if such assignment is attempted, Harriman or his successor would insist, under the terms of the contract, on the right to purchase.

Article 5, at pages 55 and 56, insures that the directors shall be divided equally between the two parties. Thus any independent action of the San Pedro road is prevented. A stipulation appears at Folio 5649, that the Empire Construction Co., the Los Angeles Terminal Land Co., and the California Improvement Co., the stock of which companies was also the subject of said agreement, have been wound up and dissolved. Thus the Union Pacific has absolute control of the situation. No changes can be made, and no extensions without its consent, and it is a matter of a very short time until it will actually be the owner of a majority of the stock. But as though that was not sufficient, the San Pedro Co. is tied up by traffic agreements and contracts. That the defendants were afraid that this arrangement might be attacked and the consummation thereof prevented before the road was completed, the said agreement being so con-

trary to the loud declarations of the projectors of the San Pedro road, is shown by the provisions of Section 6 of Article 1, Exhibit A, appearing at page 32 of the petition. This section provides that upon the completion of the sale and purchase of the undivided half interest in the stock by Harriman, Clark, trustee, will, whenever requested, cause one-half of the membership of the directorate to be vacated, and will cause directors to be nominated and named by Harriman, to be elected to the directorate to fill such vacancies. Then follows this extraordinary language:

> "Said Harriman, trustee, appreciating the advantage to be obtained by preserving the independent character of the San Pedro Company, and to that end disturbing as little as may be the present organization of said company until the through line of said San Pedro Company in this agreement mentioned is completed and in operation, will not exercise the right herein given him to name one-half of the said boards of directors unless he shall deem the exercise of such right necessary to the protection of the interests which he represents." (Folios 166-167.)

This agreement will have a familiar sound to this court, which has lately in the Standard Oil and Tobacco cases had under consideration stipulations under which competitors have been silenced and the fact has been for a time kept from the knowledge of the public. At Folio 8243 there is a stipulation that Robert S. Lovett, Trustee, has been substituted for the late defendant Edward H. Harriman under said Exhibit B.

TRAFFIC AND OTHER AGREEMENTS ELIMINATING COMPETITION BETWEEN THE UNION PACIFIC SYSTEM AND THE SAN PEDRO.

Pursuant to the foregoing contract, various agreements were entered into in 1903, approved by the stockholders of the Oregon Short Line at a meeting on October 14th, 1903. (Record, Folios 152-3.) These agreements will be found in the record at Folios 220 et seq., and are as follows:

Complainant's Exhibit 32, Traffic Agreement between the Oregon Short Line, San Pedro, and the Union Pacific. (Folios 220 to 249.)

Complainant's Exhibit 33, Traffic Agreement between the Southern Pacific and the San Pedro. (Folios 250 to 254.)

Complainant's Exhibit 34, a Deed from the Short Line to the San Pedro for a portion of the lines in southern Utah. (Folios 255 to 259.)

Complainant's Exhibit 35, a Guaranty of the Union Pacific to release the lien of certain bonds on lines taken over by the San Pedro. (Folios 260-262.)

Complainant's Exhibit 36, a Lease of certain tracks in southern California from the Southern Pacific Co. and the Southern Pacific Railroad Co., to the San Pedro, said tracks running from Riverside to San Bernardino, and being a part of the present through line. (Folios 263-282.)

Complainant's Exhibit 37, a Deed of certain lines south of Salt Lake City from the Oregon Short Line to the San Pedro. (Folios 283 to 294.)

Complainant's Exhibit 38, a Deed of what is known as the Terminus Branch, Oregon Short Line to the San Pedro. (Folios 295 to 301.)

Complainant's Exhibit 39, the Salt Lake Yard contract between the Short Line and the San Pedro. (Folios 302 to 333.)

Complainant's Exhibit 40, Deed of the Utah & Pacific, which was the line constructed by Mr. Eccles and associates to the San Pedro. (Folios 334 to 338.)

Complainant's Exhibit 41, a Deed from the Utah, Nevada & California Railroad Co. to the San Pedro Co., the grantor being the company building the line in Nevada which was the subject of so much controversy. (Folios 339 to 343.)

Complainant's Exhibit 42, Deed of the New East Tintic Railway Co. to the San Pedro, the grantor being the owner of a branch line in Southern Utah. (Folios 344 to 348.)

There are some provisions in certain of these instruments, to which particular attention should be called.

Agreements Between San Pedro and Short Line Not to Invade Each Other's Territory for Ninety-nine Years.

First, as to Complainant's Exhibit 32, the Traffic Contract between the Short Line, the Union Pacific and the San Pedro. It will be seen by Article 1, Folio 224, that the agreement is binding for ninety-nine years. By Article 2, Folio 226, a dead line was drawn at Salt Lake. During the ninety-nine years, the San Pedro Co. agreed by Section 1 of Article 2, that it would not extend its main line of road or any of its branch lines of road, nor construct nor build any lines of road nor aid any other company in the construction or building of any line of road, nor assist nor advise in the building or construction of any other railroad northward from Salt Lake City, or which may run into the territory northward of the parallel of Salt Lake City. Salt Lake City, as appears by the agreement, is the southern terminus

of the Oregon Short Line. Therefore, the San Pedro Co. absolutely agreed for ninety-nine years that it would not invade the territory of the Short Line directly or indirectly, even to the extent of advising the building of a line into that territory. Section 2 provides that no branch of the San Pedro Co.'s road south of Salt Lake City shall be built which shall directly or indirectly invade the territory of the Short Line Co. north of Salt Lake City nor be built for the purpose of diverting business naturally tributary to the Short Line Co.'s road or roads, north of Salt Lake City, and the Short Line Co. on its part agreed that it would not build any branch lines which would invade the territory of the San Pedro Co. south of Salt Lake City, or divert business which would be naturally tributary to the San Pedro Co.'s road south of Salt Lake City. The Articles of Incorporation of the San Pedro will be found in the record, Complainant's Exhibit 203, Folios 5651, et seq. It will be observed that by Article 5, it is contemplated that without limitation all necessary and appropriate branch lines and extensions of said line through the state of Utah and the other states through which the road was to run, were in contemplation, but the exercise of this franchise to build branch lines is attempted to be qualified and lopped off as to any lines into territory competitive with the Short Line by this traffic agreement.

Section 3 provides that the Short Line Co. will not build or construct any railroad or branch lines of railroad or aid any other company or companies in the construction of any railroad which will in any manner directly or indirectly enter into or invade the territory south of Salt Lake City, or south of the parallel thereof, or so as to in any manner invade or encroach upon the territory or which will be built or operated for the purpose or with the effect of di-

verting business naturally tributary to said San Pedro Co.'s road south of Salt Lake City or business originating at or delivered to points located in territory south of Salt Lake City. The Short Line by some chance is not prohibited from advising the construction of any such lines. Why that was eliminated from the Short Line stipulation and included in that of the San Pedro, does not appear, but it is, of course, immaterial. Therefore, by Article 2, there is a ninety-nine year division of territory, by two corporations, both of which are engaged in interstate commerce, the chief part of the business of both being interstate commerce.

Article 4 (Folios 230 et seq.), provides for through passenger train service over the Union Pacific from Council Bluffs to Ogden, thence over the Short Line to Salt Lake, and thence by the San Pedro road to Los Angeles or San Pedro; also through passenger service over the Short Line and the San Pedro; also through freight service in through freight trains. By section 2 of this article (Folio 233), it was agreed that the traffic taken up or laid down on the lines of the San Pedro Co. in Utah for transportation to or from any and all points which can be reached with reasonable expedition by way of the lines of the Short Line, the Union Pacific, and their connections shall be forwarded exclusively in so far as it may be lawfully done by way of and over the lines of the Short Line and the Union Pacific, and the Short Line and the Union Pacific agree to solicit the transportation of traffic to or from points in Utah reached by the roads of the San Pedro exclusively in connection with the San Pedro as against any and all of the San Pedro Co.'s competitors. It was further agreed in the same section at Folios 235-6, that the roads owned by the San Pedro, and the roads of the Short Line and the Union Pacific shall be treated as forming a through line of

transportation between points in California on the San Pedro Co.'s roads and points north of the city of Ogden on or to be reached by way of the Short Line and the Union Pacific, and their connecting railroad lines; and it is further agreed that so far as may be lawfully and profitably done, that said through lines shall be operated and worked as a unit with respect to the traffic which is in whole or in part the subject of competition by other carriers, and that the parties shall, so far as they lawfully may, promote the interests of the through line against any other line competing in whole or in part for the same traffic. This, it appears, very effectually ties up the San Pedro, but the Union Pacific at all times having in view its interest in the Southern Pacific, which is another branch of its system, put in a provision that the obligation of preference is not to be understood or construed as requiring either party to refuse or neglect to receive and properly forward any traffic offered for transportation by other connecting carriers. (Folio 236.) And by Section 4 this whole provision, in so far as it affects the obligations of the Union Pacific or the Short Line, is rendered nugatory by putting in the contract the following language:

"Nothing in this agreement shall be construed as limiting the rights or privileges or the practices of the Union Company or of the said Short Line Company, and each of them, in respect to interchange of traffic each with the other, and each with the Southern Pacific Company, as fully as before this agreement was made." Therefore the substance of this agreement, in so far as we have considered it, is that the San Pedro Company is bound to work with the Union Pacific, treating its line, that of the Short Line and the Union Pacific as a through line, and preferably promote the interests of that line as against all competitors,

while the Union Pacific and the Short Line on their part are relieved from that obligation in so far as the interchange of business with the Southern Pacific, which is the natural competitor of the San Pedro, is concerned.

Section 6 of this article (Folio 238), again shows that the San Pedro is regarded as substantially a branch of the Union Pacific. That section provides that the Short Line Company and its connections, the said Union Pacific, and each of them, shall have the right to name and make the through rates between points (that is, in both directions), on or reached via their respective lines, and points on the line of said San Pedro Company's road in Utah, for business which said Short Line Co. or said Union Co. might give to or receive from said San Pedro Co. in competition with any and all other connections of said San Pedro Co., the only proviso being that upon demand of the San Pedro Co., the Short Line and Union Co. shall meet the rates offered by a competing line for such business. That provision, it will be seen, deprives the San Pedro of all independence of action on all of its lines in Utah, on the traffic to and from the east or the north, which can be reached over the Short Line or the Union Pacific or both of them in connection. The rate-making power is taken away from the San Pedro and given over to the Union Pacific system. The San Pedro connects with the Denver & Rio Grande at Provo, and it interchanges business to some extent at that point with that line, but it cannot put in an independent rate. It is not only prohibited from taking the initiative in putting in a rate, but if the Rio Grande should offer to put in a lower rate, the Short Line and the Union Pacific would meet it, and then the business would have to be handled under the other provisions of the agreement, over the Union Pacific.

Section 9 (Folio 239), prohibits the San Pedro Co. from at any time interchanging traffic with any carrier connecting with it upon more favorable terms as to character or quality of service, or at any lower rates of charge or lower divisions of rates, or in any respect whatever, than those governing the interchange of the same or similar traffic with the Short Line Co. at Salt Lake City, so that by this contract, the San Pedro Co. is not only prohibited from joining with another company and competing on rates, but it is expressly prohibited from joining with any competitor of the Union Pacific in giving a better quality of service or accepting any lower division for the sake of securing traffic which may be offered to it.

Elimination of Competition Between Southern Pacific and San Pedro.

By section 10 (Folio 240), the San Pedro Co. stipulates that it will make an agreement with the Southern Pacific for its performance of an undertaking that it will in the first instance adopt all lawful rates, tariffs and charges used by the Southern Pacific Co. for the handling of local traffic by said San Pedro Co., which is or may be subject to competition between said Southern Pacific Co. and said San Pedro Co., and that thereafter neither company shall change said rates without the consent of the other, unless it may be made necessary so to do to meet the rates, charges or tariffs of another competing line of railroad. This stipulation was carried out by making Complainant's Exhibit 33. (Folios 250 et seq.) This agreement is for ninety-nine years, although the lease of the line from Riverside to San Bernardino, which purports to be the excuse for the stipulation (Complainant's Exhibit 36, Folios 263 et seq.), is only for forty-nine years.

By Article 2 of Exhibit 33 (Folio 252), the San Pedro agrees to print, publish and put in force at all points upon its leased, owned or operated railroad for the handling of local business thereon, the lawful rates, tariffs, classifications and charges used by the Southern Pacific for the handling of any local business which may be the subject of competition between them. By Article 3 (Folio 253), each party agrees that after putting in force those rates, neither of them shall change such rates without the consent of the other party, unless such change is made necessary in order to meet the competition of some other line of road, or to "conform to the final decree or judgment of some court of competent jurisdiction or some lawful and valid requirement of state or national law."

It is claimed that it was not the intention of those provisions to cover interstate business, but only local business in southern California. But two facts will be observed with reference to that provision: first, there is no language limiting the scope of the provision to southern California, but it is only local business on the railroad; and second, it is very difficult to see, although Mr. Gibbon makes a rather interesting explanation in his testimony, why the matter of changing rates pursuant to some lawful and valid requirement of *national* law, should have been inserted if it was intended to apply solely to California business. It is a curious fact that while it is insisted that the word "local" means southern California business, Mr. Wells in his statistics showing the movement of citrus fruits, which appears as Complainant's Exhibit 80 (Folio 1235), divides that movement into local and through shipments, and at Folios 1217 to 1218, testifies that the word "local" means destined to points west of the Missouri River, which is a very natural use of the word "local," in view of the

fact that the Union Pacific and the San Pedro constitute in fact one line. It is also said that since this testimony was taken two years ago, that agreement has been stricken out of the contract, but it is none the less important as showing the intention of the parties to effectually eliminate competition between the San Pedro and any other parts of the Union Pacific system.

Absence of Competition Between San Pedro and Southern Pacific on Traffic Between Utah Common Points and San Francisco and Los Angeles.

That there has been no competition between the San Pedro and Southern Pacific is shown by the correspondence between Mr. Babcock and Mr. Manderfield, District Freight Agent of the San Pedro Co. at Salt Lake, and the testimony in connection with the same appearing at Folios 3955 to 3963. From this testimony it appears that the San Pedro connects with the Santa Fe at Daggett, and that the latter line runs thence to San Francisco, making a total mileage to San Francisco from Salt Lake by a combination of the San Pedro and the Santa Fe of only 1083 miles, as against 823 miles by the Southern Pacific. Mr. Babcock, a witness of large experience, testified that the rates in force over the Southern Pacific to San Francisco from Salt Lake would be highly remunerative for the transportation of traffic over the line of the San Pedro in connection with the Santa Fe both as to freight and passenger business. (Folio 3961.) He further stated that a line to San Francisco by the San Pedro to Daggett, and thence into San Francisco by the Santa Fe would be an entirely feasible route for the transportation of passengers and property. (Folio 3960.) Mr. Babcock addressed letters to Mr. Manderfield, asking

for copies of the freight tariffs of the San Pedro Co. between Salt Lake and San Francisco, and was advised, under date of March 10th, 1909, that it did not publish any tariffs naming such rates, but that they were published by the Southern Pacific Co. In response to that Mr. Babcock wrote Mr. Manderfield on the 11th of March, inquiring as to whether any tariffs were in existence applying over the San Pedro, Los Angeles & Salt Lake, either via the Santa Fe or Southern Pacific connections to or from San Francisco, and desired to know whether such a route was in operation, or if it ever had been, and for what period and at what time it was discontinued, if at all. In response to that, on March 15th, 1909, Mr. Manderfield replied that his company had never published any tariffs on freight business applying between Salt Lake City and San Francisco, nor had it at any time been a party to such application in tariffs either via the Santa Fe or the Southern Pacific. (Folios 3956-9.) It is stipulated at Folio 5766 that Mr. Manderfield would have testified, if sworn as a witness, that the statements contained in his letters addressed to Mr. Babcock are true. If there was any competition existing between Salt Lake and the coast between the San Pedro and the Southern Pacific, it is apparent that tariffs would be in force, because the traffic between San Francisco and Salt Lake is very large, but the San Pedro does not attempt in any way to participate in it. That the traffic between the coast and Salt Lake and Utah common points is divided, is also shown by the testimony of Mr. J. Ross Clark. At Folios 1137 et seq. he shows that rates between Los Angeles and Utah common points were made over his line the same as the rates that prevailed by the Southern Pacific from San Francisco to Utah common points, which rates were less than the rates previously in force from Los Angeles by way of the Sacra-

mento gateway; and at Folio 1140 it appears that a new schedule was put in in March, 1907, and the Southern Pacific made the same rate from San Francisco. He was then asked:

"Q. Do the Southern Pacific maintain the same class rates that you do from Los Angeles to Utah common points by way of Sacramento?

A. I understand not.

* * * * * *

Q. So that the Southern Pacific has seen fit to retire from the Utah business, so far as class business is concerned?

A. Physical conditions practically compel them to do so.

* * * * * *

Q. So the Southern Pacific are not competitors of the Salt Lake road for Utah common points traffic from Los Angeles?

A. I should say they are.

Q. How are they, if their rates are higher than yours and their line 500 miles longer?

A. I don't know that they get any business.

Q. That is, you mean that their rails are still there?

A. Yes, sir.

Q. But if their line is 500 miles longer, and their rates are higher, they are not very energetic competitors, are they?

A. They are not likely to get much of it, *and it is not expected that they would.*" (Folios 1140-41.)

In connection with the cross-examination of Mr. Munroe, Complainant's Exhibit 210 was identified by him and offered in evidence, (Folios 6838 et seq.). It is a memorandum and understanding between the San Pedro, the Oregon Short Line, the Union Pacific and the Southern Pacific, dated August 2, 1905, changed January 27, 1906. This shows an absolute agreement to eliminate competition

between the San Pedro and the Southern Pacific in two particulars, and explains the failure to put in rates to San Francisco in connection with the Santa Fe. We quote from Clause A as amended:

> "Except on basis of added locals San Pedro Company will not join in rates to or from points north of Mojave and Santa Barbara on any traffic to or from Utah common points and east thereof."

It will be seen that that is an express agreement that the San Pedro will not unite with the Santa Fe or any other company on joint rates, which of course would shut the San Pedro out of San Francisco and all territory served by the Santa Fe or Southern Pacific north of the Tehachapi Pass. Subdivision 9 of the original agreement, which is continued in force, (Folio 6842) is as follows:

> "It is understood that while it is expected that agents will use every effort to secure business, both local and through, it is not desirable that any effort be made or continued in order to change the routing of freight which has been secured by either company; hence when car or cars are ordered, solicitation with either shippers or consignee must cease."

We will show in connection with our discussion of the Santa Fe situation that Mr. Wells testified that the fast citrus fruit trains were taken off after a protest by the Southern Pacific and the Santa Fe. There is a large celery traffic originating on the lines of the Southern Pacific moving over the San Pedro road. (Folio 1129.)

Oriental Traffic.

There is another very interesting circumstance in connection with this road; that is, that it has not engaged in the Trans-Pacific trade. We have called attention to the testimony showing the large terminal facilities possessed by the road on San Pedro Harbor, and the grandiloquent remarks with reference to the harbor of San Pedro put forth by the promoters of this road. It is therefore somewhat distressing to observe that Mr. J. Ross Clark testified that his road had no steamship connections at San Pedro except coastwise steamers. (Folio 1133.) He testified as follows:

> "Q. There is no line of steamers plying between San Pedro and the Orient?
>
> A. No regular line of steamers. We had an Oriental ship in there several months ago, but that is, I think, the only one that has been here—the only one to my knowledge, or as far as I have had anything to do with it.
>
> Q. That would be a tramp ship?
>
> A. That would be a tramp ship, yes, sir.
>
> Q. You have no line established as a connection with yours or otherwise?
>
> A. We have not.
>
> Q. Does your line participate in any Trans-Pacific traffic at all?
>
> A. Not to my knowledge.
>
> Q. That all moves by San Francisco?
>
> A. That all moves by San Francisco."

Mr. Dollar, of the Robert Dollar Steamship Line running between the coast and the same points in the Orient that are reached by the Pacific Mail and its allied lines, testified, (Folios 5019 to 5021), that although his line of boats had been established for seven years, they had never had through rates in connection with any of the transcontinental railroads; they bring from the Orient cargoes consisting

of general merchandise, and have been making the port of San Francisco. He was then asked if they had ever had negotiations with any railroad company with reference to establishing through rates with them, and testified that they had had with the San Pedro road. He first had the matter up with Mr. Gillette, who was formerly the Traffic Manager; then with Mr. Wann, the present Traffic Manager, and with the General Manager Mr. Wells; that those negotiations were protracted over a period of several years, and they proceeded to the extent of the drafting of an agreement, and it was proposed that the Dollar Line should make San Pedro its principal port that it was to be left optional with them to make San Francisco also, but they had to make San Pedro first; that in the course of the negotiations the matter was referred to New York, but he does not know to whom in New York, and it was also put up to Mr. Bancroft, who is Vice President of the San Pedro and General Manager of the Short Line, and the final result after referring it to New York and to Mr. Bancroft, was that no deal was made, although the Dollar Steamship Line was willing to make an arrangement.

So the magnificent terminal facilities possessed by the San Pedro road at San Pedro have not been allowed to interfere with the business of the Pacific Mail, and it is stipulated in the record, (Folios 1080-81), that the Southern Pacific Co. makes no through rates in connection with lines or boats across the Pacific, with the exception of the Pacific Mail, the Japanese Line, and the Occidental & Oriental Companies, the traffic of all of which is managed by Mr. Schwerin and that any other boats bringing in traffic to San Francisco have to pay the regular San Francisco rate to the east.

THE ACQUISITION OF THE STOCK OF THE DEFENDANT ATCHISON, TOPEKA & SANTA FE RAILWAY CO., BY CERTAIN OF THE INDIVIDUAL DEFENDANTS, AND THE DEFENDANT OREGON SHORT LINE RAILROAD COMPANY, RESULTING IN CERTAIN COMMON DIRECTORS, AND LESSENING OF COMPETITION, WAS A PART OF THE SAME GENERAL CONSPIRACY, AND UNLAWFUL.

Purpose of Defendants in Buying Stock Was to Lessen Competition.

The relations between the Atchison, Topeka & Santa Fe and the Union Pacific, of which complaint is made in this action, began in 1904, when the individual defendants Harriman, Rogers, Stillman, Schiff, Kahn and Mr. William Rockefeller [an intimate associate who figured in the scheme testified to by the late defendant Mr. Harriman, to protect the control of the Southern Pacific at the time the Union Pacific control was assailed by Mr. Keene and his associates (Harriman's testimony, Folios 1272 et seq.)] bought up a lot of stock in the Santa Fe and demanded representation on the board. This demand resulted in the election of defendants Rogers and Frick under circumstances that will be detailed. Both were at the time and continued to be directors of the Union Pacific Railroad Company. Frick was a member of the Executive Committee of the Union Pacific. All the circumstances in connection with this matter go to show that the allegations in the complaint are true, and that the acquisition of this stock by the individual defendants and the acquisition of ten millions of stock by the defendant Oregon Short Line Railroad Co. were part of the general scheme to control the railroad situation in the transcon-

tinental territory. Complainants put on the stand the defendant Schiff for the purpose of showing certain facts by him. At Folio 1807 Schiff testified that he knew that in 1904 requests were made on the Santa Fe people for representation of himself and his associates. The term "associates" included William Rockefeller, Henry H. Rogers, Harriman, Stillman, and Kuhn, Loeb & Co.; that they had purchased a large amount of stock of the Santa Fe and were entitled to two directors, and wanted to get them without resorting to cumulative voting. He was then asked (Folio 1808) as to his object in asking for this representation, and testified:

"A. We were large owners of Atchison, Topeka & Santa Fe stock, and we wanted to have representatives on the board to know that our interests were properly protected.

Q. Were you dissatisfied with the management of the Santa Fe road at that time?

A. I do not think we were.

Q. Were there any changes in the management that you desired to have made?

A. As I have said, we wanted to have two of our own representatives put on. It is but usual and natural that large stockholders should want to be represented on the board of managers.

Q. Yes; but I say was there any particular method of doing business on the Santa Fe that was objectionable to you, so that you wanted representatives to change it?

A. Not as far as I personally know.

Q. Did you know of anybody else in your syndicate who was dissatisfied?

A. I do not.

Q. Then there was no change of method of operation that you desired?

A. Not as far as I know of."

So that we have the admission of Mr. Schiff that there was no dissatisfaction with the management of the Santa Fe, and the only object that could have been desired was to get directors in the Santa Fe board, so that the Union Pacific might have a voice in the management of that property.

Mr. Deming, the Assistant Secretary of the Atchison, Topeka & Santa Fe Ry. Co., and the custodian of the records of the stockholders and directors, produced Complainant's Exhibit 99 (Folio 1573), a portion of the records of a meeting of the directors of that company, held Feb. 8, 1905, which showed that the defendant Frick was elected director in place of Mr. Kenna, resigned, and that the late defendant Rogers was elected in place of Mr. McCullough, resigned; that the term of office of Mr. Frick was until the annual meeting of 1908, but the term for which Mr. Rogers was elected was only until the annual meeting of 1905. Mr. Deming also produced Complainant's Exhibit 100 (Folio 1575), which shows that at the annual meeting in October, 1905, three directors were elected for four years, namely, Mr. Cheney of Boston, Mr. Haven of New York, and Mr. Rogers. Mr. Cheney was an old director, as appears by Exhibit 99, which shows that he was one of the directors present at the election of Mr. Rogers.

Mr. Deming also produced Complainant's Exhibit 101 (Folio 1577), which shows that at the annual stockholders' meeting held October 22, 1908, Mr. Frick was one of the directors who was re-elected for a term of four years.

It appears by Harriman Exhibit No. 2 (Folio 1264) that the Oregon Short Line Railroad Co. purchased ten million dollars par value of the preferred stock of the Atchison, Topeka & Santa Fe Ry. Co. on July 10, 1906.

It is important to bear these dates in mind; that is, that the demand for representation on the Santa Fe board, made by these Union Pacific directors, was in 1904. In the early spring of 1905, Frick and Rogers went on the board. Rogers was re-elected in the fall of 1905 for four years. Frick's term did not expire until 1908. In 1906 the Oregon Short Line bought its stock.

At Folios 5624 et seq. appears Complainant's Exhibit 200, showing the aggregate individual ownership of the defendants Harriman, Frick, Kahn, Rogers, Schiff, Stillman, and the firm of Kuhn, Loeb & Co. and the stock held by any two or more of them jointly in different defendant corporations.

At Folios 5632-3, there is an exhibit of their stock ownership in the Santa Fe. We call particular attention to subdivisions 17, 18 and 19 of Exhibit 200.

Here is a clear demonstration of the fact that these defendants purchased the Santa Fe stock for the purpose of getting their directors. They caused the Oregon Short Line to buy ten millions for the purpose of perpetuating that representation. At the annual meeting in September, 1904, they owned jointly 178,000 shares of stock, separately only 3,000 shares, making an aggregate of a little over eighteen millions par value. This was the year that demand was made for representation. The next year they had secured the election of two directors by the board in the spring. But the re-election of defendant Rogers was to come up in the fall of 1905. Therefore, we find that at the annual meeting in September, 1905, as shown in subdivision 18 of Complainant's Exhibit 200, there was still a joint ownership of 162,860 shares, and separate ownership of only 100 shares. Rogers was re-elected. His term was for four years, running to 1909. Frick's term did not run out until

1908. Therefore there was no reason to retain this stock for the purpose of this representation, as that had been fixed for a period of years and was protected by the $10,000,000 of stock acquired by the Short Line in 1906.

That this stock was acquired by the Union Pacific for the very purpose of enabling it to claim a voice in the management of the Santa Fe was directly testified to by defendant Kahn. After stating the enormous amount of money that came into the treasury of the Oregon Short Line from the sale of its Great Northern and Northern Pacific stocks, and the decision of the executive committee that it was not advisable to invest the same in bonds or in calling in the bonds of the Union Pacific, he said, at Folio 7881:

> "So there was the only alternative left for the investment of that enormous fund of buying high-class stocks bringing from 4½% to 5%, *and having at the same time the collateral advantage of giving to the Union Pacific some kind of a voice—simply as the voice of a considerable stockholder—in the councils of those principal lines from which the Union Pacific, through its connections derives a great deal of valuable traffic, and that was the policy which was finally decided upon, and that was the policy which explained the purchase of the Atchison preferred stock and of most of the other purchases in 1906.*"

In the face of this direct admission that one of the purposes of buying this Santa Fe stock was to give the Union Pacific a voice in the councils of the Santa Fe, it is perfectly idle to try to evolve any fine distinction between the late defendant Rogers as an individual and as a Union Pacific director, or between the defendant Frick as an individual and as a Union Pacific director.

And we find that at the next meeting in September, 1906, after the Short Line had obtained its ten millions of stock,

this joint individual ownership, which amounted to over sixteen millions of stock the preceding year had absolutely disappeared.

Section 19 of Exhibit 200 shows that at the meeting of 1906, no stock was owned jointly by these individuals, and only a matter of 14,700 shares by all of the defendants separately. So that Mr. Schiff's anxiety for representation for his stock and that of his associates, although he knew of no objection to the way the Santa Fe was being managed, and although neither he nor any of his associates had any suggestions to make as to changes in operation, lasted until the Union Pacific directors were seated on the Santa Fe board. The late defendant Rogers also became a member of the executive committee from Feb. 8, 1905, Complainant's Exhibit 110, Folio 1901, which shows that to put Mr. Rogers on the executive committee it was necessary to crowd off that committee Mr. B. P. Cheney of Boston, an old member of the board, since re-elected, as we have shown, but who does not happen to belong to the little coterie of Union Pacific directors and their associates in New York City. The necessity no longer existing for these gentlemen to retain this stock, the Short Line having ten millions to keep up the pretense, they all sold out. The purpose of securing this stock plainly appears upon the cross-examination of Mr. Morawetz, a witness for the defendant, and is also shown in the testimony of the defendant Harriman. Mr. Morawetz, as the court knows, is a great lawyer and an estimable gentleman. It is apparent that he endeavored, against great odds, but without success, to maintain the integrity of the Santa Fe system. He testified, (Folio 1853), that he was a member of the committee which reorganized the system

in 1895, and from the time the new company was organized and took over the properties, in January, 1896, he was a member of the board and of the executive committee and its general counsel, and in 1898 became the chairman of the executive committee, and remained on the committee until October, 1908, when he resigned both as chairman and director.

Mr. Morawetz testified on direct examination, (Folios 1859-60), that while a certain controversy was going on with reference to a line built by the Santa Fe in southern Arizona, (as we will show later in the face of the Southern Pacific opposition, but which after being constructed, was unlawfully turned over to the Southern Pacific because it was an invasion of territory claimed exclusively by that company), the late defendant Harriman, in September, 1904, informed him that Harriman and some of his associates had purchased about 300,000 shares of Santa Fe stock, and asked for representation on the board of directors. Mr. Morawetz stated to him that he would never willingly give any representation on the board to the Union Pacific Railway, or to any rival company. Mr. Harriman then said that the stock was not owned by the Union Pacific or the Southern Pacific, but was bought by himself and other gentlemen associated with him, as a private investment, because they believed in the Santa Fe property and in the country through which its lines ran. Mr. Morawetz enumerated the same gentlemen who were named by Mr. Schiff, and then proceeded, (Folio 1860):

> "I stated to him that I would not be willing to give any of these gentlemen a place on the Board of Directors until the differences existing between the Atchison and the Union Pacific Company had

been adjusted; but if those differences were adjusted I would be willing to give to those gentlemen some representation on the Board of Directors in view of their personal holdings, with the understanding that the nominees would be acceptable and satisfactory to my own Board of Directors. I further stated that I would not be willing to have any of the executive officers, including himself, on our Board of Directors. There was a little difference of opinion between us on that point. Mr. Harriman and I had discussed the subject—the general railway policy—on more than one occasion, and he urged that the management of great railway systems—the different great railway systems in the country—should deal with each other openly, fairly, and in a broad spirit of live and let live; and I agreed with him as to that general policy. I remember telling him that it was my belief that many, if not most of the abuses in railway management were due to a failure to observe that policy, and to attempts of the officials of rival companies to obtain advantages over the others through petty methods and sharp practices; *but I told him that I did not believe in having the officers of one company upon the Board of Directors of a rival company. He did not agree with me as to that, because he suggested that he should go on the Atchison Board, and he offered me a place on the Executive Committee of the Union Pacific or the Southern Pacific, I don't remember which.*"

Mr. Morawetz further testified at Folio 1862:

"As further explanation, I wish to state that in discussing the question of representation on the Board of Directors, Mr. Harriman and I were quite open with each other. I realized and he realized that the gentlemen whom I had named could, if they had desired, have elected four directors of the Atchison Company—four out of fifteen —because our Board is a classified board, and under

the system of cumulative voting one-fourth of the stock represented at a meeting can always elect one director, so that in four years the holders of one-fourth of the amount of stock represented at the meetings could put in four directors. With 300,000 shares to start with, and the proxies which they might obtain, it was evident that they could have elected one director a year—and then kept four directors in office. But I pointed out that no good could be obtained, either to the individuals or to the property by the Board of Directors divided against itself, and that the only sensible course was to act amicably and give fair representation to these large interests, which I suggested should be two."

We have in Mr. Morawetz's direct examination the most favorable construction that can be placed upon the situation.

Mr. Morawetz testified on cross-examination (Folios 1890, et seq.); referring to his conversation with Mr. Harriman:

"Q. You had some discussion with him about the propriety of his going on your board?

A. Yes.

Q. Did he ask to go on your board?

A. Yes, as I have stated. He suggested he should go on the Atchison board, and that I should go on their board.

Q. Why did he say he wanted to go on the Atchison board?

A. I don't think he assigned any reason.

Q. On your direct examination you gave some explanations as to conversations you had had with Mr. Harriman.

A. As to policy.

* * * * * *

Q. Let me ask you this: In substance did he ask to be put on the Atchison board so that he

might be kept advised as to prospective action to be taken by the Atchison?

A. He did not so state, but of course, the object of going on a board of directors would be to take part in the management. There could be no other.

Q. So that he wanted to go on the board so as to take part in the management of the Santa Fe road, and you objected to it?

A. I objected to his going on the Santa Fe board and objected equally to my going on his board.

Q. Why did you make that objection?

A. Because I did not believe it to be wise to have the officers of a rival company on the board of directors.

Q. Why not?

A. Because I thought, and still think, that the management would be more satisfactory if there were no divided counsels upon the board."

After giving this testimony, Mr. Morawetz said that he didn't think that objection applied so strongly to common directors as to directors who were officers of another company, although he admitted that it was laid down in some books on corporations of recognized merit, that directors who are adversely interested in other companies, are disqualified from acting, and that a corporation is entitled to the unbiased advice of each member of its board of directors. (Folio 1891.)

Again, at Folios 1892-3, on cross-examination, Mr. Morawetz admitted that when any question arose as to whether additional facilities should be provided, the Atchison board would be entitled to the unbiased judgment of its board of directors upon the question, and then testified:

"Q. And if the Santa Fe were in active competition with other transcontinental lines, any additional facilities of the Santa Fe which enable them

to do business more cheaply helps them that much in their competition with the other lines, doesn't it?
A. Yes, sir."

At Folio 1894 he admitted that Mr. Frick's name as a director was suggested by Mr. Harriman, and that Frick was at that time a member of the Union Pacific board.

At Folios 1896 and 1897, his attention was called to the testimony of Mr. Harriman, given before the Interstate Commerce Commission, and which appears in this record at Folio 1278, with reference to his interviews with Mr. Ripley, the President of the Santa Fe, and Mr. Morawetz, concerning representation on the Santa Fe board, Mr. Harriman's testimony being as follows:

"It was in substance that we were to try to establish a better relationship between all the railroads, in the line that we should deal more frankly with each other, more publicly and more frankly, and not operate our lines for the purpose of destroying each other, but for the purpose of helping each other, and for developing the territory served by each, and to that extent I even went so far with Mr. Morawetz as to tell him that as far as the Southern Pacific was concerned, I would be willing to even put him on the Executive Committee of the Southern Pacific so that he might know what our intentions were, if he chose to."

Mr. Morawetz stated that that was about his recollection of the conversation, (Folio 1897):

"Q. Then it was his opinion, expressed to you, that you should have common directors, and the roads should be operated so as to help each other instead of being operated, as he expresses it, to destroy each other or in opposition to each other,

they should be operated to help each other, is that right?

A. Yes, substantially that.

Q. *And he speaks of them being so operated as to develop the territory served by each, and then his idea was that wherever the Southern Pacific had established itself in a certain territory, or wherever the Santa Fe had established itself in a certain territory, the other lines should not build in and attempt to divide the business, is that right?*

A. *Substantially that.*"

Certainly there could be no more striking evidence of the purpose, intention and effort of this Union Pacific combination than was thus given by Mr. Morawetz.

When Mr. Harriman invited Mr. Morawetz on to his board, it was clearly not because Mr. Morawetz had any stock, that was entitled to representation upon the Union Pacific and Southern Pacific board. Mr. Morawetz said, (Folio 1868), that he never owned a share in the Southern Pacific Co., and that during the recent panic he bought one or two thousand shares of Union Pacific, held it for three days, and then sold it; except for that, he never owned a share of Union Pacific stock. Therefore, Mr. Harriman's object in having this exchange of directors, if it might be so termed, was to secure to a considerable extent, coordinate action by the Southern Pacific, Union Pacific and Santa Fe. In spite of the necessity that Mr. Morawetz felt under to justify his action with reference to certain controversies with the Southern Pacific, to which we will refer in a moment, and his effort to defend the admission of these Union Pacific directors to the Santa Fe board, he admitted that as a general proposition, he would of course approve of independent boards of directors. (Folio 1891.) At Folio 1907,

in answer to counsel for certain of the defendants, Mr. Morawetz testified:

> "I stated to Mr. Harriman at the outset that I never would consent to representation on the Atchison board of any Union Pacific stock, but that as those gentlemen were very large stockholders in their own interests, and as they had the power to elect directors, I should favor giving them representation voluntarily and amicably."

And at Folio 1908, on re-cross examination, we find the following:

> "Q. You said that you told Mr. Harriman that you would not consent to any Union Pacific stock being represented. Suppose the Union Pacific had had this 30 millions of stock, or 27 millions, or whatever it was, in its treasury at that time, how would you have prevented it?
>
> A. Well, I should have said, 'Force your way on the board if you can, but you won't get there with my consent.'"

Then, after testifying that he knew that after the date of the transactions concerning which he had been interrogated, the Union Pacific purchased ten millions of stock, he further testified:

> "Q. Now you say that if the Union Pacific itself had owned this stock, and had suggested a representation on the board, you would have let them fight their way in through the elections?
>
> A. Yes, sir.
>
> Q. And that is still your attitude, is it?
>
> A. It was when I resigned from the Atchison board.
>
> Q. *And in your opinion it is not proper, is it, that a corporation should own stock in a rival competitive line?*

A. *It is certainly undesirable, if it is legal.*

Q. And of the latter you are not prepared to give an opinion as a witness, I suppose. (Witness laughs.)

Q. *You leave the legality open?*

A. *I leave it open.*"

Phoenix & Eastern.

Mr. Frank M. Murphy built the Santa Fe, Prescott & Phoenix Railroad, which runs from Ash Fork on the main line of the Santa Fe in Arizona, to Phoenix, and as will be seen by the map, it is the only line opening up a large territory in Arizona. After building this line, Mr. Murphy sold its stock to the Santa Fe, but has remained its President, it being still operated as a separate organization, although in connection with the trains of the Santa Fe. (Murphy's testimony, Folios 1659-60.)

Mr. Morawetz testified as follows with reference to this transaction, and to the regard in which Mr. Murphy is held, (Folios 1853-4):

> "In 1901 the Atchison company bought the stock and second mortgage bonds of the Santa Fe, Prescott & Phoenix Railway Company. At that time Mr. Frank Murphy was the president of the company. On account of Mr. Murphy's familiarity with the property and with the territory through which the line runs, and on account of our respect for his ability and his character, he was requested to continue to act as president of the company, and he has so acted until the present day."

Phoenix is the capital and largest town in Arizona. It has an outlet through this Santa Fe line built by Mr. Murphy. It also has another outlet by way of Maricopa, from which point a branch of the Southern Pacific runs up to Phoenix, a distance of about 34 miles. (Folio 1661.)

Thus Phoenix, which is the center of the Salt River valley, has been for years served by the Santa Fe from the north, the Southern Pacific from the south, and by no other lines.

In 1901 Mr. Murphy incorporated the Phoenix & Eastern, and had surveys made from Phoenix to Benson, Arizona, by way of Tempe, Mesa, and Florence and the San Pedro River. Benson is on the Southern Pacific, and is also the western terminus of the El Paso & Southwestern railroad, which runs between El Paso and Benson. This is an independent line of road owned by the Phelps-Dodge mining interests. (Folio 1662.) It is the only road at Bisbee, a town of 17,000 people, where the great Copper Queen mine and other mines are located.

At El Paso this line connects with the Santa Fe, Southern Pacific, Texas Pacific, and the Rock Island, and also with the Mexican Central. At present the line has no connection for the west from Benson except with the Southern Pacific, but if the Phoenix & Eastern had been built through to Benson, as was projected by Mr. Murphy, the El Paso & Southwestern would have had a connection through the Santa Fe to the Pacific Coast.

In the testimony of Mr. Murphy, at Folios 1664 to 1728, there is a very interesting story of the elimination of actual and possible competition, and an application of Mr. Harriman's theory testified to by Mr. Morawetz—that wherever the Southern Pacific had established itself in a certain territory or wherever the Santa Fe had established itself in a certain territory, the other line should not build in and attempt to divide the business. From this testimony of Mr. Murphy it appears that after he had organized the Phoenix & Eastern Co. to build a line from Phoenix to a connection with the Phelps-Dodge road at Benson, the enterprise was taken over by the Santa Fe *and after having been partly*

constructed was turned over to the Southern Pacific at cost and interest as part of the same arrangement under which the Union Pacific directors went on the Santa Fe board.

An inspection of Complainant's Exhibit 108 which is a map of the Santa Fe system, in the record Vol. 3 opposite page 1048, shows the line of road from Phoenix to Dudleyville in black, as this is a Santa Fe map, and the Southern Pacific lines are in black and the map was made after the road had been turned over to the Southern Pacific. From Dudleyville by the canyon of the Gila River to the northeast, and thence to the southeast, through to the Santa Fe line at Deming, will be seen a projected line of road marked by Mr. Murphy on the map in red ink. This is a proposed line that he testified to and marked. See Folio 1711. The Santa Fe had recently completed what is known as its Belen cut-off, which is a low grade line leaving the old main line of the Santa Fe some distance south of Albuquerque, and running east to Texico, thence northeasterly up into Kansas, connecting with the old line. By the use of this line, it has eliminated the mountain haul over the Raton Pass, and other difficult mountain climbing. Mr. Murphy testified that if the Santa Fe had retained the line to Dudleyville, and constructed the line indicated by him in red ink, to Deming, it would have had, upon the completion of the line between Parker on the Colorado River in Arizona and Bengal, California, a through transcontinental line, with no mountain climbing, and constituting much the best line between the east and California. (Folios 1669-1673.) He said at Folio 1674, that this proposed line would be the best low grade line to the Pacific coast—better than the Southern Pacific, the Union Pacific, the Great Northern or the Northern Pa-

cific. On cross-examination, Mr. Murphy explained that the construction of this line through the canyon and up to Deming, for the purpose of forming a portion of a new low grade transcontinental line, was discussed a good deal with Santa Fe officials, including Mr. Ripley, the President, Mr. Morawetz, Chairman of the Board, and other directors. He makes this significant statement at Folio 1696:

> "They (the Santa Fe officials) were always confronted, as they represented to me, with the fact that they were being charged with trespassing on Southern Pacific's territory in going down there; but in building the low-grade transcontinental line they were protecting their own interests and enhancing the value of their own property.
>
> Q. Will you be good enough to say which you wish us to understand—that they were building the Phoenix & Eastern for the local business, or building it because of the Belen cut-off or that it would have been a waste of their money to build the Phoenix & Eastern unless it was intended to use it in connection with the Belen cut-off?
>
> A. It would not have been a waste of their money to have built it for either purpose. I think it would have been to their advantage to have built it exclusively for the low-grade line service of their transcontinental business if they hadn't the local business; and I believe that there will be sufficient business developed along that line to justify its construction, without any transcontinental business."

So that line originally projected by Mr. Murphy from Phoenix to Benson, where it would connect with the El Paso & Southwestern, became, after he turned it over to the Santa Fe, a double-headed proposition, namely, to a connection with the El Paso & Southwestern at Benson from Dudleyville, and an extension to the east from Dudley-

ville through the Gila canyon or through some other East and West canyon to Deming. He testified that when he first incorporated the company, he had an understanding with the El Paso & Southwestern for an exchange of traffic, as that line wanted the western outlet. These negotiations with the El Paso & Southwestern are detailed by Mr. Douglas, the President of that company. (Folios 1916 et seq.) From this testimony it appears that the matter was gone into in very considerable detail.

Mr. Murphy further testified that under the present railroad situation, Phoenix and contiguous regions, reach the Gulf ports only by way of the Southern Pacific to Maricopa, and thence to Galveston, unless they run up north over the Santa Fe and work down through, which is a very long line, but if the line that he projected had been built through to Benson to a connection with the El Paso & Southwestern, other new routes to Gulf ports would have been opened up in connection with the Texas & Pacific, and the Rock Island, from El Paso. (Folio 1688.)

He stated that in building the line of the Phoenix & Eastern for the Santa Fe, he was interrupted and interfered with by an organization known as the Arizona Eastern Railroad Co., owned by the Southern Pacific. He says:

> "We built about 80 miles of road there uninterruptedly, and about the time we completed the survey through the canyon to Deming it seems the Arizona Eastern was incorporated; and one day, very much to our surprise, we found a whole lot of graders had been shipped in across the country in some way, that were put up on the side of the mountain above us, and blasted rocks down on our work, taking possession of our right of way.
>
> Q. What happened then?

A. We enjoined them, and then we had it rough and tumble from that time until—

Q. What was the result of the injunction suit?

A. The grand wind-up was that our rights were sustained in the Supreme Court of the territory and we were left in quiet and peaceful possession of the road as far as Dudleyville. In the meantime other parties had appropriated the canyon above and did a lot of work up in there, and while we were occupying that position the understanding referred to in this agreement was reached and the road was turned over to the Southern Pacific." (Folios 1674-5.)

From this it appears that the Southern Pacific, before it reached such amicable terms with the Atchison, endeavored to prevent the construction of this line into its territory, or the through line, by blasting rocks. Being defeated in the courts, a few gentlemen got together in a quiet corner in New York, and fixed it up by surrendering the line to the Southern Pacific. On cross-examination, it was apparently endeavored to show that Mr. Murphy's opinion as to the value of his line to the Santa Fe was not that of an expert. (Folios 1703-4.) But counsel learned from him that he had had experience in constructing several lines for the Santa Fe. He then gave the following testimony:

"Q. Well, in your opinion, Mr. Morawetz and Mr. Ripley and the directors of the Atchison made a very great mistake in throwing away this low grade line from Chicago to California, didn't they?

A. Yes, sir. And I am not saying that as putting my judgment against Mr. Ripley's as a railroad man, either; but I am saying it because I know more about the country and the business of the country than Mr. Ripley did.

Q. You put it on that ground, do you?

A. Yes, sir.

Q. That you think you know more about the Arizona situation?

A. Yes, sir, very much."

Mr. Murphy, on direct examination, had stated that he thought he had been informed by Mr. Morawetz that the reason the Phoenix & Eastern stock was turned over to the Southern Pacific was that it was claimed by that company that its territory was being invaded by the construction of this line to the Santa Fe. This was gone into on cross-examination as follows (Folio 1704):

"Q. If you meant in answer to direct questions to say that Mr. Morawetz told you that one of the reasons why the Phoenix & Eastern stock was sold to the Southern Pacific was that the Southern Pacific, or anybody for the Southern Pacific, claimed that it was Southern Pacific territory—or whatever you said—will you please state when Mr. Morawetz told you that, and where?

A. It was in New York, and it was at some time when we were discussing the difficulties that we were having down there in Arizona when the Southern Pacific people were trying to prevent us from building that road.

Q. But the sale wasn't made until some time after you were left in peaceable possession of this canyon?

A. Well, the actual sale wasn't made, but the general understanding was had long before."

It further appeared that at the time the Phoenix & Eastern was sold to the Southern Pacific, that company had a line of road running parallel with it out of Phoenix as far as Mesa, 17 miles, Mesa being in the Salt River valley and the point from which the Government wagon road starts for the Roosevelt dam. (Folio 1714.) As showing the

good faith of this transaction to the people of that part of the country, it should be noted that Mr. Murphy, (Folio 1665), when asked what had been done toward acquiring rights of way down to Benson, after stating that he had secured the right of way for the entire distance, that some of it was given to him and some purchased, testified:

> "Q. What, if anything, did the Phoenix & Eastern do toward securing terminals in Benson?
>
> A. We got the citizens there to buy some ground that gave us the right to get through providing we experienced difficulties in making satisfactory arrangements in crossing the Southern Pacific and in making our connections with the El Paso & Southwestern." (Folio 1665.)

He further testified, (Folio 1668); which is very important considering the fact that the line was actually constructed to Dudleyville, which is the point at which the San Pedro River flows into the Gila, the projected line from this point, to Benson, being up the San Pedro:

> "Q. What kind of country is there between Winkelman or Dudleyville (whichever you may call it), to build a railroad through?
>
> A. In the western territory we call it very easy country to build a railroad into.
>
> Q. Did you have estimates made as to the cost of concluding that line down to Benson?
>
> A. Yes, sir.
>
> Q. How much would it cost a mile?
>
> A. The kind of a road that we were going to build I think about $20,000 a mile."

Surveys Through the Gila Canyon and Aravaipa Canyon to Determine Best Route to the East for Low Grade Trans-Continental Line.

Mr. Murphy was recalled by the complainant, and testified at Folio 8315, et seq, and supplemented his original testimony in a few particulars. He was asked if anything had been done by his company looking to the construction of a line through the Gila Canyon previous to the time that the Arizona & Eastern, the Southern Pacific subcompany, was organized, and the difficulty was had over the right-of-way mentioned in his former testimony, and he stated that they had surveyed a line through that canyon having had engineers in there for several months and had surveyed the line clear through to Lordsburg, the survey beginning in May, 1903, and being finished in December, 1903. The latter month was prior to the organization of the Arizona & Eastern. He said the reason for this survey was to get information with a view to building a railroad extending the Phoenix & Eastern to a connection with the Santa Fe at Deming, being a part of the proposed transcontinental line that he marked on the map when he first testified; and in addition to making that survey the Phoenix & Eastern had made another survey through what was known as the Aravaipa Canyon. This canyon runs at right angles to the proposed line to Benson about ten or twelve miles beyond t ie present terminus of the Phoenix & Eastern at Dudleyville, and is an east and west canyon parallel with the Gila Canyon. He said, at Folio 8317, that the purpose of making the survey up that canyon was to make a comparison of costs and see whether they could find a feasible line that would be less expensive than the line through the Gila Canyon. Mr.

Morawetz also speaks of the consideration being given to the Aravaipa Canyon for the low grade line. (Folio 1870.) The expenses of those surveys were paid by the Phoenix & Eastern, at that time controlled by the Santa Fe under authority given to Mr. Murphy by Mr. Ripley, the President of the Santa Fe. At Folio 8318 Mr. Murphy further testified that a railroad company called the Gila River Railroad Company, was incorporated for the purpose of building the line through the Gila Canyon. Further showing that it was the intention of the Santa Fe to build this low grade transcontinental line, Mr. Murphy testified at Folio 8324 that for that purpose they had changed the specifications for the bridges where the Phoenix & Eastern crossed the Gila Canyon, bringing them up to the Santa Fe's latest standard so as to carry their heaviest motive power. This clearly would not have been done if it had been the intention to build only a branch line. At Folio 8325 he testified:

> "Q. How long after you inaugurated the Phoenix & Eastern was it that the Santa Fe officials concluded to make this part of the transcontinental line as well as to go to Benson?
>
> A. The matter was under consideration all the time, being discussed, and the engineers were exchanging views, Mr. Dunn and Mr. Drake, and we were also having the territory looked up west of Wickenburg, with a view of building the 200 miles that we have now nearly completed; it would be a part of that line."

Summing up the situation, then, as it existed at the time the Santa Fe turned this line over to the Southern Pacific, we find that the line was projected from Phoenix through to Benson and Deming, built as far as Dudleyville, about 96 miles, for 17 miles of the 96 being paralleled by the line of the Southern Pacific running from Phoenix to

Mesa. This traversed the Salt River valley, one of the most fruitful regions of the world, and the importance of which as an agricultural region will be much augmented by the construction of the Roosevelt dam which will irrigate 250,000 to 300,000 acres. It also reached a mineral country destined to be a large copper producing country. (Folios 1678-81.) It is a well known fact that Arizona is either first or second in the production of copper, of all the states. The line could have been extended from Dudleyville to Benson for the remarkably low cost of $20,000 a mile, where it would have connected up with the El Paso and Southwestern, a line anxious for a new western connection, being now confined to a connection with the Southern Pacific alone, and connecting at El Paso, its eastern terminus, with various lines independent of the Southern Pacific. It would also have opened up to the Santa Fe a connection with the Mexican Central out of El Paso. The extension of the line as contemplated from Dudleyville by the Gila canyon or the Aravaipa canyon to the Santa Fe's present line to Deming would, upon the completion of the line from the Colorado River to Bengal, (now finished), have given the Santa Fe a complete new transcontinental line somewhat longer than its other line, but without the necessity of any mountain climbing whatever until dropping over into San Bernardino, California. This state of things existing, it is rather shocking to read Complainant's Exhibit 104, (Folios 1585 et seq.), under which the Santa Fe sold to the Southern Pacific Co. all the shares of the capital stock of the Phoenix & Eastern Co. for a price simply covering the cost of the Phoenix & Eastern line, with interest.

Northwestern Pacific.

Another item entering into this transaction which serves as an example to show how communities and people are traded off through negotiations conducted thousands of miles from the seat of activity of these great public service corporations, was the situation in Northern California. It is described at Folios 1855-6, by Mr. Morawetz. The Santa Fe concluded to extend its system into the territory north of San Francisco Bay, and negotiations were started with the owners of the stock of certain lines running from the Bay, among them the California & Northwestern Railroad, but during those negotiations the stock was sold to the Southern Pacific. In the autumn of 1902, the Santa Fe bought the stock of the Eel River & Eureka Railroad, a short line extending out of Eureka, the traffic of which at that time was chiefly timber into Eureka, from whence it was transported by ship. Mr. Morawetz says they bought the line for the purpose of obtaining that traffic, and for the purpose of obtaining a foothold in the territory there that they had desired to enter, and for which they had intended to buy the line of road purchased by the Southern Pacific.

It appears by the testimony of Mr. Payson, who when testifying had charge of those lines, as assistant to the President of the Santa Fe, (Folio 880), that there was considerable general business done over this line, and that the Santa Fe had acquired certain other small lines in that region of California; but all the timber there produced had to move out by ship from Eureka, the bulk of the lumber coming down to San Francisco, and being further transported over rail lines. (Folio 881.) The Santa Fe had also acquired the Fort Bragg & Southeastern,

a line starting from the coast at the port of Albion running about 23 miles southerly and easterly, Albion being about 200 miles south of Eureka on the coast. (Folio 884.) The Southern terminus of that line was about 100 miles north of San Francisco. Mr. Payson was asked, (Folio 885):

> "Q. What was the purpose of that acquisition by the Santa Fe?
>
> A. It was the nucleus of a feeder which would tap the Mendocino timber country and be tributary to San Francisco.
>
> Q. That is, you bought that line with the intention of making it the nucleus of a line of roads to go up from San Francisco to tap the timber country?
>
> A. A part of a line of roads to go north to tap the timber country.
>
> Q. And at that time the Santa Fe expected to construct that line itself?
>
> A. It did."

He further said that the line near Eureka was to be part of a through line to San Francisco, of which the Fort Bragg & Southeastern would be a feeder. (Folio 885.) This is not merely a matter of local importance as the timber supply of a large part of the United States now comes from California.

The result of the negotiations of Mr. Morawetz and Mr. Harriman, which included the Phoenix & Eastern in Arizona, and the railroad situation north of San Francisco, was the making not only of the contract heretofore referred to, relative to the Phoenix & Eastern, but of the contracts 75 to 78, (Folios 915 to 955), by which all of these various roads in northern California were put into a new corporation called the Northwestern Pacific, the stock being evenly

divided between the two companies, and trusteed with the defendant Farmers Loan & Trust Co., the control to alternate annually between the Santa Fe and the Southern Pacific. See Article 2, Exhibit 78, (Folio 942.) Therefore all competition was eliminated in that region of northern California, and the two lines, instead of each building into the country, proposed to build one line, with a provision for alternate control, but the Southern Pacific having thus secured control of the situation we observe the usual result, namely—no road whatever has been constructed.

Negotiations for Surrender of Santa Fe to Union Pacific Demands.

Mr. Morawetz, at Folio 1855, said:

> "Some time in the autumn or winter of 1902 negotiations were begun for the adjustment of the differences existing between the Southern Pacific Company and the Atchison with regard to conditions in Northern California and in Arizona. *Mr. Harriman objected quite strenuously to our construction of the Phoenix & Eastern line, because he considered that an invasion of territory properly tributary to the Southern Pacific system. Mr. Harriman desired us to sell to him the constructed part of this Phoenix & Eastern road, and to retire from the territory south of Phoenix.*"

It appears that negotiations continued, and while they were in progress, and about September, 1904, Mr. Morawetz was informed by Mr. Harriman that he and his associates had purchased about 300,000 shares of Atchison stock, and asked for representation on the board of directors as we have heretofore shown. (Folio 1859.) So the three matters were all under discussion

and settled at the same time. The Southern Pacific maintained its monopoly in southern Arizona. It prevented the construction of a competing line in northern California, over which the great timber production of that territory might be transported to the markets of the world in competition with it, and it succeeded in getting two of its directors upon the board of the Santa Fe; and although Mr. Morawetz states that the arrangements for the elimination of this competition had been agreed to before, it is an interesting fact, that the resolution authorizing the same was passed on December 12th, 1905, at a meeting of the board of directors at which the defendants Frick and Rogers were present, and at the same meeting the agreement to turn over the Phoenix & Eastern to the Southern Pacific was also approved. (Folios 1579-82.) At the same meeting, the Santa Fe entered into the contract, Complainant's Exhibit 104, (Folios 1585 et seq.), which provided for the sale of the Phoenix & Eastern, and for the construction by the Southern Pacific Co. upon demand, of the low grade line of railway to Deming, mentioned by Mr. Murphy, with a provision that upon the terms therein set forth the Santa Fe Co. should have the right for 15 years to run its *through* trains thereon. The Santa Fe on the other hand, agreed upon demand, to construct the low grade line which it actually had under construction, and has now finished through by Bengal, crossing the Colorado River at Parker, which Mr. Murphy mentioned as a part of the low grade line, giving the Southern Pacific running rights over it. This agreement was of no value to the Santa Fe, because when the line was built through to Deming, it would not have had the right to do local business into the rich region of southern Arizona at all, as it would if it had constructed the line itself, but only

to use it for through business, being put to large expense for interest and maintenance on the same.

Mr. Morawetz testified that the Santa Fe had never made any request of the Southern Pacific to build that line, and that he was confident it never would. (Folio 1882.) He also said that if the Southern Pacific should use the Santa Fe's line by Bengal when finished, they would get a much better grade for their northern California business, than the present line of the Southern Pacific. (Folio 1888.) Thus there was an agreement for the elimination of competition. The Santa Fe had its line built to Dudleyville. It could have built from there to Benson for a small sum—two millions of dollars—and it was Mr. Morawetz's opinion that the road would eventually be built to Benson, as shown by his testimony at Folio 1873:

> "When we took up the Phoenix & Eastern, it was with an understanding with Mr. Murphy that we would cause the line to be built as far as Dudleyville, and that we were not ready to go any farther, and I remember that Mr. Ripley did not think it advisable to go to Benson, while I was disposed to go to Benson if we went anywhere.
>
> Q. Well, you went somewhere, didn't you?
>
> A. We went to Dudleyville.
>
> Q. You were overruled in that, were you? If so, by whom?
>
> A. Hardly overruled, no. I was inclined to think that sooner or later the line would be extended to Benson anyhow.
>
> Q. That was your idea?
>
> A. After being built to Dudleyville.
>
> * * * * * *
>
> Q. You knew the Southern Pacific had a line over as far as Mesa along the line of the Phoenix & Eastern?
>
> A. Yes.

Q. When was it that Mr. Harriman came to you and objected to the invasion of his territory? Was that after the line was completed, or before?

A. Oh, before it was completed; while it was in the course of construction.

Q. Was that at the time rocks were being thrown down on the tracks, as Mr. Murphy says, or was it before that?

A. Oh, it was before.

* * * * * * *

Q. So when you found you couldn't agree otherwise, he tried the 'rock' treatment, did he?

A. I remember stating to him that I did not think such action would facilitate the negotiations and that it certainly would not influence me favorably to agree to his demands.

Q. Mr. Morawetz, if the line had been extended to Benson, as originally contemplated when Mr. Murphy proposed to build it, you would have connected there with the El Paso & Southwestern, would you not?

A. Yes.

Q. The El Paso & Southwestern is an entirely independent line, isn't it?

A. I believe it to be. * * *

Q. That line reaches El Paso, doesn't it?

A. Yes.

Q. And there connects with the Mexican Central, doesn't it?

A. Yes, sir.

Q. Running to Mexico City?

A. Yes.

Q. And connects with other lines to the east?

A. Yes.

Q. The Texas & Pacific?

A. Yes.

* * * * * *

Q. The only thing that was left, in order to give an outlet and an interchange between Arizona and the country to the west and the country along the

El Paso & Southwestern and down into Mexico, was the construction of this short line from Benson to Dudleyville, as long as the Santa Fe owned that road, isn't that true?

A. Yes.

Q. And was that the invasion of Southern Pacific territory which Mr. Harriman objected to?

A. No, he did not specify. It was generally extending our mileage south of Phoenix.

Q. He thought that there should be a wall erected at Phoenix, and you should stay on your side of the fence and he on his side of the fence, isn't that right? Or didn't he propose to stay on his side of the fence?

A. I should have proposed it if he had not.

Q. Well, that was his suggestion, was it—that you should not go south of Phoenix?

A. No, really all that I can remember is that he objected to our construction of this line south of Phoenix on the ground that we were going into territory which was properly tributary to Southern Pacific lines." .(Folios 1874-5.)

After further testifying that the Southern Pacific then had a line reaching as far as Mesa in the rich fruit growing district, he gave the following significant testimony:

"Q. Was there, then, any substantial reason why that line should have been acquired by the Southern Pacific except to stop any possible competition in that territory and to prevent a new outlet?

A. I do not doubt that the Southern Pacific wanted to buy the line, and did buy it, for the reason which was assigned, namely, that they did not want the Atchison to extend into that territory.

Q. Well, that is another way of stating that they did not desire competition from any other line in that territory, isn't it?

A. No. They did not want that territory to be occupied by the Atchison, because if there was any-

thing in the territory for a railroad company, they wanted it for themselves.

Q. That is not entirely the whole truth, is it, Mr. Morawetz? If your line had been extended down to Benson, it would have produced competitive conditions, certainly, between the country to the east and Phoenix, wouldn't it?

A. Oh, I agree.

Q. Yes.

A. Yes, I agree. I thought you meant the line to Dudleyville.

Q. No, I am speaking of the whole proposition.

A. The whole proposition, yes.

Q. Getting control of the proposition?

A. No doubt.

Q. *So that the real reason why Mr. Harriman desired to get that line into their hands was to prevent possible future competition through a line that you might run down to Benson?*

A. *I think that is true.*" (Folios 1878-9.)

Mr. Morawetz, on cross-examination, repeated his statenent at Folio 1906, in the following words:

> "I think the main reason, so far as I knew, was a desire to keep the Atchison out of that territory."

Therefore the people of Arizona who had given the right of way for the Phoenix & Eastern, who hoped for competition with the Southern Pacific, were sold out and betrayed by the Santa Fe as part of the same deal by which northern California was bottled up, and two Union Pacific directors went on the board of the Santa Fe. The testimony of Mr. Morawetz and of Mr. Murphy should be read in full in order to fully appreciate the iniquity of this proceeding. It had the usual effect, and the territory that would have been opened up, suffered the blight which has accompanied Southern Pacific and Union Pacific ownership in

Oregon. The line was built to Dudleyville by the Santa Fe. It remains at Dudleyville. The line to Benson has not been built. The line through the Gila Canyon to Deming has not been built, and probably never will be. Professor Douglas testified that he knew the San Pedro valley between Dudleyville and Benson; that it was a highly mineralized country, where the mines have never been developed, partly because of the lack of cheap transportation. (Folio 1915.) Mr. Murphy testified (Folio 1681), that when they started to build the road through to Benson, there was a very large amount of money put into that region, and a large amount of development was started in opening up mines, prospecting and getting ready for large operations. Again, at Folio 1717, he says he knows there was considerable activity started in between Dudleyville and Benson, as a result of the anticipated road; that he had a great deal of correspondence with mine operators and owners of mines at the time he was building; that there are mines there at present, and that their only outlet is either by wagon to Dudleyville or by wagon to Benson. He then testified:

"Q. Are there any mines between Dudleyville and Phoenix on the Phoenix & Eastern?

A. A great many.

Q. What kind of mines?

A. Gold, silver, copper and lead; principally copper there; the principal mines are copper.

Q. Where are the ores from those mines smelted?

A. Well, I don't know as there is very much going out of there right now.

Q. Where have they been when they were in operation?

A. Well, before they closed the Humboldt smelter, before we sold the road to the Southern Pacific, they came to us on the Santa Fe, Prescott & Phoe-

nix, and went up to Prescott, and went out to the Humboldt smelter, and were smelted there.

Q. Where is the Humboldt smelter?

A. It is on a branch of the Santa Fe, Prescott & Phoenix road, north of Prescott.

Q. What smelters are there, if you know, along the line of the El Paso & Southwestern?

A. Well, the principal smelters are the smelters of the Copper Queen Company at Douglas, and then the Calumet & Arizona have their smelting plant there also.

Q. Are there any smelters at El Paso?

A. Yes, some very large smelters there; the American Smelting & Refining Co." (Folios 1717-18.)

At Folios 5587 to 5589, appear Complainant's Exhibits 195 and 196, showing the rates on ore from all of the stations on the Phoenix & Eastern to the Humboldt smelter, in effect when the Santa Fe owned the line, and the rates put in force by the Southern Pacific when it acquired control. These exhibits show that the rates have practically doubled, so that the shipments naturally ceased, as Mr. Murphy testified. The Government of the United States is spending vast sums of money in irrigating this region, the Roosevelt dam project being one of the largest in the world. The territory that has been brought under water by the completion of the project, is that which was abandoned to the Southern Pacific by the Santa Fe when it turned over the Phoenix & Eastern road. Therefore the Government has been spending money for the purpose of aiding and perpetuating, and making more profitable a monopoly created in violation of the statutes of the United States.

Division of California Fruit Traffic.

It is not only in Northern California and in Arizona that the close relations of the Santa Fe and the Southern Pacific have eliminated competition. In southern California there is substantially no competition for the enormous citrus fruit traffic.

Mr. Bissell, Assistant Traffic Manager of the Santa Fe system, residing in San Francisco, was asked with reference to the handling of the fruit crop of southern California. He was naturally an unwilling witness, but the situation was fairly well developed. (Folio 983.) He was asked whether his company had been actively at work trying to get business for their lines in competition with the Southern Pacific, and answered:

> "A. As to that, I could not say. I do not think we do, because the main effort we have had for the last three or four years has been to get our cars back fast enough to take care of the fruit that was offered."

He further testified, (Folios 983-4):

> "Q. Mr. Bissell, the Southern Pacific and the Santa Fe lines are very close together, are they not, between San Bernardino, we will say, and Los Angeles?
>
> A. Yes, sir.
>
> Q. And there is a large amount of fruit that might easily be procured by one company as against the other by active solicitation. Is that not true?
>
> A. Well, that is true in a measure, but most of that fruit is controlled—the routing of most of that fruit is controlled by the location of the packing houses. If an orange shipper had a packing house on the line of the Southern Pacific he would not

ship over our line unless there was some unusual condition of affairs. If the Southern Pacific had no cars he might haul his fruit over to our line.

Q. Do you make any effort to get fruit that belongs to packers on the Southern Pacific track by holding out the offer of efficient service, or facilities, or anything of that sort?

A. Why, we have at times done so, Mr. Severance.

Q. How long ago did you do that?

A. I could not tell you exactly.

Q. You do not do it now, do you?

A. I don't think so. We haven't equipment enough. We have always had a hard time to get that equipment back to take care of the business originating on our own tracks."

His attention was then called to a statement made by Mr. Stubbs in Chicago, testifying before the Interstate Commerce Commission in 1902, in which Mr. Stubbs stated that there was an understanding that so far as the orange business was concerned, the Southern Pacific and the Santa Fe would endeavor to work an equal division of that traffic, and that that arose from the fact that it was about so divided in this proportion on their local lines in California, about 50% being produced on the lines of the Santa Fe, and about 50% on the lines of the Southern Pacific. Mr. Bissell was asked whether that agreement was still in force, and testified:

"A. I don't—the general policy is still in force." (Folio 986.)

He was unable to state the amount of business that the San Pedro road got. Mr. Bissell also testified that the schedule of time they endeavored to maintain on shipments of oranges from the valleys of southern California to Chicago

was eight days, but he was unable to state what time was made by the Southern Pacific or the Rock Island or the San Pedro road. (Folio 989.)

Mr. Phillips, Traffic Manager of the California Citrus Union, Los Angeles, and of the Earl Fruit Co., Sacramento, whose company ships about 20% of the Southern California output, testified that of the packing houses of his association, 49 were on the Southern Pacific, 42 on the Santa Fe, and 3 on the San Pedro. (Folio 1245.) On the question of speed in shipment, he testified, (Folio 1243):

> "A. Well, oranges are a perishable product, and the quicker we can get them to their destination and sold and our draft paid, the more money we are likely to have for our growers, and that is beneficial to them and to the industry in southern California. If we can get a car into Chicago in seven days and delivered to a consignee, and he pays his draft, and it should go to pieces on the eighth day that loss would be with him and not with the California growers. Therefore every day counts on an orange shipment, or any other perishable goods."

He had previously testified that there were some very fast shipments over the San Pedro road the year before, and he was asked how long that train was kept in service. He said he did not remember the exact number of trains. He thought there were only four or five of them, but that they made as fast time as 5½ days to Chicago on one train. This, it will be seen, is two and a half days faster than the time made ordinarily by the Santa Fe, as testified by Mr. Bissell.

Mr. Woodford, General Manager of the California Fruit Growers Exchange, handling about 47% of the entire fruit

crop of southern California, as he stated at Folio 1246, testified that they had only four or five packing houses on the San Pedro line. He makes, at Folio 1248, the following very significant statement:

> "I think, according to the published reports of the railroads, that the Salt Lake last year had about 10 per cent of the citrus fruits traffic, and the Santa Fe and the Southern Pacific each about 45 per cent. But that is not our associations' line of business alone."

Again, at Folio 1249:

> "Q. Of this 10 per cent that the Salt Lake moved last year, of the total shipments, can you state whether the whole or a large percentage of that originated on their own rails?
>
> A. I think a very small part of it originated on their own rails.
>
> * * * * * *
>
> Q. What percentage of the packing houses in this district are on the Santa Fe rails?
>
> A. I can't tell you that. About 60 per cent of all the fruit that is packed in warehouses originates, I think, on the Santa Fe.
>
> Q. That is what I want to get at.
>
> A. Some packing houses may pack more fruit than others.
>
> Q. I understand that. But the fact is that about 60 per cent out of the total of the citrus fruits raised here is tributary to the Santa Fe road?
>
> A. Yes, sir.
>
> Q. Still, when it comes to moving it to market, last year the Santa Fe moved about 45 per cent of the total shipments, the Southern Pacific about 45 per cent, and the Salt Lake about 10 per cent?
>
> A. Yes, sir; approximately, according to their published reports."

There could not be a more striking evidence of the influence of the Union Pacific organization over the Santa Fe than the foregoing. The citrus fruit traffic is very important and lucrative; and still, with 60% of the fruit tributary to the Santa Fe and only 40% to both the Southern Pacific and the San Pedro route, the latter, having almost no packing houses along its line, the two subsidiaries of the Union Pacific ship 55%, and the Santa Fe only 45%, thus dividing 15% of the business which it should control, under the testimony of Mr. Bissell between the two rival roads.

Fast Fruit Trains Put on by San Pedro and Rio Grande Abandoned Upon Demand of Southern Pacific and Santa Fe.

Mr. Wells, General Manager of the San Pedro, Los Angeles & Salt Lake road, testified that the total shipment of citrus fruits out of that territory was about 25,000 car loads per year, and the total over his line 2,330, a little under 10 per cent. He was asked about the fast train service made for a time by his road, and testified, (Folios 1227-8):

> "Q. It has appeared here by some testimony, Mr. Wells, that for a time your road made some fast shipments of citrus fruits—about a year ago last winter. (His testimony was taken before the Interstate Commerce Commission February 8, 1907.) You recall that fact, do you not?
>
> A. Yes, sir.
>
> Q. What was the time made to Chicago?
>
> A. Something like six days, as I remember, or six and a half.
>
> * * * * * *
>
> Q. What lines of road did those trains move over?

A. They were turned over to the Rio Grande at Provo and Salt Lake.

Q. And who took them after the Rio Grande? The Burlington?

A. They took some, I believe; I don't know."

Again he testified, (Folios 1278-9):

"Q. Somebody or other was responsible for starting this six day service. Now, was that six day service abandoned through the request of the Rio Grande or the C. B. & Q.?

A. It worked itself out, as a matter of fact.

Q. Just answer my question. Did either the Rio Grande road or the C. B. & Q. request the abandonment of that through service, that fast service?

A. No, sir; they did not. * * *

Q. Did the Southern Pacific people make any suggestions to you about that train—about those trains?

A. Yes, sir; they did. They protested.

Q. Yes, that is just what I thought.

A. So did the Santa Fe."

And after stating that their road got out of condition, he testified in answer to Commissioner Lane, who inquired as to how long these fast trains continued, that they ran them during January and February, and when asked when he got the protests from the Southern Pacific and Santa Fe, stated that he thought it was when the first train was landed in Chicago. He then gave the following amusing testimony:

"Q. You ordered them to be stopped yourself, either when you were east or when you were here?

A. I didn't order them to be stopped.

Q. Did you not? Who did order them stopped?

A. They stopped on account of disability on our part to keep the time up.

Q. Were there any orders given for them to be stopped at all?

A. Not by me.

Q. By anybody on the road?

A. Not that I know of.

Q. Just stopped of themselves?

A. Stopped of themselves. * * *

Q. When the bad times were over, why did you not start those trains up again—bad times on your road, I mean?

A. Well, the bad times are not over yet.

Q. They are not over yet?

A. Not quite, no, sir; not by any means." (Folios 1230-31.)

At Folio 5649 at the hearing of this case in New York on June 10th, 1909, the following statement appears in the record, made by counsel for the defendants:

"It is stipulated that the fast train service for citrus fruit from Los Angeles to Chicago, referred to in the testimony of J. Ross Clark and R. E. Wells, taken before the Interstate Commerce Commission in 1907 and read into the record in this case, has never been resumed."

From this it is apparent that the citrus fruit business, both as to the quantity to be hauled by the Santa Fe, the Southern Pacific and the San Pedro, which as we have shown in another portion of this brief, is a part of the Union Pacific system, is a matter of understanding; that the business is apportioned, about 10% to the San Pedro, and 45% to each of the other lines, and that there is no competition in train service. It is significant to notice that the fast train service which for a time was of such marked benefit to the parties growing this enormous output of citrus fruits, was not over the Union Pacific, which is the short line from Salt Lake to the Missouri River, but was over the

rather roundabout route of the Rio Grande and the Burlington, a route which, as has been testified, is some 300 miles longer from Salt Lake to the river than the Union Pacific line, but the Santa Fe protested, and the Southern Pacific protested, and the fast service stopped "just stopped," as said by Mr. Wells; stopped in the winter of 1906, and has remained stopped to the summer of 1909.

Division of incoming cargoes from the Orient between the Southern Pacific and Santa Fe.

Since a date even prior to the entry of the Union Pacific directors into the Santa Fe board and the purchase of Santa Fe stock by the Union Pacific, there has been a division of all incoming traffic from the Orient, received at San Francisco by the boats managed by Mr. Schwerin, and there is no competition whatever for this business. The matter has recently, however, been placed upon a more definite basis. The Santa Fe conducts its Oriental traffic in connection with the Pacific Mail and the allied lines controlled by Mr. Schwerin. Mr. Schwerin testified that neither the Southern Pacific nor the Santa Fe have maintained any agencies in the Orient soliciting business, but when a ship comes in he turns over the whole cargo to the Southern Pacific, and when another ship comes in he turns the whole cargo over to the Santa Fe. (Folio 2734.) Mr. Schwerin's testimony was given in January, 1907, and he said that that arrangement of giving alternate carloads to the two lines had been in force for about six months. Previous to that time all of the freight was turned over to the Southern Pacific Co. and they divided it with the Santa Fe under an understanding with the steamship company that there should be a fair division somewhat in proportion to the amount of outgoing freight received by the steamship company from the Santa

Fe and the Southern Pacific respectively. (Folio 2737.) The change in the method of handling the traffic, Mr. Schwerin testified, came up in relation to the steamship company routing the overland freight, at a conference between himself, Mr. Luce, General Freight Agent of the Southern Pacific Co. at San Francisco, and Mr. Chambers, General Freight Agent of the Santa Fe at San Francisco. He said:

> "A. We discussed the question and concluded the best way to do, instead of apportioning out of the ship any special cargo, for instance, a cargo that might be served best by the Santa Fe lines, to try to aggregate that cargo out of the ship, that we would turn over the whole cargo to the Santa Fe, and let them bill it out as they saw fit, and then turn over the whole next cargo to the Southern Pacific, and let them bill it out as they saw fit.
>
> Q. Mr. Schwerin, did you three gentlemen agree on that?
>
> A. We did.
>
> Q. And you have since carried out that agreement?
>
> A. As far as I know.
>
> Q. Up to this date?
>
> A. As far as I know, it has been carried out.
>
> Q. So that you give those instructions to your subordinates?
>
> A. Yes, sir.
>
> Q. And that was satisfactory to the two roads with whom you made the trade?
>
> A. As far as I know, yes, sir." (Folios 2743-4.)

At Folio 5646, a stipulation was put in the record, that Mr. Schwerin, who was to have testified again, but had been obliged to leave New York, would, if present, testify among other things, that there has been no change in the routing of the homeward business as between connecting

rail lines at San Francisco. This stipulation was made on June 10th, 1909.

The various dealings for the suppression of competition by the Santa Fe and the Southern Pacific and Union Pacific companies clearly demonstrates that they are so related to each other, and the business they handle is of such a character, so susceptible to competition, the territory through which they run is so new and the necessity of railroad development so great, that there is no doubt that Mr. Morawetz, the defendants' witness, was right when he said that it was undesirable, if legal, for the Union Pacific to own any stock of its competitor, the Santa Fe. And common directors and such ownership of stock necessarily can lead to but one result, namely, to the continuance of the suppression of the competition that should naturally exist between these two systems, which elimination or lessening of competition is to the detriment of the public as well as in violation of law.

PRACTICAL DESTRUCTION OF PANAMA ROUTE.

As we have shown in discussing the Trans-Pacific business, the Southern Pacific owns a majority of the stock of the Pacific Mail Steamship Co., which operates in connection with the Panama Railroad on business between New York and San Francisco. This is a very old line. Mr. Rossbottom, Assistant to the Vice President, and Secretary of the Panama Railroad Co., and custodian of its records, and who has been with the company a long time, testified that the Panama Route was the first transcontinental route, and was opened in 1850; that the Pacific Mail formed a part of that route as far back as 1872. Complainant's Exhibit 181 (Folios 5494 et seq.) is an original contract made between the Pacific Mail Steamship Co. and the old Union Pacific Railroad Co. in 1872. We have heretofore referred to this contract. It speaks of the natural competition between the Union Pacific and the Pacific Mail in relation to the transportation of merchandise and other freight between the cities of San Francisco and New York, and arranges for a control of the rates.

Exhibit 182 (Folio 5503), is an agreement between certain railroads and the Pacific Mail, dated the first of October, 1889. Among the parties to this are all of the railroad defendants here (except the San Pedro) or their predecessors. By this agreement a guaranty of $75,000 a month earnings was made by the railroad companies, in consideration of which the Steamship Co. agreed to permit the railroads to fix the rates on which all through freight between New York and San Francisco and all passengers, should be carried. It is unnecessary to go into the matter in detail. It appears by the testimony of Mr. Schwerin, as we have shown, that shortly prior to the acquisition of the control

of the Southern Pacific by the Union Pacific, the former had purchased a majority of the stock of the Pacific Mail. Contracts have been made from time to time between the Panama Railroad Co. and the Pacific Mail Steamship Co., notably Complainant's Exhibit 179 (Folio 5451), dated December 16, 1895, and the supplemental contract, Complainant's Exhibit 180 (Folio 5483), made June 11, 1902.

There are certain other lines in connection with which the Panama Railroad operates, but not on business between ports in the United States on the two oceans. Mr. Rossbottom testified, (Folio 5444), that goods cannot be shipped from New York to San Francisco by way of Panama in other than American bottoms, and that there was no other line of boats running from Panama to San Francisco of American register except the Pacific Mail. It appears by the table (Complainant's Exhibit 177, Folio 5442), showing the tonnage over the Panama Route between New York and San Francisco, from 1898 to 1908, that in 1901 there was a substantial increase in the amount of tonnage. Mr. Rossbottom explained that that was due practically to the fact that the Panama Railroad was operating its own line on the Pacific coast until the contract of 1902 was made effective. On the 12th of January, 1905, notice was given by the Panama Railroad Co., which had been acquired by the United States Government, electing to terminate its contract with the Pacific Mail on the 12th of July, 1905, but business has since been conducted practically on the basis of the contract of 1902, with the exception that the exclusive privilege given to the Pacific Mail to operate between San Francisco and Panama on through business, was cancelled, but that cancellation was of no importance, because there is no other line operating. (Rossbottom, Folios 5444-45.)

It will be observed by this table that in spite of the extraordinary growth of the west and the enlarged interchange of business between San Francisco and New York, the tonnage over the Panama Route westbound has dropped from 43,455 tons the year that the Panama Railroad had its own ships on the Pacific, to 23,258 tons in 1908, and that when operating with the Pacific Mail, there has been a steady decrease from 1904 down. On eastbound tonnage from San Francisco to New York traffic has dropped from 42,086 tons in 1901, to 15,162 tons, and from 1904 down, there has been a decrease of substantially 50 per cent.

A complaining letter from Mr. Schwerin appears in the record as Complainant's Exhibit 178, (Folio 5446), in which he very strenuously objects to the minimum rate provided for in the contract, which had been cancelled, but which has been treated as a working agreement since. Mr. Rossbottom said that Mr. Schwerin demanded of the directors of the Panama Railroad a net return of $5 a ton between Panama and San Francisco, over and above all charges. (Folios 5449-50.) It appears that substantially the only change instituted by abrogating the contract, was that since 1905, the Pacific Mail has had some competition in connection with the Panama Road on business for Central America and Mexican ports. (Folio 5511.) The Pacific Mail chafes under this competition. The Panama Railroad Co. owns the ships forming the part of this route on the Atlantic seaboard. Some correspondence between Mr. Schwerin and Mr. Drake, Vice President of the Panama Road, appears at Folios 5514 to 5525.

Mr. Rossbottom called attention to the fact that under the contract which has been treated as the basis of operation since its cancellation, the Pacific Mail had the right

to make rates from San Francisco or Pacific coast points to New York, but that the Panama Railroad might insist upon its establishing as low a rate as $8 a ton. On cross-examination counsel asked if the eight dollar rate was not demanded in order to give the Panama ships a northbound load from Colon, and he replied that it was. He was then asked if that was not an extraordinarily low rate for business between San Francisco and New York, and replied that it was not; that when the Panama Railroad operated its own line, it established rates as low as $6.00 a ton from San Francisco to New York. That was in 1894 or 1895. (Folio 5543.)

Mr. Rossbottom also said that the eight dollar a ton rate mentioned in the correspondence only applied eastbound, and that the westbound rate was figured on a percentage below the rates of the transcontinental railroads. that the westbound rates average about the same as the American & Hawaiian Steamship Co. (Folios 5550-51.) *The practical operation of this line is to make it substantially no competitor. This is because of the poor service given by the Pacific Mail, and the inferior character of its boats.* Mr. Scott, one of the leading merchants of San Francisco, President of the Pacific Hardware & Steel Co., testified (Folios 4922-3) that the rates on the Panama Route are at a fixed differential as compared with the all rail rate, and after stating that the Pacific Mail ran on the Pacific side of the Isthmus, he was asked as to the charactor of their boats, and said that they were what is generally called a lot of tubs, and have been for some time, and that there is no comparison between their ships and those of the American-Hawaiian line, which is first-class, up to date, with quick ships and proper facilities for handling freight in and out.

Mr. Connor testified that he was the agent of the Panama Railroad Co. in San Francisco for some time, and when the Panama Railroad was competing for the same traffic with the American & Hawaiian Steamship Co. after it was put on, they were both working business to Portland, and the O. R. & N. boat line handled the American-Hawaiian business from San Francisco to Portland at a less rate than they charged by the Panama Line, which worked against the Panama Route.

This is another example of the competition that existed between the Union Pacific system and the Southern Pacific system prior to the merger. (Folio 4827.) This was brought out on cross-examination of Mr. Connor. In connection with his testimony there was introduced Complainant's Exhibit 169, the contract between the Panama Railroad Co. and the Pacific Mail Steamship Co. dated June 11, 1902. (Folio 4789.)

Mr. Connor testified that when he represented the Panama Road, the Pacific Mail Steamship Co. made ten or eleven stops between San Francisco and Panama at Central American and Mexican ports, but made no other port in the United States except San Francisco; that he had difficulty in getting space on their boats for the traffic he was able to secure; that the ships had been in service a good while; that they are still in service, except as they have been wrecked; that in his day they were fifteen or twenty years old, some of them older; while they have since bought some boats, he does not know of their buying any new boats. (Folios 4780-81.) Owing to the lack of capacity of these boats, freight would accumulate on the Isthmus west bound. (Folio 4782.)

Mr. Williams, now the agent of the Panama Railroad Co. in San Francisco (Folio 5028), when asked as to the class of boats used by the Pacific Mail in the Panama service, said that they were considered out of date. They leave San Francisco every nine days, make nine or ten stops, *and their average time to the Isthmus is 30 days,* and they discharge cargo from New York all along the Mexican and Central American coast coming north. At Folio 5029 he said the Panama Railroad steamers on the other side are very much larger and superior to the Pacific Mail boats, and that they have a six-day sailing, and make the trip from New York to Colon in six days. He further testified that the average time between New York and San Francisco by the Panama Route was forty-five days, while the average time of the American-Hawaiian line, which operates across the Isthmus of Tehuantepec was about thirty days. That of the forty-five days, not exceeding ten or twelve days is consumed in the transportation from New York to Colon and across the Isthmus of Panama. When the Panama Route had its own steamers on the Pacific the ordinary time between New York and San Francisco was between thirty and thirty-five days. (Folio 5030.)

Mr. Melvin, Traffic Manager of the California Fruit Growers' Association, says that they ship very little by the Panama Route, much more by the American-Hawaiian Line, for the reason that it takes longer in transit by the Pacific Mail, and that their goods have to be corner-strapped to strengthen the boxes, when going by the Pacific Mail which is not required by the American-Hawaiian Line. (Folios 5137-8.)

Mr. Chapman, at present the Traffic Manager of the Pacific Hardware & Steel Co., testified that from Pittsburg and from the New England states, the time of transit to San Francisco by the Panama Route was 65 or 70 days; part of that includes getting the goods to New York, and the delay in New York; that the time of transit after the steamer leaves New York is about 45 days. (Folio 5165.) He further testified at Folios 5166 and 5167, that the American-Hawaiian boats were large steamers with a carrying capacity of about 12,000 tons, and were modern vessels equipped to handle large and heavy pieces of material such as long structural iron and steel. Pacific Mail boats were much smaller; had been in the service much longer; there are many classes of freight they cannot handle, and they are not equipped for the loading and unloading of goods as are the ships of the American-Hawaiian Line. They cannot take long lengths of structural material or large sized plates or large, heavy blooms or billets. He further said (Folio 5166):

> "Of course you understand that their boats very often spring a leak coming up the coast, and in figuring on shipping goods by that route you have got to take that into consideration, figuring your salt-water damage as against the American-Hawaiian route.
>
> Q. Is that a usual thing for the Pacific Mail boats to spring a leak coming up the coast?
>
> A. Well, I might say they have had bad luck lately; we have had a good many cases of damage from that cause. I can call to mind now that the last two or three shipments of plate iron that they had in were damaged by salt water. When I took it up with them I was advised that the vessel met with heavy weather and sprang a leak."

This is a very fine showing for an organization that prides itself, so far as its rail lines are concerned, on having them in good physical condition, with proper equipment. The defendants carefully refrained from offering any testimony as to the physical condition of the Pacific mail boats or as to expenditures upon them. The explanation is very simple. It is for the advantage of the rail lines to destroy the Panama Route, so far as possible, and discourage shipments by that route. Therefore, we have the old leaky lot of tubs, with no modern facilities for handling traffic, occupying a long time in transit, and the manager objecting to low rates. This Panama situation is merely an incident to the general scheme of monopolizing the transcontinental business in the hands of the Union Pacific Railroad system.

EFFECT OF CONSOLIDATION UPON THE PUBLIC INTEREST.

There are certain natural results that inevitably flow from the establishment and maintenance of a monopoly such as we have here presented. The purpose of a monopoly is to secure as large a profit as possible to the parties who control it, without reference to the public interest, except in so far as consideration of the public interest will itself tend to enlarge profits. Neither the law nor the common sense of mankind recognizes the existence of a *beneficent* monopoly. This whole record bristles with evidence of the desire of the defendants to use their power for their own profit without recognition of the public nature of the enterprises with which they have been connected. There is nothing singular in this. The defendants do not differ from other persons who have acquired a monopoly of some article that the public must purchase or consume, and it is because of the inherent selfishness of monopoly and the great loss suffered by the multitude for the enrichment of the few, that courts and legislatures have for centuries frowned upon the same. At page 18 of this brief we called attention to the language of this court in the opinion in the Standard Oil case enumerating three evils resulting from monopoly, and stated that we would show that the transactions of the defendants under investigation in this action have resulted in each of the same. They may be briefly stated as follows:

a. Economy in operation, resulting in poor service.

b. Utter failure to extend the lines of road and build branches for the development of territory which, but for the amalgamation, would have been naturally competitive territory.

c. Increases in rates in spite of the fact that the tendency of railroad charges in this country is downward.

We will discuss these in their order:

a. THE CONSOLIDATION HAS TAKEN AWAY INCENTIVE TO PROMPT SERVICE.

Mr. Knight testified that previous to the consolidation, when he was General Agent of the Union Pacific in Chicago, they had excellent service. He said:

> "We have taken certain classes of freight out of here and, of course, with effort to make time, put it to the dock in San Francisco in five days. But six and seven days was pretty regular service for us." (Folio 3011.)

Mr. McCarthy, in connection with his testimony, introduced a rate card, Complainant's Exhibit 151. (Folios 3868-3902.) This showed that on October 1, 1900, the regular time of the fast freight schedule from the Missouri River to Ogden was 54 hours, and he says that the corresponding train, which is the fastest freight train that the Union Pacific now runs from the River to Ogden, is 100 hours and 45 minutes. This is in spite of the fact that the Union Pacific management has shortened the line by 40 miles, and has eliminated a lot of curves and grades, as was triumphantly declared by the late Mr. Harriman in his testimony which was read into the record at Folios 1320-21. It is significant to notice, however, that Mr. Harriman did not claim that those expenditures had resulted in quicker service. He merely said:

> "Those improvements, which cost all these millions of dollars, have enabled us to develop a larger traffic, permit a greater traffic to go over those lines and to reduce the percentage of the cost of operation."

It is undoubtedly true that it has reduced the cost of operation and made larger profits for the stockholders of

the Union Pacific Railroad, but that is not of much interest to the patrons of the road who pay the charges which have enabled the Union Pacific to establish a credit upon the basis of which it has bought railroad stocks substantially all over the United States and to a great extent destroyed competition in the trans-Missouri territory.

Mr. McCarthy, when testifying that as a competitive measure on Portland business, a train was put on which made the run from the River to Ogden in thirty-two hours, was asked whether it was of advantage to the jobbers of Salt Lake to have fast freight trains to bring in their goods from the east, and he said it certainly was, and that it was a disadvantage to have slow trains. (Folio 3912.)

There is no excuse for this diminution in service.

Mr. McCarthy further stated that the Union Pacific now did not even make their long schedule. He testified at Folio 3932:

> "Merchandise, package freight, moving less than carload, varies from seven to twelve days in delivery from the time it passes Council Bluffs until it is delivered in Salt Lake City.
>
> Q. In the old days, at the time this faster freight schedule was in force, did they make the time?
>
> A. Very closely.
>
> Q. So it is your experience that they have not only lengthened their time, nearly doubled it, but they do not even make the slower time?
>
> A. That is it."

He further said that the time on carloads from Chicago by the Wabash, Missouri Pacific and Rio Grande is about the same as the Union Pacific. He was asked, on cross-examination, why this slow time was made by the roads, and said:

"A. I have my opinion. On the Union Pacific I should say that the time was lengthened out in an effort to increase the net revenue, increase their train haul. The time of the Gould lines, I think, is due to the deterioration of their property and inability to make better time." (Folios 3930-1.)

Mr. Love, Traffic Manager of the largest mercantile institution in Utah, testified at Folio 4118:

"Q. How is the service of the Union Pacific from the Missouri River in the matter of time (freight service) as compared with what it was ten years ago?
A. It is not as good."

Mr. Romney, a wholesale lumberman at Salt Lake, testified that in his opinion in many instances the time of shipments moving between Portland and Salt Lake are slower than they used to be. In another connection we have called attention to the time that was made into Portland during the rivalry between the two routes. (Folio 4316.)

Mr. Adams testified that his line, the North Bank road, running in connection with the Northern Pacific and Great Northern, makes a freight schedule from St. Paul to Portland of six days, and from Chicago eight or nine days. (Folio 4419.) The distance from Chicago to Portland is about 2,400 miles. The distance from the Missouri River to Salt Lake is about 1,000 miles, and still at the date of Mr. McCarthy's testimony the time was about the same by the northern route to Portland from Chicago that it was from the Missouri River to Salt Lake by the Union Pacific. This testimony makes particularly interesting another statement of Mr. Harriman's, at Folio 1203:

"If we had not had the power to buy the Southern Pacific with the credit of the Union Pacific, the terri-

> tory of the Southern Pacific would have been ten years behind what it is now. If we had acquired the Northern Pacific, the Northern Pacific territory would have been ten years ahead of what it is now."

We will discuss in another connection the question as to what effect the merger of these great systems has had upon the territory tributary to them, but it might reasonably be asked in this connection if the development of the territory served by the Northern Pacific would have been accelerated very much if, instead of the kind of service that line is giving, there was substituted for it the character of service offered by the Union Pacific.

Mr. Harriman further remarked, at Folio 1298, in discussing the great benefits that would have arisen if the defendants could have succeeded in their unlawful design of securing the Northern Pacific:

> "I believe the improvements on the Northern Pacific would have been more drastic, that their equipment and motive power would have been increased more rapidly, and I believe more intelligently. I understand —I am told now that the Northern Pacific has got— is unable to move the traffic tributary to it, and that a large part of its motive power—excuse me—not a large part of its motive power, but a considerable part of its motive power is out of service because of not being in proper condition."

It is a curious fact that, with the Union Pacific in such prime condition, with so much equipment, it is still unable to give service that is at all comparable with that of its unfortunate rival, the Northern Pacific.

Mr. Harriman also paid his respects to this Court in connection with the decision in the case of *Harriman v. The Northern Securities Co.*, in the following language:

> "Then we were forced to take, by the decision of the Supreme Court *unjustly*—it may have been legal—Great Northern which we did not want, and a lesser amount of Northern Pacific that we had deposited with the Northern Securities, and for which we received the Northern Securities stock." (Folio 1265.)

It is a possible assumption that the regret thus expressed, that the defendants' movements were interfered with by the Supreme Court, arose out of disappointment at not being able to substitute for such train service as the Northern Pacific is giving its patrons, the kind of freight movement furnished by defendants.

The defendants devoted a vast amount of time and energy to the preparation of statistics showing that since the amalgamation of these two systems the physical condition of the Union Pacific system and of the Southern Pacific system has been improved. No one disputes this fact, but we fail to see how it has anything whatever to do with the issues in this case.

The public patronizing these lines has chiefly paid for this work. Defendant Kahn testified that the necessary funds to put the Southern Pacific in first-class shape were provided mainly out of earnings. (Folio 7885.) There is no evidence that any securities were sold by the Oregon Railroad & Navigation Co. for the work done upon it.

It is a fact that practically all the railroads in the country have been greatly improved, in many cases built over, in the last ten years. The roadbed has been strengthened, and heavier power and equipment have been installed for the purpose of operating the roads more economically. Mr. Kruttschnitt (Folio 6070), when asked if all the railroads in the country didn't immediately after the panic of 1897, and about the beginning or along in 1900, commence great development in the improvement of their properties, said:

"A. With that as a beginning and up to 1907 it is quite true that the roads did spend a great deal of money.

Q. All over this country, that is true, isn't it?

A. They did.

Q. In other words they spent enormous sums of money in improving their roads, did they not?

A. As a rule, yes."

One reason for this was frankly given by Mr. Kruttschnitt at Folio 6994:

"Q. Is it not a fact that these improvements such as cutting grades, taking out curves, improved larger engines, larger cars, and other large expenditures were made in order that you could handle traffic cheaper and make more money at it at the same rates?

A. Certainly."

He testified at Folio 6998 that by reason of the elimination of curves and straightening of the track, the Union Pacific line from Omaha to Ogden was shortened 40 miles, and the Southern Pacific line from Ogden to San Francisco 50 miles, so that the through line is now 90 miles shorter than it was in 1899 or 1900. He further testified at Folio 7027, that the percentage of cost of operation to earnings on the Union Pacific decreased from 51.59% in 1900 to 48.18% in 1909; and on the Southern Pacific from 64.78% in 1900 to 62.89% in 1909. Complainant's Exhibit 215, p.4994, shows from the reports made to the Interstate Commerce Commission by these railways, that the percentage of cost of operation to earnings has decreased on the Union Pacific from 51.04% in 1900 to 47.24% in 1909, and on the Southern Pacific from 64.21% in 1900 to 60.25% in 1909.

Mr. Mohler said, at Folio 7180, that the Rock Island and Burlington were in better condition than the Union Pacific at the time the improvements on the latter line were commenced, so that it was essential to spend this money.

Mr. Park, the General Superintendent of the defendant Union Pacific Railroad Co., who spent some time on direct examination in dealing with the condition of the Union Pacific back in 1875, said on cross-examination, (Folio 7218), that there are no railroads in the country now, so far as he was aware, in the condition that the Union Pacific then was as to equipment, track and everything. He further said that the Union Pacific at that time perhaps was not quite as well built as some of the other roads that were built simultaneously. In spite of all the money that has been been spent and the excellent physical condition of the road, it was made apparent by the testimony of the defendants' own witnesses that the public has not shared in the benefit of these expenditures.

Mr. Mohler, General Manager of the Union Pacific, introduced in connection with his testimony a table showing the relative speed of freight trains over the country as follows:

On the Union Pacific 9.9 miles per hour between Council Bluffs and Ogden; Council Bluffs to Denver 11.5; on the Santa Fe, Chicago to Albuquerque 12.3; and from Chicago to Kansas City 14.4; Kansas City to Denver 14.4; Great Northern, St. Paul to Seattle 11.8; Northern Pacific, St. Paul to Portland 14.4; Rock Island, Chicago to Denver 14.2; Burlington, Chicago to Denver, 14.4; Chicago, Milwaukee & St. Paul, although a new line, Chicago to Seattle, 12.4; from St. Paul to Seattle 12.3; from Chicago to

Omaha 16.4; from Chicago to Kansas City 16.6, and from Chicago to St. Paul 12.8; Pennsylvania from New York to Chicago, 16.2; from New York to St. Louis 18.3, and from Chicago to New York, dairy products, 15.9; New York Central, New York to Chicago 17.5; from New York to St. Louis 20.4, and from Chicago to New York, dairy products, 17.

See defendants' Exhibit 153, opposite page 4268.

He testified, (Folio 7105):

> *"Q. It appears by these figures that you have just read into the record, that the slowest time made by any merchandise train in the United States, so far as developed by these various lines east and west, that you have read, is on the Union Pacific, from Council Bluffs to Ogden, 9.9 miles. That is true, isn't it?*
>
> A. *Yes."*

And at Folio 7159 he admitted that the business into Colorado common points was highly competitive between his company and the Burlington and the Rock Island, which was partly the reason why the speed of trains to Denver had been recently somewhat increased, but it appears by Mr. Park's testimony at Folio 7229, that even with that incentive the reductions in time to Denver recently made have only got the schedule back to where it was in 1900, and it is a significant fact that this reduction which was from 58 hours to 48 hours, was made in January, 1910, just before the defendants' testimony was taken.

At Folio 7234 Mr. Parks testified that they had recently shortened the time on the Portland train as well as the *Denver train, and explained that on transcontinental traffic to Portland they met the competition of the Northern Pacific and the Great Northern.* The defendant's witnesses

all admitted the truth of the statement made by Mr. McCarthy that the time of the merchandise train from Omaha to Ogden had been lengthened from 1900 to the present time from 54 hours and 30 minutes to 100 hours and 45 minutes. It was claimed by some of the witnesses that the trains when running on the 54 hour schedule did not make their time, but it was admitted by Mr. Park that in the spring of 1909 when Mr. McCarthy's testimony was taken, they were not even making the 100 hours and 45 minutes schedule, but were running six, eight and ten hours late. (Folio 7231.)

Mr. O'Brien, the General Manager of the Southern Pacific and O. R. & N. lines at Portland, testified that their merchandise train made a trifle under twelve miles an hour, which he calls a fast train, although it does not seem to be regarded as fast by the other railroad systems of the country, and he says that is done to expedite the business, and it is apparent from his testimony at Folios 7355 to 7358 that this action is made necessary by Northern Pacific competition.

Mr. Kruttschnitt at Folio 6935 testified as to the lengthening of the merchandise train from Council Bluffs to Ogden, showing that in June, 1901, which was shortly after the merger, the schedule was 58 hours and 25 minutes; November 3, 1901, 60 hours and 30 minutes; December 21, 1902, 64 hours; January, 1903, 82 hours and 10 minutes; October, 1903, 74 hours and 20 minutes; November, 1903, 74 hours and 30 minutes; October, 1907, 100 hours and 45 minutes; and when asked why the schedule was lengthened in 1907, he said:

"A. To meet the conditions that confronted us at that time. We had this panic; we could not reduce expenses, we could not increase revenues, and the problem that confronted the management of roads was how to get satisfactory results without either increasing revenues or decreasing expenses,—a pretty tough problem; but it was solved, as I have already shown, by more efficient carloading, more efficient train loading."

It does not seem to have occurred to the defendants that they might have shared in the general lack of prosperity incident to panic conditions then prevalent in the country by reducing their swollen dividends of 10% per annum, upon Union Pacific common stock. They continued these extraordinary dividends without interruption and put the entire loss upon the people along their lines who had to suffer from this addition to an impairment in service that had been progressive since 1901 with the exception of the shortening from 82 hours and 10 minutes to 74 hours and 20 minutes in October, 1903.

Now it is true that Mr. Mohler and Mr. Park say that this time was increased because they were not able to make faster time, but it is significant that in all the tables that were introduced showing selected trains running late under old schedules, even with the time they were late added to their schedule time, they did not consume 100 hours and 45 minutes, or anywhere near that amount as a usual thing. It is further significant that although the panic has passed, and although they have constructed hundreds of miles of double track since 1907, the schedule still remains as slow as it was when put in at the time of the panic. It will be remembered that while the time has been practically doubled since 1900, the distance to be traversed by these trains has

decreased 40 miles, curvature has been eliminated, mountain grades reduced, and the power has become more efficient.

Mr. Lincoln, Car Service Agent in charge of transportation of the Union Pacific, admitted at Folio 7266 that even allowing the most extreme figures that he gave, namely, 12 hours as the time that the 54 hour and 30 minute train ran late, it was still about 35 hours shorter than the 100 hour and 45 minute train when on time; and at Folio 7269, after testimony had been introduced that other commodities aside from ordinary merchandise were now given the same time as merchandise, he testified:

> "Q. As I understand it, at the present time you do not give any preference to high class freight at all, but you move dead freight just as fast as you do high class freight?
>
> A. We give preference to high class freight; but practically all of it now we say is high class freight. We have very little dead freight—coal and lumber and grain, something like that. Then we use that freight to fill out our high class freight trains with. If we have not enough of the high class freight to make a good train, we will fill it with the other freight, and it gets just as good service as the high class freight.
>
> Q. When you do not have freight enough to fill up a train do you hold it for the next day?
>
> A. We hold it for the next day, yes, sir.
>
> Q. So as to be sure to get a full train load?
>
> A. Yes, sir.
>
> Q. That is in the interest of economy in operation, purely and simply, isn't it?
>
> A. Also in the interest of economy in operation and economy in the movement of freight.
>
> Q. That is what I mean—economy in the movement of freight?
>
> A. Yes."

At Folio 7241 it appears from Mr. Park's testimony that not only has the O. R. & N. lately shortened its time as claimed, on through freight, but the Union Pacific has recently shortened the time on *Portland* freight from Omaha to Green River, the point at which the Oregon Short Line takes the train, from 90 to 74 hours, thus again showing that where there is strong competition to be met it is possible to give much better service to the public.

Mr. Richardson, Superintendent of Transportation of the Southern Pacific, shows that in spite of the fact that the ships of the Southern Pacific from New York now run to Galveston instead of New Orleans, thus shortening the rail haul very considerably, and in spite of the fact that the facilities for transferring at the docks are improved, there has been no shortening of the time of through freight from New York to San Francisco by the Sunset Route since 1900. At Folio 7460 he states that in 1900 it was 15 days and 7 hours and in 1909 15 days and 5 hours, these figures being based upon the movement of 15 cargoes of various vessels that moved during different months in the respective years. This would apparently show a decrease of two hours, but on cross-examination at Folio 7486, he admitted that the schedule from which the computation was made did not give the hour of arrival in San Francisco, and therefore the fraction of a day could not be determined from it, but it might be several hours wrong. He also admitted that 27 out of 34 carloads of freight mentioned on the first page of the schedule arrived late. If there was competition at the present time, there is no reason why the time by the Sunset Route should not be very materially shortened.

Mr. Fay, the Vice President and General Manager of the Southern Pacific lines between New Orleans and El Paso, testified to a comparison of freight service in 1901 and 1909, over the Sunset Route, and that the distance from Algiers, which is across the river from New Orleans, to El Paso, is 1194 miles; in 1901 all the Sunset freight moved by New Orleans; that the distance from Galveston, to which port the ships now proceed, to El Paso, is 882 miles, or 312 miles less; that the freight schedule from Algiers to El Paso was 68 hours and 20 minutes in 1901, and from Galveston to El Paso 72 hours and 19 minutes in 1909, thus taking substantially four hours longer to move the freight 312 miles less. (Folio 7406-7.) So the public in California has received no benefit from the expenditures along the Sunset Route in the way of better service, although at least a day's time could be cut off if the same speed was maintained over the improved tracks, that was made over the tracks before the improvements in 1901. Not only is the freight service slower than in 1901, but the passenger service on both these lines is slower, although more trains are run because the traffic has so largely increased in volume. It was admitted by Mr. McCormick, Assistant Director of Traffic, that the passenger trains from Omaha to San Francisco are slower than in 1900 in spite of the fact that the line is 90 miles shorter and that the grades and curves have been so much reduced. At Folios 7822 et seq. it appeared that the Overland Limited, the crack train by that route, made the run in January, 1900, from Omaha to San Francisco in 56 hours and 25 minutes; in September, 1909, in 60 hours and 8 minutes; that the eastbound Overland Limited in January, 1900, made the run in 58 hours and 50 minutes; in September, 1909, in 61 hours and 19 minutes; that passenger train No. 3 made

the run from Omaha to San Francisco in January, 1900, in 65 hours and 20 minutes; in September, 1909, in 70 hours and 48 minutes; that train No. 4, being the same train eastbound, made the run in January, 1900, from San Francisco to Omaha in 69 hours and 35 minutes; in September, 1909, in 72 hours and 30 minutes. On the Southern Pacific route Mr. Fay testified (Folio 7392) that the time of passenger train No. 9, from New Orleans to San Francisco, in 1901 was 95 hours and 35 minutes, and in 1909, 97 hours and 45 minutes; eastbound in 1901 the time was 96 hours and 25 minutes; and in 1909, 96 hours and 45 minutes. But in addition to this service the Southern Pacific put on a seasonal train running through the winter months from November 1st, 1894, up to the spring after the merger, April 14, 1902, called the Sunset Limited. This train has been referred to in the testimony of the complainant's witnesses as a first-class train competing actively for traffic to and from California with the Overland Limited of the Union Pacific and other transcontinental trains. It was not a daily train, as in fact, the Santa Fe Limited was not in those days, but it ran through the winter seasons from November to April. Mr. Fay gives the dates when this train was in operation, at Folio 7394. At Folio 7405 Mr. Fay testified that the time of the Sunset Limited had been shortened until in 1900, the last year before the merger, its time westbound from New Orleans to San Francisco was 72 hours, and eastbound 74 hours and 20 minutes, which, as will be seen, is a *day and a night shorter* than the fastest train now run between those points.

Mr. McCormick testified that from 1894 up to some time subsequent to the merger, the Sunset Limited train ran between San Francisco and New Orleans. It was a

first-class train of the character of the Overland Limited at its best, and made the run in 3 days, leaving New Orleans at 10:45 in the morning and arriving in San Francisco at 10:45 the third morning. (Folio 7727.) It contained a buffet, library, bathroom, barber shop, and an observation car, similar to the ones run on the 18-hour trains between Chicago and New York. The same train eastbound left San Francisco at 5 P. M. and arrived in New Orleans at 7:20 P. M. the third day, with the same equipment. This train ran four months in the year, and was discontinued in April, 1902. (Folio 7734.) It appears in his testimony at Folios 7735-6, that this train drew its patronage from the same portions of the East as the other transcontinental trains, and when it was taken off there was another train substituted for it, taking passengers from common territory in the East, running a tourist sleeper one day in the week from Washington, D. C., one day from Cincinnati, another day from Chicago by the Illinois Central to New Orleans, another day one by the M., K. & T. from St. Louis. The advantages of this route were exploited by the expenditure of money in advertising, etc. (Folios 7736-7.) At the present time this train carries four tourist cars a week from Washington, and once a week a tourist car from Chicago to San Francisco via the Illinois Central to New Orleans; one day a week a car from Cincinnati to San Francisco by the B. & O., Southwestern and Illinois Central to New Orleans, one day a week from St. Louis to San Francisco via the M., K. & T. (Folio 7748.) The traffic carried in the tourist car service from Washington originates chiefly in New York and New York territory and up in New England, moving to Washington by the Pennsylvania road, thence by the Southern Railway, to Atlanta, and westbound to Montgomery; the Louisville

& Nashville to New Orleans, and the Sunset Route to San Francisco. (Folios 7760-1.) The enormous amount of passenger traffic carried through Ogden by the Union Pacific road and westerly by the Sunset Route, which can move to the coast either way, is shown by Mr. McCormick's testimony. (Folios 7762 et seq.):

For five months of 1901 24,600 passengers by the Union Pacific route; 14,863 by the Sunset; and for the year 1907 before the travel fell off on account of the panic, it amounted to 114,520 passengers by the Union Pacific route, and 73,732 passengers by the Sunset Route. It also appears that in the year 1907, 1,988 passengers went to California by the steamer line from New York, and the Sunset Route. Since 1902 there has also been a through train over the Rock Island to El Paso, thence over the Southern Pacific, called the Golden State Limited, with the regular equipment of a first-class train, including tourist sleeper from Chicago to San Francisco. (Folio 7749.) In January, 1910, still another train was put on from El Paso over the Sunset Route to Los Angeles, carrying tourist sleepers and standard sleepers from Chicago and St. Louis to Los Angeles. In Folios 7753 to 7759 Mr. McCormick gives a thorough demonstration of the effect of competition. The Great Northern Railway put on a mail train between Chicago and Seattle, shortening the time of arrival from 7 o'clock in the evening to 5:45 in the morning. This forced the Union Pacific to shorten its mail train to Portland, which had formerly arrived in the evening, so that it arrived at eight o'clock in the morning, only a little over two hours slower than the Great Northern to Seattle. The Union Pacific mail train to San Francisco arrived at 1:08 in the afternoon. This carried New York mail by way of Chicago. The Santa Fe and the Rock Island in connection with the South-

ern Pacific from El Paso also carried New York mail out of Kansas City, which reached there by a fast train over the Pennsylvania to St. Louis and the Missouri Pacific to Kansas City. Owing to pressure from the Post Office Department these trains to Los Angeles were shortened so that they arrived at three o'clock and three-thirty in the afternoon respectively, a day previous to the arrival in San Francisco of New York mail, leaving New York at the same time and moving over the Union Pacific. It was thus possible to transfer the mail at Los Angeles to the Owl of the Southern Pacific, getting it into San Francisco at eight o'clock in the morning as against 1:08 in the afternoon when coming by the Union Pacific route. This forced the expediting of the mail train over the Union Pacific line into San Francisco, so that it now arrives at ten o'clock in the morning.

The lengthening of the time of fruit trains from Los Angeles to Chicago from five and one-half or six days to eight days or longer is a result of the protest made by the Southern Pacific and Santa Fe to the San Pedro which in connection with outside lines, to-wit, the Rio Grande and Burlington inaugurated this expedited service. The San Pedro has not been allowed to reinstate those trains, although their great value to shippers is undisputed. This impairment of service is a direct result of the control of the San Pedro by the Union Pacific.

Excessive Dividends Paid by Defendant Railway Companies.

These various examples will show the disadvantages accruing to the public from the lack of competition of two lines, both earning enormous revenues and paying large

dividends, the Union Pacific paying 10% per annum upon its common stock, and 4% upon its preferred, to which the latter is limited. The testimony shows that at the time of the reorganization, this common stock was in the market at $30 per share (Harriman Folio 1363), so that it is now paying 33 1-3 % upon that price. The Southern Pacific, as shown by Mr. Kruttschnitt's testimony at Folio 7028, is now paying six dollars per share upon the common stock, and seven dollars per share upon the preferred stock. It will be recalled that the first seventy-five millions of this Southern Pacific common stock was purchased by the Union Pacific at a trifle over $50 per share, so that it is now receiving about 12% upon that investment, although for the first five years it received no dividends. By complainant's Exhibit 218 and 219, Folios 8335 to 8339, it appears that the Oregon Short Line paid to the Union Pacific upon its stock June 30, 1906, a dividend of 50%, and a little over seven months later an additional dividend of 10%; six months later another dividend of 20%; three months later another dividend of 10%; seven months later a dividend of 100%; and one year later a dividend of 25%; that the Oregon Railroad & Navigation Co. paid 4% dividends to the Union Pacific upon its preferred stock while its stock was held by the Union Pacific from 1901 to 1905, and to the Oregon Short Line dividends at the same rate upon its preferred stock up to January 2, 1908; that on February 20, 1908, it paid an additional dividend of 77% upon the preferred stock, and 79% upon the common stock; one year later, February 20, 1909, dividends on both classes at the rate of 12½%; August 2nd, not quite six months later, 2% more on the preferred stock; February 3, 1910, 2% on the preferred stock; and February 24, 1910, 11% upon the preferred

stock and 15% upon the common stock. Complainant's Exhibit 218, Folio 8335, shows that a portion of the earnings of the Oregon Short Line out of which dividends are paid accrue from investments. No such suggestion is made, however, as to the exorbitant dividends being paid by the Oregon Railroad & Navigation Company. We have thus shown the deterioration in the service, and its consequent effect upon the public and upon the promoters of this amalgamation respectively.

b. A MOST UNFORTUNATE DIRECT EFFECT OF THE SUPPRESSION OF COMPETITION RESULTING FROM THE ACQUISITION OF THE SOUTHERN PACIFIC BY THE UNION PACIFIC, LIES IN THE FACT THAT GREAT REGIONS TRIBUTARY TO THESE LINES, WITH ENORMOUS NATURAL RESOURCES, REMAIN UNDEVELOPED.

The defendants who are in control of the Union Pacific Railroad Co. are in no sense empire builders. They have done nothing, so far as observable, toward opening up new territory, aiding in the increase of production and the growth of the western country.

They have built no transcontinental railroads. They went into the street, secured control of the securities of the Union Pacific at a time when it was in the hands of receivers, and as shown by the reorganization plan introduced in connection with the examination of the defendant Schiff, (Complainant's Exhibit 109, Folios 1757 to 1797), took hold of this property in the construction of which other men had sunk their fortunes, reorganized it and managed it for their own profit in many ways. They made large sums in connection with the floating of securities, as appears by the testimony of the defendant Kahn. They sold these securities and made these profits by reason of the favorable location of the road, the rich territory through which it was built and the great business handled over its rails. They purchased the Southern Pacific stock, eliminating competition with that line, with a large immediate profit, as is also shown by the testimony of the witness Kahn. For the purpose of further eliminating competition they purchased the majority of the stock of the Northern Pacific, incidentally receiving several million dollars commissions on the sale of the bonds issued

for the stock. They sold the Great Northern and Northern Pacific stock upon the dissolution of the Northern Securities Company at prices that netted profit to the Union Pacific of fifty or sixty millions of dollars. Instead of retiring securities of the Union Pacific with the enormous funds thus coming into the treasury, they used the same to buy from themselves great blocks of stocks in other railroads, which resulted, as testified by the defendant Kahn, in giving the Union Pacific a voice in the management of said companies. They spent large sums in bettering the physical condition of the Union Pacific and the Southern Pacific properties, said sums being largely paid by the public out of earnings, as stated by defendant Kahn. (Folio 7885.) These improvements, as already demonstrated, were not made for the public advantage, but, as stated by the late defendant Harriman, to enable greater economy in operation and to handle more traffic over the lines. (Folio 1321.) Resulting from the dominant position attained by the Union Pacific with its four lines leading East from the Pacific Coast under one control, and the enormous net earnings resulting from a great traffic with cheap operation, the value of the stock was inflated to a startling figure. Dividends have been continuously paid since 1906 at the rate of $10 per share, thus resulting in profits to the defendants so fabulous that the millions they made incidentally in buying securities from themselves for the road, or selling securities to themselves by the road, seem insignificant. (The amount of the individual defendants' holdings are shown in the stipulation Complainant's Exhibit 200, Folios 5624 et seq.) The defendants have been so intent upon the financial end of this business and so fortified in their monopoly that they have had no time, and less patience, with

A. There are at least four great competing lines. There is the Northern Pacific, the Great Northern, the O. R. & N.—that is, I don't give its corporate name, but the Harriman system; the Canadian Pacific, and then other roads are coming in by arrangement. The Chicago, Milwaukee & St. Paul is coming in.

Q. Are these roads or their branches run around through that country, reaching these wheat fields that you have spoken of?

A. Yes, I might say that eastern Washington is, for a Western place, gridironed with railroads that are fully developed, and they are more or less competing—

Q. Had the wheat fields been developed before the railroads or did the railroads come first?

A. The railroads helped to bring in the people and gave them money to raise the wheat. There was no development until the railroads came. That is true of the west. I have helped protect the surveyors of the Northern Pacific (I know all about it) from Bismarck on. The railroad was the pioneer, the forerunner—had to be. The railroad, and what it brought ended the Indian question—not the army. Yakima Valley, that is now one of the garden spots and show spots, was nothing but an Indian reservation until the railroads got there. The railroads did it all."

Mr. Hanley is still driving his cattle 150 miles to Ontario or 250 miles to Winnemucca, although solely through the force of outside competition as hereafter shown one line of railway has been started in his direction since complainant's testimony was completed. The millions of acres of wheat lands and fruit lands of central and eastern Oregon are lying there as they have from the beginning of time. Does any one believe, considering the wonderful development of the accessible parts of the West, with the people seeking new homes, for which a great population has even left the flag and removed to Canada, settling along new lines of railway which are constantly being pushed into unoccupied

regions by Canadian Railway Companies, that this Oregon territory would have remained without transportation facilities, if the Union Pacific and the Southern Pacific had continued separate and actively competing, during the period of prosperity through which this country has passed?

As shown by the testimony of Mr. Wood, Mr. Hanley and Mr. Nash, the railroad passes leading into this region have been seized, appropriated and held by these defendants. Instead of taking the money and using the credit of these splendid lines of transportation that have fallen into their hands, for the enlargement of facilities in the country served by these properties, they have used their enormous profits to buy from themselves securities issued by railroads in remote parts of the country.

Judging from defendant Kahn's testimony at Folios 7880 and 7881, they had so little appreciation of their responsibility to the people of the West from whom they were extracting their fabulous profits, that they never even gave a thought to the development of this region, which they had surrounded, when they were considering what they should do with the hundred millions to a hundred and fifty millions cash which they received for the Great Northern and Northern Pacific stock. Their minds were confined solely to the matter of stocks and bonds, and they preferred stocks because their purchase gave added power over other railway lines.

In the past four years the Oregon Short Line has paid dividends to the Union Pacific amounting to about $59,000,000 (Folios 8335 to 8339).

This alone would have gridironed central and eastern Oregon. They have not only done nothing themselves for this great region, but they have endeavored to prevent others from furnishing much needed railroad facilities by obstructing the construction of competing lines, as, for instance, the North Bank road into Portland, as admitted by the late defendant Harriman, at Folio 1313, and by commencing litigation over right of way with the Hill line recently started.

It is a matter of common knowledge, of which the Court will take notice, that in regions served by competing railroad systems, each line is trying to outdo the other, building into intervening territory, securing the location and growth of industries, the opening of new farms, the planting of crops, the raising of fruit, for the purpose of obtaining the transportation of new people and freight. The policy of these defendants having this country thus surrounded and in their power, has been to obstruct its growth by keeping railroads out while doing nothing for it themselves, so that the people of the state of Oregon, despairing of relief from the defendants, were driven to the proposal by the Legislature of a constitutional amendment permitting the state to build lines of road itself. Nothing was done by the defendants looking toward furnishing a rail outlet for Central Oregon until the dreaded competitor from the North, the Hill lines, started in to give relief to this long-suffering community. This was very lately, in fact, after complainant's testimony in this case was all taken. Mr. O'Brien testified at Folios 7334 et seq., that the Oregon Railroad & Navigation Co. is now building a line up the Des Chutes River, the same being constructed by a sub-company called the Des Chutes Railroad Company. This road is projected for 133 miles to Redmond,

Oregon. Track laying had been going on about sixty days previous to the date of his testimony, which was February 24, 1910. The reason was developed, namely, that the Hill interests so-called, are also building a line up the Des Chutes River. The O. R. & N. began about three weeks before active work was commenced by the Hill interests. (Folio 7336.) Mr. O'Brien then testified:

> "Q. At the time you commenced construction you knew they were going up there, didn't you, or understood they were?
>
> A. Well, I didn't know it, but there had been some talk about it."

He further said that he had been getting ready for about a year and a half, but he didn't want to start until it was absolutely necessary.

> "Q. But you did consider it absolutely necessary, when you heard about this other line, did you?
>
> A. Yes, we started work. That shows for itself." (Folio 7337.)

After saying there had been a good deal of clamor for transportation facilities in the interior, and that the matter had been taken up by the Chamber of Commerce and different commercial organizations, he further testified:

> "Q. Weren't you aware that the people in interior Oregon went to the legislature of Oregon because you people would not build in and develop the interior of that country, and got the legislature to pass a constitutional amendment authorizing the State itself to build lines in because you would not build?
>
> A. Yes, I know that.

* * * * * *

Q. There had been a great deal of agitation there, hadn't there, and a great many requests in one way or another?

A. A great deal of newspaper agitation.

Q. —— which you don't care much about, do you?

A. No."

It is very interesting to read Mr. O'Brien's testimony in connection with that of Mr. Calvin. The latter testified at Folios 7371-2, that he went to Portland as Vice-President and General Manager of the O. R. & N. Co., and General Manager of the Southern Pacific Co. lines in Oregon, April 1st, 1904; that a few days later he received instructions to extend the Shaniko branch up into Oregon. He asked for time to investigate it, and after having made an investigation protested against doing it, because he did not think it the proper way to develop Central Oregon, but he recommended instead the building of an east and west line through Central Oregon. On cross-examination, (Folios 7378-9), he testified:

"Q. You were asked about the extension of that Shaniko line, and stated in answer to Mr. Dunne that you recommended against extending the Shaniko line and that you did not think that was the best way to develop Central Oregon. As I understood you, you recommended a line to come in from the east?

A. I did.

Q. It has never been built, has it?

A. No, but survey has been made.

Q. I know; but the line has never been built in spite of your recommendation?

A. No. This line that we are building from Klamath Falls has not reached the proposed junction point of the east and west line.

Q. It is a good ways from Klamath Falls across to the east side of Oregon, isn't it?

A. Oh, yes.

Q. It must be 300 or 350 miles?

A. I should think fully that much.

Q. And that country in there is left without railroad facilities and is still without railroad facilities?

A. Yes.

* * * * * *

Q. The only line that is being built at present reaching up into Central Oregon is this Des Chutes River Line, isn't it?

A. As far as I know, yes."

This line was not commenced until the Hill interests so-called, had against the opposition of the defendants succeeded in building the North Bank road into Portland, thus giving a connection to a line into Central Oregon opposite the mouth of the Des Chutes.

Nothing could more strongly emphasize the desirability of competition and the fatal results to a community of monopoly than this testimony. A line from the north it is claimed was projected and abandoned in favor of an east and west line. That line has not been constructed, but as soon as it became evident that a competing system was coming in from the north by the Des Chutes River construction is begun up the same river by one of the lines included in this merger.

CORVALLIS & EASTERN.

Another property acquired to prevent possible competition through its acquisition by some outside interest is that of the Corvallis & Eastern.

Mr. Nash, for nearly fifty years a member of the bar, about thirty years of the bar of Oregon, and previously to that, of the English bar, testified at Folios 4626 et seq., with reference to the organization of the Oregon Pacific Railroad Co., of which he was the Second Vice President and Counsel, which built a railroad from Yaquina Bay to Corvallis, thence across the Willamette Valley and the Willamette River to Albany, thence from Albany along the Santiam Valley into the timber region of the Cascades, a total distance of 131 miles, from which point it was projected along a right of way which was secured entirely across the state to Ontario on the Snake River, a point on the Oregon Short Line Railroad, in the easterly part of Oregon. Some construction work was done at the east end in the valley of the Malheur, and also in the passes of the Cascades, which govern the route. The construction was begun about 1884 or 1885, and continued until about 1888. Two hundred thousand dollars worth of rock work was done in the canyon of the Malheur River, a large rock force being kept at work for ten months. (Fol. 4627.) The timber resources east of the present terminus are very great, and east of the timber region there is tributary to the proposed line about 675,000 acres of irrigable land, besides land suitable for dry farming on either side, as well as extensive stock ranges. The surveys ran for 200 miles through the stock ranges, and the stock yield is not only very large, but can be increased almost indefinitely. (Fols.

4628-29.) Mr. Nash further testified, with reference to the stock business of central Oregon, that from 100,000 to 130,000 cattle are driven every year off those ranges southerly to Montague on the Southern Pacific, and from a fourth to a third, to Ontario and points on the Short Line, all of which would be tributary to this proposed road; also that about seventeen million pounds of wool would be tributary. At present this wool has to be brought to Shaniko, which is on a short branch of the O. R. & N., by wagon trains. (Fol. 4633.) Cattle and sheep are driven from 150 to 200 miles as an average, before they reach a railroad, and the size of the territory in Oregon without railroad facilities east of the Cascade Range, excluding territory in Nevada, Idaho or California, is in the neighborhood of 300 miles each way. (Fols. 4634-37.) This road went into receivers' hands and was acquired by Mr. Hammond, who incorporated the Corvallis & Eastern Co., which took the title. Mr. Hammond owned a majority of the stock, but after a few years sold a majority of it to the Huntington Estate, and in 1906 it was acquired by the Southern Pacific. (Fols. 4629-30.) At the time this line was first operated, steamships were put on between Yaquina Bay and San Francisco, with a five-day service. Large quantities of wheat and other cereals were taken to San Francisco by those boats, which met the railroad at Yaquina Bay, and north bound freights from San Francisco were brought in and distributed by the railroad over the Willamette Valley, the same consisting of sugar, hardware, general merchandise, machinery, and general traffic. Large docks were built at Yaquina, costing several hundred thousand dollars. (Fol. 4631.) The government spent over $600,000 upon the bar, and there is now a depth of 15 or 16 feet of water on the bar at low tide, and the channel has been improved by the government

so as to make it a safe, straight and direct channel from the ocean. For a time boats were maintained on the Willamette River in connection with the railroad. (Fol. 4632.)

It appears by the testimony of Mr. McCusker, that he remembers the time that this line, in connection with its boat line to San Francisco, was competitive with the Southern Pacific, and with the O. R. & N. river boats handling all classes of merchandise for stores throughout the Willamette Valley, the said traffic coming from San Francisco. (Fol. 4488.) This railroad was never, in its incomplete state, a financial success. It has not been extended by the defendants, and there is no evidence of any intention to extend it.

We call attention to this Corvallis & Eastern purchase simply to show that the defendants in their efforts to monopolize the traffic of the western country, have acquired every possible competing line or projected competing line. In this case the railroad runs from a good harbor on the Pacific Ocean, 131 miles to the timber country in the Cascades. The low grade pass, into the country by the Malheur River, testified to by Mr. Wood and Mr. Hanley, is the most feasible route into Central Oregon from the East, and is thus occupied and controlled as against all outsiders by the Southern Pacific Co. This purchase is merely an incident in the general scheme to bottle up the country and control the railroad situation.

COOS BAY.

A significant illustration of the attitude of these defendants is shown in connection with another section rich in possibilities, needing only transportation facilities, namely, the Coos Bay region in western Oregon. It appears by the testimony of Mr. Spreckels, at Folios 957-73, that he owned a little railroad running back into the country a few miles from Coos Bay projected to a connection with the Southern Pacific at Roseburg, which is about 69 miles from the Bay. (Folio 965.)

The route up to Roseberg was through a canyon with only sufficient room for one line of road. (Fol. 971.) He had two small steamers plying between Coos Bay and San Francisco, and along the line of the railroad some lignite coal mines. He leased some docks from the state at San Francisco. He was compelled to take this property on a debt a good many years ago, and while there was a very small profit in the operation of the railroad, the boats and mines were operated at a loss. (Fols. 967 and 8.) There was, however, a certain strategic importance to this property. The railroad ran back from a good harbor for light draft vessels, and an east and west road might therefore have found this line of value. In the lifetime of Mr. Collis P. Huntington he was looking into the proposition of acquiring the road for the purpose of getting an entrance into Coos Bay and handling grain traffic to San Francisco from there instead of by Portland, saving about 300 miles. The negotiations were never concluded because of the death of Mr. Huntington. (Fols. 963-4.) In the latter part of 1905 the Southern Pacific sent a representative to Mr. Spreckels, who arranged for the purchase of the property from him. The payment was to have been made on April 18th, 1906, but that was the day of

the San Francisco earthquake, and therefore the settlement was postponed until a little later. (Fol. 966.) This property cost something more than a million dollars, and had thus been operated at a loss for many years, but for the purpose of controlling the monopoly of all transportation facilities, actual or potential, in that region, it was taken off the hands of Mr. Spreckels in the year 1906 by the Southern Pacific for $1,300,000 cash. (Fols. 958-967.) It is absurd to suggest that any such price would have been paid for this property in the absence of its strategic importance from a transportation standpoint. Mr. Spreckels was informed during the negotiations that the Southern Pacific contemplated building a line connecting with this road. (Folio 968.) No line, it is needless to say, has been built. But that is not all: The Southern Pacific not only bought this Spreckels line, but, evidently with the idea of occupying about the only other reasonably feasible line into the country and discouraging the extension of the Spreckels line, announced in 1905 that a road would be constructed from Drain, on the Southern Pacific, to Coos Bay.

Mr. Flanagan, a banker at Marshfield, Oregon, on Coos Bay, who is familiar with the country and this line, was asked to describe this proposed branch. He testified, at Folios 4758-9:

> "The construction of the road was announced, I think, in 1905. It was announced in Coos Bay that the road was to be built, and the necessary money was set aside for its construction, and about six or eight months after that, actual construction of it was begun at the Drain end, and enough rails to complete the road from Drain to, I think, all the way to Coos Bay were shipped into Drain station and a very large quantity of cement was also shipped to Drain as well as to Scottsburg.

Q. Where is Scottsburg?

A. Thirty-six miles from Drain on the Umpqua River.

Q. How was the stuff shipped to Scottsburg?

A. By sea, and a great deal of bridge material also shipped, which is still on the ground, and there is one bridge wye put in at Drain station, and a bridge built across Elk Creek; another bridge, five or six miles farther down Elk Creek, was begun but not completed, and I think probably four or five miles graded, and some work done on the tunnels. The right-of-way was secured, so far as I know, entirely from Drain to Scottsburg. * * *

Q. Is that a difficult road to construct; that is to say, are the grades difficult?

A. No, we have got a very low per cent of grade. I understand that 1-10 of one per cent was the heaviest grade on that road."

Mr. Grimes, another banker at Marshfield, testified that since 1907 nothing has been done. (Folio 4718.)

Marshfield is a town of about 5,000 people, and in the county, the chief industries are coal and lumber, dairying, horticulture and agriculture. The county stands third on the coast in dairying interests. (Folio 4716.) A report upon the traffic possibilities of the region was rendered to the late defendant Harriman by Colonel Holabird, of Los Angeles, which appears as Complainant's Exhibit 162 (Folios 4721-8), and shows the great riches of this region; that there is in operation the most modern sawmill that he had ever seen, with an average cut of 6,500,000 feet per month, and the expectation of shortly doubling it. (Folio 4726.)

Mr. Flanagan stated that there are 400 square miles of coal in the county, and 70,000,000,000 feet of lumber tributary to Coos Bay. (Folio 4756-7.)

Mr. Fisk, Purchasing Agent of the C. A. Smith Lumber Co., testified with reference to the mill of that company at Coos Bay, and that there is a very large body of timber tributary to the Bay, one of the largest bodies in the west. The only means of transportation is by steamers. (Folios 5132-3.) That in addition to the Smith mill, the Simpson Lumber Co. and the North Bend sawmill, there are other mills on the Bay. These additional mills have a capacity of about 200,000 feet a day in the aggregate, and the Smith mill about 300,000 feet a day. (Folios 5132-5.) The construction of the road from Drain having been abandoned, a committee of the Chamber of Comerce of Marshfield, made up of the witness Grimes and two other gentlemen, met the late defendant Harriman in the summer of 1908 to urge the completion of the road. Mr. Grimes testified (Folio 4719):

> "A. Of course we went for the purpose, as I have stated, of having him complete the line, as it had already been begun, and a good many people were brought in there on account of his beginning the line and would like to see it finished. He then wanted to know what resources we had that would justify the building of the road. We told him we had more than we had at the time he began the building of the road. He then asked if we were prepared to give any idea as to the tonnage. We said we were not, that we were not traffic men, and suggested to him that he send somebody who was acquainted with those conditions and affairs to report for us. He said he would. Further, in conversation, he said that if we would make a showing sufficient to justify the payment of four per cent interest on the construction of the road, he would recommend its construction."

Mr. Harriman then sent Colonel Holabird, who made the report, Complainant's Exhibit 162, mentioned above which the Court will observe is a most enthusiastic one.

Then follows in the record (Folios 4730-8) an extraordinary correspondence, the nub of which appears in a telegram addressed to two gentlemen at Marshfield, under date of March 9, 1909, signed by the late defendant Harriman (Complainant's Exhibit 164, Folio 4730), which we quote:

> "You are misinformed as to Colonel Holabird's report. My offer to your delegation last August was very plain, and if satisfactory guarantee can be had of four per cent on the cost of the road each year for ten years, over and above the cost of maintenance and operation and taxes, I will recommend its construction to our committee. No one's opinion will be satisfactory. Guarantee must be on basis that deficit in any one year will be immediately paid and the guarantee properly secured."

That is the method proposed by the defendants for developing the northwest. It was proposed that the people who were to furnish the traffic, large numbers of whom had been induced to go in by the pretense of starting the building of a railroad, should guarantee four per cent interest, taxes and all operating expenses and maintenance, for ten years, to induce the construction of a branch of defendant Southern Pacific's own railroad into a region of great richness. The joker in this proposition, in addition to the impossibility of the whole scheme, is that the making of rates, the bookkeeping and the division of earnings between the branch and the main line out of which operating expenses, maintenance and taxes would be paid, would be fixed by defendants; the operation and maintenance would be at such figures as they might conclude to make them, and the community would foot the bill. Certainly we are fortunate in having in the record the evidence of such performances of these defendants in this great northwestern country, showing the effect of the monopoly controlled by them. If no other reason existed for breaking up this combination, the situation in Oregon alone ought to be sufficient.

C. THE NATURAL, AND WE MIGHT SAY, INEVITABLE EFFECT OF MONOPOLY OR SUBSTANTIAL MONOPOLY, IS INCREASE IN RATES.

The statement of transcontinental rates from various common points in the east to Pacific Coast terminals, shown on Complainants' Exhibits 81-A, pages 866-7; 81-B, page 868; 81-F, pages 875-6; 81-G, page 877; 81-H, page 878; 81-I, page 879; 84, pages 888-90, gives a plain illustration of the result of a substantial elimination of competition. It is the boast of railroad men generally in this country, that rates are gradually but inevitably being reduced from year to year and from time to time. It is a fact that most rates, with the exception of transcontinental rates, have been gradually reduced, so that railway charges on the whole are not the subject of serious criticism on the part of shippers. But other parts of the country are served by great numbers of competitive lines. Even though they may not have common termini, they lead from various distributing points to the same territory, and thus are competitive. As, for instance, the jobbers of St. Paul, Chicago and Milwaukee meet in competition in certain territory more or less well defined. Therefore, the lines of road leading in and out of these various centers into that territory must make rates that will move the traffic and enable shippers to compete. This is as perfect competition between railroads as is the competition between the lines leading from the same distributing centers to a common territory. West of the Missouri River the lines that participate in transcontinental traffic are few in number. In fact, the only lines reaching the Pacific Ocean are the Canadian Pacific, the Great Northern, Northern Pacific, Union Pacific, Southern Pacific, and Santa Fe. In this we are, of course, treating the San Pedro,

Los Angeles and Salt Lake road as part of the Union Pacific, as we are treating the Oregon Short Line and O. R. & N. as part of the Union Pacific. It is thus easy for these lines to maintain and often advance rates south of Portland, Oregon, to the Mexican boundary. Every line south of that point is absolutely controlled by the Union Pacific, with the exception of the Santa Fe, and in that road the Union Pacific has a strong influence. Railroad men are human, and with a common traffic director in charge of every line into California, with the exception of the Santa Fe, and with the various deals and arrangements back and forth between these lines and the Santa Fe, and with some common directors, it is natural that the Union Pacific organization should dominate. This consolidation has two immediate effects on rates. It destroys the possibility of competition between the parties to the same and gives to the one official speaking for the united roads a much greater influence upon the lines not parties to the combination. Mr. Harriman in his testimony, insisted that rates had been reduced on the Union Pacific about 17% from the time he took charge up to 1906. (Folio 1300.) That statement is of very doubtful accuracy, for the reason that the rate per ton per mile for the various years does not indicate it; but if the average rates have been decreased, as he claims, that average has been produced by reductions in competitive territory. It will be remembered that from the Missouri River to Colorado and Utah common points, there are a number of lines competing with the Union Pacific on a great local business, which business amounts in the aggregate to more than the transcontinental business. Lines like the Rock Island, the Burlington, the Missouri Pacific, and Denver & Rio Grande, are actual competitors of the Union Pacific system, and it

is quite likely that these local rates may have been reduced. The testimony does not disclose whether they have or not, but the evidence does show that transcontinental rates have not been brought down, but on the contrary, have been largely increased. Much of the traffic moving to the coast from different points along the seaboard and in the interior moves on commodity tariffs—in fact, the larger portion. It is no doubt true that a very large majority of the earnings are from traffic moving on commodity rates. An inspection of Complainant's Exhibit 81-H shows that the rates are higher than in the year 1897, which was the year before the beneficent rule of the individual defendants commenced on the Union Pacific. A few examples on pages 866, 867 and 878 will demonstrate this fact. The rate on dry goods to Pacific Coast terminals from all points east of the Missouri River in 1897 was $1.50 a hundred; January 1, 1909, and for several years previous, $3.00 a hundred. The rates on cotton piece goods was $1.00; January 1, 1909, $1.10 on carload lots, and $1.60 on less than carloads. Cast iron cook stoves, $1.10, now $1.30. Canned goods then 75 cents from Cincinnati and Detroit common points and points east, and 65 cents from the Missouri River and from Chicago common points, now $1.00 from Cincinnati and points east, 95 cents from Chicago, and 90 cents from the Missouri River. Glassware then 85 cents, now $1.20. Drugs then $1.00, now $1.50. Crockery then 95 cents from Chicago and points east, 90 cents from Mississippi River common points, and 85 cents from Missouri River common points, now 95 cents from all points. The important item of nails consumed in great quantities everywhere, then 75 cents from Cincinnati and Detroit common points, Pittsburg common points and New York, and 50 cents from Missouri River points and Chi-

cago common points, now 85 cents from Cincinnati common points and 70 cents from Chicago common points and west to the Missouri River. Agricultural implements largely manufactured in Ohio and Chicago common points territory, then $1.15, now $1.35 from the same territory.

This does not look much like a reduction of 17% or any per cent, but on the contrary, shows a tremendous increase.

But Complainant's Exhibit 81-H, page 878, taken by itself, showing a comparison between the new rates put in January 1st, 1909, and rates as they had gradually been increased up to that date, demonstrates that this monopoly has added greatly to the burdens of the shipper within the last few years. The evidence that we have commented on shows that the shipments to the east of canned goods and dried fruits, nuts, hops, and similar agricultural products from California and Oregon points, is a traffic of great importance.

Complainant's Exhibit 81-G, page 877, shows how, on the first of January, 1909, the rates on all those commodities were advanced. The only reductions are on class rates upon which practically nothing moves eastbound.

Complainant's Exhibit 84, pages 888 to 890, is a statement of the rates all rail, and also by the Morgan Line and Mallory Line, in connection with the rail lines prior to January 1, 1909, and taking effect on that date. This is a table that deserves careful examination. It shows that the commodities on which the tariff has not been advanced are of minimum importance, so far as tonnage is concerned. But the important subjects of traffic moving to the coast by water and rail have been made to pay an additional tribute. It is unnecessary, and would prolong the brief to unreasonable lengths to go through this whole

All of the ten class rates, with the exception of the first two, have been increased. Class 3 from 31 cents to 41 cents; Class 4 from 26 cents to 41 cents; Classes 5-A, D and E from 18 cents to 28 cents, and Classes A and B from 23 cents to 28 cents.

The 17% reduction could not have been in this territory any more than on the transcontinental rates.

Rates into Colorado and Utah have changed very little, probably owing to the competitive lines directly reaching those points. (See Complainant's Exhibits 81-C, pages 870 and 871, and 81-D, pages 872 and 873.) These tables show that the through rates all rail from Colorado common points to New York, have not changed in any of the classes to exceed one-half of one cent, from January 1, 1898, to the present time; that is, the first-class rates changed from $2.72 to $2.72½; second class from $2.20½ to $2.21. The changes have been inconsequential. Through rates all rail from New York to Colorado common points from January 1, 1898, have likewise not changed in any case to exceed one cent, and in most cases, they are still the same. The Gulf and rail rates, which are the same by the south Atlantic ports and rail, as shown by the testimony, have been slightly reduced on some classes, remaining stationary on others from Colorado common points to New York, and on traffic moving from New York to Colorado common points, boat and rail, the tariffs have remained substantially stationary since 1900, there being an increase of only one cent on the first class, one cent on second class, one cent on the third class, the others being unchanged. Therefore, while even these rates have not shared in the general movement of reduction that has been observable in other sections, the influence of competition has been sufficient to prevent the Union Pacific-Southern Pacific com-

bination from advancing rates into this territory which is served by competing lines. It appears by Complainant's Exhibit 214, pages 4973 et seq., that the rate per ton per mile on the Southern Pacific is higher than on any transcontinental line except the Denver & Rio Grande, which is a short line with a large local business. The rate per ton per mile on the Union Pacific is substantially the same as on the Santa Fe, and upon the Union Pacific, Southern Pacific and the Santa Fe, is much higher than on the Northern Pacific, Great Northern or the Canadian Pacific. The fact is well demonstrated by these statistics that the purpose of this monopoly, created, fostered and maintained by these defendants, is the same as any monopoly, viz., to extort from the people compelled to patronize it, all the money possible; ignoring the public character of the business carried on by such combination, and spending no money for the development of the regions from which its earnings are drawn, except when forced to do so by the competition of other interests.

INTENT ON THE PART OF THE DEFENDANTS TO RESTRAIN TRADE AND MONOPOLIZE THE TRANSPORTATION BUSINESS IN THE TRANSCONTINENTAL TERRITORY.

We have discussed in great detail certain of the acts of the defendants which have resulted in the elimination of competition in this territory. We shall not repeat at length any of these matters, although for the purpose of connected and chronological statement we shall mention some of them. In determining the intention of these parties in connection with the acts they did, the court must bear in mind the fact that we suggested at the beginning of this brief, namely, that the lines of railway reaching from the Missouri River line to the Pacific, beginning at Portland on the North and extending down to the Mexican boundary, were in 1901 but four in number, to-wit, the Northern Pacific, the Union Pacific, Southern Pacific and Santa Fe. The Great Northern and Canadian Pacific reached Puget Sound. Therefore in entering upon this scheme, the defendants did not have before them such a proposition as confronted the men who controlled the American Tobacco Co. The latter, in order to arrive at a dominant position in the tobacco trade had to buy up or secure the control of many companies. The defendants here had to secure the control of very few. It is clear, also, from the reasoning in the Tobacco case and in the Standard Oil case that it is not essential to prove this conspiracy that the defendants should have had in mind at the beginning as great a monopoly as they afterwards intended. Although the purchase of the Northern Pacific and the raid upon Senator Clark's proposed independent line from Los Angeles to Salt Lake were almost contemporaneous with the Southern Pacific purchase, it was not essential that they should have

been. They might have followed each other after considerable intervals, and still each might have evidenced a settled purpose to achieve an unlawful power over and control of this business. The late defendant Harriman, the defendants Schiff, Kahn and Stillman, were connected with the matter from the beginning, Harriman, Kahn and Stillman all members of the executive committee of the Union Pacific. Schiff was a partner of Kahn, and on the reorganization committee, and from that time on the board of directors. Mr. George J. Gould was a member of the board of directors and of the executive committee until 1905. We are fortunate in having in the record the testimony given by Mr. Harriman when the relations between these companies were under investigation by the Interstate Commerce Commission. For the purpose of proving one or two facts the Government called defendant Schiff to the stand and secured the testimony from him which has been heretofore commented on, but he was not called by the defendants, nor did he testify generally upon the issues raised by the pleadings. The complainant also called Mr. Gould as a witness. The defendants called Mr. Kahn but failed to take the testimony of Mr. Stillman. Therefore he is silent as to these transactions. In connection with the San Pedro the defendant Clark was not called by the defendants to explain away his declarations introduced in evidence by the Government. The defendant Frick was not called to testify concerning the Santa Fe purchases or any other transaction developed by the testimony. All of these defendants were available, and hence we must assume that upon the vital issues of the case they could not have given testimony that would have aided the defendants. Otherwise Schiff, Clark, Stillman and Frick would have been produced as witnesses. The most important figure in this coterie was

the late defendant Harriman. His spirit animated them all He was no pretender and was frank in the declaration of his views as to the relations that should obtain between railroads and the public and as to the relations that should exist between competing railroads. In answer to Commissioner Clements at Folio 1351, he testified as follows:

> "Q. Well, you have said this morning, I think, that it would not be necessarily wrong for the road to earn fifteen per cent on its capitalization?
> A. Why, certainly not.
> Q. Where would you fix the limit?
> A. One hundred per cent, if you like?"

The record in this case shows how consistently the defendants have worked toward the attainment of such an end. The spirit animating these defendants was further disclosed by Mr. Harriman in answer to questions put by Commissioner Lane. The testimony we are about to quote also shows why the method that was taken was adopted to secure a voice in the Santa Fe. It will be remembered that the Southern Pacific and Northern Pacific purchases and the proceedings with reference to the San Pedro antedated the Northern Securities decision. The Santa Fe purchases were shortly after. After testifying with reference to the purchases of stock in various railroad corporations, a large number of which appear in Harriman, Exhibit 2, (Folio 1264), and stating that the purchases of Illinois Central, Chicago & Alton, Baltimore & Ohio and New York Central stocks had been made from the proceeds of the sale of Northern Pacific and Great Northern after the distribution of the assets of the Northern Securities Co., Mr. Harriman proceeded as follows:

"Q. Where is that thing going to stop?

A. I don't—I think it has stopped. I don't think we have any more—I would go on with it if I thought we could realize something more than we have got from these investments, I would go on and buy some more things.

Q. Supposing you concentrated two or three more you might take some other line and go right into New York?

A. Suppose we had a line from New York to San Francisco; I suppose that is what you mean; would it not be a good thing—not that we have any idea of doing it—but would it not be a good thing?

Q. Supposing that you get the Santa Fe?

A. You would not let us get it.

Q. How could we help it?

A. How could you help it? I think you would bring out your power to enforce the conditions of the Sherman Anti-trust Act pretty quick. If you will let us, I will go and take the Santa Fe to-morrow.

Q. You would take it to-morrow?

A. Why certainly I would; I would not have any hesitation; it is a pretty good property.

Q. Then it is only the restriction of the law that keeps you from taking it?

A. *I would go on as long as I lived.*

Q. Then, after you had gotten through with the Santa Fe, and had taken it, you would also take the Northern Pacific and Great Northern, if you could get them?

A. If you would let me.

Q. And your power, which you have, would gradually increase as you took one road after another, so that you might spread not only over the Pacific coast, but spread out over the Atlantic coast.

A. Yes; but hasn't your organization increased its power?" (Folos 1359-60.)

This was an open confession of the views and ambitions that animated the witness and his associates.

This tallies perfectly with the statement of the witness Kahn that we have heretofore quoted in connection with the discussion of the Santa Fe purchases, where he stated that one of the reasons for the purchase of the Santa Fe stock was to secure to the Union Pacific a voice in the councils of the Santa Fe. It hardly needs testimony to show that these defendants were familiar with the relations between the different railway and steamship companies. Mr. Schwerin testified that Mr. Harriman sold quite a block of the Pacific Mail stock to the Southern Pacific before the acquisition of the stock of the latter by the Union Pacific. (Folio 2719.) That Mr. Harriman appreciated the relations between the Union Pacific and the other lines is clearly shown. At Folio 1277 he said:

> "Q. The Santa Fe is a parallel and competing line with the Union Pacific, is it not?
> A. Undoubtedly, I am sorry to say."

And again, at Folio 1295, he said:

> "There is not a point on the Union Pacific Railroad that is not competing with a point on the Atchison road—that is, situated under the same conditions, although they may be 200 or 300 miles apart. If we are going to develop the traffic and the industries along our transportation lines, we have got to give the same service that exists at similar points on another railroad, or better service, no matter whether it is local or not.'"

And again, when asked as to whether there was any competition between the San Pedro road and the Southern Pacific or Union Pacific, he replied:

"I should say there was. It is a continual source of annoyance." (Fol. 1288.)

Of course the competition between the Southern Pacific and the San Pedro which annoyed Mr. Harriman so much is not very formidable in view of the facts which we have detailed heretofore.

As to the effect of competition Mr. Harriman testified at Folio 1325:

"Q. Then competition is the only thing that will force down the rate?

A. That is possibly so, competition between communities and competition of railroads."

He again testified at Folio 1317 that the tariff on all Pacific Railroads was the same. Having thus ascertained the attitude of mind of these parties we will consider the testimony as to what was done by them in the way of carrying out these views, which bears directly on their intentions in the premises.

As we have shown by our discussion of the evidence in detail, the Union Pacific first purchased sufficient stock of the Southern Pacific Co. to control that system. This eliminated all competition between the two systems. They were enabled to move traffic of a competitive character the way that brought the most revenue to the consolidated system, as testified by the witnesses. This purchase not only put an end to the competition between the Southern Pacific and Union Pacific, but it put in the possession of the Union Pacific the absolute control of the Panama Route between New York and San Francisco. Only one excuse is offered for this purchase, and that is that the Union Pacific desired an assurance that no competitor would secure the line from Ogden to San Francisco and thus interfere with existing relations. To use the expression adopted by the trial court, it is claimed that they were afraid of being "bottled up" at Ogden. That, of course, as is admitted by the trial court, is not a legal excuse for a purchase which directly eliminated competition and restrained trade. That is, the securing of a line, no matter how useful or profitable, running from Ogden to San Francisco, is no reason for buying the great Sunset Route, which from its inception was an active competitor of the Union Pacific. It was no excuse for acquiring control of the Panama Route and destroying that route as a competitor, as was done. But the evidence in this case clearly discloses two things with reference to that purchase which utterly destroy this explanation given by Mr. Kahn. The first and conclusive one is this: The evidence is undisputed that up to this time the Southern Pacific short line from Ogden to San Francisco had been an open highway interchanging business freely with the Union Pacific and

the Denver & Rio Grande and the Rio Grande Western. If there was no desire to eliminate competition clearly the best way to prevent such elimination was to continue that line as an open highway. In that way the through lines from the East by the Central route would have remained competitors of the Sunset Route, and the ability of the Rio Grande to unite in that competition would not have been so much lessened that it would have been driven to construct the Western Pacific for its own advantage in handling transcontinental traffic. It appears by the testimony of Mr. Gould that as a matter of fact he was not endeavoring to interfere with the acquisition of the Southern Pacific by the Union Pacific, as claimed by the defendants.

Mr. Gould testified, (Folio 8254), that from the time of the reorganization up to some time subsequent to 1901, he was a director of the Union Pacific. He was asked:

> "Q. What were your relations with Mr. Harriman as to being intimate or otherwise?
> A. Rather intimate. We were friendly. I was on the Executive Committee of the Union Pacific.
> Q. You were on that committee previous to the time you acquired the Rio Grande?
> A. Yes."

(He had previously stated that he was not interested in the Denver & Rio Grande until the fall of 1900 and the winter of 1901, going upon the board of that company February 14, 1901.)

> "Q. Do you remember of the time that the negotiations were pending on the part of Mr. Harriman for the Union Pacific for the acquisition of the stock of the Southern Pacific?
> A. Yes.

Q. Were you advised of those negotiations as they were going on?

A. Yes.

Q. By whom?

A. By Mr. Harriman. Not in the detail but in the general.

Q. During the time that those negotiations were pending or at any time after the death of Mr. Huntington, did you approach the representatives of the Huntington estate with a view to purchasing the stock of the Southern Pacific?

A. No, sir.

Q. During the time these negotiations were pending between Mr. Hariman and the Huntington people did you have any talk with him about the possibility of taking or of endeavoring to buy that stock if he did not want it, or anything of that sort?

A. Yes. Mr. Harriman seemed at one time to get a little lukewarm about taking the stock, about making the purchase. I told him if he did not want it and had no objection, I would take it for our interests.'"

On cross-examination in the endeavor apparently to make Mr. Gould appear to have been hostile, although he was Mr. Harriman's friend and on the Executive Committee and conversant with these negotiations, he was asked:

"Q. Is it not a fact that before the Union Pacific purchased the Southern Pacific stock. before the Union Pacific had acquired that stock at all, you notified Mr. Harriman that in the event he did not proceed with those negotiations, you would take that stock for your properties?

A. No, not in the way you put it, no. I suggested to Mr. Harriman, I did not notify him in the sense that you use the word, of laying the law down. I suggested to Mr. Harriman during the negotiations that if he did not want the properties—

the Southern Pacific—I would take them for my interests." (Folio 8258.)

On re-direct examination, (Folio 8260) he testified:

"Q. But neither in the fall of 1900 nor at any time did you personally attempt to buy it?
A. No, I would have considered that disloyal to my associates.
Q. Mr. Harriman?
A. Yes."

This is the hostile and antagonistic Mr. Gould, whose threatening conduct was put forward by Mr. Kahn as a justification for the acquisition by the Union Pacific of this competing line.

Mr. Hawley, who sold the Huntington stock to the Union Pacific, corroborated Mr. Gould as follows (Folio 8243):

"Q. Mr. Kahn also testified that he was advised at that time or after Mr. Huntington's death, that Mr. George Gould was trying to buy control of the Southern Pacific, or at least trying to buy the Huntington stock. Did Mr. Gould attempt to buy that Huntington stock?
A. I never heard that he did.
Q. Did he ever speak to you on the subject?
A. No, sir.
Q. Did you hear at the time from any source from the executors or anybody else that Mr. Gould was trying to buy that stock?
A. Never."

Therefore not only did Mr. Gould not endeavor to interfere with this purchase, not only was he not hostile as alleged by Mr. Kahn, but at Folio 8255 he gave the following testimony which is absolutely conclusive upon the

desire of these defendants to eliminate competition and control the whole situation themselves:

> "Q. Mr. Gould, after the acquisition of the stock or the contract for its purchase, did you have any talk with Mr. Harriman with reference to sharing in the purchase?
>
> A. *Yes, I suggested to Mr. Harriman that he let the railroads with which I was connected have a half interest in the purchase—the Missouri Pacific and the Texas & Pacific. He turned the suggestion down.*
>
> Q. *Declined?*
>
> A. *Yes.*"

On cross-examination, at Folio 8259, Mr. Gould said that this request which was so refused by Mr. Harriman was made about the time of the completion of the purchase of the Southern Pacific stock. He was then asked by counsel for defendants:

> "Q. Did you make any statement along those same lines at that time to any member of the firm of Kuhn, Loeb & Company?
>
> A. I think I mentioned it to Mr. Schiff, probably. Yes, I think I mentioned it to Mr. Schiff."

The Texas Pacific connects with the Southern Pacific at El Paso. The Missouri Pacific reaches Denver, and now has a preferred connection into Ogden over the Rio Grande, which has in turn absorbed the Rio Grande Western. The acquisition of the Rio Grande by the Gould interests was made about the same time, perhaps a little later. The fact that Mr. Harriman declined to permit the Gould lines to share in the purchase, which would have made the financial burden only one-half as great, while in the absence of a desire to monopolize, the situation would have been equally favorable for the purpose claimed, namely, to insure against

the acquisition of the line from Ogden to San Francisco by a hostile interest, is conclusive evidence that the intention of these defendants was as is alleged by the Government in the complaint.

Again, the only testimony offered to negative the allegation that this purchase was made to eliminate competition and was solely for the purpose of securing the Ogden-San Francisco line, is that given by Mr. Kahn. He stated that the executive committee of the Union Pacific had desired to make a binding traffic arrangement to insure this open highway during the lifetime of Mr. Huntington, and on his direct examination stated that Mr. Harriman had had various interviews with Mr. Huntington for that purpose, and had in those interviews gone to the extent of offering to buy the Central Pacific line alone. But on cross-examination Mr. Kahn was obliged to admit that these statements with reference to Mr. Harriman's interviews with Mr. Huntington were pure hearsay. At Folio 7893 he testified with reference to these proposed arrangements:

> "Q. Who made that offer to Mr. Huntington? When was it made and were you present when it was made?
>
> A. Mr. Harriman made that offer and he made it more than once.
>
> Q. Was it ever made in your presence, Mr. Kahn? Mr. Harriman is dead, Mr. Huntington is dead, and that is the reason I am trying to find out whether this is merely something that was told you or whether it is something you know of your own knowledge and were present when the offer was made.
>
> A. I was in daily contact with Mr. Harriman. I saw him after every important conference, and I saw him in conferences. *Whether or not I was at the conference at which that particular proposition was made I could not swear.*

Q. You would not undertake to swear that such a proposition was ever made in your presence?

A. No, I would not undertake to swear to that."

That no such proposition was ever made is demonstrated to a moral certainty by the fact that *none of the immediate associates of Mr. Huntington who were familiar with his business and with whom he discussed His affairs, ever heard of any attempt by Mr. Harriman either to make a permanent contract between the Union and Southern Pacific or to buy, on behalf of the Union Pacific the Central Pacific line alone, as claimed by Mr. Kahn.* Mr. Hawley, who was Mr. Huntington's intimate associate and for nineteen years the representative in New York of the Southern Pacific, who sold the Huntington stock together with his own, to the Union Pacific when the purchase was made immediately after Mr. Huntington's death, testified at Folios 8245 and 6, that he never knew of any such alleged attempt. Mr. Tweed, who was the Vice President and General Counsel of the Southern Pacific and Mr. Huntington's executor, whose personal and professional relations with him were of the most intimate and confidential character, and who officed in the same suite with Mr. Huntington, having his attention called to Mr. Kahn's statement gave the following testimony at Folios 8393 and 4:

"Q. Did any offer by Mr. Harriman to Mr. Huntington to purchase the Central Pacific line ever come to your knowledge, Mr. Tweed?

A. I have no recollection of such an offer having come to my knowledge."

Mr. Miles, a gentleman about sixty years of age, testified at Folios 8261 et seq., that for nineteen years previous to the death of Mr. Huntington and up to that date, he was

his private secretary; that he attended to all of his correspondence; that outside of business, his relations with him were intimate; that he had traveled with and always accompanied him on his trips to California, living there at his house; that he was with Mr. Huntington when he died at his camp in the Adirondacks; that his office or desk for nineteen years was in the same room with Mr. Huntington; that he very frequently talked over his business matters with him and in his presence, and finally that his relations with Mr. Huntington were of an exceedingly intimate and confidential character and so continued up to the time of his death. He said Mr. Harriman had come to Mr. Huntington's office occasionally but very rarely; that he made very short stops; that when he came to the office he saw him there; that he did not recall that Mr. Harriman ever had a long conference with Mr. Huntington. There was then read to him Mr. Kahn's statement as to these alleged efforts of Mr. Harriman during the last year or two of Mr. Huntington's life, and he was asked whether any such negotiations ever came to his attention, and he answered "No," and further said that he had never heard of them. This would seem enough. But in addition, Mr. Gould, who, it must be remembered, was a member of the executive committee of the Union Pacific, and as he said, on friendly and intimate terms with Mr. Harriman, after testifying to the negotiations after Mr. Huntington's death with reference to the stock purchase, said, (Folio 8255):

> "Q. During the time these negotiations were pending *or at any time* did you know of any effort being made to buy the Central Pacific line alone?
>
> A. No, I don't remember of it."

If this was a matter, as Mr. Kahn claims, that was talked over in the executive committee of the Union Pacific, why did not the defendants call Mr. Stillman, who was available, or Mr. Marvin Hughitt, who was a member of that committee, to fortify Mr. Kahn's statement after it was thus so thoroughly discredited? Why was not even the defendant Schiff put upon the stand to corroborate his partner? The defendants relied upon this alleged reason for their defense in this case, and if there was any person living who could have gone on the stand to corroborate Mr. Kahn, they would have produced him, but they did not offer the testimony of any of these other gentlemen. That Mr. Kahn was, to say the least, a very careless witness, was further shown by the fact that he testified that the Huntington stock was not purchased by the Union Pacific direct, but "that stock was bought by Kuhn, Loeb & Company on their own responsibility and at their own risk, with the sole understanding that they took upon themselves the obligation of offering it to the Union Pacific, and that the Union Pacific could take it or not as it saw fit; (Folio 7882) that the purchase was made from the Huntington estate. (Folio 7883). He then gave the following testimony at Folio 7908:

"Q. Who controlled that Huntington stock before Kuhn, Loeb & Company bought it? Who were the executors?

A. The executors were Harry Huntington, I think, and Mr. Tweed and Mrs. Huntington.

Q. That is H. E. Huntington?

A. That is H. E. Huntington.

Q. And Mr. Tweed?

A. And Mr. Tweed and Mrs. Huntington, as far as I can remember.

Q. Who conducted the negotiation with the executors on behalf of your firm for the purchase of the stock.

A. *Largely ourselves.*

Q. *I say who acted for your firm?*

A. *Mr. Schiff and myself with the cooperation of Mr. Harriman.*

Q. *Then the negotiations for the purchase of that stock from the Huntington estate were conducted by Mr. Jacob H. Schiff, Mr. E. H. Harriman and yourself?*

A. *Yes.*

Q. And over what period of time did those negotiations extend?

A. The negotiations for the actual acquisition materialized very rapidly. I should say not more than two weeks.

Q. And when did they come to a head?

A. In February, 1901, or the end of January, 1901, I think. Yes, it was the end of January, 1901."

In view of this detailed statement of Mr. Kahn and the fact that he is the witness upon whom the defendants rely in this case, it is interesting to observe:

First, that the testimony discloses that the stock was not sold by the executors of Mr. Huntington, but by beneficiaries under his will, to whom it passed directly;

Second, that the executors of the will were persons different from the ones named by Mr. Kahn, even if they had made the sale;

Third, that the sale was not made to Kuhn, Loeb & Company, but made directly to Mr. Harriman; that all of the negotiations were with Mr. Harriman, representing the purchaser, and the only time a member of Kuhn, Loeb & Company appeared in the transaction was on the evening at Mr. Harriman's house when the deal was agreed to, Mr. Schiff being present but taking no part in the negotiations and Mr. Kahn not showing up in the transaction at all.

Mr. Hawley testified that he had long been interested with Mr. Huntington in Southern Pacific stock; that a short time before the death of Mr. Huntington he had joined with him in the purchase of a portion of the Crocker stock, that interest having at one time owned a fourth of the capital of the Southern Pacific; that the purchase was for the purpose of increasing their interest in and maintaining control of the company. The purchase amounted to 100,000 shares. (Folios 8243 and 4.) His attention was then called to Mr. Kahn's testimony to the effect that most of the first seventy-five millions of stock acquired by the Union Pacific was purchased from the Huntington estate by Kuhn, Loeb & Company, and he was asked what, if anything, he had to do with the sale of the Huntington stock, and testified that he himself negotiated the sale of 475,000 shares including the entire Huntington holdings and his own; that he sold the stock to Mr. Harriman and the transaction was consummated at Mr. Harriman's house; that the negotiations were in progress for some little time. He was asked:

> "Q. Were your negotiations exclusively with Mr. Harriman?
>
> A. Yes, so far as the Union Pacific was concerned.'"

He further said that when the matter was finally concluded there were present Mr. Harriman, Mr. Schiff, Mr. H. E. Huntington and himself. (Folios 8246 and 7.) He further testified:

> "Q. You stated in your direct examination that your negotiations, so far as the matter of the sale of the stocks was concerned, were entirely with Mr. Harriman, and you saw Mr. Schiff finally at the interview when it was closed?
>
> A. That is all.
>
> Q. Did Mr. Schiff take any part in the negotiations?

A. No, sir.

Q. During the course of those negotiations with Mr. Harriman for the sale of this stock, was any proposition made to you by Mr. Harriman looking to the purchase or the control simply of the Central Pacific line?

A. No, sir.

Q. There were no negotiations except for the purchase of the stock?

A. That is all. * * *

Q. And you put through this transaction without any compensation, as you stated to Mr. Dunne, so far as the Huntington stock was concerned? You were not employed by them, but you were selling your own stock, and you sold the stock of your deceased friend?

A. That is right." (Fols. 8251-2.)

A copy of Mr. Huntington's will was produced by Mr. Tweed, and introduced in evidence as Complainant's Exhibit 217, (Folios 8295 et seq.) By subdivision 8 of the will, (Folio 8301) all Southern Pacific stock owned by Mr. Huntington was given directly to his widow, Mrs. Huntington, and his nephew, Mr. H. E. Huntington, in the proportion of two-thirds to the widow, and one-third to the nephew. The executors of the will were Mrs. Huntington, Mr. Tweed and Isaac E. Gates. Mr. H. E. Huntington was not an executor as stated by Mr. Kahn. Mr. Hawley further stated that the executors had nothing to do with the sale, as the stock was left entirely free from the power of the executors as a special bequest. (Folios 8248 and 49.) Mr. Tweed when testifying called attention to the eighth clause of the will making disposition of the Southern Pacific stock, and then testified with reference to the sale of the same:

"Q. Was that sold by the executors or was it sold by the beneficiaries under this clause?

A. It was sold by the beneficiaries, Mrs. Huntington and Mr. H. E. Huntington.

Q. Were the negotiations for the sale of that stock with the beneficiaries or their representatives or with the executors?

A. With the beneficiaries."

(Folio 8295.)

Mr. Tweed, being one of the executors, was certainly in a position to know whether Mr. Hawley testified truthfully that he made this sale, or whether the same was made as Mr. Kahn said, by the executors. It is significant that neither Mr. Schiff nor Mr. H. E. Huntington were called to contradict this testimony or to fortify the thoroughly shattered testimony of Mr. Kahn. Even though there had been any evidence entitled to belief that the Union Pacific had bought this stock for the simple purpose of getting the line into San Francisco with some local lines in California, it would, of course, be no defense to this charge if in fact the result was to directly eliminate competition. But even this excuse was wiped out by the testimony to which we have called attention. The defendants seem to be under the impression that a defense can be made out if it would have been a profitable transaction to the Union Pacific, taking into account only the Ogden line irrespective of how much the competition of the Union Pacific with other lines might be eliminated. With the idea of developing that fact on the cross-examination of Mr. Gould, the following question and answer appear, the question being put by the defendants' counsel:

"Q. You have stated to Mr. Severance that you were friendly with Mr. Harriman at the time of these negotiations, that you were a member with him of the executive committee. Do you know whether during the pendency of his negotiations

for the purchase of the stock and before the consummation of the sale, he was apprehensive that other interests over and above your own interests were desirous of getting that stock?

A. Yes, he talked it over with me several times, and he was afraid the North-Western would build from the Black Hills. They had a line up to the Black Hills, and he was afraid the North-Western would build from the terminus of their line through to Ogden, going through a canyon that lies to the north of Ogden. Ogden Canyon, I think the name is, but I am not quite sure. Then he also used to be afraid of the Burlington building through to Ogden." (Fol. 8259.)

These ghosts were commented on in the brief of counsel in the court below as making it lawful for the Union Pacific to make this purchase. If an illegal transaction can be legalized by an interested party having fears in the back of his head, no matter how remote the excuse for such apprehension, then the law becomes a farce. It would probably have cost the North-Western about as much to build from the Black Hills through the mountains of Wyoming to Ogden as it would have cost the Union Pacific to have built its own line to California, and it would have been a very expensive undertaking for the Burlington to build from Denver through the mountains of Colorado and Utah to Ogden. There is no evidence that anything had been done by either the North-Western or the Burlington looking to such extensions, or that either of them had considered the same. How Mr. Harriman would have been injured if such extensions had been made, except by the fact that other competitors of the Union Pacific would have paralleled its line, is hard to see. It shows how void of a reasonable defense is the defendants' case when such fancies are dragged in and commented upon.

ATTEMPTED ACQUISITION OF A HALF INTEREST IN THE DENVER & RIO GRANDE.

The Denver & Rio Grande is an active, energetic competitor of the Union Pacific both on local business, between Colorado and Utah common points, and also on all transcontinental traffic. It is the competitor that it is claimed was feared by the Union Pacific. It is one of the competitors that it undertook to destroy by this purchase and the through business of which was so taken away by it that the Western Pacific line was constructed. In spite of the fact that the trial court held that in determining whether one line is a competitor of another, its connections must be disregarded, that court said:

> "The same considerations lead to the conclusion that no combination or conspiracy to monopolize or attempt to monopolize trade or commerce among the states or with foreign nations, was entered into. Moreover the fact that the Union Pacific Company did not secure or undertake to secure the control of the Santa Fe road, a thoroughly sufficient, well-equipped and powerful rival for transcontinental business, or the Denver & Rio Grande, a potential, and later, an actual powerful rival for the same business, affords additional conclusive evidence of no such combination or conspiracy."

How the Denver & Rio Grande, or the Santa Fe, for that matter, could be powerful rivals for transcontinental business, when both they and the Union Pacific were necessarily dependent upon connections for that business, in view of the rule upon that matter adopted by the trial court, is inexplicable. This statement that they were both rivals and competitors on transcontinental business, is, however, absolutely true, and the fact that the trial court itself has so stated, is an answer to its ruling in another part of the

opinion, that competitors must be sufficient and complete in and of themselves without regard to their connections. It is admitted by everyone that the Denver & Rio Grande is a potential, and in fact, an actual rival for transcontinental business. Although such a state of rivalry existed Mr. Harriman was a director of that road until the time that Mr. Gould decided to assist in the construction of the Western Pacific, at which time he withdrew, Mr. Gould likewise withdrawing from the directorate and executive committee of the Union Pacific. (See Letter Harriman to Gould, Folios 383 & 4.) In the winter of 1900 and 1901, Mr. Gould purchased the control of the Denver & Rio Grande in the market, mostly in the London market. After Mr. Harriman had refused to allow Mr. Gould's companies to share in the Southern Pacific purchase, the following interview took place between them, as testified to by Mr. Gould at Folio 8255:

> "Q. *Did he (Mr. Harriman) make any suggestion to you subsequent to that with reference to permitting him to have an interest in the Denver & Rio Grande purchase?*
>
> A. *Yes. When I told him that I had acquired the control of the Denver & Rio Grande, he asked me for a half interest. He first said, "You bought that, I suppose, for both interests—Union Pacific and your own." I said, "No." He said, "Well, I would like to have a half interest in it." I told him I could not arrange it.*
>
> Q. It could not be arranged?
>
> A. No."

What conceivable reason can be advanced why the Union Pacific should have asked for a half interest in this powerful rival if there was no intention on the part of these defendants to eliminate competition in transcontinental traf-

fic? It is idle to enlarge upon such evidence. How the trial court could have overlooked this testimony we do not understand. Its attention was called to it in the brief in the court below and in the oral argument, and this testimony is undisputed. Even Mr. Kahn did not take the stand to deny that the Union Pacific wanted a half interest in the purchase of the Rio Grande, and that request was entirely consistent with what had been done up to that time and with what was done later; and if Mr. Gould had not quietly purchased this control, no doubt the defendants would have had it if they had discovered that the stock was for sale.

NORTHERN PACIFIC AND BURLINGTON.

We have shown in great detail in our discussion of the Northern Pacific purchase that the defendants knew that purchase was illegal when they made it. (Supra pp. 396 et seq.) Both Schiff and Kahn admitted on the stand that they knew the Union Pacific and Northern Pacific were competitors, and Kahn stated in the testimony which we have quoted, that the illegality was one of the risks they took in making this enormous purchase. The only excuse assigned for this purchase was that they were denied an illegal participation in the purchase of the Burlington by the Northern Pacific and Great Northern. We have shown by the testimony that Harriman and Schiff made repeated demands upon Mr. Hill, representing the Northern lines in this purchase, that they be allowed to share in it. This court has held that the acquisition of the Northern Pacific stock was illegal under the Sherman Act. They knew it was illegal at the time; they knew, if they had cared at all about it, that the purchase of a half interest in the Burlington alone would have been illegal, and still, because they were denied this unlawful participation they went into the market and made the purchase which led up to the Northern Pacific panic in May, 1901. The fact that they admitted these demands stamps as absolutely true, if it needed any verification, Mr. Gould's testimony that Mr. Harriman for the Union Pacific demanded a half interest in the Denver & Rio Grande. The Burlington extended half the length of the Union Pacific, namely, from the Missouri River to Denver; the Denver & Rio Grande the other half, from Denver to Salt Lake and Ogden, and still these defendants say there is no evidence in the case, of any intent on their part to monopolize transcontinental traffic, and that was the conclusion of the majority of the lower court.

SAN PEDRO, LOS ANGELES & SALT LAKE RAILROAD.

Under the detailed discussion of the performances of the defendants relative to the San Pedro road, we have shown that until the purchase of the control of the Southern Pacific no move was made by the Union Pacific toward building the line to Los Angeles. Up to that time the traffic from Utah to Southern California moved by the Southern Pacific. The proposed line of Senator Clark, which it was publicly stated would be independent, would have been a competitor both of the Sunset Route of the Southern Pacific and of the Central Pacific not only on Southern California business, but in independent hands and assuming the Santa Fe to have been likewise independent, it would have been a competitor on business to San Francisco and other points in California. A through line, according to the testimony, could be profitably made into San Francisco from Salt Lake over the rails of the San Pedro and the Santa Fe. It is clear that until after the acquisition of the Southern Pacific no thought had existed in the minds of the Union Pacific organization looking to the construction of a line to Los Angeles. This is made doubly certain by the fact that no arrangements had been made for financing so expensive and important an enterprise. When the board of directors of the Union Pacific in February, 1901, decided to issue one hundred millions of convertible bonds, forty millions of the same were to be devoted to the acquisition of the Southern Pacific, the other sixty millions to fighting the Great Northern and Northern Pacific, and the said balance was actually used in the acquisition of the stock of the Northern Pacific. There is not a line in the proceedings of the board of directors referring in the remotest degree to any proposed line of railroad to Los Angeles. Mr. Gibbon, Vice President and General Counsel

of the San Pedro, testified at Folios 1186 and 7 that they contemplated that they would have connections with the Union Pacific if they ran through from Los Angeles to Salt Lake as an independent line, and then gave the following further testimony:

> "Q. Was there any reason why you would not?
> A. No reason that we knew of at that time why we would not. But later on we discovered that the interests of the Union Pacific would require it to have some sort of a connecting line in southern California, or a very considerable interest in that sort of a line.
>
> * * * * * *
>
> Q. Why did its interest require it to have that? It had not had it for all the years the Union Pacific had been built, had it?
> A. As to why and wherefores, I can hardly be expected to answer for them. It was very evident to us, however, that they were going to do it, because they had incorporated all the companies for that purpose, and they were in the field surveying and getting material together, and it was the practical question of what we had to face that we had to deal with.
> Q. And they went through the work of incorporating these companies, and put their surveyors in the field, only after you people had started out to build an independent line to Salt Lake City?
> A. Yes, sir.
> Q. Prior to that time they had been compelled to serve California either through the El Paso gateway or the Sacramento gateway?
> A. Yes, sir.
> Q. And they had made no move whatever to serve them through a direct line from Salt Lake, or any Utah point thereabouts?
> A. No, sir."

Therefore, after Senator Clark and his associates had invested large sums of money in the purchase of terminals at Los Angeles, the line of railroad from San Pedro to Los Angeles, in surveys and other necessary expenditures, the Union Pacific, to maintain its monopoly that had been acquired by the Southern Pacific purchase, started the construction of a parallel line, which, in view of the arid region to be crossed in Nevada, furnishing substantially no local business to any railroad, would have meant disaster to the independent enterprise. As the business from Southern California to Utah and beyond would not only have been divided, but because of the superior facilities of the Union Pacific, and its control of the Southern Pacific terminals at Los Angeles and the lines radiating from that point through the fruit region, it became apparent that the struggle would have been very unequal. The work of construction continued, nevertheless, in the manner that we have heretofore discussed in detail, until the agreement of July, 1902, by which the Union Pacific took possession of the San Pedro. This contract was for the time a secret one. It was expressly stated therein that it should be secret so as to preserve the apparent independent character of the enterprise. Another year elapsed before the final contracts and deeds were made, which put an end publicly to the independent line of railroad which Senator Clark had boasted in the speech we have heretofore quoted would break the arm of monopoly that had so long separated Los Angeles and Salt Lake. The defendants were not content with acquiring half the stock, but obliged Senator Clark and his associates to stipulate that they would not sell any of their own stock without giving the Short Line the first opportunity to purchase it. They were not content even with that assurance of control, but entered into contracts run-

ning for ninety-nine years, by which the San Pedro contracted that it would not build, or aid or assist in building any lines of railroad north of Salt Lake City and the Oregon Short Line agreed that it would not, during the same period, aid or assist in the building of any lines of railroad south of Salt Lake City. For the purpose of further stamping out any shadow of independence, it was further agreed that the Union Pacific should make the joint rates in and out of all stations on the San Pedro in Utah. At the same time the San Pedro agreed to adopt for ninety-nine years the local tariffs of the Southern Pacific unless changed by mutual agreement or by law. It is claimed that this was intended to apply only to Southern California, but the contract does not so state. On the contrary, by every fair intendment from the language, it obligated the San Pedro to adopt the rates of the Southern Pacific on all business local to its line. It is significant that this contract ran for ninety-nine years, although the lease of a few miles of track in Southern California, which was the excuse for the same, only ran forty-nine years. Later on the San Pedro agreed in writing not to join in any through rates to California points north of Santa Barbara and Mojave. The sole and only purpose of this agreement was to prevent the San Pedro from uniting with the Santa Fe, if it should be so advised, in the transportation of business between Salt Lake and points to the East thereof, and the San Joaquin Valley or San Francisco. Although Los Angeles is a great city with a seaport at San Pedro in the construction of which the United States government has spent millions of money, and although the terminus of the San Pedro Railroad is on the docks at San Pedro, the traffic officials of that line were not allowed by the Union Pacific to close an agreement already approved by them and by a steamship com-

pany, for a line of vessels to ply between San Pedro and the Orient interchanging business with the San Pedro Railway. The reason for this is apparent. Such a line would have been competitive with the Pacific Mail and the Portland line, which were already in the combination. We have thus briefly reviewed the various steps taken in connection with the San Pedro, from which but one inference can be drawn, namely, that they were but additional acts demonstrating the intention of these defendants to monopolize the transcontinental traffic.

ATCHISON, TOPEKA & SANTA FE.

The same year, 1901, that these other transactions took place, the Atchison, Topeka & Santa Fe Railway Co., through Mr. Murphy, the President of their subsidiary line, the Santa Fe, Prescott & Phoenix, incorporated a company and surveyed a line of railroad from Phoenix southeasterly across the Salt River Valley into the Gila Valley to a point where the San Pedro River flows into the Gila, thence up the valley of the San Pedro to Benson, the western terminus of the El Paso & Southwestern Railroad. This latter line is an independent one starting at El Paso, where it connects with various lines to the East, reaching the Gulf of Mexico, and also with the Mexican Central, which runs to the City of Mexico, and having upon its line various large industries such as great smelters and world famous copper mines. Arrangements were made for an interchange of traffic between the Santa Fe line and the El Paso & Southwestern, which was looking for a Western outlet, having no other than the Southern Pacific from Benson to California. The construction of this line in Southern Arizona known as the Phoenix & Eastern was proceeding at the same time that the Santa Fe was building the cut-off in Arizona, doing away with the heavy grades down into the valley of the Colorado River at the Needles. While the Phoenix & Eastern was under construction, surveys were also made to the East through the Gila Canyon and the Aravaipa Canyon to determine the best line over which tracks could be laid to a connection with the Santa Fe's lines at Deming, New Mexico. The construction of the line to Benson would have opened up a new route from the South to California, and would also have made a new outlet to the East for the products of the Salt River Valley in Arizona, as well as traffic originating in California. The

line would have been strictly competitive with the Sunset Route of the Southern Pacific. The construction of the line through to Deming would have given to the Santa Fe a new transcontinental line with a lower grade, although slightly greater mileage than any other transcontinental railroad. Every effort was made by the Southern Pacific to prevent the construction of this line, but ninety miles of the same was built. For seventeen miles it paralleled a branch of the Southern Pacific from Phoenix to Mesa in the Salt River Valley. During this same period the Santa Fe acquired certain lines of railway in Northern California reaching the great timber country with the intention of extending them down to the Bay of San Francisco and a connection with its through line to the East. The Southern Pacific acquired certain short lines commencing at the Bay of San Francisco running North, with the intention of extending those lines into the timber region. While these matters were in this condition in 1904, Mr. Harriman notified Mr. Ripley, the President of the Santa Fe, and Mr. Morawetz, the chairman of its board of directors, that certain of the defendants with one or two intimate associates and himself, had acquired about thirty millions of stock in the Santa Fe, and demanded representation upon the board of directors, and for the purpose of eliminating competition between the two systems, or to use his language, deal more frankly and openly with each other and have knowledge of what each other was doing, proposed that Mr. Morawetz become a member of the executive committee of the Southern Pacific or Union Pacific, although he was not a stockholder in either one, and that he, Mr. Harriman, be allowed a like position on the Santa Fe. Mr. Morawetz objected to Mr. Harriman, but agreed to the election of two members of the Union Pacific board, Mr. Frick and Mr. Rog-

ers, who were placed upon the board of directors of the Santa Fe, and contemporaneously with that arrangement this competitive line in Southern Arizona was turned over to the Southern Pacific at cost and interest, and the two lines in Northwestern California were amalgamated into one corporation, the stock of which was equally divided between the Southern Pacific and Santa Fe. The only reason given by the defendants to Mr. Morawetz for demanding that the Phoenix & Eastern be turned over to them was that the Santa Fe was invading the territory of the Southern Pacific. It was, but has ceased to do so, and divides the business of that region with the Southern Pacific pursuant to the favorite policy of these defendants, who erected a dead line at the latitude of Salt Lake City in the case of the San Pedro. There can be no question that these performances were for the sole and only purpose of minimizing or eliminating the competition between the Santa Fe and the Union Pacific-Southern Pacific system, and as usual, the great strength and power that had been achieved by these defendants prevailed, and the Santa Fe was thus stripped of its independence. That this was the sole purpose is shown by the admission of defendant Schiff, that it was by reason of no complaint as to the manner in which the Santa Fe road was being conducted that they asked for members of the board of directors. It is shown by the fact that as soon as the two members of the board were safely in office and elected for a period of years, these defendants sold their stock, so that in the year following their joint holdings of Santa Fe amounting to over sixteen million dollars entirely disappeared and separately they remained the owners of only a little over one million. For the purpose of having a voice in the councils of the Santa Fe as stated by defendant Kahn, however, the Oregon Short

Line then purchased ten millions of stock in that company. Defendants Frick and Rogers, the Union Pacific directors, voted for the contracts by which the Santa Fe turned over its Phoenix & Eastern line to the corporation in which they were chiefly interested, and voted for the contract for the amalgamation of the two interests in Northwestern California. These two directors also continued in office although the stock owned by the defendants, which they were ostensibly elected to represent had been sold. Since then most agreeable harmony has prevailed between the Santa Fe and Union Pacific. There has not only been no competition between them for the enormous citrous fruit business of Southern California, but the Santa Fe has turned over to the Southern Pacific and the San Pedro a total amounting to about 15% of the total fruit traffic of that region. The testimony shows that fruit is naturally shipped over the lines of railway upon which it is packed. 60% of the fruit is packed adjacent to the tracks of the Santa Fe, but only 45% moves to the East over that line, 45% going over the Southern Pacific, and 10% over the San Pedro. There is delightful harmony on all importations from the Orient, Mr. Schwerin, the General Manager of all the steamship lines in the combination, dividing the traffic ship load by ship load, between the two. The mere statement of these facts shows that the purpose entertained by the defendants in 1901 was continuously prosecuted It is apparent from the testimony of Mr. Harriman that he was afraid to purchase the absolute control of the Santa Fe for the Union Pacific, so they did all they dared, but that was too much.

CORVALLIS & EASTERN.

This line is valuable to the Southern Pacific only as a preventative of competition. It leads from a good harbor in Oregon easterly to the Cascade Mountains crossing the Willamette Valley. It has a right of way entirely across the state and controls the most feasible entrance into Central Oregon from the East, namely the Malheur Canyon. Pursuant to a general policy of bottling up the country which is surrounded by the three lines, the Oregon Short Line, Oregon Railroad & Navigation Company, and the Southern Pacific, this line was acquired in 1906, and its acquisition is another evidence of the settled purpose and intention of these parties.

COOS BAY.

For the purpose of absolutely controlling all avenues of transportation that might by extensions and enlargements interfere with the monopoly of these defendants, in the spring of 1906 the Southern Pacific paid in cash a very large price for a very small property which was being run at a loss. There was no possible excuse for giving Mr. Spreckels this premium upon this bad investment, except the intention of eliminating all chance of competition in that territory.

Further showing how the same spirit animated all of these parties even in minor matters, it appears by the testimony of Mr. Mahl, Comptroller of the Union Pacific-Southern Pacific systems, at Folio 8127 et seq., that the Union Pacific has secured the control of the St. Joseph & Grand Island Railway, thus taking possession of a possible competitor at the easterly end of the system. We call attention to this as another evidence of the settled purpose and intention of these parties to monopolize in every conceivable way the transcontinental traffic. The St. Joseph & Grand Island is a line running from Grand Island, Nebraska, to St. Joseph, Missouri, and thence to Kansas City. The stock of the company was purchased by the Union Pacific from the late Mr. Harriman in 1906, and the purchase was made upon the report of a special committee of the board of which the defendant Frick was a member. The report is in the record, Folios 8135 et seq. This report, after reciting the amount of stock controlled by Mr. Harriman and the price he was willing to take for it, concludes:

> "The acquisition of the stock would secure practical control of the property, and at the price named would (at 4%) impose upon the Union Pacific Railroad Company an annual carrying charge of substantially $80,500. In view of the expenditures necessary to place the property in proper physical condition to economically handle an increased tonnage, it it is not likely that this carrying charge would, in the near future be materially offset by dividends on the stock of the Grand Island Company but the value of the stock would of course be enhanced by the application of surplus net earnings to permanent betterments.
>
> After a careful review of such data as we have been able to obtain, it is our judgment that the

> strategic position of this property, the economies to be effected by its use due to the savings in distance and more favorable gradients and curvature and its entrance into the City of St. Joseph, considered in connection with the plans of the Union Pacific Company for the enlargement of its trans-Missouri River System and *the further fact that its acquisition by hostile interests might prove both vexatious and costly, fully warrant* the Union Pacific Company in securing the practical control of the property on the terms suggested."

This purchase is a small matter. It is probably illegal, because it is a line of railroad running from Grand Island to St. Joseph and Kansas City, and the Union Pacific has a line between the same points. Its effect upon transcontinental traffic is, however, of little consequence, and we only call attention to it as showing the spirit that consistently animated all of these defendants. In this case it is Mr. Frick who speaks for them. The report concedes that the dividends on the stock cannot pay the interest upon the cost, but the purchase is favored because of the strategic position of the property and the fact that its acquisition by hostile interests might prove both vexatious and costly. It is another case like the Burlington, where it was feared that the introduction of hostile interests might interfere with comfortable competition. We have thus commented briefly upon the acts of these defendants and their declarations from 1901 down to 1906, and we do not conceive how there can be any question whatever that the allegations in the bill as to the making and carrying out of this conspiracy are absolutely established. The defendants have betrayed from first to last the intention to monopolize, not by normal growth or extension of facilities, but by grabbing up competitors and securing control of competitive

lines. There is the same distinction between the acts of these defendants and the normal extension of railway properties, such, for instance, as the building of the line of the Western Pacific from Salt Lake to San Francisco, or the extension of the line of the Chicago, Milwaukee & St. Paul from the Missouri River to Puget Sound, that is drawn in the Tobacco Case and in the Standard Oil Case, between normal acquisitions of property growing out of the growth of a business, and acts denoting an intention to control and monopolize and the securing of this control and monopolization by abnormal methods.

OPINION OF THE MAJORITY OF THE COURT BELOW.

There are some statements of fact in the opinion of the lower court which are hard to understand in view of the testimony, and therefore, we deem it proper, with all respect, to devote a short space to a discussion of that opinion. We will take up these matters in the order in which they appear. In this connection we call attention also to certain errors of law. We regret that this necessarily involves some repetition of testimony heretofore commented on, but such instances are few and not lengthy. The references are to pages in Vol. 12 of the record.

1. At page 204 the court said, with reference to the steamship line between Portland and Oriental ports:

> "The steamship line across the sea had just been organized and had not engaged in business until 1900 or 1901. It was neither organized nor equipped for general traffic, but only for transporting grain and flour originating on the line of the Oregon Railroad & Navigation Company in competition with the Northern Pacific and Great Northern Railroads. Its sailings were scheduled every thirty days, but were in fact irregular and uncertain."

The court overlooked the fact that by the undisputed testimony, for years a line of boats had been operated under contracts with ship owners from Portland to ports in the Orient; that the Portland & Asiatic Steamship Co., the line which the court said had just been organized, was merely the successor in chartering ships of these other lines which had handled this business for years under contracts with the Union Pacific or its subsidiary lines. The testimony of Mr. Stubbs is undisputed that these ships

were active competitors of the Pacific Mail ships out of San Francisco. (Stubbs, Fols. 6617 to 20.) That is also the testimony of Mr. Schwerin, now the General Manager of all the ships, who also stated (Folio 2806) that the Portland & Asiatic maintains a fairly regular schedule out of Portland, and the only time the schedule has varied has been when at the earnest solicitation of Portland shippers it has sent one of the steamers off the regular route to some point at Kadodate or Newschwang. It is also undisputed that these ships were equipped for general traffic, although the outward cargoes were largely composed of flour, and that may have been the chief reason for putting them in service. Whatever the reason for their existence, however, the fact is not denied that the Union Pacific organization sought traffic for these boats through the East; that traffic did move that way; that traffic representatives were at work in the Orient to secure return cargoes, and that those cargoes were sent to the East by the Union Pacific in train loads.

2. The next statement in the opinion (page 294) is:

> "The steamship line from Portland to San Francisco was likewise an inadequate provision for any regular traffic, and particularly transcontinental traffic. Its sailings were irregular and unreliable."

At p. 301 the Court again referred to this steamship line as "a line of steamboats irregularly and infrequently running between that port and San Francisco."

There is no evidence in the record upon which to base such a finding. The testimony is undisputed that prior to the merger the boat line of the Union Pacific from San Francisco to Portland was a regular line; that its steamships

sailed regularly once every five days, and sometimes as often as once in three days. There is ample testimony introduced to show the active competition between this boat line and the rail lines. So far, however, from there being any claim by any party that the steamship line was an inadequate provision for regular traffic or that its sailings were irregular and unreliable, as stated by the trial court, the claim of the defendants on the contrary, was, that the steamship service was so good and the rates that they could make were so low that the railroad could not compete with it. We quote from Mr. Stubbs' testimony, (Fols. 6661 & 2), when under examination by defendants' counsel:

> "Q. I want to take your mind back for a moment to 'Sub-Division "B,"' traffic between San Francisco and Portland, and to ask you as to whether that freight business in your judgment was competitive?
>
> A. I hold that it was non-competitive as between the Southern Pacific and the steamship line.
>
> Q. I will ask you to state your basis for that position.
>
> A. My reasons for that statement are these: The steamship service between San Francisco and Portland is better than the rail service, with this single exception—that the rail service is daily while the steamship service is probably only once in five days. The points of delivery and taking at San Francisco and a. Portland favor the steamship line. In the early opening of the Shasta route, we had some ambition to load our trains north bound, and made some attempts to get the business, but found that we absolutely could not take the business as against the steamship lines, but, besides this is the fact that there were outside competitors with the O. R. & N.; other steamship lines, and steam schooners, that made the rates not only unremunerative, but they were unstable; so, after several attempts to join in

> that business, we quit. And that was before this merger, so-called."

This was the claim of the defendants. The complainant proved by many witnesses that this steamship line was a strong, active competitor of the rail lines both on passenger and freight business; that each line was endeavoring to get the business, and each did get a large amount of traffic. There is no testimony to support the statement of the trial court.

3. At page 295 the court says, with reference to the Chicago, Burlington & Quincy:

> "The last-named company connected at several points with the Union Pacific and was a natural and important feeder for it."

Again, at page 296 the court said:

> "In 1901 the Northern Pacific Company acquired a controlling interest in the Chicago, Burlington & Quincy Railroad, which was a natural and actual feeder to the Union Pacific Company. After an unsuccessful effort to secure from Mr. Hill, who acted for the Northern Pacific Company, a partial interest in that purchase in order to insure a continuation of the fair and equitable relations which had theretofore existed between the Union Pacific and the Burlington roads, Mr. Harriman purchased for the Union Pacific Company a majority of the capital stock of the Northern Pacific Company."

While to some extent business was interchanged between the Union Pacific and the Burlington, it is a serious omission on the part of the court to overlook the fact that the testimony is undisputed that *the Burlington was an active*

competitor of the Union Pacific. This was testified to by Mr. Kahn and Mr. Schiff. It was said by them that it was by reason of the dread that the control of the Burlington by the Northern lines would disturb the existing competitive relations between the Union Pacific and the Burlington that the attempt was made to purchase control of the Northern Pacific. The Burlington was only one of seven or eight connections of the Union Pacific interchanging business with it at Omaha and Kansas City. It also undoubtedly interchanged some business at Denver, but it was an active competitor into Denver and at many other points. It is safe to say that the loss of one connection out of seven at Omaha and Kansas City would, by no possibility, have induced the Union Pacific to spend in the neighborhood of one hundred million dollars in an attempt to buy the Northern Pacific. It was because of the fact that the strong Northern lines were coming into the territory served by the Union Pacific, and because, as Kahn and Schiff admitted, the competition that they might bring was dreaded, that this purchase was made. Therefore it seems strange that the court overlooked the competitive feature of this situation and called attention only to the fact that the Burlington was a feeder of the Union Pacific. The Burlington was no more a feeder of the Union Pacific than the latter was a feeder of the Burlington.

4. At page 296, with reference to the Southern Pacific stock purchase, after speaking of the Rio Grande and its allied lines reaching Ogden, the court said:

> "To meet a menace occasioned by this situation and secure a reliable and permanent arrangement for Pacific coast business, Mr. Harriman, acting for the Union Pacific Company, first tried to purchase

from the Southern Pacific Company the old Central Pacific line extending between Ogden and San Francisco, and, failing in this, entered into negotiations with C. P. Huntington in his lifetime for the purchase of a large block of the capital stock of that company owned by him."

There is not in the record a suggestion by any witness that Mr. Harriman or anybody else representing the Union Pacific at any time tried to buy any of the stock of the Southern Pacific from Mr. Huntington. Even the facile Mr. Kahn in his testimony makes no such suggestion. There is not a hint of anything of that sort in the record. As to the attempt found by the court, to purchase from the Southern Pacific Co. the old Central Pacific line, we have demonstrated in the discussion of that matter that there is no evidence, except hearsay, upon that question. Mr. Kahn, the only witness, who attempted to testify to any such attempt, admitted on cross-examination that he would not swear that he was ever present when any such offer was made, and added to that we have the negative testimony of Mr. Huntington's most intimate associates, Mr. Hawley, Mr. Tweed and Mr. Miles, and also the Union Pacific executive committeeman, Mr. George Gould, that none of them had ever heard of such an attempt.

5. At page 296, immediately after the statement concerning the attempts to purchase stock from Mr. Huntington, just referred to, the court proceeded:

"Being unsuccessful in this, he renewed his efforts to secure that stock from Mr. Huntington's heirs and devisees after his death, in 1900. In this effort he had a competitor in George Gould, acting for the Gould interests."

In the course of our previous discussion we have shown both by the testimony of Mr. Gould and Mr. Hawley that the former was not a competitor of Mr. Harriman or his railroad in connection with the purchase of this stock. Mr Hawley, who sold the stock for the devisees of Mr. Huntington, stated that he never heard of Mr. Gould's trying to buy it; the latter said that he never attempted to buy the stock and would have regarded any such attempt as disloyal to his business associates, as he was on the Union Pacific executive committee with Mr. Harriman at the time.

6. At page 297 the court said:

> "Some time after the acquisition by the Union Pacific Company of the Southern Pacific stock, the latter company became involved in a controversy with the Phoenix & Eastern Railroad Company, the owners of a short line of road in Arizona. Litigation ensued and resulted in the sale of the Phoenix & Eastern Railroad to the Southern Pacific Company. About that time there was a consolidation of a short line of road (about ninety miles) in the northwestern part of California with the Southern Railway Company. This consolidation was made pursuant to the laws of the State of California."

And again, with reference to the same matters, the court said, at page 310:

> "The evidence discloses certain transactions between the Southern Pacific Company on the one hand and the Phoenix & Eastern and the California and Northwestern Railroad Companies on the other hand, which are claimed to have been in restraint of competition between them, but as they affect local transportation only and are not complained of in the bill as substantive wrongs and as neither of the two last-mentioned companies are made parties to this action, it is not perceived how any independent relief with respect to them can be granted. We therefore refrain from considering them except

in so far as they afford relevant evidence on issues joined in the case."

With reference to the foregoing statements, we suggest

(a) We are unable to understand why the court said nothing about the Atchison, Topeka & Santa Fe Railway Company in connection with these transactions. No person reading the opinion would suppose that the Santa Fe had had anything to do with them. As a matter of fact the capital stock of the Phoenix & Eastern was all owned by the Atchison, Topeka & Santa Fe. The controversy mentioned was between the Southern Pacific and the Santa Fe.

(b) With reference to the statement that on page 297 "litigation ensued and resulted in the sale of the Phoenix & Eastern Railroad to the Southern Pacific Company," it should be said that decisions had been rendered both by the Supreme Court of Arizona and the Secretary of the Interior (Folio 8255) in favor of the Phoenix & Eastern; that the railroad of the latter was not sold, but the capital stock of the Phoenix & Eastern was sold by the Santa Fe to the Southern Pacific for the sole purpose of eliminating competition and leaving the Southern Pacific a monopoly in the territory through which the Phoenix & Eastern was projected and in no way resulted from the litigation, the result of the sale being to prevent the extension of the Phoenix & Eastern to a connection with the El Paso & Southwestern, which extension would have created a new joint line to California from the Gulf, and also its extension to Deming, which would have made a new low grade transcontinental line for the Santa Fe itself.

(c) The next sentence in the above quotation from page 297 "About that time there was a consolidation of a short line of road (about ninety miles) in the northwestern part

had to be abandoned. In the meantime a tax deed purporting to convey title to the graded road had been secured by defendant Clark and his associates, who sought to construct a part of a line of railway projected by them between Salt Lake City and Los Angeles, over it."

In connection with this statement it will be observed

(a) The record discloses that in 1898 Mr. Eccles and his associates had incorporated the Utah & Pacific, and had constructed a line of railroad seventy-five miles in length along the old abandoned grade referred to in this statement;

(b) The tax deed obtained by the defendant Clark only covered a part of the grade in Nevada about forty miles in length on the direct line, with a branch line up to Pioche, and the only part of the said grade attempted to be used by defendant Clark and his associates in the construction of their line from Salt Lake to Los Angeles was from Uvada, on the state line between Utah and Nevada down to Caliente, about forty miles.

8. At page 309 the court said:

"The San Pedro line as originally projected and as ultimately constructed does not appear to have been naturally competitive with the Union Pacific, Southern Pacific, or any of the subsidiary lines. It is practically a continuation of the Union Pacific or Oregon Shore Line southwardly, and, generally speaking, its course is at right angles rather than parallel with either the Union Pacific or Southern Pacific line. If it, as an existing route, had been acquired by the Union Pacific it would have served rather as a short cut from Los Angeles to Salt Lake City to avoid the circuitous route between those points via San Francisco than as a natural competitor for any of the business of that route."

The testimony in this case is undisputed

(a) That the San Pedro route after its construction would have been a direct competitor of the Sunset Route of the Southern Pacific on transcontinental business, and of the Ogden Route of the Southern Pacific on both local and transcontinental business; and defendant Harriman and Mr. Munroe, Chief Traffic Officer of the Union Pacific, both swore that it is in fact a competitor even under its present ownership. (Harriman Fol. 1288, Munroe Folios 649 and 6835.)

(b) The route of the Southern Pacific from Salt Lake to Los Angeles, while longer than the San Pedro, is not as circuitous as suggested by the court. It is not by way of San Francisco, but by way of Sacramento, nearly one hundred miles east of San Francisco.

9. At page 309 the court said:

> "It is, however, contended that in the adjustment of differences between the Union Pacific and its allied or subsidiary companies with the Clark interests, resulting in the construction of one line between Salt Lake City and Los Angeles instead of two as projected, there was a suppression of competition which would have existed between the two if they had been built separately. We, however, are unable to discover anything in the transaction except a laudable purpose to adjust differences and construct a line of railroad between the two points which would serve their joint interests as well as those of the public."

In this reference to the defendants the court lost sight of the following facts:

(a) The reorganized Union Pacific made no move to construct a line from Salt Lake to Los Angeles until the project of the Clark interests to build an independent line

between those points had been entered upon and large expenditures had been made;

(b) Mr. Harriman, the moving spirit of the Union Pacific, had declined, when approached for the purpose, to construct such line;

(c) No act was done toward constructing this line until the Union Pacific had acquired the Southern Pacific, and only to protect the monopoly thus acquired and for that purpose, did the Union Pacific enter upon this work of construction of a line paralleling the Clark line.

10. The court further said:

> "The evidence discloses that it was not feasible to construct two lines of road over the only practicable route through the canyon in the mountains, known as Meadow Valley Wash. This, with other reasons of a practical nature, fully justified the abandonment of the project of constructing two lines and the consolidation of them into one."

As to this finding

(a) The court overlooked the fact that both roads could have been built through the Wash, and in fact two lines were surveyed under the joint survey heretofore discussed, neither line crossing the other throughout the entire length of the Wash, and the evidence shows they were both *feasible*, although expensive. (Moore Fol. 4258).

(b) That neither company, under the laws of the United States, had the right to monopolize that canyon if it had been deemed best to build through it;

(c) The reasons of a practical nature referred to were simply that the defendants undertook to parallel the Clark road to prevent the destruction of the monopoly they had obtained by the Southern Pacific purchase, and the Clark

interests finally became satisfied that they would have to surrender or their line would be financially unprofitable.

11. The court said, page 310:

> "Some minor agreements fixing the relations between the new San Pedro line and the other lines composing the system of the Union Pacific as well as the provisions for fixing through and local rates were made, but these are so incidental to the main transaction already found not to have violated the interstate commerce act as to warrant no further consideration.
>
> If it be true, as already pointed out, that the San Pedro line was not naturally competitive with the Union Pacific or Southern Pacific lines none of these incidental things would disturb legitimate competition within the purview of the anti-trust act."

(a) If this statement of the court is correct, any two railroads reaching a common point, can enter into an agreement that each will not invade the territory of the other by new construction, for a period of ninety-nine years, and such an agreement will be held valid by the courts. The Short Line stipulated that it would not for ninety-nine years build south of Salt Lake City. The San Pedro agreed that it would not build north of Salt Lake City, either main lines or branches.

(b) If this finding is correct it is lawful for two railroads in the same territory to stipulate that one will adopt the local rates of the other and that those rates shall not be changed for a period of ninety-nine years without mutual consent. That was the agreement made between the Southern Pacific and the San Pedro. Can it be successfully argued that the lower court was right in saying that these are incidental things which would not disturb legitimate competition within the purview of the law?

12. At page 299, after finding that many witnesses testified that the Union Pacific and Southern Pacific prior to 1901, were competing lines for transcontinental business and had separate soliciting agencies, the court proceeded:

> "The proof amply shows that they were active in securing routings of freight and passengers to California, but that they did it in two ways—one by direct solicitation of shippers and passengers and the other by securing and fostering friendly relations with the initial carriers at the points of origin of the traffic. The initial carrier commonly was able to and did determine the routing of all traffic. Notwithstanding the right of the shipper in the abstract to do so, the initial carrier practically settled the question so as best to serve its own interest."

The evidence in this case does not justify this finding as to the initial carrier controlling the routing. While one or two of the traffic men of the defendants, notably Stubbs, testified that a soliciting agent worked closely with his connections, which is undoubtedly true, the overwhelming evidence in the case is that on transcontinental traffic the separate agencies were most powerful in securing and routing traffic, and all the witnesses, both those for the complainant and the defendants, not only railroad men but the traffic representatives of large shippers, showed clearly the influence of the representatives of the transcontinental lines in routing the shipments, and the evidence does not in any way point to the conclusion stated by the court that the initial carrier practically settled the question so as best to serve its own interest. The traffic moving to San Francisco from the East was commonly routed by the consignees in that city, who were thousands of miles from the initial lines. (Jilson, Folios 2915-18, Toll, Folio

4862). Denver business from Atlantic seaboard was routed by consignees in Denver (Munroe, Traffic Manager of Union Pacific, 6809.)

13. At page 299, the court said:

> "The actuating intent and purpose of the Union Pacific Company in acquiring the Huntington stock was to secure a permanent and reliable connection at Ogden for through traffic over the Central Pacific line to the Pacific coast, and thereby to save the necessity of constructing a road of its own from Ogden to San Francisco."

This is repeated at page 305 in the following language:

> "The immediate and actuating intent and purpose of the Union Pacific Company in acquiring the Huntington stock and thereby the control of the operations of the Southern Pacific line were, according to the proof, to secure a permanent working and reliable connection at Ogden over an existing road for its through traffic, a connection not dependent upon the grace of a dominant copartner but one within its own control."

With reference to this statement it should be said that there is no evidence to support it, except the testimony of the witness Kahn, as to what he said was in the minds of the executive committee of the Union Pacific and of Mr. Harriman. We have in another part of the brief clearly demonstrated the illegal intentions of these gentlemen by a series of acts which cannot be answered by any mere statement of innocence. But even if the fact was as stated by the trial court, that would be no defense in this case. The desire of the Union Pacific to own the Central Pacific, instead of constructing its own line as did the Denver &

Rio Grande, which has since built the Western Pacific, would not make lawful the purchase of the Sunset Route and of the Panama Route and the elimination of all the competition in the Western country, that was involved in such purchase. In fact, this is conceded by the trial court in the following statement which immediately follows the last quotation:

> "We recognize the proposition that if the necessary and direct result of the purchase of the Huntington stock was to destroy or substantially suppress free and natural competition, before then existing between the two companies, or if that purchase put it within the power of the Union Pacific Company to destroy or suppress such competition, the latter named company would undoubtedly be held to have intended the natural and reasonable consequences of its act and notwithstanding the dominant purpose just mentioned, would have violated the anti-trust law. *Addyston Pipe & Steel Co. v. United States*, 175 U. S. 211, 234; *Northern Securities Co. v. United States*, 193 U. S., 197, 328, 332, 357."

That statement of the law which we have just quoted should be decisive of this case applied to the facts as they actually exist. It is exactly what the Government has contended for, and it is because of the failure of the trial court to give the proper effect to the undisputed testimony in the case and apply such testimony to the law, which they concede to be as claimed by the Government, that the error in the decision below consists.

14. At page 300, speaking with reference to the competition carried on by the Union Pacific against the Southern Pacific, the court said:

"Claim is not made that it was such a competitor for any business originating on or near to its main line, but only for business originating in New York or Pittsburgh common points a thousand or more miles away from its lines."

We do not understand how the court happened to make this statement of our position for it was claimed by the government that the competition existed as to *all business East of the Missouri River*. This claim is supported by the evidence of scores of witnesses. (See pp. 91 to 168 this brief.) It was argued at length in the brief filed with the court below and in the oral argument.

15. At page 302, it was held that the Union Pacific, being only an intermediate link in the through line from the East to the Coast, could not have been a competitor of the Southern Pacific, and further, that it could not have been a competitor because it used the Southern Pacific line from Ogden to San Francisco. We will not here argue out this question, it being fully covered in other parts of the brief, except to call attention to the failure of the trial court to notice the fact that the Union Pacific had rate-making powers to the Pacific Ocean from the Missouri River; that at the river it connected with many roads each seeking to interchange business with it. The success with which the Canadian Pacific had operated under a differential for over eleven years in connection with the same roads shows how eager they would have been to join the Union Pacific in view of its great influence in distributing traffic coming off its own rails eastbound, in any controversy that might have arisen; and the court also ignored the fact that Mr. Stubbs, the chief traffic officer of the Southern Pacific and now of both lines, stated that the divisions between the Union Pacific and the Southern Pa-

cific on the Ogden Route were more than fair to the Union Pacific, but were all the Southern Pacific could get, thus recognizing the power possessed by the Union Pacific to maintain itself as a competitor of the Sunset Route or of any other route.

16. At page 303 the court said:

> "Instead of the situation being competitive the two roads really acted together and co-operated between themselves and with their connections in securing as much of the transcontinental traffic, each for the other, according to their respective facilities as they could get; and participated in the total revenue on a basis of comparative service rendered. Their relations were like those of a limited partnership rather than those of hostile competitorship."

With respect to this statement it is sufficient to say that it contradicts the testimony of hundreds of witnesses—practically all of the witnesses who testified in the case. The evidence is overwhelming that the competition between the two systems was most intense.

17. At page 304, the court, recognizing that the evidence as to the competition between the Union Pacific and Southern Pacific systems was overwhelming, said:

> "The voluminous evidence of officers, agents and shippers to the effect that active competition existed between the Union Pacific and Southern Pacific roads prior to 1901 must be considered in the light of the legal and physical relations of the roads to each other and of other related facts. Whether there was competition or not, in view of all these things, was a mixed question of law and fact and not susceptible of determination by the preponderance of proof as an issue of fact only."

This we take to be an admission that if the question as to whether competition existed between the two systems is one of fact, the Government has established this fact by an overwhelming mass of testimony. In our brief of the law we have called attention to the direct rulings of the courts that the question as to whether two roads are or are not competing, is one of fact. We have been unable to find a suggestion in any opinion that it is a question of law or mixed question of law and fact. The words, "competing" and "competitor" are clearly and simply defined in the dictionaries. There is nothing mysterious about these words. The statement we have above quoted is immediately followed by this language in the opinion:

> "Without doubt there was active competition, but it was chiefly in co-operation with initial lines which had the routings of freight and for the benefit of such initial lines and their connections to Omaha or Kansas City, as well as for the benefit of the Union Pacific Company itself."

This seems clearly an absolute contradiction of the language immediately preceding which we have just commented on. It certainly can make no difference, if there was active competition, that the connections of the Union Pacific shared with it in the results of such competition. This competitive business in which they so shared was taken away from the Sunset line of the Southern Pacific.

18. At page 305 the court said:

> "In this condition of things the opinion of any number of witnesses as to whether the two were competing lines within the meaning of the law is of little aid, and the general statement of those witnesses that the two roads had separate soliciting

agents throws little if any light upon the ultimate issue."

It is interesting to compare this last statement with the following from the opinion of Mr. Justice Peckham in the Joint Traffic Case, 171 U. S. page 564.

"This is not all, however, for the agreement further provides that the managers are to have power to organize such joint freight and passenger agencies as they may deem desirable, and if established they are to be so arranged as to give proper representation to each company, and no soliciting or contracting passenger or freight agency can be maintained by any of the companies, except with the approval of the managers. They are also charged with the duty of securing to each company, party to the agreement, equitable proportions of the competitive traffic covered by the agreement, so far as can be legally done. The natural, direct and necessary effect of all these various provisions of the agreement is to prevent any competition whatever between the parties to it for the whole time of its existence. It is probably as effective in that way as would be a provision in the agreement prohibiting in terms any competition whatever."

19. At pages 305 and 306 the court said, with reference to competition between the two systems:

"It is contended that it was destroyed or suppressed in transcontinental business between the Atlantic seaboard and middle states on the one hand and the Portland and Willamette Valley common points on the other hand. The route of the Southern Pacific for this business was by its own line via New Orleans and San Francisco to Portland and that of the Union Pacific was by its own line from Omaha and Kansas City to Ogden, together with its connections and sub-connections eastward from Omaha and Kansas City, and its subsidiary lines.

the Oregon Short Line and Oregon Railroad & Navigation Company running northwesterly into Portland and the valley. The geographical relation of these routes to each other and the dependence of one of them, at least, upon voluntary arrangements with other lines would seem to render natural and fair competition between them for the Portland trade impossible, but the slight volume of the traffic here involved affords a controlling and decisive consideration."

With reference to this statement it should be observed

(a) The testimony is undisputed that in addition to the Sunset Route of the Southern Pacific it was an active competitor of the Union Pacific on business between the Atlantic seaboard and the middle States on the one hand and Portland and Willamette Valley common points on the other by the Sacramento Route, and thence to the East over the Rio Grande and its connections. This is ignored by the trial court in this statement;

(b) As to the following language,—"the dependence of one of them, at least, upon voluntary arrangements with other lines would seem to render natural and fair competition between them for the Portland trade impossible,"—it will be seen that upon the business from the middle States the Southern Pacific as well as the Union Pacific was dependent upon voluntary arrangements with other lines. And this is only another and extreme application of the rule laid down by the trial Court, that there can be no natural and fair competition between railroads unless each competitor is complete in and of itself. How the court could arrive at this conclusion, in view of the clear language of many cases, such as the case of *State v. Vanderbilt* in Ohio, cited and approved by this court in the Louisville & Nash-

ville case, which is fully treated in our brief of the law, we are at a loss to understand. In the Vanderbilt case the lines engaged in the competition had their Southern termini at Cincinnati. The Northern terminus of one was at Cleveland on Lake Erie, the other at Toledo upon the lake. The traffic which was the subject of the competition was brought up to Cincinnati from the South by connections of these two lines, and was taken to points in the Northwest as well as in the Eastern parts of the United States from the respective Lake Erie ports by other connections. They were both what the court in this case terms "intermediate links" in the transportation. The Supreme Court of Ohio held, upon that state of facts, that they were parallel and competing lines, and that one could not acquire the other. This ruling met with the approval of this court in its opinion in the Louisville & Nashville case:

(c) The court further considered the slight volume of the traffic as affording a controlling and decisive consideration against the complainant. This is only one of a number of items covering traffic as to which there was energetic competition between the two systems that are disposed of in this way, the court considering each by itself and stating that the traffic and revenue involved amounted to only a small percentage of the total earnings of the respective systems. All the earnings from the great competitive passenger business of the two companies are left out of consideration in making up these figures, but in any event, as pointed out by Judge Hook in his dissenting opinion, this is an impossible rule to adopt. It makes no difference what the total earnings of the Southern Pacific system are. It does an enormous business in Texas, and between New York and Texas and Arizona points. It has a tremendous local traffic in California, and between

California and Nevada points. That fact certainly has no bearing upon the destruction of competition in places where the public is, by the consolidation, deprived of the benefit of competition. The Pennsylvania Railroad and the Baltimore & Ohio are competing for business between Pittsburgh and Washington, but if the rule adopted by the trial court is approved here, the Pennsylvania would be permitted to acquire the line of the Baltimore & Ohio between Pittsburgh and Washington because the local business between those points is a very small percentage of the total earnings of either one of the two systems. The business done by two competing roads in many cases could be thus dissected, and it would be found that each separate item amounted to only a very small percentage of the total earnings of the two. The rule adopted by the court below would make valid the acquisition of these various sections upon the ground that each one amounted to but a small percentage of the aggregate business. The rule is perfectly novel. It is not supported by authority. The same argument was attempted in the Northern Securities case, as will be seen by the answer and briefs printed in the report. (See answer Northern Securities Co., 193 U. S. 239. Brief Mr. Young, 193 U. S. 261-2.) It was not dignified by even a reference in the opinion of the lower court or of this court. The consolidation of the Union Pacific and Southern Pacific absolutely eliminated competition, present and future, as to a very large and growing traffic between Portland and San Francisco. The immediate effect was to put up rates, in some cases over 50%. The testimony is undisputed that since that date when the rate is raised upon one line, it is automatically raised on the other by a rate clerk. Is it right that the people in this growing section of the country should be subjected to such charges because

the Union Pacific does a large local business in Nebraska or the Southern Pacific a large local business in Texas? The only rail lines between Utah points and Portland and vicinity are the two lines that were so consolidated. The length of the Union Pacific line which is the shorter of the two between those points, is substantially the same as that of the Pennsylvania Railroad between New York and Chicago. The lumber supply of Salt Lake and all of that intermountain region comes largely from Portland and vicinity. Can it be that the people in this great and constantly developing region are to be placed at the mercy of a combination of this kind because each of the parties earns a lot of money at some remote part of the country?

20. At page 308, in discussing the purchase of Santa Fe stock by individual defendants, called in the opinion "a syndicate of men interested in the Union Pacific Company," the court said:

> "Even if the motive of the purchasers was to gain some inside information concerning the operations of the great competitor of the Union Pacific Company, they chose an entirely lawful way for doing it, and their acts afford no reason for judicial condemnation."

(a) If the connections of railroads cannot be taken into account, then we do not understand why the Santa Fe is termed by the court "the great competitor of the Union Pacific Company." It is not a great competitor for any business except such as is turned over to one or both of the competitors by connections;

(b) If it is lawful for the controlling spirits in one company to acquire stock in a competitor for the purpose

of a voice in the councils of such competitor, to adopt the statement of Mr. Kahn, (Fol. 7881) then the decisions in the Standard Oil and Tobacco cases have been rendered in vain.

21. The court said, page 310:

> "The proof shows that after 1901 as well as before the rates for transcontinental traffic were the same over both the Union Pacific and Southern Pacific lines."

but neglected to observe

(a) That the evidence is undisputed that all rates were made in conference of the lines west of the Missouri River to which all interested railways practically turned over the making of transcontinental rates and that in such conferences the Union Pacific and Southern Pacific were prior to 1901 separate, and frequently competing with each other;

(b) That the Union Pacific had power to make a rate from the Missouri River line to tide water at Portland, and that a cut in that rate would result in a cut in all transcontinental rates, including those over the Sunset Route of the Southern Pacific or any route that might be made by using a portion of the Southern Pacific lines;

(c) That since 1901 the possibility of such competition between the Union Pacific and Southern Pacific has been eliminated;

(d) That since 1901 transcontinental rates have been largely increased, and the rates on business between Portland and San Francisco were grossly increased within three months after the merger, and have since remained at such increased figure.

22. Immediately following the foregoing statement, the court said:

> "There has since then been with respect to either of these lines no impairment of service;"

This conclusion cannot be supported by the evidence unless this Court is willing to hold that

(a) Lengthening the time of the fastest merchandise train between Omaha and Ogden from less than fifty-five hours to over one hundred hours is no impairment in the service (see this brief pp. 521-528-9);

(b) Lengthening the time of the fastest passenger train from New Orleans to San Francisco over twenty-four hours, is no impairment of service (see this brief p. 534);

(c) Destroying the efficiency of the Panama Route by operating boats that are not fit to transport freight, is no impairment of service (see this brief pp. 511 to 518);

(d) With a line ninety miles shorter from Omaha to San Francisco, grades reduced, twenty-three complete circles of curvature removed, the lengthening of the time of all passenger trains, including the Overland Limited, is no impairment of service (see this brief pp. 533-4);

(e) Now consuming over four days (see this brief p. 521), in the actual haul of freight from the Missouri River to Ogden (1,000 miles) when previous to the merger, freight was moved all the way from Chicago to San Francisco, including all delays at transfers (about 2,300 miles) in from five to seven days, (see testimony of Mr. Knight, formerly agent of the Union Pacific at Chicago, Folio 3011), represents no impairment in the service;

(f) The other instances to which we have called attention in another part of this brief (see this brief pp. 521 to 537) in which the service has deteriorated, do not constitute

impairment; but we submit that the finding of the trial court is contrary to the testimony. A general statement such as was made by Mr. Kruttschnitt that the service is good cannot be regarded in the face of the specific instances in which the service has greatly deteriorated which we have heretofore discussed in detail.

23. At pages 310 and 311 the court said:

> "The large number of initial carriers striving for that traffic (transcontinental traffic) have continued their active solicitation for business over the line which assured them the longest haul or otherwise benefited them most, and although some agents of the two roads which before 1901 were separate are now joint, they have continued to exercise their influence to secure business for either road according to its availability and always in opposition to other active competitors like the Santa Fe and the Denver & Rio Grande roads."

(a) It is a fact that these joint agents have, since the merger acted for both companies, but before the merger the influence of the separate agencies was exercised in favor of the separate systems. Each one was endeavoring to secure the business as against the other, and the shippers were benefited by many things in the way of service which were detailed in the testimony;

(b) We are again met with the statement that the Santa Fe and Denver & Rio Grande are active competitors, and again ask how either of those lines can be competitors, either active or otherwise, on transcontinental business except as acting in harmony with their connections. No transcontinental business originates on the Denver & Rio Grande; no transcontinental business moving to or from any point East of Chicago originates on the Santa Fe, but

the court says, as the complainant has always contended, that both of these lines are active competitors of the Union Pacific and Southern Pacific. If that is so, why is not the Union Pacific with its connections, a competitor likewise of the others?

24. At page 311 the court said:

> "None of the minor points charged to have been deprived of competitive opportunities by the Huntington purchase are shown to have suffered as a result of that purchase."

The undisputed testimony is that in many cases they have suffered both by increase in rates and by impairment of service.

25. At page 311 the opinion proceeds:

> "Moreover, the fact that the Union Pacific Company did not secure or undertake to secure control of the Santa Fe road, a thoroughly sufficient, well-equipped and powerful rival for transcontinental business, or the Denver & Rio Grande road, a potential and later an actual powerful rival for the same business, affords additional and conclusive evidence of no such combination or conspiracy."

(a) We are again met with the statement that both of these other systems are rivals and competitors of the Union Pacific, although, as we have shown, all three depend upon their connections to handle this traffic;

(b) As heretofore demonstrated, a powerful influence was acquired in the Santa Fe, resulting directly in the elimination of competition in the most offensive form;

(c) By the undisputed testimony the Union Pacific endeavored to secure a half interest in the control of the Denver & Rio Grande.

CONCLUSION.

The appellant submits that it has demonstrated that the respondents have violated both the first and second sections of the Sherman Act; that the result of such violation has been to impose grievous hardships upon the people of the West, that the decree should be reversed, and that the Government have proper relief in the premises.

Respectfully submitted,

GEORGE W. WICKERSHAM,
Attorney General.

CORDENIO A. SEVERANCE,
FRANK B. KELLOGG,
Special Assistants to the Attorney General.
